The provision for this depletion allowance is not a sneaker, a hidden effort of special privilege. It is simply an effort to evaluate the exhaustion of natural resources. Again and again we have tried to explain that for every barrel of oil that is produced from an oil well, there is one less barrel in the well. It is not like the tall corn in the State of the distinguished Senator from Illinois, which comes forth as a new crop every year, and in ever greater production. Oil and gas is a diminishing resource. In about 1924 or 1925, Congress, after having made provisions for depletion which resulted in unfairness and uncertainty, arrived at the 27½-percent depletion formula, which has given America the best domestic supply of oil, gas, and petroleum resources of any nation in the world. In spite of the fact that our mineral lands are not rich in resources as Saudi Arabia and other places, the depletion allowance has led to great development by placing the emphasis on exploration.

We have developed a good domestic supply of oil, which has stood us and the free world in good stead. For example, when the Suez Canal was closed, by opening our oil fields to full production, we were able to supply the rest of the free world from the surplus supply which we developed under this system.

I grant that there are great profits being made by the major oil companies. I do not know the companies the distinguished Senator from Illinois has in mind, but I wager that most of these profits he referred to were made by companies which have overseas oil production, such as Aramco, Gulf and other major companies which are not dependent upon depletion because of the working arrangements they have with sheiks and others overseas.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MONRONEY. I have very limited time available. If the Senator could use some of the time of the Senator from Illinois, I would be happy to answer his inquiries. However, I am trying to complete my remarks in 5 minutes. I do not believe the chairman can yield more time to me. The Senator from Kansas [Mr. CARLSON] wants some time to be yielded to him also.

First, Mr. President, to return to the bill, the present depletion allowance has given us a plentiful supply of oil, and it is nearer to the price it was in 1912 per gallon than any other commodity we have.

The Senator proposes a sliding scale of depletion. As I read it and as the general counsel of the committee interprets it, it would apply also to the royalty owners. If I read the bill correctly, a farmer on one side of a fence who leases his property for production of oil to Standard Oil or Gulf, or even to a rather small company, which has over a million dollars of gross revenue, the depletion allowance goes down to 21 percent. If it should exceed $5 million of total production of oil, the depreciation allowance drops to 15 percent. This means that farmer A, getting his royalty from a major company, would receive only 15 percent for the depletion of the oil under his land, whereas farmer B, who leases to a wildcatter would get 27½ percent on the same oil. If that is not a correct statement, I hope the Senator from Illinois will correct me.

A million dollars sounds like a great deal of money. However, let us break it down. The amount of one million dollars of gross production of an oil company, broken down to production per day, amounts to 850 barrels per day. That is not a great deal of oil.

The PRESIDING OFFICER. The 5 minutes allotted to the Senator have expired.

Mr. JOHNSON of Texas. Mr. President, I yield such time as the Senator may desire.

Mr. MONRONEY. So, any company, no matter how small, if its total production in every State is greater than 850 barrels a day, may charge off only 21 percent. If the income happens to be over $5 million, which means a total production of only 4,000 barrels per day the depletion allowance will drop down to 15 percent. If the total of one stockholder who owns 51 percent produces more than 4,000 barrels a day, this reduces everyone else's depletion to 15 percent.

Mr. President, these are not giant companies the distinguished Senator from Illinois is talking about. Those companies produce 5 times that much from each well in Saudi Arabia. Therefore we would not be reaching down to those great sources of great wealth, which avoid all Federal income taxes by shuffling leases with the sheiks or kings of the Middle Eastern empires.

The oil industry in my State—and it was one of the pioneer oil States—is a sick industry. It is scraping the bottom of the barrel and is trying to find saucer size fields. Little explorers are still going out to find oil, because they love the oil industry. The larger ones have moved on to the Williston Basin and other places, as they search for new supplies of oil.

Although there may need to be some adjustment of supply, this is not the way to bring it about. Let us not penalize every small owner. That is what we would do. The boom days of oil have passed us by, and we are trying to get a little oil out of depleted fields. The loss of the 27½ percent depletion allowance will end many leases and will lead to the liquidation of many small businesses, which will probably be absorbed by the giant companies, or be forced to shut down, leaving supplies to be wasted.

Mr. CARROLL. I wish to say to the Senator from Oklahoma that what he has stated is 100 percent correct so far as Saudi Arabia and Aramco are concerned. We never contemplated, 24 or 26 years ago, when we passed the depletion allowance provision, that we would be giving a depletion-allowance benefits to Aramco and Saudi Arabia. Since then we have lost millions of dollars in revenue. I agree with the able Senator from Oklahoma, who comes from one of the richest oil-producing States in the Union.

Mr. MONRONEY. It once was one of the richest.

Mr. CARROLL. I believe Texas has 46 percent of the oil and gas reserves of the Nation today.

In my own State, we have an important and growing oil and gas producing industry. I am not speaking against that industry. I am talking about the principle of depletion allowance. We must look at this question very carefully. That is not solely a question of scarcity of oil. Many able Senators do not understand that there is a regulation of the Internal Revenue Service providing that one can get depletion on oil and gas only if it is in a well. We have over a billion barrels of oil in rock shale in Colorado, Wyoming, and Utah, but we cannot get a favorable Internal Revenue regulation with regard to it. We have oil running out of our ears, but we cannot get an equitable depletion allowance.

My able friend from Illinois has made a brilliant fight through the years. I commend him for his faith, for his courage. I do not mean to take the time of my friend from Oklahoma, and I do not want to take the time promised to the Senator from Kansas. I merely wished to emphasize and further highlight what the Senator from Oklahoma has so ably expressed.

The PRESIDING OFFICER. The time presently allotted for debate has expired. Under the unanimous-consent agreement 10 minutes on each side has been used. A quorum call will now take place, after which each side will be in control of 5 minutes.

Mr. CHAVEZ. I should like to have some time yielded to me. In New Mexico we also have some oil.

The PRESIDING OFFICER. Time will have to be yielded by either the Senator from Illinois or the majority leader after the quorum call is had.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. How much time is left to the majority leader?

The PRESIDING OFFICER. Five minutes.

Mr. MANSFIELD. How much time is left to the Senator from Illinois?

The PRESIDING OFFICER. Five minutes.

Mr. CHAVEZ. I should like to have some time yielded to me.

Mr. MANSFIELD. I yield 1 minute to the Senator from New Mexico.

Mr. CHAVEZ. One minute?

Mr. MANSFIELD. Yes.

Mr. CHAVEZ. I will need more than that.

Mr. MANSFIELD. I will yield 5 minutes to the Senator from Kansas.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I yield 5 minutes to the Senator from Kansas [Mr. CARLSON], under a commitment previously made.

Mr. CARLSON. Mr. President, if I am recognized for 5 minutes, I shall be pleased to yield time to the Senator from New Mexico.

The PRESIDING OFFICER. The Senator from Kansas has the floor.

Mr. CARLSON. Mr. President, we have heard some discussion concerning the oil depletion amendment. Usually it is an annual discussion. This evening, we are considering an amendment offered by the distinguished Senator from Illinois [Mr. DOUGLAS]. This time it is a new proposal. I concur in the statement made by the Senator from Oklahoma [Mr. MONRONEY]. It is my firm opinion that this goes out to the royalty owners. It is further proof that the Committtee on Finance ought to examine an amendment of this kind, because of its far-reaching effect, before it is brought to the floor of the Senate in an attempt to have it adopted this evening.

Mr. President, we could spend much time talking about the percentage of depletion, but we must remember that depletion allowances have helped to establish and maintain the United States as the world's greatest producer and consumer of petroleum products.

The 27½-percent depletion rate has proved to be sound. It is fair. Today it does no more than to reflect the current value; in fact, it does not fully recognize the increase in the cost of finding oil.

I think it is interesting to note that in 1926, when Congress first passed the 27½ percent depletion allowance, the country had 8 billion barrels of oil reserves. In 1960, after this long period of 27½ percent depletion rate, our reserves are 38 billion barrels of oil.

I may note that in 1936, gasoline, less taxes, sold for 20.9 cents a gallon. In 1960, it is selling for 20.2 cents a gallon. That is proof to me, that as a nation we have benefited from the depletion allowance.

Not only that, but in 1926 it took 1 hour's wages to buy 2.6 gallons of oil. Today, 1 hour's wages will buy 10 gallons of gasoline, under the 27½ percent depletion allowance.

The percentage depletion has meant lower prices for oil and gasoline for the consumer. I believe the critics of depletion allowance recognize that fact.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, a table which proves this very point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

PERCENTAGE DEPLETION AND THE PRICE OF GASOLINE

Percentage depletion means lower prices for oil to the consumer. Even critics of depletion recognize this fact.

Edward S. Mason, dean at Harvard University, has stated that the effect of depletion is "to expand investment and output—thus bringing down mineral prices." Prof. Arnold C. Harberger of the University of Chicago has testified that "more oil can indeed be obtained by tax concessions * * * [but] * * * If the rest of the economy wants more oil, it should be willing to pay for it by way of a higher market price."

Elimination or reduction of depletion, therefore, would mean less oil at higher prices, as illustrated by the following figures:

(a) Average U.S. price of crude oil in 1957, $3.09 per barrel.

(b) Maximum amount available from 27½ percent depletion,[1] spent by oil producers to find more oil, 85 cents per barrel.

[1] The 27½ percent applies to gross income, but because depletion is limited to 50 percent of net income, the average for the industry is no more than 23 percent. However, depletion also applies to income from natural gas which is not included in the price of crude oil used above. If all such factors were taken into consideration in a more detailed calculation, the results would be approximately the same as shown in this analysis.

(c) Loss in funds for oil exploration because of additional income tax if depletion were eliminated (52 percent tax rate on 85 cents per barrel), 44 cents per barrel.

(d) Increase in price of crude oil necessary to provide 44 cents per barrel for exploration after payment of 52 percent tax, 92 cents per barrel or 2.2 cents per gallon.

An increase of 2.2 cents per gallon in the price of crude oil would necessarily mean an increase in prices paid by consumers for petroleum products. The price for all products could increase by 2.2 cents per gallon, but it is more likely that the increase would be passed along in the form of higher prices for gasoline, the principal product derived from crude oil. As it takes 2.3 gallons of crude oil to make a gallon of gasoline, an increase of 2.2 cents per gallon in the price of crude oil would mean an increase of about 5 cents per gallon in the price of gasoline at the service station.

Mr. CARLSON. Mr. President, I think the most recent statement on the need for the oil depletion allowance is a report entitled "Amending the Mineral Leasing Act," dated June 10, 1960, and submitted by the distinguished junior Senator from New Mexico [Mr. ANDERSON] from the Committee on Interior and Insular Affairs. I read from the report as follows:

In general, the committee finds that in the past several years there has been a potentially dangerous slackening in exploration for development of domestic reserves of oil and gas so necessary for our security in war and peace. The decline in exploration is caused in large part by the falling off of domestic production—from 7,150,000 barrels daily a year ago to 6,850,000 barrels daily in May of this year—as a result of global factors embracing the fabulously flush production of Middle East oilfields and increase in Venezuelan and, most recently, north African production. At the same time that our domestic production has been declining by some 3 percent, our consumption has been rising by about 5 percent to some 9 million barrels daily.

This falling off of domestic exploration is readily discernible in the figures of the Interstate Oil Compact Commission covering active exploration crews. In April 1960 the number of such crews was 419, in contrast to 490 at the end of 1959 and 725 in the peak year of 1953.

Mr. President, that is from the report dated June 10, 1960, and submitted by the distinguished junior Senator from New Mexico [Mr. ANDERSON] and his committee.

Mr. President, I ask unanimous consent that I may have printed at this point in the RECORD a statement concerning the oil production situation in Kansas.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CARLSON: KANSAS PICTURE

In the State of Kansas, crude oil production averaged about 310,000 barrels daily during the first 4 months of this year compared with 337,000 the same period last year, a drop of 27,000 barrels daily or 8 percent. In May, the Kansas production allowable was cut another 25,000 barrels per day and actual production during the first week in May was down almost 50,000 barrels per day or 15 percent from the same week last year. As things now stand, no improvement in this situation is now in sight.

The combination of depressed prices and reduced markets for Kansas crude has caused severe curtailment of exploratory and development activity. Exploratory crews active during the first quarter of 1960 are down 15 percent from a year ago level. The average number of rotary rigs active this year is down 18 pecent and the total number of wells drilled to date is down 24 percent.

Mr. CARLSON. Mr. President, I am glad to yield back the remainder of my time.

Mr. DOUGLAS. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. The Senator from Illinois has 5 minutes.

Mr. DOUGLAS. First, I should like to clear up some misapprehensions. My amendment would cover the income derived by American oil companies from their operations abroad and would, therefore, apply to ARAMCO and Standard Oil Co. of New Jersey drillings in Arabia, Venezuela, and other countries. Their depletion allowances would be reduced. It is no cover up for them.

Second, it would not cover royalties received by farmers. Farmers who lease land to oil companies almost universally receive a share of the fiscal product which is obtained from drilling on the farms—generally one-eighth. This comes as direct income to them. It is not dependent on the profits of the drilling or operating companies. I think no farmer in the country gets an income of more than $1,000,000 from his oil leases. Therefore, since I have not changed the rate for those whose gross incomes are less than $1 million, the total royalty of any farmer in the United States would not be reduced by one cent.

When the 27½ percent allowance was originally enacted a third of a century ago, the corporation tax was approximately 14 percent of net profits. So the allowance of one-half of net profits amounted then to a deduction of a maximum of only 7 percent of the net profits. That was the maximum then. Now the corporation tax is 52 percent. So the allowance of up to 50 percent of net profits would make it possible for a company to have 26 percent of its net profits completely immune from taxation. This frequently happens. This evil has therefore greatly increased as the corporation tax has increased.

My amendment would bring in from $350 million to $400 million more revenue a year. This would still leave the oil industry with approximately $2 billion of depletion allowances. It would be a very moderate reduction.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. CARROLL. The Senator from Illinois has answered the question I was about to ask. I was not here on Saturday and came to the floor late today.

I think we have had a considerable discussion about fiscal responsibility. The Senator has indicated that his amendment would result in an increase of $350 million of revenue to the United States.

Mr. DOUGLAS. That is correct. That is a modest estimate.

Mr. President, I am glad to yield a minute to the Senator from Ohio.

Mr. LAUSCHE. Mr. President, for 3 years I have been listening to discussions on this very important subject. The judgment which I have reached, based upon the arguments, negative and affirmative, is that the oil and gas companies have been given a tax privilege to which I believe they are not entitled.

The Senator from Illinois has pointed out that all the corporations within the country are paying 51 percent of their income as taxes, while the gas and oil companies are paying from 17 percent to 20 percent. I cannot reconcile those two figures and so must conclude that there is injustice in that situation.

My own belief is to accord with the Senator from Illinois that unless Congress does something about this vital problem, there will be a rebellion within the country. Demands will be made for tax reforms which will be far more burdensome than the improvement which the Senator from Illinois suggests.

The PRESIDING OFFICER. The time of the Senator from Illinois has expired. All time for debate on the amendment is exhausted.

All time on the amendment has expired.

The question is on agreeing to the amendment offered by the Senator from Illinois [Mr. DOUGLAS].

On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Oregon [Mr. LUSK], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MURRAY], and the Senator from Alabama [Mr. SPARKMAN], are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Wyoming [Mr. O'MAHONEY], are necessarily absent.

On this vote the Senator from Mississippi [Mr. EASTLAND] is paired with the Senator from Washington [Mr. MAGNUSON]. If present and voting, the Senator from Mississippi would vote "nay," and the Senator from Washington would vote "yea."

On this vote, the Senator from Alabama [Mr. SPARKMAN] is paired with the Senator from Minnesota [Mr. HUMPHREY]. If present and voting, the Senator from Alabama would vote "nay," and the Senator from Minnesota would vote "yea."

On this vote, the Senator from Montana [Mr. MURRAY] is paired with the Senator from Missouri [Mr. HENNINGS]. If present and voting, the Senator from Montana would vote "nay," and the Senator from Missouri would vote "yea."

On this vote, the Senator from Wyoming [Mr. O'MAHONEY] is paired with the Senator from Tennessee [Mr. KEFAUVER]. If present and voting, the Senator from Wyoming would vote "nay,"

and the Senator from Tennessee would vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. BRIDGES], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

If present and voting, the Senator from Arizona [Mr. GOLDWATER] would vote "nay."

The result was announced—yeas 30, nays 56, as follows:

[No. 245]

YEAS—30

Aiken	Javits	Pastore
Carroll	Keating	Prouty
Case, N.J.	Kennedy	Proxmire
Clark	Lausche	Russell
Dodd	Long, Hawaii	Smathers

Goldwater	Kefauver	Sparkman
Green	Lusk	

So Mr. DOUGLAS' amendment was rejected.

Mr. GORE. Mr. President, I call up my amendment identified as 6–17–60—B, and ask that it be stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Tennessee will be stated.

The LEGISLATIVE CLERK. It is proposed at the end of the bill to insert the following new title and section——

Mr. GORE. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with, and that it be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment ordered to be printed in the RECORD is as follows:

At the end of the bill insert the following new title and section:

TITLE III—ADDITIONAL PROVISIONS

SEC. 301. TREATMENT OF CERTAIN LUMP-SUM DISTRIBUTIONS

(a) ELIMINATION OF CAPITAL GAINS TREATMENT OF CERTAIN EMPLOYEES' TRUST DISTRIBUTIONS.—Section 402(a) of the Internal Revenue Code of 1954 (relating to taxability of beneficiary of exempt trust) is amended by striking out paragraph (2) and by striking out subparagraph (C) of paragraph (3).

(b) ELIMINATION OF CAPITAL GAINS TREATMENT OF CERTAIN EMPLOYEES' ANNUITY PAYMENTS.—Section 403(a) of the Internal Revenue Code of 1954 (relating to taxability of beneficiary under a qualified annuity plan) is amended by striking out paragraph (2).

(c) Section 72 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"(n) TREATMENT OF CERTAIN LUMP-SUM DISTRIBUTIONS.—

"(1) APPLICATION OF SUBSECTION.—

"(A) DISTRIBUTIONS BY EMPLOYEES' TRUST.—Subject to the provisions of subparagraph (C), this subsection shall apply to amounts distributed to a distributee, in the case of an employees' trust described in section 401(a) which is exempt from tax under section 501(a), if the total distributions payable to the distributee with respect to an employee are paid to the distributee within one taxable year of the distributee—

"(i) on account of the employee's death,

"(ii) after the employee has attained the age of 59½ years,

"(iii) after the employee has become disabled (within the meaning of section 213(g)(3)), or

"(iv) in the case of any employee other than an employee within the meaning of section 401(c)(1), on account of the employee's separation from service.

"(B) ANNUITY PLANS.—Subject to the provisions of subparagraph (C), this paragraph shall apply to amounts paid to a payee, in the case of an annuity plan described in section 403(a), if the total amounts payable to the payee with respect to an employee are paid to the payee within one taxable year of the payee—

"(i) on account of the employee's death,

"(ii) after the employee has attained the age of 59½ years,

"(iii) after the employee has become disabled (within the meaning of section 213(g)(3)), or

"(iv) in the case of an employee other than an employee within the meaning of section 401(c)(1), on account of the employee's separation from service.

"(C) This subsection shall apply if the recipient is the employee on whose behalf such contributions were made, only if contributions which were allowed as a deduction under section 404 have been made on behalf of such employee for 5 or more taxable years prior to the taxable year in which the total distributions payable or total amounts payable, as the case may be, are paid.

"(2) LIMITATION OF TAX.—In any case to which this subsection applies, the tax attributable to the amounts to which this subsection applies for the taxable year in which such amounts are received shall not be greater than 5 times the increase in tax which would result from the inclusion in gross income of the recipient of 20 percent of so much of the amount so received as is includible in gross income.

"(3) DETERMINATION OF TAXABLE INCOME.—Notwithstanding section 63 (relating to definition of taxable income), for purposes only of computing the tax under this chapter attributable to amounts to which this subsection applies and which are includible in gross income, the taxable income of the recipient for the taxable year of receipt shall be treated as being not less than the amount by which—

"(A) the aggregate of such amounts so includible in gross income, exceeds

"(B) the amount of the deductions allowed for such taxable year under section 151 (relating to deductions for personal exemptions).

In any case in which the preceding sentence results in an increase in taxable income for any taxable year, the resulting increase in the taxes imposed by section 1 or 3 for such taxable year shall not be reduced by any credit under part IV of subchapter A (other than section 31 thereof) which, but for this sentence, would be allowable."

Mr. GORE. Mr. President, on Saturday I offered an amendment the adoption of which the Eisenhower administration has beseeched the Congress for 2 years. Fortunately, this afternoon it was adopted. That amendment, in my opinion, is of an emergency nature.

The amendment I have now offered is likewise recommended by the Eisenhower administration. This amendment is similar to that submitted and recommended to the Congress by the Secretary of the Treasury, but it is not of an emergency nature. Therefore, if Senators will continue this generous attention for 5 minutes, I shall, due to the exigencies of the occasion and other reasons, withdraw the amendment.

This amendment may not be important in overall revenue loss, but it is important in principle. It would deny capital gains treatment to certain lump-sum distributions from corporate pension funds.

One reason why I am willing to withdraw this amendment, other than the exigencies of the pressing legislative situation, is that another bill is on the calendar to which this amendment could more properly be offered.

The Senate Finance Committee was informed by the Treasury Department that some corporation officials had received lump-sum corporate pension settlements in excess of $800,000. This large pension fund had been built up by tax-free corporate contributions.

This type of income bears no relationship whatsoever to capital gains. It is, rather, a form of ordinary income which has been deferred and accumulated. There is no equity whatsoever involved in according such income the favorable 25 percent capital gains treatment.

This inequity in the law has been recognized by the Treasury Department in a letter to the chairman of the Finance Committee on April 1, 1960. Under Secretary of the Treasury Fred C. Scribner stated:

> The present long-term capital gains treatment accorded to lump-sum distributions by qualified plans at termination of the employee's service or at his death should be removed.

Despite the recognition of this inequity by the Treasury, and despite this recommendation that such inequity be corrected, the Congress has failed to act.

The Treasury itself has been remiss in this regard. During consideration of the bill H.R. 10 by the Finance Committee, a bill which deals specifically with retirement plans, spokesmen for the Treasury Department indicated the Treasury was not satisfied with the bill as passed by the House and that the Treasury would submit proposals of its own in the pension and profit-sharing field.

The Treasury did submit proposals in the pension and profit-sharing field, to the Finance Committee, in the form of a draft bill. Although this draft contained a great many provisions dealing with pension and profit-sharing plans, it failed to correct completely this abuse which existing law allows.

During the consideration of this Treasury proposal by the Finance Committee, I offered an amendment which would

eliminate capital gains treatment for these lump-sum distributions altogether.

Under this amendment as I am now offering it, any lump-sum payment from a pension or profit-sharing plan would no longer be accorded capital gains treatment. Neither would it be treated, however, as ordinary income received within 1 year. What this amendment provides is that 20 percent of the amount received in a lump-sum distribution would be added to the beneficiary's ordinary income to determine his maximum tax rate. The amount of his tax liability on this 20 percent of the lump-sum distribution, as thus computed, would be multiplied by five and added to whatever tax liability he might have for other income received during that year. This gives in effect a 5-year spread, treating this lump-sum distribution as though it had been received in five equal parts over a 5-year period. This is something of a compromise between capital gains treatment and ordinary income treatment.

In view of the Treasury's recommendation, I have offered the amendment in this form and will support such a treatment of lump-sum distribution, though I doubt if the amendment goes far enough.

I am not able to estimate the overall revenue effect of this amendment. The Treasury does not have sufficiently detailed statistics in this area to determine the revenue loss for recent years caused by the capital gains treatment of lump-sum distributions. The fact that individual cases of this sort where the amounts involved exceeded $800,000, however, have come to light, indicates that the revenue loss has amounted to several million dollars annually.

Regardless of the amount of revenue which may have been lost during past years, I think it is safe to assume that corporation executives, as more of them begin to take advantage of so-called pension and profit-sharing plans, will seek to convert increasingly larger proportions of their ordinary income into such payments as this, purely for tax avoidance purposes. The same corporation official may have several corporate pension plans. There is no statutory limit to the number of corporate pension plans that men with sufficient money to be associated with several corporations may have.

If, instead of cashing in $800,000 at the capital gains rate, one wants to pass on to his grandchildren, or to whomever he wishes to pass the funds on to, they can, under certain circumstances, be passed on without gift tax, or without estate tax. Thus, you will see, the corporate contribution is tax deductible to the corporation. The official does not pay current income tax on the contribution. Moreover, the fund, in part or in whole, can be passed on without gift or estate tax.

I point out to the Senate another loophole of tax favoritism which even a Republican administration is asking a Democratic Congress to close. I hope that early next year the Senate Finance Committee will start work on removal of tax favoritism. Let us not wait again for action late in the session by the other body. The only primacy given to the other body in tax legislation is the origination of revenue measures. This does not lessen the responsibility of the U.S. Senate to promote fairness and equity in tax treatment. Any revenue measure that has originated in the House of Representatives can serve for amended legislation.

Mr. President, obviously this matter should be entitled to committee study. Therefore, with appreciation, first, for the adoption of the amendment earlier today, which was of an emergency nature, and, second, for the patience and attention of Senators tonight, I withdraw the amendment.

Mr. MONRONEY. Mr. President, earlier I gave notice that I intended to propose an amendment and time was reserved. I should like to yield myself 3 minutes on this amendment, and then I shall withdraw the amendment.

The PRESIDING OFFICER. The clerk will state the amendment.

Mr. MONRONEY. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MONRONEY. This is a very complicated amendment in form, but the intention is to tax fuel for jet aircraft. While the gasoline used in older, piston driven aircraft, is taxed at 2 cents a gallon, there is no tax today on the fuel which is used in our turbine powered airliners today.

I think the tax on this fuel should be equivalent, considering its effectiveness in the propulsion of jet aircraft and turboprop aircraft, to the tax on gasoline used in the reciprocating engine planes.

The amendment is very complicated. There is some question as to what the yield is per gallon of jet fuel as compared with a gallon of gasoline. Therefore, I do not propose to offer the amendment at this time, but I urge distinguished members of the Senate Finance Committee to set some hearings on this question, so they can ascertain what the amount of tax should be on jet fuel.

Therefore, Mr. President, I withhold the amendment at this time. I urge the committee to study the proposal and to act this year, so that we can have the revenue brought in on an equal basis.

Mr. LONG of Louisiana. Mr. President, I have an amendment which I offered on this same subject a year ago, to make it possible for the Federal Government to increase its matching with State welfare plans. The amendment was agreed to by the Senate and was taken to conference. The Senate conferees yielded to the House conferees, and the amendment did not come to a vote in the House.

This is the same provision which the House sent to the Senate 2 years ago. I am hopeful the amendment can be agreed to tonight. I ask the chairman of the committee if he is willing to agree to the amendment, in view of the fact that the amendment was lost in the conference a year ago.

Mr. BYRD of Virginia. Mr. President, I have not had an opportunity to consult with members of the committee. The general feeling of the members of the committee was that we should not accept amendments to this particular bill. I do not feel I can accept the amendment.

Mr. LONG of Louisiana. Mr. President, this is the same amendment which was agreed to by a majority of the Senate last year It would cost $142 million. There is no bill before the committee which would be as appropriate a vehicle to which to offer the amendment as this bill. Last year the Senate agreed to the amendment, which would raise the limit of the State matching from $65 to $75 as the top limit upon which the Federal Government could match the States. It would put into effect what the Senate agreed to a year ago and what the House agreed to 2 years ago, which would result in a variable formula, as high as 70 percent on that part of the payments which are above the amount of $30.

The amendment would be of assistance to 2,372,000 aged people. It would be of assistance to 3 million orphaned children, to 108,000 blind persons, and to 356,000 permanently and totally disabled persons. The amount of assistance to be given those people would be small, from $3 a month to perhaps as much as $7 or $8 a month, depending upon what the States wished to do in matching the available Federal funds.

It seems to me, since we have provided a 7½ percent pay raise for all Federal employees and since we have provided very amply for many others in various places in life, that it would be appropriate for us to provide some additional assistance, which the Congress did not provide last year or this year, for those who are most in need.

Most of what is in the amendment was passed by the House 2 years ago. It was taken out in the Senate on a motion by the Senator from Florida [Mr. SMATHERS]. I supported the motion at that time, because we were threatened with a veto at a time when Congress was anxious to adjourn, and Senators wished to go home. The theory was that if we did as much as even the Committee on Finance had agreed to, and as much as the House had agreed to, the President probably would veto the bill and Congress would not be in session to act upon the veto.

I hope very much that the Senate will add the amendment to the bill, as it did a year ago, in order that we can confer with the House, to see if we can provide some additional assistance for the needy, the aged, the blind, and the orphaned children of this country. I hope we shall have a favorable vote on the amendment.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. LONG of Louisiana. Mr. President, I offer the amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 10, after line 17, it is proposed to insert a new title, as follows:

TITLE III—CORPORATE NORMAL-TAX RATE AND CERTAIN EXCISE-TAX RATES

That (a) subsection (a) of section 3 of the Social Security Act is amended—

(1) by striking out "October 1, 1958" and inserting in lieu thereof "October 1, 1960";
(2) by striking out "$65" and inserting in lieu thereof "$75"; and
(3) by striking out "$35" and inserting in lieu thereof "$38".

(b) Subsection (a) of section 403 of the Social Security Act is amended—
(1) by striking out "October 1, 1958" and inserting in lieu thereof "October 1, 1960";
(2) by striking out "fourteen-seventeenths" and inserting in lieu thereof "five-sixths", and by striking out "$17" and inserting in lieu thereof "$18";
(3) by striking out "$30" and inserting in lieu thereof "$33"; and
(4) by striking out "$18" and inserting in lieu thereof "$20".

(c) Subsection (a) of section 1003 of the Social Security Act is amended—
(1) by striking out "October 1, 1958" and inserting in lieu thereof "October 1, 1960";
(2) by striking out "$65" and inserting in lieu thereof "$75"; and
(3) by striking out "$35" and inserting in lieu thereof "$38".

(d) Subsection (a) of section 1403 of the Social Security Act is amended—
(1) by striking out "October 1, 1958" and inserting in lieu thereof "October 1, 1960";
(2) by striking out "$65" and inserting in lieu thereof "$75"; and
(3) by striking out "$35" and inserting in lieu thereof "$38".

(e) The amendments made by the preceding subsections of this section shall be effective—
(1) in the case of money payments, under a State plan approved under title I, IV, X, or XIV of the Social Security Act, for months after September 1959; and
(2) in the case of assistance in the form of medical or any other type of remedial care, under such a plan, with respect to expenditures made after September 1959.

(f) (1) Section 1101(a)(8)(A) of the Social Security Act is amended by striking out "65 per centum" and inserting in lieu thereof "70 per centum".

(2) The amendment made by paragraph (1) shall be effective with respect to the calendar quarter commencing October 1, 1959, and all subsequent calendar quarters.

SEC. 2. (a) Section 3(a)(1)(A), section 1003(a)(1)(A), and section 1403(a)(1)(A) of the Social Security Act are amended by inserting immediately after "$30" in each such section the following: "(or, in the case of any State in which the per capita income is less than 60 per centum of the average per capita income of the United States, five-sixths of such expenditures, not counting so much of any expenditure with respect to any month as exceeds the product of $36)".

(b) Section 1101(a) of the Social Security Act is amended by adding at the end thereof the following new paragraph:

"(9) The term 'per capita income', as used in sections 3(a)(1)(A), 1003(a)(1)(A), and 1403(a)(1)(A), means the average per capita income of each State or of the United States, as the case may be, for the three most recent calendar years for which satisfactory data are available from the Department of Commerce."

(c) The amendments made by the preceding subsections of this section shall be effective with respect to the calendar quarter commencing October 1, 1960, and all subsequent calendar quarters.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. LONG of Louisiana. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were not ordered.

Mr. LONG of Louisiana. Mr. President, I suggest the absence of a quorum.

I should like to have a vote on the amendment.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with, and I ask for a division on the amendment.

The PRESIDING OFFICER. Without objection, further proceedings under the quorum call will be dispensed with.

The question is on agreeing to the amendment offered by the Senator from Louisiana. A division is requested.

Mr. LONG of Louisiana. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that further proceedings under the quorum call may be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, I should like to have a yea-and-nay vote on the amendment. There is no limitation on debate. I can debate the amendment as long as necessary, but I think Senators would prefer to vote. I do not believe any argument I may make will produce a lot of difference in the vote. I think Senators have other things they wish to do, and that it will accommodate them to vote, rather than to have a quorum call and to have me debate the amendment over a long period of time. I suggest a vote on the amendment.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. CLARK. How much revenue would the amendment cost the Treasury?

Mr. LONG of Louisiana. It would cost $142 million to assist some 6 million needy people in this country. That is only about one-fourth the amount of revenue the bill would bring in for the Treasury.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana [Mr. LONG]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Nevada [Mr. CANNON], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MURRAY], the Senator from Alabama [Mr. SPARKMAN], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Oregon [Mr. LUSK], are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Washington [Mr. MAGNUSON], and the Senator from Missouri [Mr. SYMINGTON] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. BRIDGES] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Nebraska [Mr. HRUSKA] is detained on official business.

If present and voting, the Senator from Arizona [Mr. GOLDWATER] and the Senator from Nebraska [Mr. HRUSKA] would each vote "nay."

The result was announced—yeas 37, nays 45, as follows:

[No. 246]

YEAS—37

So the amendment of Mr. LONG, of Louisiana was rejected.

Mr. DIRKSEN. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. JOHNSON of Texas. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on final passage.

The yeas and nays were ordered.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, the minority leader wishes to know what will follow the vote on the bill presently under consideration. We propose to move to consider Calendar 1668, the legislative appropriation bill. So far as I know, there is no serious objection and no serious controversy relative to that bill. There may be some discussion but not at length. We shall have a yea and nay vote on the legislative appropriation bill if we can reach it tonight.

PUBLIC DEBT AND TAX RATE EXTENSION ACT OF 1960

The Senate resumed the consideration of the bill (H.R. 12381) to increase for a 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal tax rate and certain excise tax rates.

The PRESIDING OFFICER. The question is on the passage of the bill. The yeas and nays have been ordered, and the clerk will call the roll.

Mr. MANSFIELD. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MURRAY], the Senator from Alabama [Mr. SPARKMAN], the Senator from Missouri [Mr. SYMINGTON], and the Senator from Oregon [Mr. LUSK] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON], the Senator from Mississippi [Mr. EASTLAND], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Oregon [Mr. LUSK], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Alabama [Mr. SPARKMAN], and the Senator from Missouri [Mr. SYMINGTON] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. BRIDGES] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent. If present and voting, the Senator from New Hampshire [Mr. BRIDGES] and the Senator from Arizona [Mr. GOLDWATER] would each vote "yea."

The result was announced—yeas 84, nays 0, as follows:

[No. 247]

YEAS—84

NAYS—0

NOT VOTING—16

Bridges	Hartke	Murray
Cannon	Hennings	O'Mahoney
Church	Humphrey	Sparkman
Eastland	Kefauver	Symington
Goldwater	Lusk	
Green	Magnuson	

So the bill, H.R. 12381, was passed.

The title was amended, so as to read: "An Act to increase for a one-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for one year the existing corporate normal-tax rate and certain excise-tax rates, and for other purposes."

Mr. BYRD of Virginia. Mr. President, I move that the Senate insist on its amendments, request a conference thereon with the House of Representatives, and that the Chair appoint the conferees on the part of the Senate.

Mr. CLARK. Mr. President, I have no intention of objecting to the motion of the Senator from Virginia. However, I should like to read into the RECORD the procedures in this connection as stated in Senate Procedure, page 172:

> Under rule XXIV, the Senate may elect its conferees, if it sees fit to do so. The Senate has a right to elect its own conferees. A motion to elect certain conferees is amendable by substituting other conferees.
>
> * * * * *
>
> The conferees in theory are appointed by the Presiding Officer but in fact are designated by friends of the measure, who are in sympathy with the prevailing view of the Senate, and with consideration for the usual party ratio. And the Senate, on motion, may elect its conferees as it sees fit.

I read from page 174, as follows:

> Senators have declined to serve as conferees in some instances because they were not in sympathy with the provisions of bills as passed by the Senate or, after a conference report was rejected, a Senator declined to serve on a second conference committee because of views not in harmony with the action of the Senate.
>
> Conferees have resigned because they were not in sympathy with the action of the Senate on the bill or opposed to the bill in question.

The distinguished Senator from Virginia [Mr. BYRD] has been kind enough to advise me the names of the Senators whom he has recommended that the Chair appoint as conferees. I shall not object to their appointment, although a majority of the conferees are not in support of the views of the Senate as expressed this afternoon. However, I have such confidence in the senior Senator from Virginia and in the other conferees that I shall not raise the point raised by the procedures I have just read. Accordingly, I have no objection to the motion of the Senator from Virginia.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Virginia [Mr. BYRD].

The motion was agreed to; and the Presiding Officer appointed Mr. BYRD of Virginia, Mr. KERR, Mr. FREAR, Mr. LONG of Louisiana, Mr. WILLIAMS of Delaware, and Mr. CARLSON conferees on the part of the Senate.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that the bill H.R. 12381 be printed with the amendments of the Senate numbered, and that, in engrossing the amendments of the Senate, the Secretary of the Senate be authorized to make such clerical and conforming changes as may be necessary.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE APPROPRIATIONS, 1961

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1668, H.R. 12232.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 12232) making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Appropriations with amendments.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, this is the appropriation bill for the legislative branch of the Government. It has already been passed by the House. It contains the usual line items, and there are very few objections thereto.

The committee had many requests for additional positions or employments, and many requests for increases in salaries, almost all of which were declined.

The committee approved an additional clerk for the Office of the Legislative Counsel of the Senate and an additional

position of inspector in connection with the charwomen in the Senate Office Building.

The House of Representatives has approved positions for an air-conditioning mechanic and two safety inspectors, in which the Senate is asked to concur.

Under the Library of Congress, the House approved 32 additional positions; and under salaries and expenses, two additional positions under Books for the Blind, and 28 additional positions for the Legislative Reference Service.

The committee referred that matter to a special subcommittee, comprised of the Senator from Oklahoma [Mr. MONRONEY] and the Senator from Colorado [Mr. ALLOTT], who conferred with the Librarian of Congress. The subcommittee reported that they approved of the new assignments because they were adjudged to be necessary for the work being done.

A few increases in salaries have been approved. The first is that of the Chaplain of the Senate, whose salary was raised to $8,195, the same as the salary of the Chaplain of the House. That is an increase of about $2,500.

The salary of the Superintendent of Mails in the Senate was increased about $900. The salaries of three employees in each of the cloakrooms have been increased $565.

The salaries of the Official Reporters of Debates appointed by the Senate have been increased from $16,300 to $17,050 per annum.

Two other employees in the office of the Official Reporters of Debates have been granted increases of approximately $668.

Slight increases have been granted to two printing clerks.

The Senate has also included language which will permit the payment of transportation—that is, mileage—for four members of a Senator's staff instead of two. That is in connection with travel back to the State, especially with reference to keeping offices open in the summer and in the fall.

The postage allowance was increased from $450 to $550 per annum.

The most important single proposal in the entire bill, in my opinion, is the appropriation of $400,000 to restore the Old Senate Chamber, on the principal floor of the Capitol, to the condition which existed when it was last occupied by the Senate in 1859. That is the room ordinarily called the Old Supreme Court Chamber. It is really the Old Senate Chamber.

Also, provision has been made to restore the Old Supreme Court Chamber, on the ground floor of the Capitol, to the condition which existed when the Supreme Court last occupied the Chamber in 1860.

Photographs are on the desk, if Senators wish to examine them.

The Assistant Architect of the Capitol, who spent 10 years in connection with the restoration of colonial Williamsburg, has said that these two rooms, when properly restored, will represent some of the finest interior architecture to be found anywhere in Washington.

Most happily, the additions to the east front of the Capitol will provide sufficient space for all the activities which are now carried on in the two fine Chambers it is proposed to restore. They will be dedicated, in the language of the bill, as shrines for exhibition to the public, and are to be used for no other purpose.

The committee had for consideration a proposal to paint the old Senate garage. However, after looking into the matter further, the subcommittee recommended that the item be deleted from the bill.

Mr. President, to carry out the work which I have so far described, I move that the Senate disagree to the amendment on page 25, line 15, and to the committee amendment on page 29, line 25, of the bill as now written. They cover the legislative garage and Legislative Reference Service items, which I have explained.

Mr. MANSFIELD. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield.

Mr. MANSFIELD. Do I correctly understand that the distinguished chairman of the Subcommittee on Legislative Appropriations has moved that the Senate agree to the figure of $1,479,300 instead of to the House figure of $1,660,200?

Mr. STENNIS. No; that is not correct. My motion now pertains to the item on page 25, line 15, relating to the legislative garage, and also to the committee amendment on page 29, line 25, relating to the Legislative Reference Service.

Mr. MANSFIELD. Yes. That is what I had reference to. Did I correctly understand the Senator from Mississippi to say that instead of two of our staff members being allowed a round trip back home, we will now, under the bill, allow four members of our staff to go home?

Mr. STENNIS. The Senator is correct. That matter will really be covered in a request for unanimous consent that the committee amendments be agreed to en bloc.

Mr. MANSFIELD. It appears to me that it would be far better to give serious consideration to the House figure rather than to allow two more of our staff members to go home. As I understand, the House figure has been reduced by the committee by $180,900. That means that this amount for the employment of 23 additional budgeted positions, and including $25,000 for temporary employees during the session, was approved by the House committee and passed by the House, but not approved by the Senate committee.

Mr. STENNIS. My motion is to restore the House figure.

Mr. MANSFIELD. Of $1,660,200?

Mr. STENNIS. That is correct.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. JAVITS. I had in mind asking the Senator from Mississippi about the item communications, on page 8. I do not wish to interrupt the Senator or the Senate during the consideration of the Senator's motion.

Mr. STENNIS. I hope we may proceed to dispose of the matter I have mentioned, to which I do not believe there is objection.

Mr. President, I have moved that the Senate disagree to the committee amendment to be found on page 25, in line 15. The effect of disagreeing to that amendment will be to strike out the increased amount proposed by the Senate committee for the painting of the legislative garage. Let us vote first on this item.

The PRESIDING OFFICER. The questions is on agreeing to the motion of the Senator from Mississippi.

The motion was agreed to.

Mr. STENNIS. Mr. President, I now move that the Senate disagree to the committee amendment to be found on page 29, in line 25, of the bill as now written. This is in the Legislative Reference Service item.

Mr. MANSFIELD. Mr. President, just to make the record clear, what is the figure on which we shall vote?

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 29, in line 25, it is proposed to strike out "$1,660,200," and insert in lieu thereof "$1,479,300."

Mr. STENNIS. Mr. President, I have moved that the Senate disagree to the committee amendment, so as, in effect, to restore the amount voted by the House, namely, $1,660,200.

The PRESIDING OFFICER. The Chair rules that on the question of agreeing to the committee amendment, if the negative votes are in the majority, the amount proposed to be supplanted by the Senate committee amendment will be restored.

The question is on agreeing to the committee amendment.

The amendment was rejected.

Mr. STENNIS. Mr. President, I now ask unanimous consent that the remaining committee amendments be agreed to en bloc—that is to say, all committee amendments except the ones which already have been passed on—and that the bill as thus amended be regarded for the purpose of amendment as original text, provided that no point of order shall be considered to have been waived by reason of agreeing to this order. That is the customary motion.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Mississippi.

The motion was agreed to.

The amendments agreed to en bloc are as follows:

At the top of page 2, to insert a new heading, as follows:

"SENATE

"Salaries of Senators, mileage of the President of the Senate and of Senators, expense allowance of the majority and minority leaders of the Senate, and salary and expense allowance of the Vice President"

On page 2, after line 6, to insert:

"COMPENSATION OF SENATORS

"For compensation of Senators, $2,433,370."

On page 2, after line 8, to insert:

"MILEAGE OF PRESIDENT OF THE SENATE AND OF SENATORS

"For mileage of the President of the Senate and of Senators, $58,370."

On page 2, after line 12, to insert:

"EXPENSE ALLOWANCE OF MAJORITY AND MINORITY LEADERS

"For expense allowance of the majority leader and the minority leader of the Senate, $2,000 each; in all, $4,000."

On page 2, after line 16, to insert:

"COMPENSATION OF THE VICE PRESIDENT OF THE UNITED STATES

"For the compensation of the Vice President of the United States, $37,775."

On page 2, after line 20, to insert:

"EXPENSE ALLOWANCE OF THE VICE PRESIDENT

"For expense allowance of the Vice President, $10,000."

On page 2, after line 22, to insert:

"SALARIES, OFFICERS AND EMPLOYEES

"For compensation of officers, employees, clerks to Senators, and others as authorized by law, including agency contributions as authorized, which shall be paid from this appropriation without regard to the below limitations, as follows:"

On page 3, after line 3, to insert:

"OFFICE OF THE VICE PRESIDENT

"For clerical assistance to the Vice President, at rates of compensation to be fixed by him in basic multiples of $5 per month, $112,140."

On page 3, after line 7, to insert:

"CHAPLAIN

"Chaplain of the Senate, $8,195: *Provided,* That effective July 1, 1960, the gross compensation of the chaplain of the Senate shall be $8,195 per annum."

On page 3, after line 11, to insert:

"OFFICE OF THE SECRETARY

"For office of the Secretary, $646,805."

On page 3, after line 13, to insert:

"COMMITTEE EMPLOYEES

"For professional and clerical assistance to standing committees, and the Select Committee on Small Business, $2,372,960."

On page 3, after line 17, to insert:

"CONFERENCE COMMITTEES

"For clerical assistance to the Conference of the Majority, at rates of compensation to be fixed by the chairman of said committee, $44,020."

On page 3, after line 21, to insert:

"For clerical assistance to the Conference of the Minority, at rates of compensation to be fixed by the chairman of said committee, $44,020."

At the top of page 4, to insert:

"ADMINISTRATIVE AND CLERICAL ASSISTANTS TO SENATORS

"For administrative and clerical assistants and messenger service for Senators, $11,078,850."

On page 4, after line 4, to insert:

"OFFICE OF SERGEANT AT ARMS AND DOORKEEPER

"For office of Sergeant at Arms and Doorkeeper, $2,309,660: *Provided,* That effective July 1, 1960, the basic compensation of the superintendent of mails, Senate post office shall be $3,540 per annum.

On page 4, after line 9, to insert:

"OFFICES OF THE SECRETARIES FOR THE MAJORITY AND THE MINORITY

"For the offices of the secretary for the majority and the secretary for the minority, $115,575: *Provided,* That effective July 1, 1960, the respective secretaries may fix the basic compensation of the chief telephone pages for the majority and minority at not to exceed $3,780 per annum each; may fix the basic compensation of one telephone page for the majority and minority at not to exceed $2,880 per annum each; and may fix the basic compensation of one telephone page for the majority and minority at not to exceed $2,520 per annum each."

On page 4, after line 21, to insert:

"OFFICES OF THE MAJORITY AND MINORITY WHIPS

"For two clerical assistants, one for the Majority Whip and one for the Minority Whip, at not to exceed $5,580 basic per annum each, $22,050."

At the top of page 5, to insert:

"OFFICIAL REPORTERS OF DEBATES

"For office of the Official Reporters of Debates, $208,500: *Provided,* That effective July 1, 1960, the official reporters of debates heretofore or hereafter appointed by resolution of the Senate shall be employees of the Senate and shall be compensated at the gross rate of $17,050 per annum each: *Provided further,* That the said official reporters are authorized to appoint such reporters, transcribers, and other employees as may be necessary and fix their compensation in basic multiples of $60 per annum."

On page 5, after line 10, to insert:

"OFFICE OF THE LEGISLATIVE COUNSEL OF THE SENATE

"For salaries and expenses of the Office of the Legislative Counsel of the Senate, $216,950."

On page 5, after line 14, to insert:

"CONTINGENT EXPENSES OF THE SENATE

"Legislative reorganization

"For salaries and expenses, legislative reorganization, $117,150."

On page 5, after line 18, to insert:

"SENATE POLICY COMMITTEES

"For salaries and expenses of the Majority Policy Committee and the Minority Policy Committee, $124,685 for each such committee; in all, $249,370."

At the top of page 6, to insert:

"JOINT ECONOMIC COMMITTEE

"For salaries and expenses of the Joint Economic Committee, $156,950."

On page 6, after line 3, to insert:

"JOINT COMMITTEE ON ATOMIC ENERGY

"For salaries and expenses of the Joint Committee on Atomic Energy, $280,145."

On page 6, after line 6, to insert:

"JOINT COMMITTEE ON PRINTING

"For salaries and expenses of the Joint Committee on Printing, $106,515; for expenses of compiling, preparing, and indexing the Congressional Directory, $1,600; in all, $108,115."

On page 6, after line 11, to insert:

"VICE PRESIDENT'S AUTOMOBILE

"For purchase, exchange, driving, maintenance, and operation of an automobile for the Vice President, $8,245."

On page 6, after line 14, to insert:

"AUTOMOBILE FOR THE PRESIDENT PRO TEMPORE

"For purchase, exchange, driving, maintenance, and operation of an automobile for the President pro tempore of the Senate, $11,000."

On page 6, after line 18, to insert:

"AUTOMOBILES FOR MAJORITY AND MINORITY LEADERS

"For purchase, exchange, driving, maintenance, and operation of two automobiles, one for the majority leader of the Senate, and one for the minority leader of the Senate, $16,490."

At the top of page 7, to insert:

"FURNITURE

"For services and materials in cleaning and repairing furniture, and for the purchase of furniture, $31,190: *Provided,* That the furniture purchased is not available from other agencies of the Government."

On page 7, after line 5, to insert:

"INQUIRIES AND INVESTIGATIONS

"For expenses of inquiries and investigations ordered by the Senate or conducted pursuant to section 134(a) of Public Law 601, Seventy-ninth Congress, including $380,000 for the Committee on Appropriations, to be available also for the purposes mentioned in Senate Resolution Numbered 193, agreed to October 14, 1943, $3,568,355."

On page 7, after line 12, to insert:

"FOLDING DOCUMENTS

"For the employment of personnel for folding speeches and pamphlets at a gross rate of not exceeding $1.77 per hour per person, $31,900."

On page 7, after line 16, to insert:

"SENATE RESTAURANTS

"For repairs, improvements, equipment, and supplies for Senate kitchens and restaurants, Capitol Building and Senate Office Buildings, including personal and other services, to be expended under the supervision of the Committee on Rules and Administration, United States Senate, $85,000."

At the top of page 8, to insert:

"MAIL TRANSPORTATION

"For maintaining, exchanging, and equipping motor vehicles for carrying the mails and for official use of the offices of the Secretary and Sergeant at Arms, $16,560."

On page 8, after line 4, to insert:

"MISCELLANEOUS ITEMS

"For miscellaneous items, exclusive of labor, $1,974,105."

On page 8, after line 6, to insert:

"POSTAGE STAMPS

"For postage stamps for the Offices of the Secretaries for the Majority and Minority, $140; and for airmail and special-delivery stamps for Office of the Secretary, $160; Office of the Sergeant at Arms, $125; Senators and the President of the Senate, as authorized by law, $55,550, and the maximum allowance per capita of $450 is increased to $550 for the fiscal year 1961 and thereafter; in all, $55,975."

On page 8, after line 14, to insert:

"STATIONERY (REVOLVING FUND)

"For stationery for Senators and the President of the Senate, $181,800; and for stationery for committees and officers of the Senate, $13,200; in all, $195,000, to remain avilable until expended."

On page 8, after line 19, to insert:

"COMMUNICATIONS

"For an amount for communications which may be expended interchangeably for payment, in accordance with such limitations and restrictions as may be prescribed by the Committee on Rules and Administration, of charges on official telegrams and long-distance telephone calls made by or on behalf of Senators or the President of the Senate, such telephone calls to be in addition to those authorized by the provisions of the Legislative Branch Appropriation Act, 1947 (60 Stat. 392; 2 U.S.C. 46c, 46d, 46e), as amended, and the First Deficiency Appropriation Act, 1949 (63 Stat. 77; 2 U.S.C. 46d–1), $15,150."

On page 9, after line 7, to insert:

"ADMINISTRATIVE PROVISIONS

"The ninth paragraph under the heading 'Administrative Provisions' in the appropriations for the Senate in the Legislative Branch Appropriation Act, 1957 (2 U.S.C. 127) is amended by striking out 'two' where it appears therein and inserting in lieu thereof 'four'."

On page 9, after line 13, to insert:

"No part of any appropriation disbursed by the Secretary of the Senate shall be available hereafter for the payment to any person, at the time of the service upon him of a subpena requiring his attendance at any inquiry or hearing conducted by any committee of the Congress or of the Senate or any subcommittee of any such committee, of any witness fee or any sum of money as

an advance payment of any travel or subsistence expense which may be incurred by such person in responding to that subpena."

On page 19, after line 15, to insert:

"JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES

"For an amount to enable the Joint Committee on Reduction of Nonessential Federal Expenditures to carry out the duties imposed upon it by section 601 of the Revenue Act of 1941 (55 Stat. 726), to remain available during the existence of the committee, $24,910, to be disbursed by the Secretary of the Senate."

On page 21, line 17, after the word "of", to strike out "$10,000" and insert "$20,000".

On page 23, after line 4, to insert:

"RESTORATION OF OLD SENATE CHAMBER AND OLD SUPREME COURT CHAMBER IN THE CAPITOL

"To enable the Architect of the Capitol to afford to the American people an opportunity to observe in its historic form, and to maintain as objects of interest to the youth of the United States, the rooms in the Capitol in which the United States Senate and the United States Supreme Court conducted their respective sessions in the early decades of our Nation, the Architect of the Capitol is authorized to make such expenditures as may be necessary to restore the Old Senate Chamber on the principal floor of the Capitol and the Old Supreme Court Chamber on the ground floor of the Capitol substantially to the condition in which these chambers existed when last occupied in 1859 and 1860, respectively, by the Senate and the Court, including expenditures for procurement, restoration, and repair of furniture and furnishings for these chambers, $400,000 to be expended without regard to section 3709 of the Revised Statutes, as amended, and to remain available until expended,."

On page 23, after line 23, to insert:

"Said chambers are hereby dedicated as permanent historic shrines of the Senate of the United States and of the Supreme Court of the United States, and when restored, shall be exhibited to the public and used for no other purpose."

On page 24, after line 3, to insert:

"SUBWAY TRANSPORTATION, CAPITOL AND SENATE OFFICE BUILDINGS

"For maintenance, repairs, and rebuilding of the subway transportation system connecting the Senate Office Buildings with the Capitol, including personal and other services, $6,000."

On page 24, after line 9, to insert:

"SENATE OFFICE BUILDINGS

"For maintenance, miscellaneous items and supplies, including furniture, furnishings, and equipment; and for labor and material incident thereto, and repairs thereof; for purchase of waterproof wearing apparel, and for personal and other services; including eight female attendants in charge of ladies retiring rooms at $1,800 each, for the care and operation of the Senate Office Buildings; uniforms or allowances therefor as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); to be expended under the control and supervision of the Architect of the Capitol; in all, $2,338,400."

On page 24, after line 21, to insert:

"EXTENSION OF ADDITIONAL SENATE OFFICE BUILDING SITE

"For an additional amount to enable the Architect of the Capitol, under the direction of the Senate Office Building Commission, to carry out the provisions of Public Law 85–429, Eighty-fifth Congress, relating to the acquisition of property in square 724 in the District of Columbia, including necessary expenses, $69,500, to remain available until expended."

On page 25, after line 5, to insert:

"For an additional amount to enable the Architect of the Capitol, under the direction of the Senate Office Building Commission, to carry out the provisions of Public Law 85–591, Eighty-fifth Congress, relating to the acquisition of property in square 725 in the District of Columbia, including necessary expenses, $70,000, to remain available until expended."

On page 28, line 11, after the word "by", to strike out "H.J. Res. 352, Eighty-sixth Congress" and insert "Public Law 86–469".

Mr. STENNIS. Mr. President, on behalf of the Senator from Arizona [Mr. HAYDEN], I offer an amendment identified as "6–18–60—C." The amendment is submitted on behalf of the Senator from Arizona [Mr. HAYDEN], the Senator from Oklahoma [Mr. MONRONEY], the Senator from Colorado [Mr. ALLOTT], the Senator from Massachusetts [Mr. SALTONSTALL], and myself. The amendment relates to foreign travel expenses of Senators and employees of the Senate.

I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The Chief Clerk proceeded to read the amendment, which is as follows:

On page 34, line 17, insert the following:

"SEC. 105. (a) Section 502(b) of the Mutual Security Act of 1954, as amended, is amended by inserting before the last sentence thereof a new sentence as follows: 'Such consolidated report, in the case of a Senate committee or a joint committee whose funds are disbursed by the Secretary of the Senate, shall show, in addition to the information otherwise required to be included, the total amount expended for each purpose by each member and employee during the calendar year covered by the report, or in the case of the report for the calendar year 1960, during the last six months of such year: *Provided*, That for the purposes of any report required by this section, a statement of the total amount of the per diem in lieu of subsistence authorized for any such member or employee in accordance with United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate shall be considered a sufficient itemization of any expenditures made from such allowance.'

"(b) Each Senate member of the United States group or delegation to the Interparliamentary Union, the NATO Parliamentarian's Conference, the Canada-United States Interparliamentary Group, the Mexico-United States Interparliamentary Group, or any similar interparliamentary group of which the United States is a member, and each employee of the Senate, by whom or on whose behalf expenditures are made from funds appropriated for the expenses of such group or delegation, shall file with the chairman of the Committee on Foreign Relations of the Senate an itemized report showing all such expenditures made by or on behalf of each member or employee together with the purposes of the expenditure, including subsistence, transportation, and other purposes. Within sixty days after the beginning of each regular session of Congress, the chairman of the Committee on Foreign Relations shall prepare consolidated reports showing with respect to each such group or delegation the total amount expended, the purposes of the expenditures, the amount expended for each such purpose, the names of the members or employees by or on behalf of whom the expenditures were made and the amount expended by or on behalf of each member or employee for each such purpose. The consolidated reports prepared by the chairman of the Committee on Foreign Relations shall be filed with the Committee on Appropriations of the Senate. For the purposes of any report required by this section, a statement of the total amount of the per diem in lieu of subsistence authorized for any such member or employee in accordance with United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate shall be considered a sufficient itemization of any expenditures made from such allowance. Each such consolidated report shall be printed in the Congressional Record within ten days after receipt by the Committee on Appropriations of the Senate.

"(c) Expenditures, whether from foreign currencies owned by the United States or from dollar appropriations, for expenses of members and employees of committees of the Senate, of joint committees whose funds are disbursed by the Secretary of the Senate, or of the Senate group or delegation of any interparliamentary body, incurred after July 1, 1960, in connection with travel outside the United States, shall be authorized only in accordance with the provisions of the United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate.

"(d) Section 60 of the Revised Statutes (2 U.S.C. 102) is amended by adding at the end thereof a new paragraph as follows:

"'Reports of the Secretary of the Senate under this section shall be printed as a Senate document, and contain an index for all but salary payments.'"

Mr. STENNIS. Mr. President, I ask unanimous consent that the amendment not be read at this time; I think it can be stated, and will be stated, fully.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. The substance of the amendment is that it provides a definite procedure to be followed by Senators and employees of the Senate and Senate committees, when traveling beyond the United States. It pertains to a per diem and to travel expenses, and applies only to foreign travel, and applies only to the Senate.

This subject was submitted to the full committee in the form of an amendment which heretofore has been known as the Williams amendment, which has been adopted by the Senate on prior occasions, but has been lost in conference.

This is an effort to work out a definite, practical rule which will apply, and to limit it to the Senate only; and the attempt is thus to set up, here on the floor, a definite rule; and it will avoid any disagreement in conference; and if it is adopted, it will leave to each House the matter of establishing its own rules with reference to this matter.

Briefly stated, the amendment provides that instead of reporting every detailed item of expense while traveling abroad, either on hard dollars or on foreign currencies, the Senator or the Senate staff member will be allowed a per diem; and that per diem will be, under the present rules of the Senate Committee on Rules and Administration, the same as the one the executive agencies have adopted for that particular country. It will vary from country to country; but under the present rules of the Senate Committee on Rules and Administration, we shall adopt, as a starter, the same rules that the executive branch of the Government now uses for that particular country.

Mr. WILLIAMS of Delaware. Mr. President——

Mr. CASE of South Dakota. Mr. President——

Mr. STENNIS. Mr. President, before I yield, I wish to cover the main points.

If a Senator or a Senate staff member were traveling in a country where the actual expenses were more than the per diem allowance, and if he wished to make a claim therefor, under the present rules of the Senate Committee on Rules and Administration—which are printed, and which will be discussed later by another Senator—he could apply to the Senate Rules Committee for allowance of the additional sum.

There is another major item: The amendment also provides that a report of these expenditures shall be made by each Member of the Senate or each Senate staff member within 60 days after the convening of the January session each year, and will be reported to the Appropriations Committee and 10 days thereafter will be published in the CONGRESSIONAL RECORD.

Mr. President, this amendment was prepared after study and investigation by the Senator from Arizona [Mr. HAYDEN], the Senator from Colorado [Mr. ALLOTT], and the Senator from Oklahoma [Mr. MONRONEY]. If they wish me to do so, I shall be glad, if I may, to yield at this time to the Senator from Arizona [Mr. HAYDEN]—or if he prefers to obtain the floor in his own right, I shall be glad to have him do so—in order to present this matter to the Senate.

Mr. HAYDEN. Mr. President——

Mr. STENNIS. May I yield to the Senator from Arizona?

Mr. HAYDEN. Certainly.

Mr. President, a very similar proposal was before the Senate last month, on an amendment offered by the Senator from Delaware [Mr. WILLIAMS]. We adopted it, and took it to conference. The House very properly, in my judgment, said, "We do not allow the Senate of the United States to tell us what our Members shall do." I feel that the House has that right; namely, to regulate the conduct of its own Members; and the Senate has no right to attempt to do otherwise.

On the other hand, if we set a pattern for ourselves, that is it; and if the House then wishes to include its own Members, or if it wishes to adopt its own rules, it may do so.

I am sure that all Senators would resent an effort by the House to dictate how the Members of this body should conduct themselves while traveling abroad; and of course that rule works both ways, as applied to this measure.

The amendment works in a similar way as does the amendment of the Senator from Delaware [Mr. WILLIAMS], except that this amendment applies only to Senators.

Mr. MONRONEY. Mr. President, will the Senator from Mississippi yield to me?

The PRESIDING OFFICER (Mr. MCGEE in the chair). Does the Senator from Mississippi yield to the Senator from Oklahoma?

Mr. STENNIS. I yield.

Mr. MONRONEY. The amendment relates only to foreign travel, but it relates not only to funds disbursed by Senators in connection with committee travel, but also to funds disbursed by Members of the Senate who travel to the Interparliamentary Union or to the NATO Parliamentary Union—expenditures which heretofore have not been accountable under normal Government regulations, except when they come from contingent funds. This amendment brings all those expenditures under the regular travel rules of the Senate.

In case someone does not understand why we do not refer in the amendment to travel within the United States, I point out that the booklet entitled "U.S. Senate Travel Regulations" sets forth the rules on "Subsistence Expenses." They appear on page 11, as follows:

> No part of the foregoing appropriations made under the heading "Contingent Expenses of the Senate," may be expended for per diem and subsistence expenses (as defined in the Travel Expenses Act of 1949, as amended), at rates in excess of $12 a day; except that (1) higher rates may be established by the Committee on Rules and Administration for travel beyond the limits of the continental United States.

This provision with respect to travel beyond the United States puts us in the same category as that of any Government official who travels abroad.

For instance, in Basutoland the amount of per diem is $8; in Anchorage, $12; in Tibet, $13; in Bulgaria, $14; in Rangoon, $16—and so on, around the world. This is all that is allowable under the per diem expenditures, under this amendment.

Many Members will find they will be "in the hole" in their travel; but this will put the matter on a formal basis, and will put it in line with the practice of the other Government departments.

The main difference between this amendment, as I understand it, and the amendment of the Senator from Delaware is that by means of this amendment we do not try to tell the Members of the House of Representatives what their per diem shall be. It has never been the same as that for the Senate. The Senate has had the $12 per diem rule for many years. I do not think the House has had such an allowance. I understand that the House Members report their actual expenditures.

This amendment also provides that the expenditures shall be reported in the report of the Secretary of the Senate—which is a thick volume. In order to make the information readily available to newspapermen who may be interested in it, we shall index the report, so it will be easy for anyone to find out exactly what any Member spends while traveling on the business of the Senate. In brief, in that connection, we shall do practically everything for the newspapermen, except write their stories.

It is going to be the easiest thing in the world for anybody to find out exactly what every Member spends in his travel abroad, or in this country, which is at $12 per diem. I do not see how it could be more closely drawn. We have made an effort to include the reporting of every dollar spent, or of all counterpart funds spent. It is to stop abuse of excessive amounts sometimes spent in the other currencies that this is necessary.

I think the distinguished Senator from Delaware is to be commended for his service in repeatedly bringing this question up.

Several Senators addressed the Chair.

Mr. STENNIS. Mr. President, the Senator from Colorado [Mr. ALLOTT] is one of the authors of the amendment, and I yield to him first.

Mr. ALLOTT. Mr. President, I think the purpose is to do all that is necessary as good Government servants to expose to newspapers and the public and Government agencies the amount that is spent in travel, so that there can be no doubt about it, and there can be no suspicions printed about what somebody has spent when he has not.

I should like to call attention to several items. First of all, I must confess that when I became a member of the subcommittee for the first time, I ran into the yellow booklet entitled "United States Senate Travel Regulations," issued by our Committee on Rules and Administration, which covers travel in this country and covers the per diem rate, which is $12 in this country. There is a list published by the Bureau of the Budget, which the Senator from Oklahoma has called to the attention of the Senate. Any Member of the Senate is very welcome to read it.

We have gone two steps further. We have reiterated the very fine thing the Senator from Delaware has done over and over again, which is to provide that the spending of counterpart funds be accounted for.

Subsection (c) of the amendment reads:

> Expenditures, whether from foreign currencies owned by the United States or from dollar appropriations for expenses of members and employees of committees of the Senate, of joint committees whose funds are disbursed by the Secretary of the Senate, or of the Senate group or delegation of any interparliamentary body, incurred after July 1, 1960, in connection with travel outside the United States, shall be authorized only in accordance with the provisions of the United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate.

When that provision is considered, together with the last section, which provides that, "Reports of the Secretary of the Senate under this section shall be printed as a Senate document, and contain an index for all but salary payments," then I think we have put in the hands of the public every possible conceivable access to a disclosure of the expenditures of the Senate, the Senate committees, the individual members thereof, and the staff members, that the public could possibly want, or anyone else could possibly desire.

I agree wholeheartedly with the chairman of the Subcommittee on Appropriations that, in view of the difficulties we always run into with the House telling us that we cannot tell them to write their own rules, this is the best way and the most expeditious way of getting around that problem.

Several Senators addressed the Chair.

Mr. STENNIS. Mr. President, before yielding, I should like to say, first, that the only additional point I wish to emphasize is that we already have in the Senate the U.S. travel regulations, promulgated by the Committee on Rules and Administration, and adopted by the Senate on January 7, 1960. These are detailed regulations for Senate travel within the United States. On the last page, foreign travel is very sketchily covered. This proposal, in effect, would cover and clear up the regulations on foreign travel.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. STENNIS. I had promised to yield to the Senator from Georgia [Mr. RUSSELL].

Mr. CASE of South Dakota. I merely wanted to say that the amendment was well conceived and very much in order, and I commend the members of the Appropriations Committee for presenting it.

Mr. STENNIS. I thank the Senator.

I yield to the Senator from Georgia.

Mr. RUSSELL. Do I correctly understand that if a Member of the Senate and a Member of the other body goes to an Interparliamentary Union, or a NATO Parliamentarians' Conference, or the Canada-United States Interparliamentary Group, or the Mexico-United States Interparliamentary Group, or any other similar interparliamentary group of which the United States is a member, the Senate member must file a more detailed report and has a more limited subsistence account than a Member of the other body?

Mr. STENNIS. If the amendment is adopted, the Senate will have adopted a complete system of rules applying to its own Membership; and, unless the House should adopt that or a similar amendment, the Senator would be correct.

Mr. RUSSELL. I am in favor of a very strict accounting of all public funds, whether they be for travel or otherwise. I have always supported, whether the amendment was offered by the Senator from Delaware or another Senator, an amendment that required both Houses of the Congress to make a more strict accounting of any funds that are expended.

I stand ready and willing to support such a proposal today, even to the extent of postponing action on the legislative appropriation bill from which we all draw our salaries. But, Mr. President, I think there is a limit to self-abnegation and humility, and as a Member of the Senate of the United States I am not willing to go to the extent of saying that the Senate should be required to adopt rules, particularly those dealing with international bodies, that would require us to make much more rigid reports than those that are made by Members of the other body.

For that reason, I am opposed to the amendment; and I make a point of order against it as being legislation on an appropriation bill.

Mr. STENNIS. Mr. President, the authors of the amendment gave notice under the rules of the Senate.

The PRESIDING OFFICER. First, the Chair will rule on the point of order. The Chair rules that the point of order is well taken, and the point of order is sustained.

Mr. STENNIS. Mr. President, I move, notice having been given, that the Senate Rules be suspended for the purpose of consideration of this amendment.

Mr. WILLIAMS of Delaware. Mr. President, I support the motion of the Senator from Mississippi that the rule be suspended. I would like the Senate to dispose of the question now, although I am in complete agreement with what the Senator from Georgia has said. After it has been brought before the Senate, I shall offer a substitute amendment which will lay down the rule for both Members of the Senate and the House, and we can debate it on its merits.

In order to get it before the Senate, however, we must first suspend the rules. Therefore, I join the Senator from Mississippi in urging that the rule be suspended.

Several Senators addressed the Chair.

Mr. STENNIS. I yield to the Senator from Louisiana, who has been on his feet a long time.

Mr. ELLENDER. Mr. President, before we vote on the question of the suspension of the rules, I wonder if the Senator from Mississippi will be kind enough to explain to us as a matter of detail how this will work. For instance, I plan to go abroad this year. I may visit as many as 30 countries. I do not know the length of time I shall remain in any one particular country.

In the past I have received from the State Department a certain amount to cover probable expenses. When I returned I made my report to the State Department. As a matter of fact, I have returned every dollar the Department ever gave me.

I wonder how this new setup will affect the procedure I have been following in the past.

Mr. STENNIS. On the first point, after the adoption of the amendment, the amount of per diem allowed to the Senator from Louisiana in any particular country would depend upon this schedule which has already been worked out and is in effect in the executive branch of the Government. It has been approved by the Senate Committee on Rules and Administration. The Committee on Rules and Administration of the Senate simply adopted the executive schedule.

The Committee on Rules and Administration has the authority, under the proposed amendment, to adopt any other schedule it wishes. Until the committee does so, the Senator would operate under the present schedule as to per diem rates. Transportation expenses, of course, would be in addition.

Mr. ELLENDER. I understand. In other words, if I should decide to go to 30 different countries, I would have to know in advance the length of time I expected to remain in each country.

Mr. STENNIS. No. I do not think that would be required.

Mr. ELLENDER. How would we arrive at the total amount to be given to the Senator?

Mr. STENNIS. I do not think that would be required at all, so far as the operation of the amendment is concerned. The Senator could use his own funds. I am talking about possibilities. The Senator could use his own funds and receive reimbursement, or he could file a tentative schedule subject to correction and have it approved before departure.

Mr. ELLENDER. On the other hand, could an advance be made, let us say, by the State Department for travel, with an accounting to be given upon return?

Mr. STENNIS. The Senator could use the present law and draw an advancement from the State Department, of course, and give the accounting later. The Senator could draw the sums of money, as the Senator from Mississippi understands it, in the respective countries to which he went, if we had counterpart funds there.

Mr. ELLENDER. Would the amount to be drawn in each country be limited to the number of days a Senator remained in that country, at the amount fixed by the schedule to which the Senator referred?

Mr. STENNIS. Not in the opinion of the Senator from Mississippi. The Senator would not know how long he was going to be in the country.

Mr. ELLENDER. That is the point. The accounting would be very difficult.

Mr. STENNIS. The Senator would have control of the accounting. He could wait until he started to leave the country, or he could make an estimate.

Mr. ELLENDER. The Senator might have to carry a bookkeeper around with him, too. It would amount to that.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Mississippi has the floor. The Senator has yielded to the Senator from Louisiana.

Mr. ELLENDER. I am simply asking these questions. I am very much interested in the subject.

Mr. STENNIS. That is the point.

Mr. President, I yield to the Senator from New Mexico.

The PRESIDING OFFICER. The Senator yields to the Senator from New Mexico.

Mr. CHAVEZ. Mr. President, I am very much in favor of the Senator from Louisiana making any trip he wishes to make. I think the Senator gives us factual information when he returns to the Senate, as to what is being done all over the world. I am in favor of that.

I do not wish to have the Senator from Mississippi, the Senator from New Mexico, the Senator from Louisiana, or any other Senator given a free trip. I do not favor that. I know the Senator from Louisiana does not favor it, either.

However, I am in favor of the Senator from Louisiana going anywhere he should go and bringing information to the Senate as to what is going on with reference to foreign aid and our foreign relations in all these other countries. I also favor the same for the Senator from Wisconsin [Mr. WILEY]. I think the Senator from Wisconsin should go anywhere he thinks he should go, in order to bring to the Senate information which may be of benefit to us, to aid us in doing a little better job.

Mr. STENNIS. I say to the Senator from New Mexico, We certainly agree

with him on that. The amendment would provide the machinery whereby the Senator could carry out the mission.

Mr. CHAVEZ. I have no more faith in any Senator, of the 100 Senators, than I have in the Senator from Louisiana.

Mr. STENNIS. The Senate shares that faith.

Mr. CHAVEZ. I could not have more faith in the Senator from Louisiana. I also have great faith in the Senator from Wisconsin, and the other Senators.

Mr. STENNIS. If the Senator from Mississippi may give the Senator from Louisiana an illustration, it may help the Senate to understand the operation of the amendment.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. STENNIS. May I give the illustration for the Senator?

The PRESIDING OFFICER. The Senator from Mississippi has the floor.

Mr. STENNIS. If the Senator from Louisiana goes to France and thinks he may be in France for 10 days, 5 days, or any specific number of days, the Senator can draw such amounts as he may wish from the Department of State, either in hard dollars or in counterpart funds, if available. Then the Senator would account for that money as he does now, but it would be according to the formula set forth.

Mr. ELLENDER. In other words, the amount which is listed for each country on the list will be the full amount which can be advanced by the State Department?

Mr. STENNIS. No. The State Department will be permitted to advance any amount of money the Senator may wish to draw.

Mr. ELLENDER. I expect to go to Poland. The per diem rate for Poland is $6.

Mr. STENNIS. That is correct.

Mr. ELLENDER. Does the Senator expect a Senator to live in Poland for that amount of money?

Mr. STENNIS. That is what those who go to Poland representing the executive branch receive. The Senator could apply to the Senate Committee on Rules and Administration, and on a showing of proper facts, of course, could receive $12, $14, or whatever his actual expenses were.

Mr. ELLENDER. Could that be done under the provisions of the amendment?

Mr. STENNIS. Yes.

Mr. ELLENDER. It could be done under the amendment the Senator is presenting?

Mr. STENNIS. Yes.

Mr. ELLENDER. As I understand the proposed amendment, although the amount prescribed for Poland is $6 a day, if the Senator shows his actual cost is $20 a day, that would be the amount paid?

Mr. STENNIS. That would be the amount, provided the Senate Committee on Rules and Administration so ordered.

Mr. ELLENDER. The Senator would have that privilege?

Mr. STENNIS. Yes.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. STENNIS. I believe I should yield now to the Senator from Delaware.

The PRESIDING OFFICER. The Senator from Mississippi yields to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, assuming that the Committee on Rules and Administration decided in the instance the Senator from Louisiana raised that in Poland it would allow a per diem of $25 per day, would that be all the report required?

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. STENNIS. May I answer the question of the Senator from Delaware? The Senator from Delaware has been on his feet for a long time.

The Senator from Louisiana, if he applied to the Committee on Rules and Administration for an additional allowance, of course would have to submit proof that his actual expenses were, let us say, $20 a day in that country. The Committee on Rules and Administration, in its discretion, could allow or disallow the $20. Presumably the committee would allow it.

Mr. WILLIAMS of Delaware. The question I ask is this: After the Committee on Rules and Administration decides to allow the $20 per diem, under the amendment of the Senator from Mississippi, is that all which is to be reported? Is the report only on the per diem allowance? Is that all the report to be made?

Mr. STENNIS. I think the report required is a report of what the Senator actually drew for those purposes.

Mr. WILLIAMS of Delaware. That would be the $20 per diem, with no breakdown? Is that what would be required under the amendment?

Mr. STENNIS. Yes. The Senator would have to prove his actual expenditure of the money, before he would get the additional allowance, and then he would report whatever sum he was allowed.

Mr. WILLIAMS of Delaware. I am asking about the report which would ultimately be made in the official report to the Senate. Would this be itemized or filed merely as a $20 item?

Mr. STENNIS. I do not think it would be filed in any way except as a per diem for Poland for the Senator from Louisiana, allowed by the Committee on Rules and Administration.

Mr. WILLIAMS of Delaware. That answers the question I was raising.

Mr. STENNIS. Yes.

Several Senators addressed the Chair.

Mr. STENNIS. Mr. President, I yield to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Mississippi yields to the Senator from Kentucky.

Mr. STENNIS. May I yield to the Senator from Kentucky?

Mr. MORTON. This schedule does not always work out fairly. It is sometimes a little low. But certainly the schedule which the Senator from Mississippi has developed and read to us is one that applies, as I understand, to every one in the executive branch of the Government.

Mr. STENNIS. The Senator is correct. May I make one exception? The committee amendment does set $12 as the minimum.

Mr. MORTON. In this country.

Mr. STENNIS. In any country, because that was considered the minimum for these purposes.

Mr. MORTON. But those who travel with the State Department or any other department use that schedule.

Mr. STENNIS. They use that schedule, and most of them are $12 or above.

Mr. MORTON. I think we could do the same. I commend the Senator for his amendment.

Would the proposed amendment apply to members of the Appropriations Committee who travel?

Mr. STENNIS. Yes; it applies to all Members of the Senate and all staff members of the Senate committees.

Mr. MORTON. Both those who travel on the funds of the various departments, the Defense Department or the State Department, and those who travel on Senate funds?

Mr. STENNIS. The amendment that is now in the law applies to funds of the Senate and committees of the Senate and the appropriated funds we have for those purposes.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. STENNIS. I am glad to yield to the Senator from Vermont.

Mr. AIKEN. I think it is a good idea to have legislation like this, but it should apply to all the committees, should it not?

Mr. STENNIS. The amendment applies to all Senate committees.

Mr. AIKEN. This would apply to the Appropriations Committees, too?

Mr. STENNIS. The Senator is correct.

Mr. AIKEN. The Appropriations Committee draws funds from the State Department, does it not?

Mr. STENNIS. Yes; that is possible.

Mr. AIKEN. Then is not the Appropriations Committee exempted under the amendment?

Mr. STENNIS. Yes; that is possible. Mississippi thinks it applies to all committees.

Mr. WILLIAMS of Delaware. Do I understand the Senator to say that the Appropriations Committee can draw funds from the State Department and it would be exempt under the proposed amendment?

Mr. STENNIS. The Senator from Mississippi thinks it would be covered by the amendment. It would be possible to draw those funds, but they would still have to be accounted for and would be covered by this amendment. That is the way the Senator from Mississippi understands it.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Mississippi [Mr. STENNIS] to suspend the rule, which requires a two-thirds vote.

The motion to suspend the rule was agreed to.

Mr. STENNIS. Mr. President, I move the adoption of the amendment as heretofore explained.

The PRESIDING OFFICER. The amendment will be printed in the RECORD without reading.

The amendment is as follows:

"SEC. 105. (a) Section 502(b) of the Mutual Security Act of 1954, as amended, is amended by inserting before the last sentence thereof a new sentence as follows: 'Such consolidated report, in the case of a Senate committee or a joint committee whose funds are disbursed by the Secretary of the Senate, shall show, in addition to the information otherwise required to be included, the total amount expended for each purpose by each member and employee during the calendar year covered by the report, or in the case of the report for the calendar year 1960, during the last six months of such year: *Provided*, That for the purposes of any report required by this section, a statement of the total amount of the per diem in lieu of subsistence authorized for any such member or employee in accordance with United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate shall be considered a sufficient itemization of any expenditures made from such allowance.'

"(b) Each Senate member of the United States group or delegation to the Interparliamentary Union, the NATO Parliamentarian's Conference, the Canada-United States Interparliamentary Group, the Mexico-United States Interparliamentary Group, or any similar interparliamentary group of which the United States is a member, and each employee of the Senate, by whom or on whose behalf expenditures are made from funds appropriated for the expenses of such group or delegation, shall file with the chairman of the Committee on Foreign Relations of the Senate an itemized report showing all such expenditures made by or on behalf of each member or employee together with the purposes of the expenditure, including subsistence, transportation, and other purposes. Within sixty days after the beginning of each regular session of Congress, the chairman of the Committee on Foreign Relations shall prepare consolidated reports showing with respect to each such group or delegation the total amount expended, the purposes of the expenditures, the amount expended for each such purpose, the names of the members or employees by or on behalf of whom the expenditures were made and the amount expended by or on behalf of each member or employee for each such purpose. The consolidated reports prepared by the chairman of the Committee on Foreign Relations shall be filed with the Committee on Appropriations of the Senate. For the purposes of any report required by this section, a statement of the total amount of the per diem in lieu of subsistence authorized for any such member or employee in accordance with United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate shall be considered a sufficient itemization of any expenditures made from such allowance. Each such consolidated report shall be printed in the CONGRESSIONAL RECORD within ten days after receipt by the Committee on Appropriations of the Senate.

"(c) Expenditures, whether from foreign currencies owned by the United States or from dollar appropriations, for expenses of members and employees of committees of the Senate, of joint committees whose funds are disbursed by the Secretary of the Senate, or of the Senate group or delegation of any interparliamentary body, incurred after July 1, 1960, in connection with travel outside the United States, shall be authorized only in accordance with the provisions of the United States Senate Travel Regulations promulgated by the Committee on Rules and Administration of the Senate.

"(d) Section 60 of the Revised Statutes (2 U.S.C. 102) is amended by adding at the end thereof a new paragraph as follows:

"'Reports of the Secretary of the Senate under this section shall be printed as a Senate document, and contain an index for all but salary payments.'"

Mr. WILLIAMS of Delaware. Has the Senator from Mississippi offered his amendment?

The PRESIDING OFFICER. The Senator from Mississippi has offered his amendment.

Mr. WILLIAMS of Delaware. Mr. President, I offer my amendment, which I send to the desk, designated "6-13-60—B," on behalf of the Senator from Maine [Mrs. SMITH] and myself, as a substitute for the amendment just offered by the Senator from Mississippi.

The PRESIDING OFFICER. The clerk will state the amendment of the Senator from Delaware.

The LEGISLATIVE CLERK. At the proper place in the bill it is proposed to insert the following:

SEC. . (a) The second sentence of section 502(b) of the Mutual Security Act of 1954, as amended, is amended to read as follows: "Within the first sixty days that Congress is in session in each calendar year, the chairman of each such committee shall prepare a consolidated report showing the total itemized expenditures during the preceding calendar year of the committee and each subcommittee thereof, and of each member and employee of such committee or subcommittee, and shall forward such consolidated report to the Committee on House Administration of the House of Representatives (if the committee be a committee of the House of Representatives or a joint committee whose funds are disbursed by the Clerk of the House) or to the Committee on Appropriations of the Senate (if the committee be a Senate committee or a joint committee whose funds are disbursed by the Secretary of the Senate)."

(b) Each member of the United States group or delegation to the Interparliamentary Union, the NATO Parliamentarian's Conference, the Canada-United States Interparliamentary Group, the Mexico-United States Interparliamentary Group, or any similar interparliamentary group of which the United States is a member, and each employee of the Senate or House of Representatives, by whom or on whose behalf expenditures are made from funds appropriated for the expenses of such group or delegation, shall file with the chairman of the Committee on Foreign Relations of the Senate in the case of Members or employees of the Senate, or with the Committee on Foreign Affairs of the House of Representatives in the case of Members or employees of the House, an itemized report showing all such expenditures made by or on behalf of each Member or employee together with the purposes of the expenditure, including lodging, meals, transportation, and other purposes. Within sixty days after the beginning of each regular session of Congress, the chairman of the Committee on Foreign Relations and the chairman of the Committee on Foreign Affairs shall prepare consolidated reports showing with respect to each such group or delegation the total amount expended, the purposes of the expenditures, the amount expended for each such purpose, the names of the Members or employees by or on behalf of whom the expenditures were made and the amount expended by or on behalf of each Member or employee for each such purpose. The consolidated reports prepared by the chairman of the Committee on Foreign Relations of the Senate shall be filed with the Committee on Appropriations of the Senate and the consolidated reports prepared by the chairman of the Committee on Foreign Affairs of the House shall be filed with the Committee on House Administration of the House. Each such consolidated report shall be printed in the CONGRESSIONAL RECORD within ten days after receipt by the Committee on Appropriations of the Senate or the Committee on House Administration of the House.

(c) Section 60 of the Revised Statutes (2 U.S.C. 102) is amended by adding at the end thereof a new paragraph as follows:

"Reports of the Secretary of the Senate and the Clerk of the House of Representatives under this section shall be printed as Senate and House documents, respectively."

Mr. WILLIAMS of Delaware. This amendment is printed and is on the desk available to all Senators. Unless some Senator wishes the amendment to be read, I ask that the reading be waived.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. AIKEN. May I ask whether the amendment of the Senator from Delaware applies to Appropriations Committees?

Mr. WILLIAMS of Delaware. Yes.

Mr. AIKEN. And all other committees?

Mr. WILLIAMS of Delaware. The amendment applies to all committees of both the House and the Senate. It applies to all joint committees of both the House and the Senate. It applies to all special committees which are appointed by the Vice President or the Speaker of the House. The amendment covers all committees of which Members of Congress are members. It covers the employees of all such committees, and the amendment is applicable to both the House and the Senate. It would require an itemized accounting by each Member of all expenditures of either dollars or foreign currencies.

I recognize that there are certain rules that provide that the Senate should not amend the House rules. However, I point out that what we are amending tonight is a section of the law which was passed by both the House and the Senate; namely, section 502(b) of the Mutual Security Act, which provides that members of the legislative branch or congressional committees may draw under this act upon the various agencies of the Government for counterpart funds.

We are not amending the rules of either the House or the Senate.

The law was passed by both branches of Congress. It is a part of the law and is applicable not alone to the Senate, not alone to the House, but to Members of Congress as a whole, the legislative branch. We have amended that law on two different occasions.

We have amended that law, and no Member of either the Senate or the House has raised the question as to the propriety of that law being amended as it applies to both Houses of Congress. We amended the law a few years ago under the leadership of the Senator from Kentucky [Mr. MORTON]. We required a certain accounting of counterpart funds which were spent by the congressional committees in both the House or the Senate. That amendment was not accepted in its entirety, it is true. The

House rejected a part of it. But the House did not reject it on the basis that the Senate had no right to amend it. It rejected it on the basis that it did not like the substance of the amendment. It accepted only one part of the Senate amendment.

Earlier this year, by a vote of 68 to 0, the Senate adopted a similar amendment to that now pending before the Senate as applying to both the House and the Senate. By a rollcall vote, 68 Members of the Senate voted for it. No one voted against it. No one raised the question then as to the impropriety of voting for an amendment which would apply to the House. Included in the list of those who voted for that amendment were the Senator from Mississippi [Mr. STENNIS]; the Senator from Arizona [Mr. HAYDEN] was absent, but he was recorded in the Senate as being in favor of the amendment; the Senator from Oklahoma [Mr. MONRONEY]; and the Senator from Colorado [Mr. ALLOTT]. They voted and are so recorded in the RECORD of April 27, 1960, as being in favor of the amendment.

Mr. STENNIS. Mr. President——

Mr. HAYDEN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Arizona?

Mr. STENNIS. The Senator from Arizona wishes the floor.

Mr. HAYDEN. I wish to ask whether the Senator's amendment prevailed?

Mr. WILLIAMS of Delaware. In the Senate, yes. A part of the amendment prevailed in conference which would make this accounting under the consolidated report——

Mr. HAYDEN. I am talking about the last amendment that the Senator offered.

Mr. WILLIAMS of Delaware. Yes, it was a part of the mutual security program which was adopted April 27, 1960, and when that amendment came back——

Mr. HAYDEN. I am talking about the amendment the Senator from Delaware offered and the Senate adopted about a month ago. It went to conference and the conferees said, "We will not accept an amendment adopted by the Senate dictating to the House what its Members shall do." Exactly the same thing would happen again if we accepted the Senator's amendment. It would be taken to conference, the conferees would disagree, and we would surrender and come back here again.

Mr. WILLIAMS of Delaware. The House rejected the amendment because it did not want to render any accounting at that time. However, they did accept a part of the amendment.

The vote was taken on April 27, 1960, and appears on page 8755 of the RECORD. Every member of the Appropriations Committee is recorded on that date as being in favor of the amendment which would lay down the same rules we are asking be laid down again tonight as applicable to both the House and the Senate. But the House accepted only that part of the amendment which included the dollar accounting as well as a foreign currency accounting. However, they raised no question as to the propriety of the Senate's right to act.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield to the Senator from New Mexico.

Mr. CHAVEZ. Irrespective of the questioning of the House, when we go to conference, we do so with the expectation that everything the Senator from Delaware [Mr. WILLIAMS] wishes must be carried out. We have to act as a body and as representatives of the Senate as conferees. That is the whole question in a nutshell. We might agree with the Senator from Delaware. We probably wanted to agree with the Senator from Delaware and did agree with the Senator from Delaware.

However, we were mistaken. After all, in order to enact a law, we must have the agreement of both Houses. I am sorry, but in many instances the House does not agree with the Senator from Delaware. We cannot hold it up. That is all there is to it.

Mr. WILLIAMS of Delaware. The House may not disagree this time if the Senate adopts the amendment. We shall have to cross that bridge when we reach it. Although the House rejected the amendment the last time, a great deal has happened in the past few weeks which may make the Members of the House more receptive than they were the last time. There is no use denying the fact that there have recently been exposed some glaring abuses in this connection. We should send the bill to the House with the amendment.

I point out one other point in favor of the amendment to show that there cannot be any valid argument raised in the House. There are now pending in the House of Representatives nine bills, every one of which proposes to amend the law to require complete accounting of these expense accounts. All of these bills would apply to the Senate as well as to the House of Representatives.

Mr. CHAVEZ. I believe the other 99 Members of the Senate try to be just as honest, just as sincere, and just as candid as any other Senator. There are 437 Members of the House of Representatives. How can we say that the only one who has the correct attitude on this subject is the Senator from Delaware?

Mr. COTTON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. COTTON. I wish to ask the Senator from Delaware, in order that we may have a clear understanding, whether the amendment he offers is a substitute for the amendment of the Senator from Mississippi [Mr. STENNIS].

Mr. WILLIAMS of Delaware. That is correct.

Mr. COTTON. So if his amendment is adopted, there will not be carried into the bill any of the schedules and other features contained in the amendment of the Senator from Mississippi. Is that correct?

Mr. WILLIAMS of Delaware. Yes; my amendment is an entire substitute.

Mr. COTTON. It provides for a complete, full, and public accounting by every individual and by every committee in both Houses, both within and without the United States. Is that correct?

Mr. WILLIAMS of Delaware. That is correct. If a Member of Congress or an employee of a committee is in a certain country and he has a bona fide expense of $5 or $15, my amendment provides for reimbursement of that amount. There is much general good derived from congressional travel. I am not criticizing that at all. I believe that the commitments of the U.S. Government in foreign countries make it essential for Members of Congress on occasion to make these official trips.

I am in favor of having these official expenditures of the individuals involved paid by the U.S. Government. They should have the expenditures reimbursed; they should not be required to pay them out of their own pockets provided they are bona fide expenses.

On the other hand, we must realize that we are not spending our own money on this travel. We are spending money belonging to the taxpayers of the country. They are entitled to an accounting as to how their money is being spent. That is all I am asking for in the amendment. I am asking for an accounting. The amendment would cover the full amount which is necessary for these officials to spend. It would cover all expenditures, but would require an accounting from every committee and every Member of Congress, both with respect to counterpart funds and dollar expenditures.

Certainly that accounting should be made. A great deal of criticism which is leveled at official travel results from a few isolated cases of abuse. Once all this is put out in the open, I am not the least bit concerned that the public will not approve of this travel. On the other hand, if there are cases in which wrongs are committed, they should be criticized. When we put this information out to public scrutiny, we will not have any trouble with further abuses.

I hope the Senate will not yield on this question before we go to conference. I say, again, nine bills have been introduced in the House of Representatives, all of which are now pending over there, and not one of those bills introduced in the House excludes the Senate. Every one of the nine bills introduced in the House proposes to make the law applicable to both Houses of Congress; they would amend the law as to both Houses.

This procedure has been followed time and time again. The Senator from Georgia [Mr. RUSSELL] made an excellent argument in support of my amendment. Why should we single out the Senate and say that we will have different rules for the U.S. Senate? There are some joint committees involved, too. Why should the Members of the House not render an accounting of their expenses while traveling abroad?

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. ALLOTT. What the Senator is doing in effect, is saying that even though the rules may be excessive in the other body, we must go along with them. I do not believe any Senator agrees with

that contention. I should like to have the Senator answer a few questions. Will he join me in an amendment which will provide for a reporting on counterpart funds?

Mr. WILLIAMS of Delaware. It is already in section 502(b). We do not need to have an amendment on that point. It is already in the law, and an itemized accounting will be required if you will support my amendment.

Mr. ALLOTT. If the Senator wishes to amend the law, why does he not wish to put such a provision in the law? Would he be willing to ask the Senate, since he has already had the yeas and nays ordered on the amendment, to include at the end of line 22 an amendment to read "including funds expended from counterpart funds"?

Mr. WILLIAMS of Delaware. If the Senator thinks it is necessary, yes. However, if the Senator will get a copy of section 502 he will note that it was amended in 1958 to include an accounting of counterpart funds. It was amended in 1960, on the 27th day of April, to include dollar expenditures. That provision is already in the law. At the time I offered my amendment on April 27, 1960, there was included the provision for dollar funds. That part was accepted by the House of Representatives. Why should we put into the law something that is already there? If the Senator wants to do it, I do not know that it makes any difference.

Mr. ALLOTT. Will the Senator agree that it is not effective, because it was not reported, and therefore we put it into the law in a way in which it should be? I have voted for every one of these amendments the Senator from Delaware has offered since I have been in the Senate, which is about 6 years. There is another way in which his amendment is defective. If he will turn to page 4 of his amendment he will find the words:

> Reports of the Secretary of the Senate and the Clerk of the House of Representatives under this section shall be printed as Senate and House documents, respectively.

No mention is made that they shall contain an index, so that anyone who is looking for something can find it.

My position is clear. I shall support the chairman of my committee, because we have gone to the House enough times on this matter and have come home with nothing.

I am sorry about the order of things here. I would rather support our amendment first and then support, if I had to, the amendment of the Senator from Delaware.

Mr. WILLIAMS of Delaware. If my amendment is adopted the Senator need not worry that there will not be a full accounting. The law already provides for an accounting in a consolidated return—that is the way it reads—for appropriated dollars and counterpart funds. This was provided for in previous amendments. This year we included not only foreign currencies but also dollar appropriations. I repeat, it is already in the law that these reports shall be published in the CONGRESSIONAL RECORD within 10 days after receipt by the Committee on Appropriations of the Senate or the Committee on House Administration of the House on a consolidated basis.

My amendment provides for an itemized breakdown and the publication thereof by names of Members.

While the amendment does not provide for an index, if the reports are published in the CONGRESSIONAL RECORD we shall not need an index. Let us not kid ourselves. That is not a valid argument. If the committee felt the amendment lacked a few words, they could very easily have been added in committee or on the floor.

Mr. ALLOTT. I am asking the Senator to accept an amendment.

Mr. WILLIAMS of Delaware. If the Senator will get the Legislative Counsel to say it is necessary, I will accept it. However, Mr. Pinion, of the legislative counsel's office, has told me that it is not necessary. That office has worked on the problem for 4 or 5 days, and members of the staff may be as familiar with the subject as is the Senator from Colorado.

I yield to the Senator from Oklahoma.

Mr. MONRONEY. Under the Senator's amendment, which does not refer at all to the Senate Committee on Rules and Administration, there is no limit whatsoever, so long as a proper itemization is made, on what a Senator can spend a day, whether he is traveling within the United States or outside. As I read the amendment, he can spend $100 a day, so long as he reports his expenditures item by item and has them published in the CONGRESSIONAL RECORD.

Mr. WILLIAMS. That is correct. This amendment does not modify that. If the Senator wants to do it, all right; but he will not find many Members of either the House or Senate, if the amount is to be published in the CONGRESSIONAL RECORD, spending $100 a day.

If the Senate rejects this amendment, it will be saying that a Member of the House of Representatives can spend $500 a day, and we do not care. There would be no required accounting under the committee proposal.

Mr. MONRONEY. Our amendment limits reimbursement for travel within the United States to a per diem of $12 a day. It limits the travel expense to the same schedule as that of every employee of the U.S. Government. It is a schedule made by the Bureau of the Budget. The study estimates the price of an average room with bath in the various countries of the world.

I say that our amendment is much better drafted. I do not want to be running around with a lead pencil and little black book; and every time I spend 25 cents for a taxi, to write down the amount in the little black book, and then try to translate liras, cruzeiros, pesos, or guilders, or whatever other kind of currency it may be, into dollars to be shown on my expense account.

We have a limit on our per diem. We are allowed so much a day. We are going to lose money anyway. I would rather lose more money than to fiddle around keeping books when I ought to be working. I do not want to have to figure whether I paid a waiter or a taxi driver 50 cents.

The amendment which the committee has presented has been carefully prepared. It conforms with the practice which was established in the Legislative Reorganization Act, which was initiated by Bob La Follette.

As passed by the Senate it did not affect a line in the House rules. A provision was put into the Senate rules by the Senate. Then it was put into the House rules by the House. Had it been handled otherwise, the House would not have touched the bill.

Historically, from the establishment of these two great bodies, each has let the other be the judge of its own Members' conduct and of its own rules.

If we want legislation, if we want to limit expenditures to a reasonable amount and say that the reports are to be published, I believe we should accept the amendment suggested by the committee and reject the Williams amendment, which has an unlimited ceiling, so long as a Senator prepares a proper expense account and turns it in, and writes it up for $100 or $200.

Mr. WILLIAMS of Delaware. Mr. President, the Senator from Oklahoma has made much about items of 25 cents or 50 cents. He has complained that this amendment has no limit. Yet he wants no limit and no accounting in the House. Under his amendment there is no limit for the House at all. If a joint committee is involved and a House Member spends $400 a night, there is nothing to prevent him from doing so; and the Senator from Oklahoma says it is none of the Senate's business.

Mr. MONRONEY. I say it is the business of the House.

Mr. MANSFIELD. Mr. President, would the Senator from Delaware yield to permit a unanimous-consent request for a limitation of time, so as to enable the Senate to vote on this question? Would the Senator agree to 20 minutes on a side?

Mr. WILLIAMS of Delaware. No; I shall not delay the Senate unnecessarily. Several Senators desire to have me yield to them so I would not want to have the time limited. If the Senator wishes to finish the bill tonight or to have it go over until tomorrow, either procedure is satisfactory to me.

Mr. MANSFIELD. I think we ought to face up to the question tonight. I think the procedure is ridiculous. I am perfectly willing to be counted.

Mr. WILLIAMS of Delaware. I too am willing to vote tonight.

We are not amending the rules of the House. The objection being made is that the Senate has no right to amend the rules of the House. We do not touch the rules of the House. We do not touch the rules of the Senate. We are amending a law which was passed by both the House and the Senate and was signed by the President. The amendment I am offering has nothing whatsoever to do with the rules of either body. It has no reference to the rules.

Let us not kid ourselves. We do not amend the rules which provide the present per diem for congressional committees so far as travel in the United States is concerned. That provision under both amendments is left the same as it is now.

Under section 3 of my amendment, the same per diem is still carried. It does not change the rules so far as foreign travel is concerned except that we say that the Member when he comes back must render an itemized accounting and that the itemized report be public information.

Under the amendment proposed by the committee, as I understand the interpretation of the Senator from Mississippi, a committee can go before the Rules Committee, and if it can persuade the Rules Committee that in a certain country the per diem should be $20 a day and can get a rule from the Committee on Rules that it will allow $20 a day in X country, then that is all the accounting which is necessary to be made.

Mr. ALLOTT. The Senator from Delaware is decidedly in error.

Mr. WILLIAMS of Delaware. I hope the Senator from Colorado will wait. I said I would yield to the Senator from Mississippi to answer this question and then I shall yield to the Senator from Colorado.

Mr. STENNIS. I said that should a Senator have an actual per diem expense in country X of $20, and the schedule allowed but $15, and if the Senator went before the Committee on Rules and Administration and proved his case for the additional $5, then the committee in its discretion could allow the extra $5, in which event the Senator would, of course, have to report the $20, as in all such cases.

Mr. LAUSCHE. What would the proof in such a case consist of? Vouchers? Receipts?

Mr. STENNIS. I assume that if a Senator went before the Committee on Rules and Administration and stated as a fact that his expenditure was $20 in the country he visited, his statement would be accepted.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I think the Committee on Rules and Administration will be very busy.

I yield to the Senator from Massachusetts.

Mr. LAUSCHE. May I complete my thought?

Mr. WILLIAMS of Delaware. Yes.

Mr. LAUSCHE. I asked the question because the Senator from Oklahoma pointed out that under the Senator's amendment there would be no limitation; that it would be necessary to file vouchers and receipts; and that that would be too great a burden and too liberal a rule to adopt.

I point out that the statement of the Senator from Mississippi indicates that the provisions contained in this proposal are similar to the ones to which the Senator from Oklahoma objects as being in the proposal of the Senator from Delaware.

Mr. WILLIAMS of Delaware. I said that there would be no limit. Under this amendment which I now offer Senators would have to do as they do at the present time; namely, justify their expenditures to the chairmen of the respective committees. After they justify their expenses to the respective committees, the chairmen then report in the CONGRESSIONAL RECORD an itemized account of all such expenditures. I cannot conceive of a chairman of a committee approving an expense allowance with no limit. Remember, the information is all to be published in the CONGRESSIONAL RECORD and available to the American people. Once the expenses are published, I do not think we shall be bothered with abuse.

So far as the argument is concerned that it would be too much trouble for a Member of Congress to make an itemized report of expenditures, let us not forget that we demand the same kind of accounting from every businessman in America when he deducts such expenses from his income tax.

It is no more of a burden on Members of Congress to keep track of their expenses on a trip so that when they return they can render an accounting to the taxpayers than it is to demand that the taxpayers keep an account of their expenses and render it to Uncle Sam.

If it is considered a burden for Members of Congress to make such a report it would do us good to consider the burden which is placed upon the taxpayers.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. SALTONSTALL. It seems to me we are getting away from the point. The point is that it is desired to have every Senator who makes a trip, whether inside or outside the United States, to make a report. Whether he spends $12 a day or $16 a day is for him to decide.

I wish the Senator from Oklahoma [Mr. MONRONEY] were in the Chamber. However, speaking as one Senator who participated for several weeks in the debate on the La Follette-Monroney reorganization bill, I know it was made perfectly clear by the Senator from Wisconsin, Mr. Bob La Follette, that the rules of the Senate were intended to cover the Members of the Senate, and that it was not the intention to interfere with the House, or vice versa.

This is not a general law; it is a question of the rules of the Senate. We can apply those rules only to ourselves.

The distinguished Senator from Delaware and I have discussed this question in private several times. It seems to me it is a question of half a loaf being better than no bread. I have sat in many committees of conference on the legislative appropriation bill. On subjects of this nature, when we have tried to tell the House what to do, they are simply adamant.

What we are now trying to do is to say that so far as we ourselves are concerned, we will report what we have spent. Whether it is $10 or $20, it seems to me, is immaterial. The question is, Shall we make a report, and make it public? That is what the Senator from Mississippi [Mr. STENNIS] and the Senator from Arizona [Mr. HAYDEN] are trying to accomplish. It is what the Senator from Delaware [Mr. WILLIAMS] wants to do. But he is making it impossible to do it, because if the Senate adopts his proposal, then, as I told him in conversation 2 days ago, we will not get anywhere in conference with the Members of the House. We want to get half a loaf of bread, rather than no loaf.

Mr. WILLIAMS of Delaware. Mr. President——

Mr. CHAVEZ. Mr. President——

Mr. WILLIAMS of Delaware. Mr. President, in a moment I shall yield to the Senator from New Mexico; but first I wish to reply to the Senator from Massachusetts. He has referred to the La Follette-Monroney Reorganization Act.

The Senator from Massachusetts has emphasized the fact that each branch of Congress—the House and the Senate—reserves to itself the right to establish its own rules. I recognize that point.

But I point out that this amendment does not touch the rules of either the House or the Senate. It would be an amendment to a law which was passed by both Houses of Congress. This law has been amended at least twice.

I respect the rights of the Members of the House, but neither body is a private club supported by dues paid by its own Members. Each House is a group of elected public officials, working for the American taxpayers, and paid by the funds of the American taxpayers. Why should we not render an accounting of our expenditures? Why should we say that we, as Members of the Senate, are willing to vote tonight that the Members of the House should not make an accounting?

If this amendment goes to conference, I recognize that the House conferees may try to deadlock the conference rather than accept the amendment.

If some Members are so insistent that they will not render an accounting to the taxpayers who provide the funds we use, if the House conferees wish to disagree in conference and let the legislative appropriation bill be tied up, all that we will be doing is tying up our own payroll. If Members do not wish the public to know how they are spending the taxpayers' funds on these trips we should have our pay stopped until we become more considerate.

I am perfectly willing to see the legislative appropriation bill tied up if that is the situation. Why should we not try this proposal in conference?

I certainly would like to see our Appropriations Committee, which voted unanimously on April 27 on a rollcall vote for this same proposal, take that position again here tonight. Certainly, what has happened since April 27 has not changed the opinion of any Member as to the necessity of having an accounting made of these expenditures. On the contrary, we should be even more concerned now than we were then. These recent disclosures of abuse are a reflection on us all unless we act to stop them.

Mr. SALTONSTALL. Mr. President, will the Senator from Delaware yield, briefly?

Mr. WILLIAMS of Delaware. I yield.

Mr. SALTONSTALL. First, although this may be a general law, it would not be effective unless the rules of the committees and the rules of the Senate put it into effect; second, the House of Representatives is composed of grown men and women who are determined to protect the rights of the House of Representatives, as opposed to the rights of the Senate.

If we include this provision, inasmuch as the legislative appropriation bill must be enacted, and we must arrive at a compromise, we cannot do that if we remain firm on this item; and in that event there would be no funds with which to operate the legislative branch of the Government.

Mr. AIKEN. Mr. President——

Mr. WILLIAMS of Delaware. I yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, both of these amendments require each Member who travels to make a report to the chairman of the committee, who then will make a consolidated report to the Appropriations Committee, I believe.

Mr. WILLIAMS of Delaware. That is correct.

Mr. AIKEN. How will they be required to make the report? If I were the chairman of a committee of 15 or 20 members, all of whom were taking a foreign trip, I would not wish to be responsible for having each one make his report.

No penalty is called for by these amendments. Are the Members supposed to pay their own expenses in advance, and later be reimbursed, when they make their report? How would that matter be handled?

Mr. WILLIAMS of Delaware. This provision requires a report. If the amendment is adopted and is enacted into law, and if a Member of the Senate—to cite an extreme case—drew $1,000 or an equivalent amount of counterpart funds in France, let us say, and upon his return flatly refused to render any accounting, that refusal would be published in the CONGRESSIONAL RECORD within 10 days after the report was made by the chairman of the committee. The chairman of the committee must receive the information from the Members within 60 days after the beginning of the next session of Congress or report their refusal.

Mr. AIKEN. But perhaps only two of the Senators in the group would be members of, let us say, the Interparliamentary Union, and perhaps the other Senators who were making the trip would be traveling in connection with other Senate business. Yet the chairman would be held responsible in case certain Members failed to make their reports. How would the chairman be able to "get off the hook?"

Mr. WILLIAMS of Delaware. Presumably the entire trip would be taken under the authority of the committee in question—for instance, let us say, the Foreign Relations Committee. If, following their return from the trip, one of the Members refused to make his report to the chairman of the Foreign Relations Committee, the chairman would report, "I have waited 60 days after the return of the Members who made the trip, and Member so-and-so has refused to make any reporting to me." That information would be published in the CONGRESSIONAL RECORD, and he could then be called to account by either the House or Senate as the case may be.

I am not concerned about any particular Member of the Senate or any particular Member of the House attempting this because under this amendment the chairman of the committee would report that the Member who refused to make the report had drawn "X" amount of money in a certain country or countries but had refused to render any report; then that information would be reported not only to the Senate and to the House but also to all the American people through the CONGRESSIONAL RECORD.

Under either amendment I am not concerned that Members of Congress who returned from such a trip would make necessary the publication of a notice that they had spent the equivalent, let us say, of $1,000 in a certain country with the notation, "I flatly refuse to make any accounting of how I spent it." If so, we would have to handle that situation when it happened.

Mr. AIKEN. Does the Senator from Delaware agree that if the chairman of the committee had waited a reasonable length of time for reasonable reports to be made to him—and, for instance, if 20 Members were on a bus, I suppose each would pay one-twentieth of the bus expense, and would include that part in his report—but, at any rate, after waiting a reasonable length of time, if some of the Members who had been traveling refused to make their reports, then, in the opinion of the Senator from Delaware, would the chairman—for instance, the chairman of the Foreign Relations Committee—be acting properly if he reported which ones had made their reports, and then said, "Such-and-such Members received so much money, but have declined to account for it."

Mr. WILLIAMS of Delaware. That is the only report he could make.

Mr. AIKEN. Because the chairman could not be held responsible, when he does not have any authority over such Members.

Mr. WILLIAMS of Delaware. Certainly he does not. But this amendment states that each Member would be required to submit his report to the chairman of the committee within 60 days after the convening of the next session of Congress; and, 10 days later the chairman would submit the report for publication in the CONGRESSIONAL RECORD. If any member of a committee of either the House or the Senate were so arrogant that after spending $100 or $1,000 he would refuse to make the required report, the chairman of the committee would not be responsible for his refusal but would merely report that information to the Senate or to the House; and we think that would take care of the matter because either the Senate or the House has authority to discipline its own Members.

Mr. AIKEN. I think the chairmen of the responsible committees will be glad to have in the RECORD the statements of the Senator from Delaware.

Does the Senator from Mississippi have the same understanding, in case a Member of the Senate who traveled declined or failed to make the report to the proper person?

Mr. STENNIS. The Senator from Mississippi would say it would certainly be his opinion——

The PRESIDING OFFICER. Does the Senator from Delaware yield to the Senator from Mississippi?

Mr. STENNIS. Will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. STENNIS. A Senator guilty of such conduct would be violating the rules of the Senate and the law of the land. If the amendment is adopted, it will be the law, and I certainly think Senators will comply with it.

Mr. AIKEN. That would be true of either amendment.

Mr. STENNIS. Yes; that would be true of either amendment.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. Mr. President, I am ready to yield the floor.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Delaware yield to the Senator from Illinois [Mr. DIRKSEN]?

Mr. WILLIAMS of Delaware. I yield.

Mr. DIRKSEN. I should like to ask three questions of the Senator for clarification. The first question is this: The amendment of the Senator from Mississippi applies only to the Senate, and not to the House. Is that correct?

Mr. WILLIAMS of Delaware. That is correct.

Mr. DIRKSEN. The amendment of the Senator from Delaware applies both to the House and the Senate. Is that correct?

Mr. WILLIAMS of Delaware. That is the major difference between the two amendments.

Mr. DIRKSEN. This provision really would become law permanently.

Mr. WILLIAMS of Delaware. Yes.

Mr. DIRKSEN. The third question is this: The amendment of the Senator from Delaware sets no limitation, such as per diem; it requires only that what a Member of Congress spends be reported. Is that correct?

Mr. WILLIAMS of Delaware. That is correct.

Mr. DIRKSEN. A Member of Congress could go to the Claridge in London, at $30 a day; he could go to the Dorchester, at $20 a day; or to the Savoy, at $40 a day; or he could go to some other hotel, and be reimbursed for only $15 a day. It does not make any difference, so long as that Member of Congress reports the full amount. Is that correct?

Mr. WILLIAMS of Delaware. Under my amendment.

Mr. DIRKSEN. Under the amendment of the Senator from Mississippi, there is a $12 per diem limitation. Is that correct?

Mr. WILLIAMS of Delaware. In the United States. The Senator from Mississippi can explain his own amendment,

but the amendment which I have offered retains the existing law with respect to the $12 per diem limitation within the United States. We do not change that at all. It is retained. On expenditures made in foreign countries under existing law there is no limitation in the amount which may be spent by Members of Congress. A Member of Congress could, under existing law, go to any one of the three hotels the Senator has mentioned. Not only that, but rather than get a room he could ask for the presidential suite and charge the $100 a day to the taxpayers, and no one would know about it. No accounting is now required.

Mr. DIRKSEN. But, under the amendment of the Senator from Delaware, it would be all right so long as he reported it. Is that correct?

Mr. WILLIAMS of Delaware. My amendment takes care of excessive charges by requiring that they be reported. However, I am willing to accept an amendment placing a limit on the amount of per diem allowance if it is thought to be necessary. I think the heart of the question is that we get a proper accounting for the public. If there is a proper accounting and every Member has to account for all such expenditures to the people back home, I venture to say he will not be staying at many $50- and $100-a-day hotels, nor will there be many other unnecessary expenditures.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield so that I may propound a unanimous-consent request that there be a vote after a 5-minute debate on each side?

Mr. WILLIAMS of Delaware. I promised to yield to the Senator from Ohio [Mr. LAUSCHE] and the Senator from Vermont [Mr. AIKEN]. Let me yield first to those Senators.

Mr. JOHNSON of Texas. The Senator can yield to them under the 5-minute limitation.

Mr. WILLIAMS of Delaware. I promised to yield to the Senator from Ohio.

Mr. JOHNSON of Texas. The Senator can yield to him. The Senator will have 5 minutes.

Mr. WILLIAMS of Delaware. I do not know for what they wish me to yield. I yield first to the Senator from Vermont [Mr. AIKEN]. Then I shall yield to the Senator from Ohio [Mr. LAUSCHE].

Mr. AIKEN. Mr. President, I asked the Senator to yield because I think the amendment of the Senator from Delaware is the only one that would work, because it applies to committees made up of House and Senate Members. It would be ridiculous to require that half of those Members make individual reports, and not require the other half of the Members to do so. I think, with respect to the joint committees referred to, it would be necessary to put them under the same rule when they travel on the same bus or plane. Otherwise, half of them would say, "We do not make any reports," and perhaps the other half would have to pay the whole bill, for all we know.

Mr. WILLIAMS of Delaware. If that is not done there may be a limitation of $12 per diem applying to Members of the Senate, and Members of the House may at the same time be staying in $50-a-day rooms with no reports to make. I do not think we should adopt any different rules for either branch. Let everybody render an itemized accounting of all their expenditures.

I now yield to the Senator from Ohio [Mr. LAUSCHE]. Then I shall be ready to vote, so far as I am concerned.

Mr. LAUSCHE. Mr. President, reference has been made to the La Follette-Monroney Reorganization Act, which declared that each of the two Houses should be vested with the right of determining the expenditures of their own employees and Members. The study which was made of that subject probably justified that conclusion. However, I should like to point out that whenever a Member of the Senate demeans himself improperly with respect to public funds, it makes no difference what the La Follette-Monroney declaration was—the odium of that misconduct falls upon every Member of the Congress.

Mr. WILLIAMS of Delaware. That is correct. It cannot be otherwise.

Mr. LAUSCHE. On the other hand, when unjustified and extravagant expenditures are made by a Member of the House, that same odium falls upon Members of the Senate.

My mail has been loaded with questions such as, "Why does not Congress do something about this problem?" In my opinion, the effort made by the Senator from Delaware is to reach to the roots of a very critical problem. That critical problem will not be lessened by declarations made in the Senate that it is consequential. The people of the country want some care in the spending of public money on trips which we are making around the world. If there is no one else here to support the fearless Senator from Delaware—and I think there will be others—I am prepared to support him. I want to commend him for the unending, unflinching fight which he has made on the floor of the Senate day after day in trying to maintain decency and protect the taxpayers of the country.

Mr. WILLIAMS of Delaware. Mr. President, I am prepared to yield the floor. First, however, I ask unanimous consent that there be printed at this point in the RECORD an explanation of the amendment as furnished by the legislative counsel.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXPLANATION OF AMENDMENT

The amendment adds a new section to the bill. Subsection (a) of the new section is in the form of an amendment to section 502(b) of the Mutual Security Act of 1954, as amended. Section 502(b) requires that members and employees of congressional committees making foreign currency expenditures file itemized reports with the chairmen of their committees showing the amounts and purposes of the expenditures. Under an amendment adopted earlier this year, these reports must also include any expenditures from appropriated dollars made available to a committee or to its members or employees for expenses of foreign travel. Reports filed by individual members and employees are required to be consolidated so as to show the total amount of the expenditures of the committee for each purpose. The consolidated report must be filed with the Appropriations Committee on the Senate, and the House Administration Committee in the House during the first 60 days of each calendar year, and is then required to be published in the CONGRESSIONAL RECORD. At the present time, the consolidated reports are not required to contain the names of the individual members and employees incurring the expenses. Under the amendment made by subsection (b), consolidated reports in addition to showing the amounts spent for each purpose by the committee, would be required to show the total amount expended by each member and employee for each purpose.

Subsection (b) of the amendment would require reporting, in the manner described above, by members and employees of the U.S. delegations to interparliamentary bodies, such as the Interparliamentary Union and the NATO Parliamentarians Conference. Since these delegations are not committees within the meaning of section 502(b), the reporting requirements of such sections are not applicable to them.

These groups are not authorized to spend counterpart funds, but receive regular appropriations for their expenses. Subsection (b) of the amendment would require reports of all expenditures from these appropriations to be made to the chairman of the Committee on Foreign Relations of the Senate in the case of Senate Members and employees, and to the chairman of the Committee on Foreign Affairs of the House in the case of House Members and employees. These consolidated reports, showing an itemized breakdown as described above, would then be filed by the chairman of those committees and would be printed in the CONGRESSIONAL RECORD.

Subsection (c) of the amendment amends section 60 of the Revised Statutes (2 U.S.C. 102). Section 60 provides for the filing by the Secretary of the Senate and the Clerk of the House with the respective Houses of annual reports containing certain information, including detailed statements of contingent fund expenditures. The report filed by the Secretary of the Senate has in the past been published as a public document. It is understood, however, that for the past several years there has been no such publication in the case of the House. The amendment would require no change in Senate practice but would require that the report of the Clerk of the House be published in similar fashion.

Mr. STENNIS. Mr. President, I shall take a moment to summarize. We believe the amendment we have offered is the only practical way to get at this problem. The only way for the Senate to cover the question is to adopt this rule. Dollars and amounts, and variations of schedules, are not important. The major consideration is the adoption of a rule of conduct that will be the law of the land, so far as we are concerned, for the expenditure of public funds as Members of this body.

Under the amendment, the Rules and Administration Committee will still have abundant authority to revise the schedule upward in order to take care of any real need, not only as to individuals, but it will be able to revise schedules upward before they go into operation under the present rules of the Senate and under the amendment.

So, in our opinion, though what the Senator from Ohio has outlined is true, the only proper procedure that can prevail is adoption of our amendment,

which applies to the Senate. Then the House can devise its own rule as it may see fit.

The Senate must not stumble over theories and items of figures. Let us adopt the amendment so that we may have a rule and guide, which the Rules and Administration Committee may revise in any way it sees fit.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. STENNIS. I am glad to yield.

Mr. HOLLAND. I think all of us would like to see a measure apply to both Houses. We tried that 2 or 3 times before.

Mr. STENNIS. A number of times.

Mr. HOLLAND. The conferees have returned from the conference unable to accomplish anything, because the House was not willing to accept the proposal. It seems to me the only way we can surely get something done is to support the amendment offered by the Senator from Mississippi, the distinguished chairman of the subcommittee. The only way we can get anything done with assurance is to support the amendment, in the hope that when we go to conference the House will be willing to expand it, with the knowledge that if the House conferees will not agree we shall at least have made a beginning in behalf of the Senate to show affirmatively where we stand. Therefore, I shall support the amendment of the Senator from Mississippi.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware [Mr. WILLIAMS] in the nature of a substitute for the amendment of the Senator from Mississippi [Mr. STENNIS].

Mr. DIRKSEN. Mr. President, I shall ask the Senator from Massachusetts only one question. The Senator is a ranking minority member of the subcommittee and has lived with the problem a long time. I ask the Senator to state in 30 seconds what is his estimate of the situation—whether he thinks the distinguished Senator from Mississippi is correct in the presentation of his amendment, or whether we should support the Senator from Delaware.

Mr. SALTONSTALL. Mr. President, I believe the only practical way to go about accomplishing our objective is to support the Senator from Mississippi and the Senator from Arizona. If we wish to make public the money we Senators spend we should support the amendment of the Senator from Mississippi and vote against the amendment of the Senator from Delaware.

In my opinion, ultimately the objective of the Senator from Delaware may be accomplished, but the only way we can make a start is to make a start with ourselves. I have been through this on three or four conference committees. I believe we will get nowhere in that process, but if we support the amendment of the Senator from Mississippi we shall make a start.

Mr. WILLIAMS of Delaware. Mr. President, I shall take only 1 minute.

I point out that this particular amendment has not been to conference with the House of Representatives since the recent disclosures, which I believe may have changed the sentiment in the House toward accepting the amendment.

The point was made a moment ago that if we should agree to the committee amendment dealing with the Senate only and send it to conference, the conferees could expand it to include the House if the House should so desire. That is in error. That action would be subject to a point of order. The conferees could not expand the provision beyond what was taken to the conference. The proposal would not be in conference unless we accept my amendment.

I point out further that if all the Senate wishes to do is to open its own records it is not even necessary to enact a law. All that is necessary is to have the chairman of the Committee on Appropriations and the chairman of the Committee on Foreign Relations stand on the floor of the Senate tonight and say, "All records of the Senate now in our possession which relate to foreign travel are public information," and then it will all be over. What the Senate is asked to do is to go through the farce of passing a bill which is applicable only to the Senate, in order to make the Senators do what they say they want to be made to do by law. Let us stop kidding ourselves. If we really want to remove this cloak of secrecy we should vote for this amendment being offered on behalf of Mrs. SMITH and me.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Delaware, in the nature of a substitute for the amendment of the Senator from Mississippi. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Alabama [Mr. HILL], the Senator from Oregon [Mr. LUSK], the Senator from Washington [Mr. MAGNUSON], the Senator from Arkansas [Mr. MCCLELLAN], and the Senator from Montana [Mr. MURRAY] are absent on official business.

I also announce that the Senator from Georgia [Mr. RUSSELL], the Senator from Missouri [Mr. SYMINGTON], the Senator from Florida [Mr. SMATHERS], the Senator from Virginia [Mr. BYRD], and the Senator from Missouri [Mr. HENNINGS] are absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that if present and voting, the Senator from Alaska [Mr. BARTLETT], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Washington [Mr. MAGNUSON], the Senator from Arkansas [Mr. MCCLELLAN], the Senator from Missouri [Mr. SYMINGTON], the Senator from Virginia [Mr. BYRD], and the Senator from Florida [Mr. SMATHERS] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. BRIDGES], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

I further announce that, if present and voting, the Senator from New Hampshire [Mr. BRIDGES], and the Senator from Arizona [Mr. GOLDWATER] would each vote "nay."

The result was announced—yeas 56, nays 23, as follows:

[No. 248]

YEAS—56

Aiken	Ervin	Mansfield
Anderson	Fong	Martin
Beall	Frear	Morse
Bennett	Fulbright	Morton
Brunsdale	Gruening	Mundt
Bush	Hart	Muskie
Butler	Hickenlooper	Pastore
Cannon	Hruska	Proxmire
Carlson	Jackson	Randolph
Carroll	Javits	Schoeppel
Case, N.J.	Johnston, S.C.	Scott
Case, S. Dak.	Keating	Smith
Cooper	Kerr	Talmadge
Cotton	Kuchel	Williams, Del.
Curtis	Lausche	Williams, N.J.
Dodd	Long, La.	Yarborough
Douglas	McCarthy	Young, N. Dak.

Allott	Gore	Prouty
Bible	Hayden	Robertson
Byrd, W. Va.	Holland	Saltonstall
Capehart	Johnson, Tex.	Sparkman
Chavez	Jordan	Stennis
Clark	Long, Hawaii	Thurmond
Dirksen	Monroney	Wiley
Engle	Moss	

NOT VOTING—21

Bartlett	Hartke	McClellan
Bridges	Hennings	Magnuson
Byrd, Va.	Hill	Murray
Church	Humphrey	O'Mahoney
Eastland	Kefauver	Russell
Goldwater	Kennedy	Smathers
Green	Lusk	Symington

So the amendment of Mr. WILLIAMS of Delaware in the nature of a substitute was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Mississippi [Mr. STENNIS].

The amendment as amended was agreed to.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from New York.

Mr. JAVITS. Some Senators who live close to the Capitol have a problem which I wish to bring to the attention of the Committee. The problem has to do with the interchangeability, if any, between telephone and telegraph allowances. A substantial amount of my telegraph allowance is unused, but I often have a shortage in my telephone allowance. May I ask the Senator to have a study of that question made?

Mr. STENNIS. I assure the Senator that the subject to which he refers will be looked into. As the Senator from Mississippi recalls, the two accounts are handled separately and in different ways. They are not easily made interchangeable. However, we will certainly study the question and attempt to reach a solution to his problem.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ELLENDER. There has been considerable discussion in the past two or three weeks with respect to the construction of a new swimming pool. I wonder if the Senator will tell us whether or not there is money provided in the bill for the construction of a new swimming pool.

Mr. STENNIS. No, there are no funds provided in the bill for that purpose, to be used or that can be used for the purpose the Senator has mentioned.

Mr. ELLENDER. Can the Senator inform us as to whether any effort is now being made to construct a new swimming pool?

Mr. STENNIS. I am glad to give the Senator from Louisiana such knowledge as I have, which is largely what I have read in the newspapers. But I have understood that there has been recently authorized by the Senate Office Building Commission the building of a small pool in what is ordinarily called the gymnasium, and the Senator from Mississippi is glad to give the following explanation of the amount of money involved and where the money can come from if it is so used.

Two years ago, I believe it was, a request was made for a very large sum of money to re-wire, re-aircondition, and re-do the plumbing in the Old Senate Office Building at a cost of $500,000 or $600,000. The request was denied, but of that amount a sum of around $150,000 was included.

Mr. ELLENDER. As I recall, the Architect of the Capitol had submitted a request for as much as $6½ million to do that job. That is my recollection.

Mr. STENNIS. The Senator is correct.

Mr. ELLENDER. The committee finally gave the Architect of the Capitol $250,000 to remodel the existing facilities in the old Capitol Building, and I understand that of that sum of $250,000 there remains $120,000. I understand the balance of that amount is what the Senator is now referring to.

Mr. STENNIS. Yes, there is a balance on hand. The money expended has been used for cutting doors through walls and increasing the number of rooms. A part of the money was used to take out the old cafeteria on the second floor and to convert it into a hearing room or Space Committee rooms, and quarters, and in a small way the remodeling of offices of different Senators.

The Senate Office Building Commission, as the Senator from Mississippi understands, has authorized the sum of around $45,000 of that existing money to be spent in small items in this gymnasium, the principal one of which is the swimming pool to which the Senator refers.

Mr. ELLENDER. Is it not a fact that the amount of $250,000 was designated for the purpose of remodeling existing facilities in the old office building?

Mr. STENNIS. The provision reads as follows:

Remodeling, Senate Office Building: Toward carrying out the provision of the Act of July 10, 1957, Public Law 85-95, authorizing the enlargement and remodeling of Senators' suites and structural, mechanical, and other changes and improvement in the existing Senate Office Building to provide improved accomodations for the United States Senate, $250,000 to be expended under the direction of the Senate Office Building Commission.

Mr. ELLENDER. Does the Senator interpret that section of the law as giving the Commission the right to construct a brandnew swimming pool in the old office building?

Mr. STENNIS. I think it would, in connection with the enlargement or remodeling of the quarters and the facilities that are there. Among the facilities is a very small swimming pool which the Senator from Mississippi was paid for through the private funds of the Senate many years ago. I cannot vouch for that information, but I believe it was some 40 years ago. The Senator understands that it is not much larger than an old-fashioned wash pot, and can only be used by one Senator at a time, if he is really going to swim. I learned how to swim in a creek.

Mr. ELLENDER. I understand that the dimensions of the present pool are 14 feet by 20 feet. It is proposed to build one 20 feet by 20 feet.

Mr. CHAVEZ. That is correct.

Mr. STENNIS. I should like to conclude my statement. I propose the expansion of the present pool or the building of another swimming pool for the following reasons. Although I do go to the gymnasium, I seldom get into this small size pool. There are Members of the Senate, however, who are in such physical condition that, under doctor's orders, the only kind of exercise they can take is a very mild type, of which swimming is the best.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. STENNIS. I should like to finish this point first. This is a factual statement. I am certainly willing to provide a small pool so that Senators may take some exercise, under the schedule on which we have been operating here, and I am willing to have any reasonable sum of money spent for that purpose.

Mr. ELLENDER. It is not a question of opposing the project, by any means. However, it strikes me that we ought to follow the law. As I read the law, I do not see in it any right on the part of the Commission to construct a brandnew swimming pool. The money was appropriated—and I was present when all of it was done—for the purpose of renovating and renewing present facilities, not for the building of a brandnew structure. Merely reading the law, which the Senator from Mississippi has done, indicates to me clearly that the money that is left over should either be returned to the Treasury or spent, if necessary, for the remodeling of Senator's suites, and things of that kind; in other words, for existing facilities. If the Commission takes some of the $120,000 to spend on a brand new pool, that is not in accordance with the law as I read it.

Mr. STENNIS. There is no proposal that the Senator from Mississippi has heard of about spending $120,000 on a swimming pool. I used the figure of $44,000.

Mr. ELLENDER. I may have misstated it. If so, I am in error. I believe I said out of the $120,000, this amount would be spent for the pool. It is my information that out of it we would spend $44,000, instead of renovating the existing swimming pool, to build a brand new one.

Mr. CHAVEZ. That is correct.

Mr. ELLENDER. Why do we not go through the regular procedure and make a case for it and let the money be appropriated?

Mr. CHAVEZ. We are going through the regular procedures. The Senator from Louisiana is not willing to give $4 billion to foreign aid. I wonder why he is worrying about $44,000 for Senators to take a bath. It makes me sick to think that 99 men and the good lady in the Senate will appropriate $60 million for the State Department and then worry about someone taking a bath in a $44,000 pool. We worry about that.

Mr. ELLENDER. Mr. President——

The PRESIDING OFFICER. The Senator from Mississippi has the floor.

Mr. STENNIS. Mr. President, I yield first to the Senator from Oregon [Mr. MORSE]. He has been on his feet a long time.

Mr. MORSE. I wish to associate myself with the remarks of the Senator from Louisiana [Mr. ELLENDER]. I suggest, from the standpoint of safety of Members of the Senate, to which the Senator from Mississippi [Mr. STENNIS] has referred, that I believe it would be better to provide Senators with a cold shower than running the risk of drowning in the pool.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. ELLENDER. I wish to repeat that I am not taking issue with the distinguished Senator from New Mexico. It may be that we do need a new swimming pool, but let us get it in an orderly fashion.

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. STENNIS. Mr. President, I yield to the Senator from Alaska.

Mr. GRUENING. Mr. President, I think it is desirable that we have two pools. For one thing, the Senate has been guilty of gross discrimination in having a pool only for the male Members of the Senate. In the next Senate we will probably have two or more lady Senators. It is only fair that one of these pools and one of these facilities be reserved for them.

Mr. STENNIS. There is no money in the bill for a swimming pool.

Mr. CHAVEZ. I tell the Senator that we have the money.

Mr. LAUSCHE. Mr. President, I should like to ask the Senator from Mississippi to repeat the statement which he has just made about money being included in the bill for a swimming pool.

Mr. STENNIS. There are no funds in the bill for a swimming pool.

Mr. President, I ask unanimous consent that a statement I have prepared with reference to the restoration of the old Supreme Court Chamber and the old Senate Chamber be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR STENNIS

I strongly support the committee's amendment to provide $400,000 for restoration of the Old Senate Chamber on the principal floor of the Capitol and of the Old Supreme Court Chamber on the first, or ground floor.

The rather casual use of these historic chambers has been an object of concern to many of us.

We feel that these Chambers should be restored and refurnished in an authentic manner to their condition in 1859. Then, these rooms should be dedicated to the public in perpetuity.

These Chambers—true examples of architectural and decorative beauty in their original condition—have witnessed many milestones of American history.

Let me briefly review the history of these two chambers and then relate some historic events that transpired there.

Originally the Senate Chamber in the north wing of the Capitol was two stories high. It extended upward from the Old Supreme Court Chamber to the Old Senate Chamber opposite the Disbursing Office. It was used as a Senate Chamber from 1800 until 1808.

Then it was subdivided by adding a floor on the principal floor level, and in 1810 the Senate moved up to the upper level, while the Court moved into the lower Chamber.

These two bodies occupied the Chambers until the British burned the Capitol in 1814. It took 5 years to complete the repairs, and then (1819) the restored Chambers were reoccupied.

In 1828 a balcony was added around the semicircular portion of the Senate Chamber. It was here that the press, for the first time, had space reserved for free reporting of Senate deliberations.

The Old Senate Chamber was occupied by the Senate until 1859, when it moved into the present Chamber.

Planned restoration includes rebuilding the balcony, removal of the wooden screen on the east side, and the busts of the Justices. It will feature replicas of Senate furniture and draperies. The Peal portrait of Washington will be returned and the ornate central chandelier replaced.

Restoration of the lower Chamber, the old Supreme Court Chamber, will include removal of wooden partitions now subdividing the Chamber, removal of the protective structure which conceals Franzoni's bas relief "Justice Holding Scales." Judicial furniture of the period will be added.

The Architect's Office, working in connection with the Archives and Records Service and the Library of Congress, is gathering photographs, prints, and drawings of the two Chambers, in an effort to recreate, realistically, the environment of a century ago.

In the two-storied original Senate Chamber, Thomas Jefferson was sworn in by John Marshall and delivered his inaugural address. The Louisiana Purchase was ratified here in 1803.

The Chamber on the principal floor witnessed the declaration of war of 1812, the war with Mexico in 1846. The Senate sat here when the Monroe Doctrine message was sent to Congress.

John Calhoun, Henry Clay, and Daniel Webster delivered historic speeches and their farewell addresses here. Funeral ceremonies for Calhoun and Clay were held in this Chamber.

The Supreme Court Chamber on the ground, or first floor, had its moments, too. Under two famous Chief Justices, John Marshall and Roger Brooks Taney, the Court, here, rendered many landmark cases. A few of these are: *Dartmouth College* v. *Woodward* (1819), *McCullogh* v. *Maryland* (1819), *Gibbons* v. *Ogden* (1824), *Martin* v. *Mott* (1827), *Worchester* v. *Georgia* (1831), *Bank of Augusta* v. *Earle* (1839), *Swift* v. *Tyson* (1842), *Abelman* v. *Booth* (1855), and *Dred Scott* v. *Sanford* (1856).

Surely, these events assure these Chambers of important places among our national shrines.

The amount involved is relatively small: $400,000. These Chambers should belong to the public, and particularly should they belong to our youthful visitors who may experience a new sense of historical inspiration, a new dimension of patriotism, by having the opportunity for a clearer look at history that this restoration will provide.

The language included in the bill by the committee reads as follows:

"RESTORATION OF OLD SENATE CHAMBER AND OLD SUPREME COURT CHAMBER IN THE CAPITOL"

"To enable the Architect of the Capitol to afford to the American people an opportunity to observe in its historic form, and to maintain as objects of interest to the youth of the United States, the rooms in the Capitol in which the United States Senate and the United States Supreme Court conducted their respective sessions in the early decades of our Nation, the Architect of the Capitol is authorized to make such expenditures as may be necessary to restore the Old Senate Chamber on the principal floor of the Capitol and the Old Supreme Court Chamber on the ground floor of the Capitol substantially to the condition in which these chambers existed when last occupied in 1859 and 1860, respectively, by the Senate and the Court, including expenditures for procurement, restoration, and repair of furniture and furnishings for these chambers, $400,000 to be expended without regard to section 3709 of the Revised Statutes, as amended, and to remain available until expended.

"Said Chambers are hereby dedicated as permanent historic shrines of the Senate of the United States and of the Supreme Court of the United States, and when restored, shall be exhibited to the public and used for no other purpose."

The PRESIDING OFFICER. The question is on the passage of the bill. The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Alabama [Mr. HILL], the Senator from Oregon [Mr. LUSK], the Senator from Washington [Mr. MAGNUSON], the Senator from Arkansas [Mr. MCCLELLAN], the Senator from Montana [Mr. MURRAY], the Senator from Georgia [Mr. RUSSELL], and the Senator from Missouri [Mr. SYMINGTON] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

I further announce that, if present and voting, the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Rhode Island [Mr. GREEN], the Senator from Indiana [Mr. HARTKE], the Senator from Alabama [Mr. HILL], the Senator from Oregon [Mr. LUSK], the Senator from Washington [Mr. MAGNUSON], the Senator from Arkansas [Mr. MCCLELLAN], the Senator from Montana [Mr. MURRAY], the Senator from Missouri [Mr. SYMINGTON], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Massachusetts [Mr. KENNEDY] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. BRIDGES] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

I further announce that, if present and voting, the Senator from New Hampshire [Mr. BRIDGES] and the Senator from Arizona [Mr. GOLDWATER] would each vote "yea."

The result was announced—yeas 81, nays 0, as follows:

[No. 249]

So the bill (H.R. 12232) was passed.

Mr. STENNIS. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House thereon; and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. MCGEE in the chair) appointed Mr. STENNIS, Mr. CHAVEZ, Mr. HAYDEN, Mr. JOHNSON of Texas, Mr. BRIDGES, Mr. SALTONSTALL, and Mr. ALLOTT conferees on the part of the Senate.

SUSPENSION OF TARIFF SCHEDULES BY FEDERAL MARITIME BOARD

Mr. BARTLETT. Mr. President, I ask unanimous consent that a report from the Department of Commerce concerning H.R. 10458 be printed in the RECORD. Senators will note that the Department of Commerce has reported adversely about a bill which would extend the time by which the Federal Maritime Board may suspend proposed increases in tariffs. H.R. 10458 is companion legislation to S. 3005, a measure I sponsored in the Senate and which the Senate has approved. When the Federal Maritime Board allowed increases in tariffs in the Alaska trade without any hearings, the Board explained that its powers of suspension were limited to 4 months only. The Board sought to justify its action in the Alaska case with a contention that 4 months is an inadequate period of time to complete a review of the proposed tariff increases. On that basis the Board permitted the increases to become effective and ordered a subsequent investigation. Of course, any subsequent investigation after tariffs become effective can, at most, permit rebates by carriers to shippers. The consumers whose cost of living is inflated by higher shipping costs in the meantime receive no refunds.

My bill was a response to the Federal Maritime Board's complaint that it had authority to suspend increases for too brief a period to make adequate study. The legislation was designed to add to the powers of the Federal Maritime Board. When Clarence Morse, former Chairman of the Federal Maritime Board, testified before the Senate Interstate and Foreign Commerce Committee recently he stated his personal view that the legislation to which I refer would be unobjectionable.

In the light of this background, Mr. President, it is strange that the Department of Commerce opposes a measure, the need for which the Federal Maritime Board had itself indicated. With respect to this report four considerations seem to me particularly salient:

First, H.R. 10458 does not compel the Federal Maritime Board to suspend rates for seven months; instead it gives the Board permissive authority within its discretion to suspend rates for any length of time up to seven months as protection of the public interest may require.

Second, the contention that the bill would work hardship upon carriers is not well taken because the Board's authority under the bill is permissive and because any responsible carrier can anticipate well in advance the need for higher rates required by increases in the cost of its service. It should be customary to file requests for rate increases sufficiently in advance to take into account the suspension period during which the appropriate agency of government reviews the applicant's rate structure.

Third, the public interest requires that the burden of proof in rate cases should always be upon the carrier. The approach of the Secretary of Commerce is to place the burden of proof upon protestants. The public is placed in the position—without access to all of the necessary facts—of having to sustain its burden before a hearing is even ordered. This approach frustrates effective opposition on behalf of consumers to rate increases proposed by the carriers.

Fourth, the report from the Department of Commerce appears to adopt the view that as between the consuming public and the carrier any risk of loss should be imposed upon the public. There is no evidence of concern in the report for the unrecoverable cost to the consuming public if the carriers' rates after investigation are found to be unjustifiably high. The report puts the public interest second, not first.

Mr. President, I again recall that the General Services Administrator has commended this legislation on the ground that it would result in savings to the United States Government as a shipper. I believe that any one who reads the bill and the report will see that the Department of Commerce report is unresponsive to the real issues and that it demonstrates, at the very least, a misunderstanding of the purposes of this legislation.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF COMMERCE,
Washington, D.C., May 3, 1960.

Hon. HERBERT C. BONNER,
Chairman, Committee on Merchant Marine and Fisheries, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in reply to your request dated February 24, 1960, for the views of this Department with respect to H.R. 10458, a bill "to amend the act of March 3, 1933 (47 Stat. 1426), relating to the length of time by which the Federal Maritime Board may suspend tariff schedules."

The bill, H.R. 10458, would amend section 3 of the Intercoastal Shipping Act, 1933, to provide for a 7-month rate suspension period in lieu of the 4-month period presently provided.

Under the present provisions of the 1933 act, whenever any carrier subject to the act files with the Federal Maritime Board a change in rates, fares, or charges, then either upon complaint or upon its own initiative without complaint, the Board is authorized to provide a hearing concerning the lawfulness of the proposed change. Pending the hearing and decision thereon by the Board, the proposed new schedule of rates, fares or charges, may be suspended for a period not longer than 4 months beyond the time when it would otherwise go into effect.

The bill, if enacted, would extend the duration of such suspension from 4 months to 7 months.

The amendment proposed by H.R. 10458 is not favored by the Department of Commerce and we are of the opinion that its enactment would not be in the public interest.

The proposed amendment establishing a 7-month suspension period is identical with existing law under the Interstate Commerce Act and the Federal Aviation Act. However, this does not justify the establishment of a 7-month suspension period here proposed.

In the report of the Presidential Advisory Committee on Transport Policy and Organization, it was recommended that the suspension powers of the Interstate Commerce Commission be reduced from a 7-month to a 3-month period. In making this recommendation the Committee stated as follows:

"It believes that suspension of new rates should be considered as a special and unusual remedy. However, those affected by proposed changes in rates are now given an opportunity without adequate restriction to have new rates postponed until the ICC has adjudicated the matter or the suspension expires. There is no practical method of indemnifying carriers for possible losses in traffic or revenues over the period of suspension if it is later determined that the rates are just and reasonable * * * the standards which have been developed for determining the lawfulness of suspended schedules have become unduly restrictive, holding the carriers to the meeting of competition only and largely denying them the right to give effect to their full economic capabilities * * * in order to remedy this situation and to be consistent with the proposed revisions in transportation policy which placed more reliance on competitive forces in ratemaking, the power of suspension should be exercised only after the ICC determines on the basis of factual information supplied by the protestant, or as a result of its own investigation, that the proposed rates or related matters are probably unlawful and that making the rate effective would result in injury to the complainant, and that in the absence of suspension the complainant would have no adequate remedy. The period of suspension should be shortened to 3 months * * * by so circumscribing the power of suspension, carriers would be protected from unwarranted attacks by * * * shippers on their pricing adjustments. Unnecessary suspension of new rates would be eliminated on the one hand and, on the other, adequate emergency relief would still be available in situations where a proper showing indicates its desirability * * * the interest of carriers and shippers alike in prompt action demands that administrative procedures should be adjusted to accommodate their needs accordingly. While the above recommendations should produce a marked decrease in the number of suspension dockets, the Commission should use every possible method for expediting such litigation."

The lengthening of the suspension period would discourage or at least retard rate changes. The Department adheres to the above concept and further proposes that as a longrun program the suspension process should be eliminated entirely. An increase in the suspension period would be contrary to this concept and would not achieve the ultimate objective.

The proposed amendment which would compel suspension for a 7-month period or until a full hearing has determined whether or not the proposed rates are reasonable or unreasonable would in our opinion impose an unnecessary hardship on the carrier and result in an undue burden on waterborne commerce. Stated differently, a carrier should not be required to defer a rate adjustment for an unduly protracted period pending investigation and decision by the Board. Such a development could negate the need for prompt rate relief to a carrier.

Under the circumstances the Department is opposed to H.R. 10458 and urges that it be not favorably reported by your committee.

We have been advised by the Bureau of the Budget that there would be no objection to the submission of this report to your committee.

Sincerely yours,

PHILIP A. RAY,
Under Secretary of Commerce.

INDEPENDENT OFFICES APPROPRIATIONS, 1961

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1674, H.R. 11776, the independent offices appropriation bill.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 11776) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices for the fiscal year ending June 30, 1961, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Appropriations with amendments.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I desire to inform the Senate that it is planned to call the Executive Calendar at an early date, perhaps some time tomorrow. We should like to dispose of the independent offices appropriation bill as quickly as possible, and then proceed to the consideration of the Executive Calendar, if plans work out satisfactorily.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. FULBRIGHT. I understood the Japanese Treaty would be made the pending business.

Mr. JOHNSON of Texas. I said that it was planned to call the Executive Calendar; and the Japanese Treaty is on the Executive Calendar.

Mr. President, I desire to have the RECORD show that following the completion of action on Calendar No. 1674, H.R. 11776, the independent offices appropriation bill, Calendar No. 1673, the general Government appropriations bill, may be taken up.

Also, it is planned to call up the following measures:

Calendar No. 1612, H.R. 10455, to amend the Mineral Leasing Act of February 25, 1920.

Calendar No. 1553, H.R. 2565, to promote effectual planning, development, maintenance, and coordination of wildlife, fish, and game conservation and rehabilitation on military reservations.

Calendar No. 1588, S. 2692, to advance the marine sciences, to establish a comprehensive 10-year program of oceanographic research and surveys; to promote commerce and navigation, to secure the national defense; to expand ocean resources; to authorize the construction of research and survey ships and facilities; to assure systematic studies of effects of radioactive materials in marine environments; to enhance the general welfare, and for other purposes.

Calendar No. 1580, H.R. 8229, to amend the Internal Revenue Code of 1954 to provide an exemption from income tax for supplemental unemployment benefit trusts.

It is also expected that the Senate may proceed some time tomorrow to the consideration of Executive E, 86th Congress, the Mutual Security Treaty with Japan; and any other measures which have been previously listed.

ORDER FOR RECOGNITION OF SENATOR MANSFIELD AT THE CONCLUSION OF THE MORNING HOUR ON THURSDAY, JUNE 23, 1960

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may be recognized at the conclusion of the morning hour on Thursday.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEATH OF HON. DOUGLAS H. ELLIOTT, REPRESENTATIVE FROM PENNSYLVANIA

The PRESIDING OFFICER. The Chair lays before the Senate a message from the House of Representatives, which will be read.

The resolution (H.R. 566) was read, as follows:

IN THE HOUSE OF REPRESENTATIVES, U.S.,
June 20, 1960.

Resolved, That the House has heard with profound sorrow of the death of the Honorable DOUGLAS H. ELLIOTT, a Representative from the State of Pennsylvania.

Resolved, That a committee of eleven Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect the House do now adjourn.

Mr. SCOTT. Mr. President, for myself and on behalf of my senior colleague from Pennsylvania [Mr. CLARK] I submit a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be read.

The resolution (S. Res. 339) was read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. DOUGLAS H. ELLIOTT, late a Representative from the State of Pennsylvania.

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Under the second resolving clause, the Presiding Officer appointed Mr. CLARK and Mr. SCOTT as the committee on the part of the Senate to attend the funeral of the deceased Representative.

TRANSACTION OF ADDITIONAL ROUTINE BUSINESS

By unanimous consent, the following additional routine business was transacted:

ADDITIONAL REPORTS OF A COMMITTEE

The following additional reports of a committee were submitted:

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare, without amendment:

H.R. 3313. An act to amend section 200 of the Soldiers and Sailors Civil Relief Act of 1940 to permit the establishment of certain facts by a declaration under penalty of perjury in lieu of an affidavit; (Rept. No. 1621);

H.R. 7966. An act to amend section 601 of title 38, United States Code, to provide for the furnishing of needed services of optometrists to veterans having service-connected eye conditions; (Rept. No. 1622); and

H.R. 10108. An act to authorize reimbursement of certain Veterans' Administration beneficiaries and their attendants for ferry fares, and bridge, road, and tunnel tolls; (Rept. No. 1623).

TECHNICAL REVISIONS IN INCOME TAX PROVISIONS RELATING TO ESTATES, TRUSTS, PARTNERS, AND PARTNERSHIPS — AMENDMENT

Mr. DOUGLAS submitted an amendment, intended to be proposed by him, to the bill (H.R. 9662) to make technical revisions in the income tax provisions of the Internal Revenue Code of 1954 relating to estates, trusts, partners, and partnerships, and for other purposes, which was ordered to lie on the table and to be printed.

INDEPENDENT OFFICES APPROPRIATION BILL AMENDMENT

Mr. JAVITS submitted an amendment, intended to be proposed by him, to the bill (H.R. 11776) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes, which was ordered to lie on the table and to be printed.

AMENDMENT OF SMALL BUSINESS ACT—ADDITIONAL COSPONSOR OF BILL

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the name of the Senator from West Virginia [Mr. RANDOLPH] may be added as an additional cosponsor of the bill (S. 3689) to amend the Small Business Act, and for other purposes, introduced by me on June 16, 1960.

The PRESIDING OFFICER. Without objection, it is so ordered.

STUDENT LOAN INSURANCE ACT OF 1960—ADDITIONAL COSPONSORS OF AMENDMENT

Under authority of the order of the Senate of June 17, 1960, the names of Senators MONRONEY, MANSFIELD, CHAVEZ, CARLSON, BYRD of West Virginia, MURRAY, BIBLE, SPARKMAN, KERR, FREAR, JOHNSTON of South Carolina, PASTORE, HUMPHREY, HART, BARTLETT, MCCARTHY, MCGEE, CANNON, MAGNUSON, GREEN, SYMINGTON, HILL, RANDOLPH, ANDERSON, JAVITS, YARBOROUGH, WILLIAMS of New Jersey, MUSKIE, LONG of Louisiana, MOSS, FULBRIGHT, and HENNINGS, were added as additional cosponsors of the amendment, in the nature of a substitute, submitted by Mr. JOHNSON of Texas, on June 17, 1960, to the bill (S. 2710) to provide for loan insurance on loans to students in higher education.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, June 20, 1960, he presented to the President of the United States the enrolled bill (S. 899) to repeal certain provisions of law requiring the submission of certain reports to Congress, and for other purposes.

ADDITIONAL APPENDIX MATTERS

By Mr. THURMOND:

Address delivered by James J. Kilpatrick, editor of the Richmond News Leader, at a testimonial dinner for Col. W. D. Workman in Columbia, S.C., on the subject of "The Decline of Basic Values in Contemporary Society."

Address entitled "The Equality of Men," delivered by Wayne J. Holman, Jr., at the commencement exercises at Presbyterian College, at Clinton, S.C., on June 6, 1960.

Address delivered by Dr. Edwin R. Walker, president of Queens College, in a speech in Rock Hill, S.C., on May 29, at the Winthrop College commencement exercises, on the subject of "Decisions and Actions Affecting the Outcome of Man's Destiny in the Next 40 Years," which will appear hereafter in the Appendix.

Commencement day address delivered by Hon. Ernest F. Hollings, Governor of South Carolina, at the Medical College of South Carolina, at Charleston, S.C., on June 2, 1960.

ADJOURNMENT

Mr. SCOTT. Mr. President, as a further mark of respect and honor to the memory of the deceased Representative, I move that the Senate adjourn until 12 o'clock noon tomorrow.

The motion was unanimously agreed to; and (at 11 o'clock and 58 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, June 21, 1960, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES

MONDAY, JUNE 20, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Psalm 1: 2: *Blessed is the man whose delight is in the law of the Lord.*

Almighty and eternal God, in the quiet of this moment of prayer, may we come to Thee with glad and grateful hearts as we call to memory Thy grace and goodness.

Give us a courageous and conquering faith in these perilous days when the way of life is dim and its meaning seems to be a bewildering enigma.

We penitently acknowledge that we so frequently yield to inertia and desire the delights of a strong faith without dedicating ourselves to its high demands or surrendering to its disciplines.

Show us how we may enlist the loyalty and service of the virile and educated young people of our generation who, with ambitions for high adventure and lofty enterprises, are scanning the skyline for a new portent of a better day when men shall live together in peace and good will.

Grant unto us, as we mourn the death of our colleague, the assurance that whatever was good and noble in his life, in our sight and Thine, shall abide forever. May the members of his bereaved family be blessed with the consolation of Thy grace.

Hear us in Christ's name. Amen.

THE JOURNAL

The Journal of the proceedings of Friday, June 17, 1960, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment bills and a joint resolution of the House of the following titles:

H.R. 1543. An act for the relief of Angela D'Agata Nicolosi;

H.R. 2007. An act for the relief of May Hourani;

H.R. 3242. An act for the relief of Mrs. Virginia Lee Sage;

H.R. 5530. An act for the relief of Leila Bernstorff Grauert;

H.R. 5738. An act to authorize the Secretary of the Army to transfer to the Waukegan Port District the commitment of the city of Waukegan, Ill., to maintain a public wharf in Waukegan Harbor on land conveyed to the city in 1914, and for other purposes;

H.R. 5850. An act for the relief of the borough of Ford City, Pa.;

H.R. 6149. An act for the relief of Wesley C. Newcomb;

H.R. 6456. An act concerning payment of debts out of compensation for trust land on the Lower Brule Sioux Reservation taken by the United States;

H.R. 6498. An act concerning payment of debts out of compensation for trust land on the Standing Rock Sioux Reservation taken by the United States;

H.R. 9443. An act for the relief of Mrs. Ethel B. Morgan;

H.R. 11646. An act to amend the act authorizing the Secretary of Agriculture to collect and publish statistics of the grade and staple length of cotton, as amended, by defining certain offenses in connection with the sampling of cotton for classification and providing a penalty provision, and for other purposes;

H.R. 12052. An act to extend the Defense Production Act of 1950, as amended, for an additional 2 years; and

H.J. Res. 688. Joint resolution for the relief of certain aliens.

The message also announced that the Senate had passed with amendments, in which the concurrence of the House is

requested, a bill of the House of the following title:

H.R. 7634. An act authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes.

The message also announced that the Senate insists on its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. CHAVEZ, Mr. KERR, Mr. MCNAMARA, Mr. CASE of South Dakota, and Mr. COOPER to be the conferees on the part of the Senate.

The message also announced that the Senate had passed with amendments, in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 11390. An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1961, and for other purposes.

The message also announced that the Senate insists on its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. HILL, Mr. CHAVEZ, Mr. RUSSELL, Mr. STENNIS, Mr. PASTORE, Mr. MONRONEY, Mr. KUCHEL, Mrs. SMITH, and Mr. HRUSKA to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 598. An act for the relief of Anthony DiGiovanni;

S. 1409. An act for the relief of Donald B. Thurston, and other employees of the Fish and Wildlife Service;

S. 1764. An act to amend title 32, United States Code, to authorize the payment of certain claims against the National Guard;

S. 2310. An act for the relief of Peter Dolas;

S. 2353. An act for the relief of Col. John A. Ryan, Jr.;

S. 2548. An act for the relief of Henry C. Larson;

S. 2585. An act for the relief of Josephine Lue Fan (also known as Josephine Fook-Lau), Joseph Lue Fan (also known as Joseph Lew-Fan), and Aura Joan Lue Fan;

S. 2689. An act for the relief of Hwachii Lien;

S. 2711. An act to quiet title to certain lands within the Nez Perce Indian Reservation, Idaho, and for other purposes;

S. 2712. An act to authorize the Administrator of General Services to convey all lands comprising Fort Dearborn, Rye, N.H., and Rye Air Force Base, Rye, N.H., to certain former owners of such lands;

S. 2855. An act for the relief of Brenda Nicholson Miller;

S. 2863. An act for the relief of Kyung Ok Ahn;

S. 2919. An act providing for a study and investigation of the desirability and feasibility of establishing and maintaining a national tropical botanic garden;

S. 2974. An act for the relief of Michael Nolan (formerly Michael Pasvanis);

S. 3053. An act for the relief of the State of Connecticut;

S. 3083. An act for the relief of Andrew Rerecich and his wife, Germana Rerecich;

S. 3105. An act for the relief of William Y. Allen, Jr., Donald Baldwin Quintero, Johann Friedrich Stapelfeld, and Kenneth Gordon Woods;

S. 3117. An act to treat all basic agricultural commodities alike with respect to the cost of remeasuring acreage;

S. 3125. An act for the relief of Robert William Neal, Robert J. Naumann, Charles LeRoy Van Slyke, and Franklin Jordan;

S. 3158. An act to exempt State controlled banks belonging to the Federal Reserve System from the statutory limits on the number of their directors;

S. 3160. An act to provide for the striking of medals in commemoration of the 100th anniversary of the founding of the State of Idaho as a Territory;

S. 3237. An act for the relief of Anastasia Stassinopoulos;

S. 3263. An act for the relief of Cesar S. Wycoco;

S. 3439. An act authorizing the President of the United States of America to present a gold medal to Robert Frost, a New England poet;

S. 3485. An act to amend section 7 of the Administrative Expenses Act of 1946, as amended, to provide for the payment of travel and transportation costs for persons selected for appointment to certain positions in the United States, and for other purposes;

S. 3486. An act to authorize Government agencies to provide quarters, household furniture and equipment, utilities, subsistence, and laundry service to civilian officers and employees of the United States, and for other purposes;

S. 3487. An act to amend the "Anti-Kickback Statute" to extend it to all negotiated contracts;

S. 3496. An act to amend section 362(b) of the Communications Act of 1934;

S. 3532. An act to provide for the striking of a medal in commemoration of Century 21 Exposition to be held in Seattle, Wash.;

S. 3549. An act to amend the act of September 14, 1959, to authorize studies by congressional committees with respect to sales and use taxes imposed by the States on sales and other business activities in interstate commerce;

S. 3579. An act to authorize agencies of the Government of the United States to pay in advance for required publications, and for other purposes; and

S. 3665. An act to authorize the Secretary of Agriculture to grant an easement over certain lands to the trustees of the Cincinnati Southern Railway, their successors and assigns.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 899. An act to provide for the discontinuance of certain reports now required by law.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9322) entitled "An act to make permanent the existing suspension of duties on certain coarse wool."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9862) entitled "an act to continue for 2 years the existing suspension of duties on certain lathes used for shoe last roughing and shoe last finishing."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9881) entitled "An act to extend for 2 years the existing provisions of law relating to the free importation of personal and household effects brought into the United States under Government orders."

REPORT ON SUPPLEMENTAL APPROPRIATION BILL, 1961

Mr. THOMAS. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to submit a privileged report on the supplemental appropriation bill for 1961.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. JENSEN reserved all points of order on the bill.

WATERSHED PROTECTION AND FLOOD PREVENTION

The SPEAKER laid before the House the following communication, which was read by the Clerk and together with the accompanying papers was referred to the Committee on Appropriations:

JUNE 16, 1960.

Hon. SAM RAYBURN,
The Speaker,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the provisions of section 2 of the Watershed Protection and Flood Prevention Act, as amended, the Committee on Agriculture has today considered the work plans transmitted to you by Executive Communications 2013, 2182, and 2233, and referred to this committee and unanimously approved each of such plans. The work plans involved are:

STATE AND WATERSHED

Pennsylvania: Mill Creek.
Ohio: Chippewa Creek.
New York: Ischua Creek.
Kentucky: West Fork of Clarks River, North Fork of Little River.
Georgia: North Broad River.
Wisconsin: Bad Axe.
Missouri: Tabo Creek.
Iowa: Mill-Picayune Creek, Badger Creek.
Colorado: Vineland Area Tributary to Arkansas River.
South Carolina: Huff Creek.
West Virginia: Brush Creek.

Sincerely yours,

HAROLD D. COOLEY,
Chairman.

CONSENT CALENDAR AND MOTIONS TO SUSPEND THE RULES

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the call of the Consent Calendar and motions to suspend the rules in order today may be in order on Tuesday and Friday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. HALLECK. Mr. Speaker, reserving the right to object, and I shall not object, as the gentleman and the Speaker and I have conferred about this matter and under the circumstances it is the only course for us to adopt.

I would like to suggest in this reservation that there were certain special orders for today and after the gentleman's

unanimous-consent request is granted I would ask the Speaker's indulgence in order to make arrangements for insertion in the CONGRESSIONAL RECORD of the remarks which would have been made.

The SPEAKER. The gentleman will be recognized.

Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

EXTENSION OF REMARKS

Mr. HALLECK. Mr. Speaker, I ask unanimous consent that the following Members, the gentleman from Michigan [Mr. FORD], the gentleman from New Hampshire [Mr. BASS], the gentlewoman from Ohio [Mrs. BOLTON], the gentleman from Michigan [Mr. CHAMBERLAIN], the gentleman from Missouri [Mr. CURTIS], the gentleman from California [Mr. HOSMER], the gentleman from California [Mr. JACKSON], the gentleman from Minnesota [Mr. JUDD], the gentleman from Wisconsin [Mr. LAIRD], the gentleman from New York [Mr. MILLER], the gentlewoman from New York [Mrs. ST. GEORGE], and the gentleman from California [Mr. WILSON] may extend their remarks in the CONGRESSIONAL RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. HALLECK. A further request, Mr. Speaker, that the gentleman from Wisconsin [Mr. BYRNES], the gentleman from Illinois [Mr. ARENDS], and the gentleman from Arizona [Mr. RHODES] may extend their remarks in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

LEGISLATIVE PROGRAM FOR TOMORROW

Mr. HALLECK. Mr. Speaker, in respect to the program for tomorrow, could the gentleman tell us what will be called first, the suspensions or the bills that were programed.

Mr. ALBERT. The bills that were previously programed will be called first. The bills in order will be the first order of business tomorrow.

GENERAL LEAVE TO EXTEND REMARKS

Mr. ALBERT. Mr. Speaker, may I have permission to request, without establishing a precedent, that all Members may have permission to extend their remarks in the CONGRESSIONAL RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

H.R. 12603

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may have until midnight to file a report on the bill H.R. 12603.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

EXTENSION OF REMARKS

Mr. HALLECK. Mr. Speaker, a parliamentary inquiry. I have permission for certain Members to extend their remarks in the CONGRESSIONAL RECORD and to include extraneous matter. Of course, if they had proceeded under orders entered for today the cost would not be an issue. Would it be in order for me to ask unanimous consent that those extensions be made without regard to the cost?

The SPEAKER. If they are the Member's own preparation, the rule would apply.

MARTIN POPPER

Mr. ROOSEVELT. Mr. Speaker, I rise to a question of the privilege of the House.

The SPEAKER. The gentleman will state it.

Mr. ROOSEVELT. Mr. Speaker, I have been subpenaed to appear before the U.S. District Court for the District of Columbia to testify on June 21, 1960, at 10 o'clock a.m., in the case of the United States of America against Martin Popper. Under the precedents of the House, I am unable to comply with this subpena without the consent of the House, the privileges of the House being involved, I therefore submit the matter for the consideration of this body.

Mr. Speaker, I send to the desk the subpena.

The SPEAKER. The Clerk will report the subpena.

The Clerk read the subpena, as follows:

U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA—UNITED STATES OF AMERICA *v.* MARTIN POPPER—CRIMINAL CASE NO. 1053–59

TO CONGRESSMAN JAMES ROOSEVELT,
House of Representatives, Washington, D.C.:

You are hereby commanded to appear in the United States District Court for the District of Columbia at Third and Constitution Avenue NW., Fourth Floor, Courtroom No. 8, in the city of Washington, D.C., on the 21st, 22d, 23d, and 24th day of June 1960, at 10 o'clock a.m. to testify in the above-entitled case.

This subpena is issued on application of the defendant.

HARRY M. HULL,
Clerk.

By JOHN A. O'BRIEN,
Deputy Clerk.

JUNE 16, 1960.

LEONARD B. BOUDIN,
Attorney for Defendant.

NEW YORK, N.Y.

Mr. ALBERT. Mr. Speaker, I offer a privileged resolution, which I send to the desk.

The SPEAKER. The Clerk will report the resolution.

The Clerk read the resolution (H. Res. 565), as follows:

Whereas Representative JAMES ROOSEVELT, a Member of this House has been served with a subpena to appear as a witness before the United States District Court for the District of Columbia, to testify at Washington, D.C., on the 21st day of June 1960, at 10 o'clock antemeridian, in the case of the United States of America against Martin Popper, criminal case No. 1053–59; and

Whereas, by the privileges of the House, no Member is authorized to appear and testify, but by order of the House: Therefore be it

Resolved, That Representative JAMES ROOSEVELT is authorized to appear in response to the subpena of the United States District Court for the District of Columbia in the case of the United States of America against Martin Popper at such time as when the House is not sitting in session; and be it further

Resolved, That as a respectful answer to the subpena a copy of this resolution be submitted to the said court.

The SPEAKER. The question is on the resolution.

The resolution was agreed to

DEFENSE DEPARTMENT APPROPRIATIONS, 1961

Mr. MAHON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes, with Senate amendments thereto, disagree to the amendments of the Senate, and ask for a conference with the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas? [After a pause.] The Chair hears none and appoints the following conferees: Messrs. MAHON, SHEPPARD, CANNON, FORD, and TABER.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 598. An act for the relief of Anthony DiGiovanni; to the Committee on the Judiciary.

S. 1409. An act for the relief of Donald B. Thurston and other employees of the Fish and Wildlife Service; to the Committee on the Judiciary.

S. 1764. An act to amend title 32, United States Code, to authorize the payment of certain claims against the National Guard; to the Committee on the Judiciary.

S. 2310. An act for the relief of Peter Dolas; to the Committee on the Judiciary.

S. 2353. An act for the relief of Col. John A. Ryan, Jr.; to the Committee on the Judiciary.

S. 2548. An act for the relief of Henry C. Larson; to the Committee on the Judiciary.

S. 2585. An act for the relief of Josephine Lue Fan (also known as Josephine Fook-Lau), Joseph Lue Fan (also known as Joseph Lew-Fan), and Aura Joan Lue Fan; to the Committee on the Judiciary.

S. 2689. An act for the relief of Hwachii Lien; to the Committee on the Judiciary.

S. 2711. An act to quiet title to certain lands within the Nez Perce Indian Reservation, Idaho, and for other purposes; to the Committee on the Interior and Insular Affairs.

S. 2712. An act to authorize the Administrator of General Services to convey all lands comprising Fort Dearborn, Rye, N.H.,

and Rye Air Force Base, Rye, N.H., to certain former owners of such lands; to the Committee on Government Operations.

S. 2855. An act for the relief of Brenda Nicholson Miller; to the Committee on the Judiciary.

S. 2863. An act for the relief of Kyung Ok Ahn; to the Committee on the Judiciary.

S. 2919. An act providing for a study and investigation of the desirability and feasibility of establishing and maintaining a national tropical botanic garden; to the Committee on Agriculture.

S. 2974. An act for the relief of Michael Nolan (formerly Michael Pasvanis); to the Committee on the Judiciary.

S. 3053. An act for the relief of the State of Connecticut; to the Committee on the Judiciary.

S. 3083. An act for the relief of Andrew Rerecich and his wife, Germana Rerecich; to the Committee on the Judiciary.

S. 3105. An act for the relief of William Y. Allen, Jr., Donald Baldwin Quintero, Johann Friedrich Stapelfeld, and Kenneth Gordon Woods; to the Committee on the Judiciary.

S. 3125. An act for the relief of Robert William Neal, Robert J. Naumann, Charles LeRoy Van Slyke, and Franklin Jordan; to the Committee on the Judiciary.

S. 3158. An act to exempt State-controlled banks belonging to the Federal Reserve System from the statutory limits on the number of their directors; to the Committee on Banking and Currency.

S. 3160. An act to provide for the striking of medals in commemoration of the 100th anniversary of the founding of the State of Idaho as a territory; to the Committee on Banking and Currency.

S. 3237. An act for the relief of Anastasia Stassinopoulos; to the Committee on the Judiciary.

S. 3263. An act for the relief of Cesar S. Wycoco; to the Committee on the Judiciary.

S. 3439. An act authorizing the President of the United States of America to present a gold medal to Robert Frost, a New England poet; to the Committee on Banking and Currency.

S. 3486. An act to authorize Government agencies to provide quarters, household furniture and equipment, utilities, subsistence, and laundry service to civilian officers and employees of the United States, and for other purposes; to the Committee on Post Office and Civil Service.

S. 3496. An act to amend section 362(b) of the Communications Act of 1934; to the Committee on Interstate and Foreign Commerce.

S. 3532. An act to provide for the striking of a medal in commemoration of Century 21 Exposition to be held in Seattle, Wash.; to the Committee on Banking and Currency.

S. 3549. An act to amend the act of September 14, 1959, to authorize studies by congressional committees with respect to sales and use taxes imposed by the States on sales and other business activities in interstate commerce; to the Committee on Rules.

S. 3579. An act to authorize agencies of the Government of the United States to pay in advance for required publications, and for other purposes; to the Committee on Government Operations.

S. 3665. An act to authorize the Secretary of Agriculture to grant an easement over certain lands to the trustees of the Cincinnati Southern Railway, their successors, and assigns; to the Committee on Agriculture.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 899. An act to repeal certain provisions of law requiring the submission of certain reports to Congress, and for other purposes.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on June 18, 1960, deliver to the White House for presentation to the President, for his approval, bills of the House of the following titles:

H.R. 9883. An act to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes; and

H.R. 12117. Making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1961, and for other purposes.

THE LATE HONORABLE DOUGLAS H. ELLIOTT

The SPEAKER. The Chair recognizes the gentleman from Pennsylvania [Mr. FENTON].

Mr. FENTON. Mr. Speaker, the sudden passing of our friend and colleague, DOUGLAS H. ELLIOTT, is a great shock to our membership, and sadly brings to our attention the tremendous stress and strain in these days of terrific tension.

"DOUG" ELLIOTT, as he was affectionately known, had been with us but a short time, being elected to the House in a special election on April 26 last in Pennsylvania, and the nominee from his district to run next November for the full term of an area which had been served so outstandingly for many years by his predecessor, the beloved Dick Simpson.

Yes, Mr. Speaker, "DOUG" ELLIOTT had a great future before him for during his short stay in the Nation's Capital he had already attracted countless friends with his fine personality and his vigorous approach to the questions that had already faced him.

These are trying times and perhaps the persistent and tireless manner in which he met the problems which face all of us at times created a tension which sometimes is even too great for youth itself. For "DOUG" ELLIOTT, at the youthful age of 39, had already given a creditable account of himself in both private and public life, and the future was even brighter. But fate deemed it otherwise, and today we mourn the loss of a young Member who in the parlance of the day, would have been a "real comer" in State and National affairs. Our hearts are heavy, and to the widow and three children we extend our heartfelt and deepest sympathy. We know that God will give them the strength and fortitude to carry on in the days ahead.

DOUGLAS H. ELLIOTT was born on June 3, 1921, at Philadelphia, Pa. He graduated from Haverford School and attended the University of Virginia. He married the former Rachel Peirson, and there are three children, Deborah, Dana, and Warren.

Congressman ELLIOTT was an elder in the Presbyterian Church and a member of its Synod Council.

During World War II he served 4 years in the Naval Service of the United States, being a veteran of the Southwest Pacific campaigns.

For 8 years DOUGLAS ELLIOTT served as vice president of Wilson College at Chambersburg, Pa., and was on leave of absence since his election to Congress.

From 1945 to 1948 Congressman ELLIOTT had been employed as a representative for the Phoenix Mutual Life Insurance Co. and the Guardian Life Insurance Co. of Philadelphia. During the period of 1948 to 1952 he was manager of the Public Relations Eastern Department of the Lumbermen's Mutual Casualty Co. of Philadelphia. From 1948 to 1952 he was also Director of Public Relations for the Franklin Institute of Philadelphia.

Active at all times in civic affairs Congressman ELLIOTT was a director of the Chambersburg Community Chest; a member at large of the Conococheague District Committee, Boy Scouts of America; vice chairman of the Franklin County Chapter American National Red Cross; past president of the Chambersburg Rotary Club; member of the board of trustees, Eastern Citizenship Clearing House; vice chairman of the Legislative Committee of the Pennsylvania Department, the American Legion; member of the Legislative Committee of the Pennsylvania Motor Federation; past vice president and director of the Pennsylvania Junior Chamber of Commerce; member of American Alumni Council, American College Public Relations Council; parent teachers association; Crippled Children's Society; chamber of commerce; Civil Defense; United Fund; Young Men's Christian Association; and the Franklin County Farmers Association.

Active in Republican Party affairs since 1945, DOUGLAS ELLIOTT was one of the most active members of the Adams and Franklin County Young Republican Clubs.

Before coming to Washington Mr. ELLIOTT was elected to the Pennsylvania State Senate in November 1956 and served until being elected to the 86th Congress at a special election in Pennsylvania on April 26 last. It was at this special election that Mr. ELLIOTT also received such a tremendous majority as the nominee for the full term next November to represent Bedford, Franklin, Fulton, Huntington, Mifflin, Snyder, Somerset, and Union Counties of Pennsylvania in the U.S. House of Representatives.

Mr. Speaker, let me state again that the heartfelt sympathy of the entire membership of the House goes out to Mrs. Elliott and her family, as well as to all the loved ones in their hour of sorrow.

The Elliott family reside at 222 Fifth Avenue, Chambersburg, Pa. The funeral will be held Wednesday afternoon with services at 2 o'clock in the Falling Springs Presbyterian Church at Chambersburg. The family has respectfully requested that flowers be omitted.

Mr. WALTER. Mr. Speaker, will the gentleman yield?

Mr. FENTON. I yield to the gentleman from Pennsylvania.

Mr. WALTER. Mr. Speaker, when someone we know has passed on it brings to our hearts a feeling of grief. When

that person is young, perhaps there is a tendency to question the whys and the wherefores in a matter that is beyond question.

In the passing of our friend and colleague we are particularly saddened because those who have known him and known about him saw in him a great, dedicated Christian gentleman. None of us can question the reason for his passing. Suffice it to say that because of his youth and his attainments it brings us a greater measure of grief than would ordinarily be the case.

To his family I extend a feeling of deep sympathy.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Indiana [Mr. HALLECK].

Mr. HALLECK. Mr. Speaker, I rise to express, as best I can, the distress I feel at the death of our colleague, the Honorable DOUGLAS H. ELLIOTT.

My acquaintance with DOUG ELLIOTT began with correspondence this past spring. It was on April 6 that I met him for the first time during a visit to Chambersburg where I spoke during his campaign and at his invitation.

DOUG ELLIOTT brought to his candidacy for election to the House of Representatives a fine background of public service to his people in Pennsylvania, as has just been recounted by the distinguished gentleman from Pennsylvania, Dr. FENTON. I was particularly impressed with the enthusiasm of DOUG's supporters. I am quite sure that this reflected the high regard in which he was held by his friends and neighbors in his community.

Mr. Speaker, my early impressions of DOUG ELLIOTT as a person of considerable ability and personal charm were confirmed after he arrived among us here in the Congress. He took his responsibilities seriously, but I found him to be patient and understanding during the period we, in the leadership on this side of the aisle, were experiencing some temporary difficulties in finding for him appropriate committee assignments; assignments, may I say, Mr. Speaker, which we worked out and which would have been made official today.

In trying to reconcile what happened to cut short this most promising career, I find myself facing the conclusion that none of us can ever know, really, what the future holds for us. To say simply that I am grievously shocked by the word of this morning is an understatement. My reaction at hearing the news was one of complete disbelief that such a report could possibly be true.

Mr. Speaker, mere words are small consolation to the bereaved at a time like this, but I do want to extend my deepest sympathies to Mrs. Elliott and her children in this most difficult hour.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Georgia [Mr. FLYNT].

Mr. FLYNT. Mr. Speaker, it was with profound sorrow and with deepest regret that I learned this morning of the untimely and tragic passing of our able and distinguished colleague from Pennsylvania, the Honorable DOUGLAS H. ELLIOTT.

DOUGLAS ELLIOTT, late a Representative from Pennslyvania, served only a brief period as a Member of this body. During this time he made a favorable impression upon all of us who were privileged to become acquainted with him. Almost immediately after he was sworn in as a Representative from Pennsylvania, I introduced myself to him and expressed the hope that we would have a long association together as Members of the House of Representatives. We were almost instantly attracted to each other. Our conversations revealed that we held many similar views on matters affecting the security and strength of our Government and our beloved country.

I enjoyed our friendship, brief though it was, and I am deeply saddened and shocked by its tragic termination.

His colleagues on both sides of the aisle predicted for DOUGLAS ELLIOTT a long and distinguished career in the House of Representatives. Coming to Congress at a relatively early age and possessed of a keen mind, strong character and a distinguished appearance, no one doubted that he would become a leader of both his party in this House and of the House of Representatives.

Mr. Speaker, I join with the gentleman from Pennsylvania [Mr. FENTON] and our other colleagues in expressing profound sorrow at the loss which this House and this Nation have sustained.

Mrs. Flynt joins me in extending to Mrs. Elliott and their three children our heartfelt sympathy in their loss. It is our prayer that the Great Healer of all wounds will mitigate the sorrow which now fills their hearts.

Mr. FENTON. Mr. Speaker, I yield to my colleague from Pennsylvania [Mr. DAGUE].

Mr. DAGUE. Mr. Speaker, it is with a sense of profound shock and bewilderment that we are confronted with the untimely passing of this colleague whom we so recently welcomed to our midst.

Of all of our Pennsylvania Members his future seemed most bright with promise. Young, talented, handsome, a fine family man, the victor in a recent special election, with his reelection predicted by even his opponents and with political prospects extending even to the Governor's chair, he of all of our delegation seemed destined for great things. And now he is gone and we can only look at each other in wonderment and in muted tones ask, "Why did this have to be?"

My acquaintance with our late colleague runs less than a year and I did not come to know him intimately until he came to the House following his victory at the special election in April. With his admission to our delegation I immediately came to appreciate his fine qualities and I was particularly impressed with his attention to his legislative responsibilities, to say nothing of his evident grasp of the import of the problems confronting us.

From this short association with DOUGLAS ELLIOTT I came to appreciate him as a dedicated Christian, and as an official of a church-oriented college he lived and moved in a religious atmosphere. As recently as last Thursday morning we sat at the same breakfast table and listened to a stirring sermon by Billy Graham and our late friend and comrade commented on the lift he received from the great evangelist's message. And now he has gone to meet the Maker I know he revered and we who are left to mourn his passing can only in prayerful petition ask the Great Healer to receive his soul.

Yes, my colleagues; we shall miss this bright and youthful friend to whom we had become so attached. And we shall grieve a bit as we contemplate his vacant place. We can only hope that the Master who has opened the gates to receive him will reach down and put His healing arms around the wife and children who are thus bereaved and that He will lighten for them the burden of this hour. And we shall remember them in our prayers as we move in our halting way to keep the memory of this departed brother forever green.

The Lord giveth and the Lord taketh away,
Blessed be the name of the Lord.

Mr. FENTON. Mr. Speaker, I yield to my colleague from Pennsylvania [Mr. GAVIN].

Mr. GAVIN. Mr. Speaker, I was most shocked to hear of the passing of our friend and colleague, DOUGLAS ELLIOTT, at the start of what would have been, I believe, a most distinguished career in the Congress. I extend to his family my heartfelt sympathy and may God give them great comfort in this hour of grief.

Mr. FENTON. Mr. Speaker, I yield to my colleague from Pennsylvania [Mr. VAN ZANDT].

Mr. VAN ZANDT. Mr. Speaker, the sudden death of our colleague, Representative DOUGLAS H. ELLIOTT, of the 18th District of Pennsylvania, is a source of great sorrow especially to those of us who had known him for the past several years as a Pennsylvania State legislator, and as one of the leading educators in Pennsylvania.

Representative ELLIOTT, who was vice president of Wilson College, Chambersburg, Pa., was prominent in educational circles in the State and of Pennsylvania and also served as Pennsylvania State senator where his fine personality and outstanding ability caused him to be prominently mentioned in connection with a list of potential candidates for Governor of the Keystone State.

Elected to succeed the late Representative Richard M. Simpson, "DOUG" ELLIOTT, in the short time he served as a Member of Congress, endeared himself to his colleagues by the warmth of his personality and the sincerity of his efforts.

I wish to join with my colleagues in extending deepest sympathy to Mrs. Elliott and children in the great loss sustained in the death of a devoted husband and loving father.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from New York [Mr. MILLER].

Mr. MILLER of New York. Mr. Speaker, I wish to join my distinguished colleagues from the State of Pennsylvania in this tribute to our late and beloved and distinguished colleague, "DOUG" ELLIOTT. Outside of the members of the Pennsylvania delegation I believe I knew "DOUG" ELLIOTT perhaps longer than anyone else in this House. I met him when he was nominated for Congress in the 17th District of Pennsylvania and I campaigned with him during the month of May of this year. I found him to be a dedicated and a loyal American, a man of idealism such as you find in few men. Our great loss is not because of what he has accomplished here but rather because of what he could and would have accomplished had he lived. It is a tragedy that our country will never know the quality of this man or benefit from the great contributions he would have made to the cause of American ideals and the cause of free men everywhere. I join my colleagues in expressing to his family my deepest sympathy.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. KEARNS].

Mr. KEARNS. Mr. Speaker, I join my colleagues in the Pennsylvania delegation in eulogizing a great statesman, DOUG ELLIOTT, a man in my opinion who had a great future ahead of him. I had heard about him in educational circles throughout the Keystone State but had never had the pleasure of meeting him personally until he came to Congress. But I would like to say that for a new Member coming in, I never witnessed anyone so interested in his work as he was. The thing he was particularly interested in was the parliamentary procedure in the House of Representatives versus that in the senate in Pennsylvania where he served prior to coming to Congress.

Mr. Speaker, I extend my sincere sympathies to his wife and to his lovely children. I know we shall all miss him.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. CORBETT].

Mr. CORBETT. Mr. Speaker, I want to associate myself with the sentiments that have been expressed here on this floor today regarding the death of our beloved colleague, "DOUG" ELLIOTT. I of course had the opportunity to work with him during his recent campaign and, like everybody else associated with him, I was extremely impressed with his popularity and his ability. His passing is a loss to the State of Pennsylvania and to the Nation, as well as to his fine family, his friends, and his neighbors. Mr. Speaker, an expression of sympathy at this time is all that can be advanced. I certainly hope that in tribute to him all of us are motivated to perform our tasks in the time allotted to us in a better and more dedicated fashion.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. FULTON].

Mr. FULTON. Mr. Speaker, this is a sad occasion of sorrow for everybody in the House, especially for those of us who knew DOUG ELLIOTT. When we were advised of his passing we were shocked, because he had such a bright future ahead of him.

When Congressman DOUGLAS ELLIOTT came to Congress from the Pennsylvania State Senate I was more than pleased about it. I had been a speaker at the Lincoln Birthday observance at Gettysburg a few years ago when I first heard him speak. I saw the wonderful reception he received when he was finished speaking and what a fine opinion his friends and neighbors had of him. I think the Congress has lost a promising Member. I join in expressing our sincere sympathy to his wife and children.

Mr. FENTON. Mr. Speaker, I yield to our colleague, the gentleman from Pennsylvania [Mr. MUMMA].

Mr. MUMMA. Mr. Speaker, I was terribly shocked last night as I watched a television program, when all of a sudden the program was interrupted and an announcement was made of the finding of the body of our colleague. I could hardly believe it. I never knew Mr. ELLIOTT until he came to the House of Representatives. But, being from Harrisburg where he had his previous tour of duty, I remembered seeing in the newspapers many times stories of Senator Elliott, from Chambersburg. And I read during the campaign in the local newspapers about the qualities and possibilities of this fine man. From that I came to like him. When he came to the Congress, I saw what a wonderful man he was. He quickly became acquainted with most of the Members of the Congress in our delegation, and I do really feel sorry for those Members who did not have the privilege of meeting him. He was a dynamic person. I mourn his passing. My heartfelt sympathy goes to his wife and children. Might I say, finally, that last Friday, after we had such a terrific session here, when he left here he was very happy with his committee assignments. He had just found out about it then, and he was very happy. What changed his attitude toward life, I do not know.

Mr. FENTON. Mr. Speaker, I yield to our colleague the gentleman from Pennsylvania [Mr. QUIGLEY].

Mr. QUIGLEY. Mr. Speaker, on this sad occasion I am prompted to recall that I first met DOUG ELLIOTT some 6 years ago in the summer of 1954. I was then a candidate for the Congress, and DOUG ELLIOTT was seeking election to the Pennsylvania State Senate. Our meeting come about because it just so happened that we had one county in common. The congressional district in which I sought to be elected, and the senatorial district from which he sought to be elected had one county, namely, Adams County, which was in both districts. I recall it was on a Sunday afternoon when I was attending a church festival. I was busy doing all the usual things that candidates for public office do at such affairs—meeting people and shaking hands, and as I worked my way through the crowd, I suddenly found a hand extended to me. "JIM QUIGLEY, I believe?" he asked. I said, "Yes." He said, "I am DOUG ELLIOTT." My immediate reaction to DOUG ELLIOTT was the same as almost everyone who has ever met him had. I liked the guy. Despite our partisan differences, that was the start of a fairly close friendship.

As I have indicated, Mr. Speaker, my reaction to DOUG ELLIOTT was not unique. The record shows that voters of his district reacted pretty much the same way and well they might. DOUG was literally tall, dark, and handsome. On top of that, he had a very affable and pleasant way about him. He was additionally blessed, as I discovered on that same Sunday afternoon, with an unbelievably attractive wife and three very lovely children. In a word, he seemed to have everything that any man, and certainly any man who was a candidate for public office, could ever want to have. I was grateful, in fact, as I later told him that he was not my opponent in that particular election. It was an election he won decisively.

With the death of our former esteemed colleague, Dick Simpson, earlier this year, DOUG was selected as the candidate for that vacancy in the House of Representatives. There seemed to be little doubt that considering the district a candidate with DOUG'S outstanding qualifications that he could only emerge as the winner.

This happened. He came to this House less than 2 months ago. This of course gave me an opportunity to again renew our friendship, a friendship which continued during the 4 years when he served in the State senate in Harrisburg.

I talked to him on this floor Friday afternoon. I discussed with him the fact that I was going to the Democratic Convention in Los Angeles and had just that day decided to take my family with me. As of last Friday he had decided not to go to his party convention in Chicago.

Mr. Speaker, I thought I really knew DOUG ELLIOTT fairly well. However, it seems, in the light of events in the past 30 hours, that I did not. I suppose no one will ever know what happened and why it did. I certainly have no idea.

When the word came to me last night about 10 o'clock, I was shocked beyond words. I can only say now that I express my sorrow to his lovely wife and his three fine children, and I trust and hope and pray that in this, their hour of great tragedy, they will have the necessary courage and strength, and that the Lord will give them everything they need to see them through. They have lost, Pennsylvania has lost, the Congress of the United States has lost a man who, in my judgment, was a good man, and a potentially great one.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. RHODES].

Mr. RHODES of Pennsylvania. Mr. Speaker, together with my colleagues, I

am shocked over the death of DOUGLAS ELLIOTT, a member of the Pennsylvania delegation. I learned to know him as a friend and as an able, dedicated man. A strong character, a pleasant personality seemed to assure for him a bright and promising future.

To his wife and to his children go my deepest sympathy.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. MORGAN].

Mr. MORGAN. Mr. Speaker, I have the honor to represent the district that adjoins the congressional district of our deceased friend, DOUGLAS H. ELLIOTT. Although I never had an opportunity to know him well until he arrived as a Member of this legislative body, I had known previously of his ability as a legislator in our State capital, and as a great educator in one of our colleges in Pennsylvania.

I am sure that those of us who have had an opportunity to work with him, recognized his great ability. I know he had a distinguished political career waiting for him on a statewide basis.

I wish to express my deepest sympathy to Mrs. Elliott and to his three fine children.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Minnesota [Mr. NELSEN.]

Mr. NELSEN. Mr. Speaker, there are times when words fail to measure up to the situation at hand, and today is such a time. We have lost a beloved Member, a young man full of energy, a sparkle in his eye, an engaging friendly smile; a man destined to go places.

As one of the freshman Members, I extend to the family, on the part of our group, our most heartfelt sympathies. We mourn with them in their loss.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. SCHNEEBELI].

Mr. SCHNEEBELI. Mr. Speaker, I was deeply moved to learn of the passing of DOUG ELLIOTT. Since DOUG and I were both sworn in at the same time, I think we have a common kinship.

We both were struggling to learn the mechanics of the House and what was going on; we were learning together. So I believe I have a more personal relationship with DOUG ELLIOTT than anybody else in the House.

His passing is one of those things which is so difficult to understand. I am deeply moved and greatly affected by his passing.

To his lovely family I extend my deepest sympathy in their bereavement.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from New York [Mr. LINDSAY].

Mr. LINDSAY. Mr. Speaker, in a very short space of time DOUGLAS ELLIOTT made a very long impression on me, a fellow first-termer. I was shocked and saddened by his tragic death, and I join the other Members of the House in extending to his wife and family my deepest sympathy.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. SAYLOR].

Mr. SAYLOR. Mr. Speaker, last Monday morning as I left my home and started to Washington, I turned on the radio and heard the announcer mention our colleague, DOUG ELLIOTT. He stated he not only had a perfect attendance record in Washington, but also announced an itinerary where his constituents could see him during the week. I have just checked the RECORD and find that in this past week also he had a perfect record.

This morning I turned on the radio and heard the same announcer mention the untimely death of our colleague.

There is not a Member of the House on either side of the aisle who in my opinion was possessed of the tremendous ability and potentiality DOUGLAS ELLIOTT had. I know he will be sadly missed—not only by those who cherished his friendship, but also the members of his family. His passing is indeed a great loss to his district, the Commonwealth of Pennsylvania, the House of Representatives, and our country.

To his family and friends, I extend my deepest sympathy.

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. CURTIN].

Mr. CURTIN. Mr. Speaker, my acquaintanceship with our colleague, DOUGLAS ELLIOTT, is of relatively recent origin. However, his reputation as a hard working and conscientious public servant preceded him here, and during the short time that he had been here among us, he impressed us all with his joviality, energy, ability, and sincere efforts to be a real addition to this great body.

Our colleague was no stranger to legislative halls; he served the 33d senatorial district of Pennsylvania well and ably in the Senate of Pennsylvania from 1957 until his election to serve the 18th Congressional District. During that period he, as a State senator, made a fine record of service to his district. Mr. ELLIOTT'S tragic passing shocks us immeasurably; he had great potentiality as a leader.

He leaves a lovely wife and three fine children. Our sympathy goes out to this grief-stricken family.

Mr. MILLIKEN. Mr. Speaker, will the gentleman yield?

Mr. FENTON. I yield to the gentleman from Pennsylvania [Mr. MILLIKEN].

Mr. MILLIKEN. Mr. Speaker, I was deeply shocked and grieved when I walked into my office this morning and learned of the death of our colleague, DOUG ELLIOTT. I had known Mr. ELLIOTT only a short time, since he has been a Member of Congress, but my sister and his family and my niece and his sister were very close friends. He originally came from my legislative district.

In the short time that I knew DOUG ELLIOTT I had learned to admire his ability and respected his desire to be a good public servant. I want to join my colleagues in expressing sympathy to his parents and to his wife and children.

Mr. ARENDS. Mr. Speaker, I do not know what to say or how to say what is in my mind and heart with the passing of our fine colleague, DOUGLAS ELLIOTT.

Those of us who have been privileged to serve here for a number of years readily recognized in our new Member all the potentials for great service. He demonstrated to us his innate ability which, with time, the whole country would recognize. He was always understanding of different opinions and always tolerant.

The passing of DOUGLAS ELLIOTT is a great loss to us. We have lost a personable young man of great ability.

I extend my sincerest, deepest sympathy to his fine wife and family.

GENERAL LEAVE TO EXTEND REMARKS

Mr. FENTON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on the life and character of the late DOUGLAS ELLIOTT.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SCHNEEBELI. Mr. Speaker, since DOUG ELLIOTT and I were sworn into office together a short time ago, I have felt a special kinship and perhaps a closer relationship with him than most of the other Congressmen. We usually sat together at the sessions, discussed policies and procedures, and were mutually concerned with many of the initial problems confronting a new Congressman. With this background of sympathetic understanding, I felt close to DOUG ELLIOTT since we shared the same emotional experiences at the beginning of our congressional careers.

Consequently I was deeply moved and very saddened to learn of DOUG'S sudden passing. His last 2 days in Congress we spent together discussing our thoughts and reactions to the legislation being proposed. It is difficult for me to believe that my friend will not be sitting next to me to confer further on our mutual opinions and reactions to the bills and amendments as they come to the floor for a vote.

I found DOUG ELLIOTT to be most conscientious in his voting; most studious in his attention to House actions, and I sincerely believe that his potential in becoming an outstanding legislator was unlimited. He had a great future before him in the Halls of Congress and from his initial actions it could be easily determined that he would have done exceptionally well for his constituents, his State, and the people of the United States. He had early gained the confidence and respect of his colleagues on both sides of the aisle.

My deepest sympathy goes out to DOUG'S wife and family in this hour of shock and bereavement.

Mr. BOSCH. Mr. Speaker, I was greatly saddened at the untimely death of our colleague from Pennsylvania, DOUGLAS ELLIOTT. I originally had the pleasure of meeting him at the time of his nomination to succeed the distinguished late Richard Simpson through the courtesy of our former colleague, Franklin H. Lichtenwalter. After he became a Member of this body, I had occasion to become better acquainted with

him. Short as that period was, I was convinced that DOUG ELLIOTT had great prospects for distinguished service in this body. Tragedies such as these are indeed hard to understand, and we will sorely miss him.

I extend sympathy to his loved ones.

Mr. FENTON. Mr. Speaker, I offer a resolution.

The Clerk read the resolution (H. Res. 566), as follows:

Resolved, That the House has heard with profound sorrow of the death of the Honorable DOUGLAS H. ELLIOTT, a Representative from the State of Pennsylvania.

Resolved, That a committee of eleven Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

The SPEAKER. The Chair appoints as members of the funeral committee the following Members: Mr. WALTER, Mr. FENTON, Mr. MORGAN, Mr. VAN ZANDT, Mr. DAGUE, Mr. SAYLOR, Mr. MUMMA, Mr. CURTIN, Mr. QUIGLEY, Mr. MILLIKEN, and Mr. SCHNEEBELI.

The SPEAKER. The Clerk will report the remainder of the resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect the House do now adjourn.

The resolution was agreed to.

ADJOURNMENT

Accordingly (at 12 o'clock and 53 minutes p.m.), the House adjourned until tomorrow, Tuesday, June 21, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2278. A letter from the Secretary of the Army, transmitting reports of the number of officers on duty with Headquarters, Department of the Army and the Army General Staff on March 31, 1960; to the Committee on Armed Services.

2279. A letter from the Secretary of the Interior, transmitting a coordinated report on the San Juan-Chama project, Colorado-New Mexico, and the Navajo Indian irrigation project, New Mexico, pursuant to section 9(a) of the Reclamation Project Act of 1939 (53 Stat. 1187) (H. Doc. No. 424); to the Committee on Interior and Insular Affairs and ordered to be printed with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. THOMAS: Committee on Appropriations. House Joint Resolution 765. Joint resolution making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes; without amendment (Rept. No. 1919). Referred to the Committee of the Whole House on the State of the Union.

Mr. HARMON: Committee on Post Office and Civil Service. H.R. 7810. A bill to credit periods of internment during World War II to certain Federal employees of Japanese ancestry for purposes of the Civil Service Retirement Act and the Annual and Sick Leave Act of 1951; with amendment (Rept. No. 1920). Referred to the Committee of the Whole House on the State of the Union.

Mr. OLIVER: Committee on Post Office and Civil Service. S. 1849. An act to amend the act of August 10, 1939, authorizing the Postmaster General to contract for certain powerboat service in Alaska; without amendment (Rept. No. 1921). Referred to the Committee of the Whole House on the State of the Union.

Mrs. PFOST: Committee on Post Office and Civil Service. S. 3545. An act to amend section 4 of the act of January 21, 1929 (48 U.S.C. 354a(c)), and for other purposes; with amendment (Rept. No. 1922). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMAS: Committee on Appropriations. H.R. 12740. A bill making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes; without amendment (Rept. No. 1923). Referred to the Committee of the Whole House on the State of the Union.

Mr. SPENCE: Committee on Banking and Currency. H.R. 12603. A bill to extend and amend laws relating to the preservation and improvement of housing and the renewal of urban communities, and for other purposes; with amendment (Rept. No. 1924). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. MACK of Illinois:

H.R. 12727. A bill to amend the act of October 2, 1888, and repeal the act of March 4, 1911, relating to certain payments from the contingent fund of the House of Representatives; to the Committee on House Administration.

By Mr. GEORGE:

H.R. 12728. A bill to amend title 38, United States Code, to liberalize the income limitations applicable to the payment of pension to veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. HALPERN:

H.R. 12729. A bill to provide for the construction of a permanent museum of science and industry at the New York World's Fair of 1964, and for other purposes; to the Committee on Foreign Affairs.

H.R. 12730. A bill to require detailed accounting by Members of the House of Representatives in the case of travel expenses, and for other purposes; to the Committee on House Administration.

By Mr. HARRIS:

H.R. 12731. A bill to promote the efficient, fair, and independent operation of the Civil Aeronautics Board, the Federal Communications Commission, the Federal Power Commission, the Federal Trade Commission, the Interstate Commerce Commission, and the Securities and Exchange Commission; to the Committee on Interstate and Foreign Commerce.

By Mr. HECHLER:

H.R. 12732. A bill to provide that, to the maximum extent practicable, postage rates for second-class and third-class mail shall cover the costs of such mail, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MOSS:

H.R. 12733. A bill to amend the act of September 21, 1959, to authorize conveyance of certain real property of the United States to the county of Sacramento, Calif.; to the Committee on Armed Services.

By Mr. PELLY:

H.R. 12734. A bill to amend title 39, United States Code, the postal service; to the Committee on Post Office and Civil Service.

By Mr. THOMAS:

H.R. 12740. A bill making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes; to the Committee on Appropriations.

H.J. Res. 765. Joint resolution making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes; to the Committee on Appropriations.

By Mr. LOSER:

H.J. Res. 766. Joint resolution providing for the designation of the week commencing October 2, 1960, as "National Public Works Week"; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

The SPEAKER presented a memorial of the Legislature of the State of Louisiana, memoralizing the President and the Congress of the United States relative to urging immediate action by appropriate legislation to institute some type of program to curtail and control the foreign importation of shrimp, which was referred to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DAGUE:

H.R. 12735. A bill for the relief of Domenico Antonelli; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 12736. A bill for the relief of Dr. Erol Y. Caypinar; to the Committee on the Judiciary.

By Mr. MITCHELL:

H.R. 12737. A bill for the relief of Milton M. Cole; to the Committee on the Judiciary.

H.R. 12738. A bill for the relief of A1c. Marvin T. Ashley; to the Committee on the Judiciary.

By Mr. MORRISON:

H.R. 12739. A bill for the relief of Dr. John P. Chiasson and his wife, Alice Chiasson, and their minor children, Louis, Marc, Marina, and Nicole Chiasson; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

501. Mr. CUNNINGHAM presented a petition of Julia Cecelia Provost Sommers and Lucille Mary Sommers of the Omaha Tribe, in opposition to H.R. 11782, which was referred to the Committee on Interior and Insular Affairs.

EXTENSIONS OF REMARKS

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF

HON. JOHN J. RHODES
OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. RHODES of Arizona. Mr. Speaker, today a 15-member task force of the House Republican policy committee has released a report—"American Strategy and Strength"—which is so vital to our national survival that it deserves special note in the RECORD and the serious study of all Members of this body.

I shall describe some of the background of this study, and then the actual report summary will be presented.

At the outset of my remarks, I should point out that this document is nonpolitical. I wish to emphasize that attempts to make it appear political could destroy its usefulness and lead the United States ever deeper into the mire of international miscalculation.

I consider it a great tribute to the 14 members of this body who worked with me and the task force staff in evaluating the papers upon which the report is based that they so effectively shunned partisanship temptations. This is particularly commendable in an election year when the very subject at hand is likely to be one of the most bitter political controversies.

The report is based upon study papers prepared on a full range of subjects dealing with national and international strategy by distinguished experts on diplomatic, military, scientific, economic and psychological phases of the conflict between the free and slave worlds.

In addition, still other authorities from academic and professional life were called on for comments and suggestions. Altogether, more than 50 evaluations by task force staff members, authorities in the fields concerned, and Members of this body, went into the report.

I believe the hundreds of crises which have arisen between this Nation and its allies on the one hand and, on the other, the countries of the Soviet bloc in the past 30 years are ample proof of the need for such a study.

In the consideration of this age-long struggle, those who worked on the report and the study papers upon which it is based have neither sought the solution to an individual crisis nor suggested a course of action designed to meet any particular conflict which may arise. Rather, they have attempted to outline an overall strategy which could be expected to preserve our freedoms for all time.

No one concerned in this project considers the study or its report the complete, or final, solution to all problems at hand. Indeed, Mr. Speaker, such a thing obviously would have been impossible of attainment in the short period which has been devoted to the subject.

The studies were begun 4 months ago under the direction of the distinguished gentleman from Wisconsin [Mr. BYRNES], who is chairman of the policy committee, and my able colleague, the gentleman from Michigan [Mr. FORD], chairman of the study group.

At the outset, those who took part in the project fully considered the problems which would be presented by time limitations and the question of producing something more than a superficial study with the small staff we had available for the task.

The task force recognized that the strategy followed by the slave world in its conquests thus far has not been limited to any particular sphere or spheres of influence, but rather has been as varied as the governmental interests of its opponents. We were aware that mere military deterrents, economic blocs, diplomatic approaches, propaganda techniques, and scientific and industrial development could not, in themselves, halt the spread of world communism or long defend the freedoms Americans consider more important than life itself.

Instead, an articulated strategy, or what we have called a public strategy, in which every area of enemy onslaught could be defended through the coordinated efforts of our entire people, would be necessary.

The ultimate strategy arrived at, of course, should spell out in bold letters the difference between our national survival in freedom and our enslavement.

In a world where every compromise of vital interests work out only to the benefit of our opponents time obviously is not on our side. For this, and other considerations, it was determined to have a report ready prior to the adjournment of this session of Congress. We felt that, if we could enlist the aid of experts in the more vital fields of consideration, we could produce something with which to work. This, we were and are convinced, would be a start.

It perhaps could develop in all of us, a better sense of direction and coordination. It could channel the thinking of Americans everywhere into the streams of a coordinated and well-articulated strategy with which to meet alien onslaughts on our civilization.

An an example of this desire by those responsible for the studies and the report at hand, I should point out that the recommendation for a coordination of vital public information media under the direct supervision of the White House was arrived at before the recent U–2 incident. In this respect, I think it is significantly important to reemphasize that such a strategy as is put forth would not be limited to a particular crisis, but rather would preclude American loss of prestige or power because of them.

In an effort to produce the best possible report within our time limitations, the task force enlisted the aid of the best available experts in all fields concerned. Volunteers were used wherever possible and the cooperation of faculty members at America's leading universities, scientists, diplomats, military leaders, economists, psychologists, legislators, and others was overwhelming.

Now, briefly, here is how we proceeded:

Last February it seemed to certain Members of this body that the then-current debates over the so-called missile gap reflected a lack of real depth and appreciation—both of our national strategy and strength and of how to build upon our present strategy and strength constructively for the decade just entered.

It was shortly after this that the chairman of the Republican policy committee appointed a task force of members to study the total strategy and strength of this Nation in relation to its conflict with the Sino-Soviet bloc. Initially, there were but six members in the group, but as study progressed, the members became increasingly aware of the broad-gage approach needed for the problems involved. Consequently, the task force was enlarged to an eventual 15 members drawn from vital House committees.

It also was felt that the study should be broadened by viewpoints of experts outside of Congress, especially those of academicians and professional people. As a vehicle for initiating this, background papers were sought not only from the staff and some of the Congressmen of the task force, but also from outside authorities on the subjects at hand.

To further enrich the study, the papers are being circulated in the academic community, and remarks and comments thus elicited were and are being considered. Naturally, some of the conclusions and comments differ, and this is good. The report soon to be presented is thus a result of the task force's evaluation of the more than 50 viewpoints available.

The members of the task force, with the increased depth obtained from these viewpoints, papers, and discussions, have consolidated into this task force report summary of conclusions the ideas, concepts, and recommendations which they felt especially needed congressional and public discussion before the close of this session of Congress.

Many equally important problems are considered in the study papers which merit greater discussion for a future task force operation. But we think we have made a real beginning.

As coordinator for the task force, I wish to make grateful acknowledgment to my colleagues on this task force, to the staff members who assisted us, to those who prepared the study papers

which were considered and evaluated by our group, and to those in private fields who gave time and effort to assist Members of this body in their assessments.

Mr. Speaker, first, I will list my colleagues who participated in this study and acknowledge their particular contributions to the project. The gentleman from Wisconsin [Mr. BYRNES] appointed the task force and especially participated in recommendations for improved policymaking within the Congress. The gentleman from Illinois [Mr. ARENDS], the minority whip and the ranking Republican on the Armed Services Committee, has lent overall advice to the preparation of the report and has contributed valuable background material. Of the study group itself, the gentleman from Michigan [Mr. FORD] was chairman and particularly devoted attention to the review of national objectives. The other members of the task force specialized in portions of the report as follows: The gentleman from New Hampshire [Mr. BASS], scientific aspects; the gentlewoman from Ohio [Mrs. BOLTON], diplomacy and awareness in approach to undecided and captive nations; the gentleman from Michigan [Mr. CHAMBERLAIN], appraisals of our forces in being; the gentleman from Missouri [Mr. CURTIS], economic aspects; the gentleman from California [Mr. HOSMER], national policy; the gentleman from California [Mr. JACKSON], psychological aspects and deterrence; the gentleman from Minnesota [Mr. JUDD], Sino-Soviet characteristics; the gentleman from Wisconsin [Mr. LAIRD], military aspects; the gentleman from New York [Mr. MILLER], responsible political partisanship; the gentlewoman from New York [Mrs. ST. GEORGE], individual responsibility; and the gentleman from California [Mr. WILSON], implementing public strategy.

The staff members of the task force also deserve special commendation for the long and arduous hours spent in assimilating and preparing material. Working under the able direction of Dr. David M. Abshire on the staff were Dr. Donald Ackerman, Guy Waterman, and Priscilla E. Turner.

Now, I wish to express the appreciation of the policy committee and the task force to those who prepared the background study papers. The papers and those who prepared them are:

First. "National Character as an Element of Power," by Prof. William Y. Elliott of Harvard University, widely known both for his academic and governmental experience.

Second. "Fundamentals of a National Strategy," by Dr. David M. Abshire, task force staff director.

Third. "How Democracies Die," by John H. Stambaugh, vice chancellor of Vanderbilt University.

Fourth. "An Appraisal of Soviet Economic Capability," by Representative THOMAS B. CURTIS, of Missouri, ranking minority member of Joint Economic Committee.

Fifth. "International Tension and National Defense," by Prof. Robert W. Neumann, director of the well-known Institute of International and Foreign Studies at UCLA.

Sixth. "Key Factors in Future Military Planning," by Adm. Arthur Radford (retired), the distinguished former Chairman of the Joint Chiefs of Staff.

Seventh. "U.S. Defense: Policies and Posture," by Dr. Donald H. Ackerman of the task force staff and special assistant for Defense Affairs to the gentleman from Michigan [Mr. FORD].

Eighth. "The Requirements of Deterrence," by Prof. Paul Peeters of Iona College.

Ninth. "Science and Foreign Affairs," by Dr. George B. Kistiakowsky, the distinguished Special Assistant to the President for Science and Technology.

Tenth. "A History of Ballistic Missiles," by Representative LESLIE C. ARENDS, of Illinois, ranking Republican member of House Armed Services Committee.

Eleventh. "The Cost of National Security," by Prof. Arthur E. Burns of George Washington University.

Twelfth. "The Economics of National Defense in a Free Economy," by Guy Waterman of the task force staff.

Thirteenth. "The Economic Challenge of the Soviet Union," by Dr. Don Paarlberg, Special Assistant to the President for Economic Affairs.

Fourteenth. "The Impact of Inflation on America's Balance of International Payments," by Dr. Rita Hauser, author and lawyer.

Fifteenth. "An Extension of National Security Council Machinery," by Prof. William Y. Elliott, his second paper.

Sixteenth. "Some Psychological Aspects of Soviet Propaganda," by Malcolm Smith, of Senator THOMAS H. KUCHEL'S staff.

Seventeenth. "Civil Defense Policies," by Dr. Donald A. Melnick, of Scientific Planning Associates.

Eighteenth. "Disarmament: Problems and Prospects," by Representative CRAIG HOSMER, of California, member of the Joint Atomic Energy Committee, and Arthur Peterson, of the University of Wisconsin.

Nineteenth. "Soviet Subversive Forces," by Ralph De Toledano, well-known author, lecturer, and syndicated columnist.

Twentieth. "Soviet Strategy and Free World Defense," by Prof. Gerhart Niemeyer, of the Notre Dame faculty.

Twenty-first. "An Examination of Partisanship and Bipartisanship in National Security Matters." A symposium of political scientists: Prof. James Atkinson and Prof. Karl Cerny, both of Georgetown University; William Y. Elliott, Harvard University; George Grassmuck, University of Michigan; Ivan Hinderaker, University of California, Los Angeles division; Karl Lamb, University of Michigan; the Reverend Stanley Parry, Notre Dame; Howard Penniman, also of Georgetown University; and Robert Loevy, Johns Hopkins University, who served as secretary for this symposium.

I should like to say at this point that we especially respect and appreciate the advice and assistance which we received from these individuals: Professor Penniman, Dr. Malcolm Moos, Father Parry, Dr. Cornelius P. Cotter, and Prof. Franklyn Burdette.

In behalf of the task force, I also wish to express appreciation to Karl Hess, John Patten III, and Patrick Anderson, for their invaluable voluntary assistance to the staff; and to the following distinguished participants for their evaluation and assessment of studies and other helpful suggestions:

Prof. Vaughn David Bornet of Santa Monica, Calif.; Dr. W. Glenn Campbell, executive director of the Hoover Institution on War, Revolution, and Peace, Leland Stanford University; Prof. George O. Comfort of Butler University; Prof. George Grassmuck of the University of Michigan; Alfred de Grazia, director of the Center for Applied Social Research at New York University; Neil H. Jacoby, dean of the Graduate School for Business Administration, University of California at Los Angeles; Prof. G. Warren Nutter of the University of Virginia; James K. Pollock, chairman of the department of political science at the University of Michigan; Jackson A. Ransahoff, president of Neutron Products, Inc.; Prof. Wilson E. Schmidt of the School for Advanced International Studies, Johns Hopkins University and of George Washington University; Prof. Joseph L. Sutton of Indiana University; Prof. Paul Van Riper of Cornell University; and W. Allen Wallis, dean of the School of Business at Chicago University.

In conclusion, Mr. Speaker, I repeat that we have made every attempt to avoid partisanship in the preparation of this report and that it is intended only as a basis for further study and consideration of the articulated strategy necessary for our national survival. The study papers concerned in the report should provide all Members with a valuable foundation upon which to build future policy and bring wider participation into these efforts.

That our work has been nonpolitical in nature, is attested, I believe in one of the recommendations made: That the policy committees of both major political parties continue these task force studies in order to provide the Government and the people of the United States with sound, well-considered recommendations for a national strategy to deal with the greatest challenge our country ever has known.

Time, as I pointed out earlier, is on the side of the opponent, but we can make it serve us through just such an approach as this task force report.

This task force report summary, submitted by the task force membership, covers the full range of national-international strategy involved in the conflict between the free and the regimented sectors of the world. This report includes diplomatic, military, scientific, economic, and psychological strengths.

The purposes of this task force report are: First, to increase public awareness by offering a clear course for national policy; second, to furnish Members of Congress with a comprehensive viewpoint as an aid in their specialized committee activities; third, to identify American political dilemmas fomented both by the Sino-Soviet protracted conflict and the nuclear age; fourth, to offer specific recommendations, especially in regard to policy machinery, party and personal responsibilities.

OUR OBJECTIVES

Short-cut objectives for military victory in two world wars ignored long-range policy, lost the peace, and created conditions for the present conflict with the Sino-Soviet powers.

In this cold war, a panic-inspired objective of "survival only" might destroy free civilization.

"Survival only" is not a policy. It is the delusion of a nation marked for social suicide. It is the sure graveyard of human dignity. Captive nations survive, but only in slavery.

Free nations with no objectives beyond survival are prone to panic at times of artificial as well as real crisis and to engage in the piecemeal surrender made inevitable by seeking "peace at any price."

"Survival only" seeks glittering substitutes for facing crisis with a courageous and firm will. Cold war medicinemen are daily peddling panaceas with stereotyped plans for economic growth, for fluctuating military organization, for legislating leadership, for unilateral disarmament, for another summit regardless of conditions, for appeasing Khrushchev by apologizing to Khrushchev unnecessarily.

Equally negative is the objective of merely opposing communism. Sparta, resisting external challenge, destroyed internal freedom and creativity. Mere opposition to communism could do the same, erecting in the name of expediency the sort of central, Socialist tyranny it had meant to oppose.

The real challenge to the United States is to reevaluate the methods by which a republic can meet its challenges without renouncing the spirit of liberty. Our concern should center not so much on freedoms from, as on freedoms for, a better, more creative life for all the peoples of the earth.

Proper, positive objectives are:

PROMOTION OF WORLDWIDE POLITICAL AND ECONOMIC ORDER

Anywhere in the world, stability, law, and order work in favor of America's best interests. At home and overseas, the Vice President has spoken of the rule of law. The virus of communism can infect people only in a climate of disorder, discontent, and instability. Mutual security, the Development Loan Fund, the food-for-peace program all support stability. Associations such as the Common Market serve as independent obstacles to Communist expansion.

Emergence of other peace-loving centers of power in Europe, Asia, and Africa reduces the possibility of Soviet attack and eases the tensions inevitable when only two power centers exist in the world.

INCREASING INTERNAL STRENGTH

The free society is being tested by trends in both science and government toward amalgamation into large, more complex systems. But excellence in both derives not from monolithic but from decentralized organization. From outer space to the hometown, America's challenge is to produce scientific creativity and local government responsibility without overreliance upon central support and authority. The consciences of the States, as an example, must be stimulated to revise tax structures and leadership concepts and carry greater burdens in such fields as education and civil defense.

OPEN SOCIETIES

Closed societies constantly pose the possibility of secret preparations for surprise attack. Thus, President Eisenhower has set as a major American objective a world of open societies. The objective can be achieved. Open societies, although frequently not scoring initial successes, have greater staying power, flexibility, originality, and loyalty within. Open societies can harness science for the cause of free men. The lack of walls in space antiquates the Iron Curtain. The Midas satellites proclaim the doom of the closed system.

OUR STRATEGY

To accomplish these objectives, a strategy is needed for the maximum use of our resources. In the cold war battle, the resources are political, military, scientific, economic, and psychological. National strategy must embrace and employ the task force approach, which uses these resources in combinations, mutually complementing rather than competing.

Psychological objectives, especially, can be reached by interchangeable means.

While a massive satellite might have great psychological impact, an exportable cancer cure, or salt-water freshening method might have greater long-range impact among less favored nations.

Since the 1958 reorganization, the military services have placed increased emphasis on the task force or functional approach. Each military service has the mission to provide forces to command, respectively, on the land, sea, or in the air. The mission of actual victory, however, in anything short of all-out war, is assigned the unified theater command in task force organization.

Elimination of rivalry, duplication, and harmful competition depends upon such clear viewpoints of overriding objectives.

A PUBLIC STRATEGY

A national strategy should not be tucked away in a national security document. To be a public affair, it must be readily understood and enthusiastically supported by the scientists, the educator, the reporter, the engineer, the Congressman, and the housewife. Such an understanding would enormously refortify our present position of strength, and enable a real cold war victory.

The framework of a public strategy can only be built upon the timber of past success. This means understanding why war has been deterred since 1953 and why the Communists have not increased, at the expense of our allies, their territorial expansion one square inch since 1954.

Workable alternatives to the strategy that has achieved this success have not been formulated or even proposed. Yet, some critics would pull national strategy to pieces without replacing it by something better—this is like demolishing your house because you assume the roof might leak.

The Monroe Doctrine is an example of a public strategy understood and supported by Americans of both parties, enabling successive administrations to preserve the integrity of the new world.

To develop an equivalent public strategy for the 1960's, Americans must not tear down proven success, but must erect an even better structure upon it. Small but vocal minorities must not be allowed more destruction than construction. Men of both parties working together can transform our present strategy to a public strategy with which a united people can deter war and advance liberty for a century or more—until the final world triumph of the open society.

THE CHARACTER OF THE SINO-SOVIET CHALLENGE

INDIVISIBLE, PROTRACTED CONFLICT

Communist strategy is total, with war and peace merging into a completely flexible conflict system designed to seek victory, regardless of how long or what means it takes.

The Sino-Soviet strategy aims to divide the United States from within and from her allies without, to sap her ability to resist, to undermine her will to act, and to monopolize the initiative over an entire historical era.

STRATEGY OF TERROR

Nuclear blackmail, in which Soviet propaganda relentlessly emphasizes the devastation of atomic warfare, is used in an attempt to weaken the fiber of persons seeking "peace above all." Probing maneuvers are used to keep the West off balance, particularly during such politically sensitive periods as national elections. Soviet exploitation of the Suez crisis in 1956, the Quemoy-Matsu crisis of 1958, the U–2 incident of 1960 are examples. A new propaganda probe, possibly in the space field, may be expected, also, prior to the November election.

The Communists shifted from the direct penetration of the Korean limited war to a proxy penetration of peripheral gray areas such as Indochina, and then in 1955 shifted to a leap-frog strategy into the Middle East. Now, Communists are shifting to a forward strategy aimed more directly at the new world—in Cuba, in South America, and in the internal politics of the United States.

Pavlov, the father of Russian psychology, trained dogs to respond by automatic reflex to certain stimuli or signals. By changing the signals enough to produce confusion, he drove them to frustration, neuroticism, and eventual collapse. The Russian psychological strategy aims at conditioning the West to

neurotic frustration, guilt complexes, and conscience destruction. The principal conditioner is sharp alternatives of friendship and bellicosity. The result sought is to make the West react reflexively, in terms beneficial to Soviet power, to each Soviet gambit.

Examples of zig-zags: The 1955 summit "spirit of Geneva"—the Czech arms deal with Egypt; Khrushchev's smiling 1959 tour of the United States—Khrushchev's 1960 summit frowns; stormy threats of immediate settlement of the German problem one day—quiet insistence on patience the next; threatening Pakistan with missiles one moment—proposing disarmament the next.

SUBVERSION

The knife of Communist subversion is in its most deadly form aimed at the national will-to-resist. No modern revolution has succeeded without the destruction of that will in legitimate government. Lenin had the half-hearted Kerensky government efforts in his favor. This erosion of will employs inevitability and wave-of-the-future concepts, downgrading national achievements, upgrading enemy achievements, and use of the strategic minority. This last group, once will is undermined, takes over in a time of crisis.

Three Communist parties infiltrate America today: The open party or card carriers; the underground party, having more than 75 percent at work in industrial plants; and the "sleepers," or most dangerous group, with no recorded history of affiliation, now hard at work muddying policy whenever possible.

DECEPTIONS AND DISTORTIONS

Soviet scientific achievement is a principal weapon, not technically but as propaganda, to batter Western confidence. In this respect, it is not required that the Soviet be actually superior but only that they focus on areas where vocal and uneasy spokesmen in the West will, in panic, concede Soviet superiority on Soviet word alone. An example is Western inferiority statements about the Russian moonshot despite Russia's admission, after many official statements to the contrary, that the famed moon photo was merely a retouched composite.

Soviet economic claims, taken at face value rather than with grains of statistical salt, are used in the same way, to induce Western feelings of inferiority and the fright of panic-proneness that follows.

Actual Soviet strength is vastly inferior to our own. Our steel production, much below maximum capacity, exceeds that of the Soviet, running at full capacity by 60 percent. We have 3 times the number of hydroelectric plants, 9 times the shipping, 20 times the number of cars and trucks, and a standard of living 4 times as high.

Our industrial manpower exceeds that of the Soviet by some 10 million due to the fact that Russia's backward agricultural system keeps half the entire working population chained to the demands of collective farms.

The plight of the United States would be serious if she exchanged places with the U.S.S.R. In the military, we would have a one-weapon strategy based on a handful of first-generation ICBM's, and several hundred bombers less than enemy bombers operating from Bermuda, Hawaii, Alaska, Venezuela, and Newfoundland. We would face thousands of fighter aircraft and IRBM's from bases scattered through Canada, Mexico, and the Caribbean islands, and an enemy capability to fly across our country despite our best air defenses. While our ground troops were dispersed over a restless satellite empire, the enemy would have a quarter million nuclear-armed troops and reliable alliance systems to the east, south, and west.

EXTERNAL ACTIONS AND INTERNAL STRESS

Internal stresses result from domestic imbalance, power struggles, discontent, and rivalry with Red China for Communist leadership. Competent studies suggest that Soviet threats actually cover internal Soviet weaknesses, whereas a real prelude to overt military action would most likely be in the form of a concentrated peace offensive. This is ample reason for never dropping our guard during such periods, and is one reason for the U–2 flight before the summit.

DANGER POINTS

The protracted conflict could only culminate in general war as a result of, first, Soviet miscalculations; second, Soviet desperation; third, Soviet conviction of possessing the strength to emerge victorious. The national strategy of the United States is designed to prevent these three conditions. But one actual threat to world peace is the possibility that the Soviet could be deluded into thinking it has sufficient power to win a contest of arms.

An example of the difficulty faced, however, in substituting fact for fears is that the administration easily could have countered critical charges of a missile gap by revealing information gathered during 4 years of U–2 reconnaissance. But to do so, before the Soviet revealed its knowledge of the flights, would have seriously shortened the duration of the overflight project.

THE COMMUNIST TOTAL STRATEGY OF DIPLOMATIC, MILITARY, SCIENTIFIC, ECONOMICAL, AND PSYCHOLOGICAL MEANS CAN BE MET ONLY BY AN EQUALLY TOTAL STRATEGY, STRENGTHENED BY THE UNITY AND CONFIDENCE OF THE AMERICAN PUBLIC. FOLLOWING ARE WHAT THIS TASK FORCE CONSIDERS TO BE KEY ASPECTS OF OUR NATIONAL STRATEGY: A FOUNDATION OF POSITIVE NATIONAL POLICY

BACKGROUND

Following World War II, the United States tried to build a containment dike around communism, and yet confined her one strong capability-in-being to strategic A-bombing. This containment policy centered upon the European area, NATO, and the Marshall plan, to the neglect of worldwide dangers. The exclusion of Korea led the Communists into a miscalculated attack. Fear of Russian aggression in Europe restricted the response to the Korean aggression to defensive measures and permitted a privileged sanctuary.

Russia had engaged the free world through a pawn. A continued opposition to Communist limited wars with a purely negative strategy would have worked through attrition in favor of a shifting of global strength to the Communist bloc.

DETERRENCE THROUGH INITIATIVE

In 1953 and 1954, speeches by the President, the Vice President, the Secretary of State, and the Chairman of the Joint Chiefs of Staff intentionally announced that the United States no longer would play into the protracted conflict design by meeting aggression according to the ground rules of the aggressor, but would punish aggression at the time, place, and with weapons of our choice.

Thus the gap was spanned between unlimited nuclear retaliation against Moscow and defensive containment on enemy terms. This policy of calibrated retaliation achieved a total deterrent effect, and confronted the aggressor with unacceptable risks on each level of military aggression.

AVOID WAR THROUGH MISCALCULATION

The new national strategy sought to avoid Korea-type miscalculations by communicating in advance our intentions to punish aggression. The new administration in 1953 warned the Chinese Communists that the United States would not continue to tolerate a Manchurian privileged sanctuary and that the fighting might, to the aggressor's peril, soon spread beyond the limits and methods of his selection. The armistice followed.

It is essential that an opponent be convinced of firmness through public and private expressions by our Government. Prior to the proposed 1960 summit meeting, the State Department, on April 4 and 20, strongly reiterated that under no conditions would the free world retreat over the Berlin issue. Summit hopes were inconsequential as compared to avoiding Russian miscalculations leading to war. Similar examples of announced firmness are found in the Eisenhower Middle East doctrine, as well as in strong statements that the United States would resist any attempts of a Russian takeover in Cuba.

COLLECTIVE SECURITY

The third element of national policy has been collective security buttressed by self-help and mutual aid. An enlargement of what was begun in the Marshall plan and in NATO, the Eisenhower policy expanded the alliance systems so that aggression could be punished through a legal system formed in free world interest.

The 1954 Indochina crisis illustrated the need to expand globally the legal basis for U.S. intervention to halt aggression. A Far East alliance system had not been established and thus collective deterrence was lacking. To avoid a repetition of other indirect aggressions, the United States led in forming various security treaties and the SEATO alliance, constituting for Southeast Asia and the Pacific area what Senator George called "the Monroe Doctrine formula."

The Eisenhower doctrine, a unilateral declaration, authorizes the United States to assist economically and militarily nations which want such assistance to preserve their independence. If the independence of a Mideastern nation is declared to be vital to international peace

and the national interest, the United States will act when necessary and with initiative. The commitment of the Middle East resolution, as well as the commitments functioning in the Middle East through NATO—Turkey, SEATO—Pakistan, and CENTO—Iran afford a framework of deterrence which indeed worked, as proved in Lebanon.

Virtually the entire free world now stands in unity against Soviet aggression.

MILITARY CONCEPTS AND CAPABILITIES FOR INITIATIVE

RELATION OF THE MILITARY STRATEGY TO NATIONAL POLICY

Military strategy must be tailored to serve national policy developed to fulfill basic national objectives. Yet, some have considered military policies as if in a vacuum, isolated from a policy foundation.

Present national strategy is translated into military capabilities through five concepts. The long-pull concept is covered in the economic section.

MIXED FORCE CONCEPT

To meet aggression at the time, place, and with the weapons of our own choosing, our military forces need flexibility, selectivity, and variety in weaponry which takes best advantage of our geography and the capabilities of our allies. We seek a comparative military advantage in the decisive areas of deterrence. This eschews the dangerous, defensive concept of exactly matching an opponent in weapons or divisions, but poses for an aggressor risks that outweigh any gain. The mixed force concept was supported in the report of the House Defense Appropriations Subcommittee in this session of Congress.

Important is not only the "mix" of limited war capabilities in current needs, but also the increasing search for more effective future capabilities such as gases for disarming troops. At the same time, any concept of limited war strategy which disavows the possibility of using tactical nuclear weapons when opposed by Russia, Red China, or their pawns, would return us to the "wall of flesh" strategy, encourage Korea-type wars, and lose us our freedom of action.

SHIELD AND SWORD CONCEPT

The shield is largely composed of the conventional war forces of the free world alliance; the sword, massive mobile striking forces of the United States. This means getting more defense per taxpayer dollar by aiding allies to build conventional and limited war forces to meet creeping aggression and brushfire wars, while supplying through our own efforts the missile and nuclear weapons capability which is beyond the economic reach of most allies.

Ways must be sought to strengthen our allies with modern weapons. For example, the mobility and economy of the Polaris or Pershing missiles, on land and floating mounts, however, could add to the shield forces an independent deterrence capacity.

The shield and sword concept vastly enlarges the limited war capabilities of the free world. Mutual security helps to support, and our military missions help to train, over 200 divisions.

MOBILITY CONCEPT

Essential to our national policy is the capacity to react quickly to enemy aggression. Not merely a matter of more planes, airlift, and ships, mobility also is a matter of staging bases, of logistic followup, of improving equipment, of paring down requirements to basic minimums in order not to destroy the mobility sought.

Because of the vast comparative expense of airlift for a number of divisions, and the fact that only Western Europe has adequate airfields for landing a massive airlift anyway, the divisions of the common alliance system remain the primary limited war land deterrent. We must seek ways to improve the air-transportability of the combat division and the air landing facilities around the globe. At the same time, sealift remains the primary means of large limited war troop movements, as demonstrated in Lebanon.

Mobility of missiles is necessary for protection of deterrent capabilities. This administration is giving top priority to mobile missiles invulnerable to surprise attack and thus exploiting a breakthrough in solid fuel missiles. Because missile launching sites, unlike airbases, can be dispersed more widely, and given additional mobility on rails, roads, beneath the seas and under the polar icecap, the missile age will complicate vastly the task of the aggressor.

INVULNERABILITY OF THE DETERRENT

Another component of mobility relates to the indestructibility of the deterrent forces. So great is the destructive power of the megaton missile warhead that it is not in numbers of missiles, but in the invulnerability or the inability of an aggressor to destroy our retaliatory capability, that our true deterrence lies. A potential aggressor will calculate no benefit in aggression if he knows he cannot destroy the opponent's ability to destroy him.

Until we fully enter the solid fuel missile age, the invulnerability of our deterrent will rest not only in hardened liquid fuel missile sites, but more so in our Strategic Air Command. The present dispersion of SAC bases throughout the world, just-announced plans for further dispersion among civilian airfields, and our early warning systems, render SAC indestructible today. As the Russian ICBM capabilities increase, our ability to place a substantial portion of SAC on a sustained airborne alert will increase. Meanwhile, the President can, if necessary, overspend the budget and has standby powers to put SAC on airborne alert during an emergency period. The capacity for the alert in terms of, for example, spare engines and trained crews, is provided for in current budgets (fiscal year 1960 and fiscal year 1961).

FORCE-IN-BEING

Capabilities-in-being are the heart of deterrent power. This demands a new look at the traditional roles of stockpiling, of transport facilities—air, sea and land—and of the Reserves and National Guard. Instead of being wedded to World War II concepts, our forces, services, and industries must seek new roles identified with the forces-in-being concept.

While Russian military might has been concentrated in their heavy reliance on the intercontinental ballistic missile, the United States has included the ICBM as one element in an overall military capability which takes account of our control of the seas, our advanced bases and system of military alliance, our vastly superior bomber force, and other strong points in our position. Thus, while Soviet military strength has been forced into a single and obsolescing channel, due to their lack of carriers, oversea bases, and sound alliances, the United States has built up a force-in-being which concentrates on variety, flexibility, continual modernization, and dispersion of our weapons systems—a truly balanced force.

RÉSUMÉ OF U.S. FORCES-IN-BEING

Actual U.S. military might includes:

2,000 long-range strategic bombers, each with the destructive potential of several ICBM's, with a sizable proportion of them on 15-minute alert.

Sixteen wings of tactical aircraft, each with nuclear capability, deployed on bases strategically located in advance positions around the world.

Operational Atlas missiles now ready for launching from the west coast.

Snark missiles with a very large warhead, difficult to detect through defense radar.

Four more operational tactical missile squadrons equipped with a mix of Matador and Mace missiles which are all to be replaced with the Mace by 1962, each exceeded by far the total explosive power expended against all Axis military targets in Europe during the whole of World War II.

Intermediate range ballistic missiles, the Thor, stationed in allied forces' hands in the United Kingdom.

Two cruisers and five submarines equipped with the Regulus I, a surface-to-surface weapon.

Fourteen aircraft carriers, several of which are deployed around the periphery of the Soviet Union, able to launch more aircraft than the entire Soviet heavy bomber force and capable of nuclear strikes into almost any area of the Communist bloc.

Our naval alert forces also include 9 antisubmarine carriers, 14 cruisers, 269 destroyers, 115 submarines, 81 minecraft and more than 7,000 operational aircraft; augmented in the future by nuclear attack submarines, destroyer-escort vessels and other high priority efforts in research. They will provide an aggressive antisubmarine warfare program.

Fourteen Army divisions, eight overseas and six in this country, all at the highest state of readiness in peacetime history.

Three divisions of Marines, always prepared to move quickly and effectively to trouble spots anywhere in the world.

Allied nations provide the United States with some 250 strategically located bases, and contribute to our collective defense more than 5 million men, air forces of over 25,000 planes, half of which are jet powered, and help insure

free world control of the sea with their 2,200 combat vessels.

Near-future strength will be even greater. Added this year: two atomic-powered submarines each equipped with 16 operational Polaris missiles, with more to be added progressively at a minimum rate of three per year—the House-approved Polaris program would soon add 336 missiles to the strategic forces of the United States—IRBM's soon to be placed in Italy and Turkey—Atlas ICBM forces to be expanded to 13 squadrons by 1963, all but the first squadrons in hardened, underground sites—the Titan ICBM in hardened bases next year, with 14 squadrons available shortly after 1963. The Midas satellite system will double our warning time—the target date for the Minuteman solid-propellant ICBM will be reached earlier than expected, thus giving our missile force the mobility to roll the length and breadth of our country before 1963.

Our striking power, by the dispersal of bases, the mobility of new nuclear missiles, and warning systems, is now sufficiently invulnerable to deter use of surprise attack. It is only by exercises of science-fiction fantasy that critics can say Russia might destroy our retaliatory power. These critics are not, in fact, able to say that Russia actually possesses such power. Such criticism characteristically says that Russia could do such and such if Russia had such and such—that Russia could destroy our SAC bases if they had hundreds of missiles, if they had the sites from which to launch them simultaneously, if our bombers had no warning, if they all were on the ground, if every missile hit. The "if" bomb thus becomes one of Russia's greatest propaganda weapons.

Thus we see that there is no deterrent gap and that our forces today are capable of carrying out their assigned roles and missions. This capability will continue, aided by future procurement policies and research and development work. As General Twining has stated, "the impression in some quarters that the Soviet Union has overtaken or even outdistanced the United States in military power is simply not supported by facts."

BROAD-GAGE SCIENTIFIC DEVELOPMENT

BACKGROUND

The Communists seek superiority in a few key scientific fields for international prestige and power. Totalitarianism can concentrate upon selected areas and probe for technological breakthroughs.

Following World War II, the Soviet Union commenced intensive efforts in the field of high-thrust ballistic missiles and gained a 5- or 6-year head start over the United States. Although their lead in propulsion is waning and the scientific value of their space efforts is inferior to ours, they nonetheless gained a psychological advantage through Sputnik I and other spectaculars.

Russian scientific discoveries could produce special advantages on a short-term basis. Yet, if we narrowed our own research and development efforts into special-purpose crash programs, we would provide neither the lasting scientific reserve, stability, and flexibility to last out the protracted conflict, nor the most reliable end product for any one year of the contest.

By wise management of resources, the United States holds far greater basic advantages in terms of capital, productivity, labor skills, and scientific resources, all in combination with an atmosphere friendly to the spirit of free inquiry so essential to scientific progress. Our accomplishments in science have been more broadly based. While maintaining at least parity in the development of missiles and in other areas of military science, we have achieved preeminence in such fields as chemical research, especially in polymers and pharmaceuticals; molecular biology, with its intriguing advances toward an understanding of the real origins of life; medical and health research, so meaningful to the world's people; and solid-state physics, which have yielded the transistor.

SCIENTIFIC POWER THROUGH PURPOSE

The real danger confronting the United States is not Russian science, but a lack of our ability to integrate scientific perspective into our national purpose. In 1947, when Stalin overflowed with enthusiasm over the theories of the German scientist Sanger about big rockets spanning continents, the United States still thought, scientifically, in World War II research and development terms. Plainly, the Soviets moved into a new field ahead of us, not because of any general superiority, but because they identified the particular field with their national goals.

The establishment in 1957 of the President's Science Advisory Committee and the post of Special Assistant to the President for Science and Technology has already created a new relationship between science and government at the policy-making level. Additional progress for focusing responsibility for technical decisions at policy levels has resulted from the appointment of executives for research and development in the military services, the establishment of a Director of Research and Engineering in the Department of Defense, and the establishment of NASA and clarification of its responsibilities.

SCIENCE AND PRESTIGE

Correct choices must weigh contributions to general scientific data, to national security, and to international prestige, as well as technical feasibility.

The psychological purpose can be accomplished by timing with international events and dramatizing the achievements we do have. Nevertheless, it would be a tragic mistake to upset sound scientific programs for purely psychological goals. It is poor psychological technique, and not any failure in scientific progress, which has made uncommitted nations more aware of who launched sputnik than who invented the Salk vaccine, who produced the recent breakthroughs in molecular electronics, who developed atomic submarines capable of traversing beneath the ice cap at the North Pole or rounding the world completely submerged, or who has communicated farthest into space. Scientific articulation and appreciation is the American lack.

ADEQUATE FLOW OF EFFORT INTO BASIC RESEARCH AND EDUCATION

There is a continuing temptation to bring research resources to bear on the areas where immediate results are being spectacularly achieved. But, if we do not keep the flow of invention and innovation going, if we fail to push forward the frontiers of scientific discovery, the pace of development will relatively and decisively slow 10 years hence. The same long-range importance attaches to education.

Echoing Vannevar Bush's postwar call, Dwight Eisenhower again and again has asserted basic research should be given stronger support. Ultimately, the leader in outer space will be the nation which has made the greatest progress quietly, patiently, and perhaps undramatically on the true frontiers of knowledge—the laboratories of basic research on earth.

Long-range planning essential to scientific research also is essential in our educational process. The nation of schools is the nation of the future.

The strength of our intellectual pursuits will depend upon the ability to improve education and teacher incentives from the bottom up rather than through centralized and federalized education.

We must also recognize that today's and tomorrow's endless frontiers are intellectual ones. We must learn to honor the pioneers of those frontiers as warmly as the pioneers of our territorial frontiers.

FLEXIBILITY IN DECISION-MAKING

Each year compounds the outpouring of research results and at the same time the acceleration of obsolescence. The limitation of any Nation's scientific resources demands of decision makers a keener appraisal, selection, and phasing.

No nation has unlimited resources. Superiority in the technological race will go to the power which makes the best use of its resources. In the shifting sea of technological change, wise management demands a courageous willingness to stop and start major programs in accord with changing analyses to fulfill long-range objectives. The pressures of geographical interests, politics, organizational inertia, conflicting claims, and Russian propaganda conspire against the decision-maker.

An uneconomical crash program is one in which basic understanding or underlying development is lacking. At the same time, it is false economy and unwise timidity which deliberately stretch out a program where the feasibility of the development and production cycle is already assured.

The United States, for example, is the world leader in nuclear research. But a vital next step, the construction of a powerful linear accelerator, has once again failed to pass Congress. Rapidly rising construction costs and, especially, the difficulty of retaining top qualified personnel contribute to the imperative need to push this.

LEAD-TIME

In recent years the lead-time problem has been practically solved for top-priority projects such as Thor, Jupiter, and Polaris. Thor and Jupiter were available for deployment in about

3 years from project initiation. Reducing lead-time involves the development of production, logistical support, training, test and operation concurrently instead of consecutively. However, in advanced technology, concurrent development can add greatly to the cost in resources of a project because of the feasibility of each step in development is uncertain until actually accomplished. The proponent of a system is apt to become very impatient of delay caused because others are not as optimistic as he that the project is ready to move forward. Sound management consists of knowing when to press forward with a concurrent program to reduce leadtime, and when to hold back for further research evidence to avoid false starts and costly waste.

SCIENTIFIC APPROACH TO SPACE

An outstanding example of America's broad-gage approach to scientific advance, as opposed to the narrow-purpose pursuits of the Soviet, is our space program.

Russia, with a headstart in space exploration, has been able to maintain a lead only in the field of rocket thrust. This lead could be closed within 2 years. Of the 22 additional earth satellites launched since Sputnik I, three have been launched by Russia, 19 have been launched by the United States. Of the seven space probes launched since October 4, 1957, four have been launched by the United States and have produced far more scientific knowledge than the Russian probes.

Whereas the Soviets have accounted for some important "firsts," the U.S. programs have achieved the first detailed photo of solar ultraviolet spectrum, the first photo of a complete tropical storm, the first penetration of equatorial ionospheric current sheets, the first detection of X-rays in high atmosphere, the first identification of the Van Allen radiation belt, the creation of a man-made radiation band around the earth, the first geodetic use of artificial earth satellites to obtain refined information on the size and shape of earth, the first communications satellite.

NASA has instituted a 10-year plan which is not keyed to what Russia does (and is therefore not trapped into a "fits-and-starts" program). Target dates include: 1961 lunar impact vehicle, Atlas Centaur vehicle, and manned space flights; 1963, two-stage Saturn vehicle; and 1963–64, unmanned vehicle for controlled landing on the moon. The U.S. program of long-range objectives will increase scientific knowledge, will be a positive counter-force to Soviet propaganda, and will afford a startling quantum jump over Russia's limited approach to space.

AN ECONOMY FOR THE LONG PULL

During the 1940's, the unrecognized need for a long-haul strategy had resulted in the armed services being "princes today and paupers tomorrow." Despite the Russian peril at the close of World War II, our defense budget ($79.9 billion) dwindled by 1950 to $11.9 billion. Development on long-range missiles was eliminated. Had the Communists delayed aggression a year longer, planned service cuts would have further reduced U.S. combat capabilities.

Crash rearmament by 1953 had raised the budget to $43.7 billion. Such a fluctuating budget policy has a seriously adverse impact on our long-range security posture, and inefficient stops and starts destroy effective research and development efforts. Such policies spell ultimate disaster.

After the Korean armistice, the new administration redesigned national policy to provide indefinite sustaining power for the long haul. This concept of the military need for a healthful economy was, therefore, a basic decision of the Joint Chiefs of Staff, and not, as often described, of the Bureau of the Budget. The decision recognizes the danger of tying defense preparations to magical critical years as predicted dates of future war.

The long-haul strategy has several corollaries:

PLATEAU OF PREPAREDNESS

This entails a planned level of national security outlays which will provide and sustain effective military defenses for the indefinite period of the protracted conflict. Hence, the administration opposed a hasty demobilization in 1953.

Short-range crash efforts of the World War II type often compete with instead of reinforce, the capacity to sustain long-range preparedness efforts. A crash bomber program, as demanded by some critics in 1955, in response to Russian propaganda about an unfounded bomber superiority, would have competed with resources for our missiles program.

Second, the concept seeks stability of military, scientific, and Government personnel levels. A limitation on the future size and effectiveness of the armed services is obtaining and holding qualified personnel in the numbers needed.

The plateau of preparedness concept calls for a national security program on a taxation level: First, which the people and the politicians will support over the long pull; second, which furnishes adequate forces in being for every year; third, which gently rises if necessary to meet increased costs of weaponry. This demands a balanced set of priorities and the ability to shift priorities and funds as needed to meet technological changes. A compromise must exist between too much too soon and too little too late. The request to shift funds this year because of successful Polaris tests is an instance of flexibility.

A PROGRAM FOR FINANCING NATIONAL SECURITY

We can afford all the defense that is needed, if we will soundly finance the full cost. But critics who would increase defense spending should discuss the full price tag. Members of the House or Senate who propose preparedness programs involving major cost differentials from the program-in-being should introduce bills or make a matter of public record the total cost and concepts of their program.

Responsible suggestions to increase preparedness expenditures should include specific legislation and public statement of the total costs of the alternate program.

There is no painless way to pay for preparedness. Increased tax revenues mean increased tax rates. Deficit financing means inflationary erosion of our overall economic position in world markets at a time when these markets are, in fact, a battleground, and at a time when our own balance of payments position has shifted downward.

Elimination of waste is a goal toward which to work but not a panacea immediately available.

Economic growth will make more tax moneys available but also will require increased expenditures because of vast built-in spending programs. A very serious view must be taken of adding further such spending programs.

Those who advocate a rising GNP as a painless process to increased defense often are the same persons who proposed the built-in spending schemes which have made this impossible.

Without further legislative action, the Nation is already committed to $25 to $35 billion for highway programs, and $8 billion for public works, as part of a total of $455.5 billion in future spending.

The two sound means of increasing preparedness expenditures remain: First, cutting back on nondefense programs; and, second, increasing taxation, with the potential dangers which that course carries. All factors must be weighed to insure that economic policies do not defeat long-range defense efforts or destroy individual economic freedom. In the last session of Congress alone, the 20 major spending bills introduced in the House and in the Senate for new programs would have added $50 or $60 billion a year to present spending and placed in jeopardy nearly all of the national objectives related to the world conflict between freedom and regimentation.

In the formulation of the defense budget, countless decisions must be made in a context of uncertainty, rapidly changing technology and, unfortunately, political pressures, external and internal. Defense outlays lack the continuous test of the private enterprise market to insure proper allocation. Automobile manufacturers may launch new cars with high hopes, but the market turns in a verdict quickly, ruthlessly, but effectively, and if the verdict is negative, that particular misuse of resources is ended. Lacking this advantage, the managers of the multi-billion-dollar defense budget must make special means of improving efficiency and obtaining more defense per dollar, such as stabilization of outlays over a plateau of preparedness.

Significant assistance to the preparedness program could be provided by prompter action each year on military appropriations, developing better budgetary and appropriations techniques in handling military budgets, developing closer liaison between industry and Congress, forgetting local geographical pressures when considering defense matters, and removing legislative roadblocks to efficient use of personnel and patents by defense contractors.

In sum, economic policies for the long-haul contest between freedom and regimentation should be geared to our

strengths and not our weaknesses. These policies should foster stable growth and a climate favorable to savings, investment, and capital formation. Also, they should encourage competition in private markets while discouraging the need for Government intervention which shelters particular groups from the discipline of such competition.

STRENGTH THROUGH PSYCHOLOGICAL AWARENESS

The United States can escape the frustration of Soviet psychological conditioning only through a counterstrategy of her own based on character, purpose, and by articulating freedom to the world. Essential to such a positive strategy is:

A REALISTIC APPROACH TO UNDECIDED NATIONS

Have-not nations, like have-not people, are seeking to find—in the Soviet system or in the free-enterprise system—identification with their own hopes for a better life.

This psychological struggle must not be interpreted as merely a contest between persuasive efforts, either with money or with words. It is the personal approach that is important on every level—from the tours of President Eisenhower to exchanges of technicians and artists, businessmen, and tourists. This is worth more than tons of literature, thousands of words.

In the world of mass communications, the wistful citizen of an underdeveloped nation, in effect, carries on his back a walkie-talkie tuned to all that goes on within the United States—the bickering especially—the mistakes we make here and within our Government services overseas.

He resents our misinterpretation of his beliefs, his actions, and his needs. He seeks evidence of our real desire to share with him our scientific knowledge, our industrial know-how, and our far-reaching objectives. Most of all does he want to be certain that we care, that our hearts seek to express our interest in his well-being.

APPROACH TO CAPTIVE PEOPLES

This should include: First, continued attempts to break through the Iron Curtain by such visits as that of the Vice President to Russia last year; second, the story of our American free enterprise system which has created the highest level of living in history; third, showing simply and clearly how the American economy serves the individual. If patiently and continuously done this should automatically create internal demands upon the Soviet rulers for liberalization and so further open societies. The Kremlin's determination to torpedo the planned visit of the President to Russia this summer obviously stemmed in part from the telling effects of these visits.

ARTICULATION

We must prove by results rather than by words that America's ideals of political freedom and machinery of individual enterprises have more to offer them than either Russian or Chinese communism. If we truly believe in what is in our Constitution and our Bill of Rights and live our trust in God, this will permeate all we say and do and will be a powerful influence in the decisions they will make. America, therefore, must prove the value of her ideals, her purpose and her goal, not by her words, but by her actions, the visible evidences of her heartful desire to share with them the riches of her understanding of their needs. Men will not choose between what nations say of their ideals. They will choose between what they can see.

DETERRENCE AND PSYCHOLOGY

Deterrence involves a state of mind and will. Throughout history, materially and militarily superior nations with divided will have fallen prey to inferior nations with united will. Without national character and commitment, NATO, SEATO, SAC, STRAC become not deterrents but shambles.

The credibility and respect assigned by a tempted aggressor to our military strength depends upon the aggressor's estimation of the manifest will to use those forces. Throughout the 1930's, Hitler, with inferior forces, calculated the democracies lacked the manifest will to use their combined forces. Critics today who assert a strategy encompassing tactical use of nuclear weapons would not be credible to the opponent, actually are saying our will to act would not be credible. They are saying our will to defend freedom would not be credible. If we lacked this will, the Communists would be allowed an overwhelming advantage in their strategy of terror to monopolize the initiative.

Asserting constantly a lack of credibility can indeed discredit deterrence and lead to miscalculated war. Khrushchev knows that the majority of Americans support the present administration's policy of firmness. But Khrushchev's obvious interest is in whether the next President will continue the same commitment to a national strategy which has deterred the Kremlin from military action. Any presidential candidate who questions the credibility of the deterrent power in such a way as to discredit the national will to act automatically places in jeopardy that credibility if he is elected President.

Maintaining the credibility of our strength by unified purpose and clear objectives is necessary both to the deterrence of war and to the progressive enlargement of liberty throughout the world.

PSYCHOLOGICAL STRATEGY OF INITIATIVE

Psychologically, we must respond to the Communist challenges not in the areas of their advantages, but with initiative, in the ideological manner and with psychological weapons of our choice.

Freedom is our trump card. We believe in the sovereignty of God, the dignity of man, the right of each citizen to seek his own happiness. In this system, the doctor of medicine who promotes the health of the individual is the highest paid professional, whereas in the Soviet he is the lowest paid.

A positive faith can destroy all effects of the Soviet psychological strategy.

IMPLEMENTING THE PUBLIC STRATEGY

A continuing reevaluation of the machinery to implement national strategy is a constant necessity. This task force, refraining from attractive-looking, impracticable recommendations, has sought a few practical steps capable of implementation without upsetting existing workability, effectiveness, and progress:

PRESIDENCY AND VICE PRESIDENCY

It is essential to continue and enlarge upon the policy of the present administration in utilizing the position of Vice President as a vital post in national security policymaking.

PRIORITIES IN RESOURCES UTILIZATION

To further utilization of resources and investment efficiency according to policy objectives, this task force recommends some type of priorities review board for comparative analyses of interagency programs as an adjunct to the National Security Council.

The study paper of Dr. William Y. Elliott proposes that the board consist of a standing group charged solely with studying and reporting on priorities in the allocation of resources—human, military, economic—to maximize national security. These board members, supported by a small staff of top capability, would be unencumbered with other duties and would not be delegates from other agencies. Each member would be an expert with top-level experience in his particular field, preferably with high-level experience in several agencies, the fields being military and foreign assistance defense programs, disarmament problems, NSC mechanism, foreign policy, psychological strategy, basic research and technology, mobilization base, civil defense, national economy, and fiscal policy related to growth factor and inflation.

Because of the advisory relationship of the board to the President, the task force believes that such a board should be established by administrative action rather than by statute, with the President left free to name its chairman and members.

DEFENSE ORGANIZATION

This task force believes that a single chief of staff for all the services would overconcentrate power and decision-making on the wrong level. Such concentration could introduce an imbalance into consideration of our military program as part of, not the whole of, our preparedness program. Also, in the foreseeable future, there will not be present the great balance wheel of a Chief Executive of unparalleled military background who is uniquely trusted by the citizens to exercise independent evaluation in that field.

DEFENSE REORGANIZATION

This task force believes that the Reorganization Act of 1958 should be allowed time to accomplish the objectives of that act before another major reorganization. Highest praise is due the present Secretary of Defense for building splendid teamwork as an element of maturing the Department of Defense operation. His close consultation with the Joint Chiefs of Staff is a model for successors.

EXPERIENCED APPOINTEES

The excellent performances of both Secretary of Defense Thomas Gates and Gordon Gray in the national security

fields points out the advantage of extensive previous experience in national security matters, and sets a precedent for future appointments.

PUBLIC OPINION

Its increased role in the psychological conflict with communism demands a continuing reevaluation of ways to disseminate information at home and abroad. This reevaluation must go beyond the scope of USIA, and fix clear responsibility for coordinating vital information from all departments and agencies bearing on national security or foreign policy. One suggestion is that the State Department be charged with overall responsibility, but the majority of this task force favors such an assignment within the existing framework of the White House staff. At the very top level, the timing and impact of releases can be best appraised.

TOWARDS RESPONSIBLE PARTISANSHIP

Public confidence as an element of deterrence has placed upon political parties new and grave responsibilities. Political parties in the United States must not become the catalyst for the poisonous processes by which our adversary seeks to create disunity and dissension within the free world.

Inevitably, change in government will invite moves to test the national will and upset international balance, unless there is responsible partisanship in national security matters.

In the testing years ahead we must as a Nation cherish this great strength of our political system where the "opposition party" is not forced by political maneuvering to oppose, just because it has a different party level, the sound policies for continuous defense of the Nation. Those many members of the other party in both Houses of Congress who called for unity after the recent summit collapse are to be commended.

POLICY MACHINERY WITHIN CONGRESS

Within the Congress there is a neglected tool, the concept of party policy committees, for achieving responsible partisanship for right policies and for promoting a public strategy. This machinery, at the same time, would afford a vehicle for criticisms of existing policies where such criticism serves as a much needed corrective.

During the 79th Congress, the Joint Committee on the Reorganization of Congress recommended the establishment of policy committees "for the determination and expression of majority policy and minority policy." These committees, to be elected by the party conference, were to be a means of strengthening party responsibility and accountability.

The four policy committees would have comprised a Joint Legislative-Executive Council designed to meet with the President "to facilitate the formulation and carrying out of national policy, and improve relationships between the executive and legislative branches of the Government."

In times of crises, both parties could express opinions and criticisms in executive session through these committees. A joint policy committee resolution would produce an ethical limitation, so that criticisms and divisive influences would not destroy the strength of our international position, give potential opponents undue advantage, and lose prestige with the uncommitted nations.

This policy committee legislation passed the Senate, but was never brought to the floor of the House. In 1949 the Republican Members of Congress unilaterally set up their policy committee. The recent U–2 incident, the summit crisis, and Khrushchev's attempt to influence domestic politics refortify the recommendation of this task force to implement such legislation.

SUBCOMMITTEE ON NATIONAL STRATEGY WITHIN THE POLICY COMMITTEES

The present congressional committee system affords difficulty in properly appraising national strategy. No one congressional committee represents all interests involved. But both in a legislative and in an opinionmaking role, Congress becomes a vital accessory to the national strategy of the Executive.

If the policy committee machinery were fully implemented, consideration might be given to establishing policy subcommittees of select members from applicable standing committees to assess national strategy. This task force has had such a mission. Dissenting reports of counterpart subcommittees could serve to deepen legitimate debate over real issues, and the joint reports could promote a sound, comprehensible public strategy.

Consideration must be given to streamline and compact regular committee hearings. The Secretary of Defense appears before 10 or 12 committees, often for protracted periods, during one session of Congress.

TOWARD INDIVIDUAL RESPONSIBILITY

This Republic, and the freedom for which it stands, was born in the decision that how a nation survives is as important as whether it survives.

No circumlocution or rhetoric of special and expedient interest can long evade the necessity for a similar decision today.

This is America's moral responsibility. Virtually all other arguments between our people are matters of individual conscience. This is a matter of the Nation's conscience.

If a nation doubts its mission in the world, it will regress and cease to retain the confidence of anyone.

The outcome of our contest with Russia will depend upon the personal commitment of the American housewife and the breadwinner to the values that made America—values not exclusively ours, but belonging to a common humanity.

History abounds with examples of nations forced both to fight and surrender because of failure to convince an enemy that it will not only live for its ideals, but is prepared to die for them.

No way has been shown to disengage from this responsibility without also disengaging from freedom.

Nations cannot drift into peace. They can only drift into war. Thus, the national responsibility is to unite in purpose, no matter how divided as to technique. Criticism within such a framework of purpose can be constructive. Criticism oblivious of such purpose can only be destructive.

It is the heavy responsibility of criticism in a republic that it be accompanied by clear and specific alternatives.

It is the responsibility of citizens in a republic to constantly demand this criticism of clear alternatives and to reject those appeals which are simply to disunity, discontent, and discord. The philosopher Ortega y Gasset has noted that the fall of Rome began when discord outweighed concord.

The decisive battles of history which dramatize the death of nations after centuries of life came as a result and not as the cause of decline and decadence.

Weakness or vacillation in national character can be a nation's greatest weakness, irreplaceable by any amount of hardware, material, or money.

National character is the key element of national power.

First. "Survival alone" is unacceptable as the objective of American strength and strategy. Liberty, justice, and open societies are the only goals worthy of our heritage, and these are promoted by the rule of law, by a stable world, and by independent, internally healthy republics.

Second. These can be accomplished by a national cold war strategy which becomes a public affair, understood and enthusiastically supported by people in all walks of life.

Third. The first steps of this strategy have already been accomplished: Since 1953, national policy has renounced any defensive method of meeting aggression on the terms of the aggressor, has embraced a diplomacy of firmness which has deterred a Soviet adventure in Berlin, invasion of Formosa, reinvasion of Korea, and Soviet takeover in the Middle East.

Fourth. The military phase of this strategy has achieved effectiveness by the mix of forces, incorporated with a worldwide shield of troops from the free world alliance and a sword of massive, mobile, and indestructible striking power, capable of varying and calibrated responses.

Fifth. In the scientific phase, real progress has been made in integrating scientific and national purpose. American technology, in comparison with Russia's, is more broadly based, devoted to the welfare of mankind, and has produced far more solid scientific data from space exploration. If the public and the political leaders will give greater attention to basic research and education, in a climate of decentralized responsibility and creativity, and understand and support efforts such as the new 10-year NASA program, American science will win the resurgent confidence of the world and antiquate Iron Curtains.

Sixth. The "long-pull" policies initiated in 1953 have ended the peaks and valleys characteristic of American preparedness since the Revolutionary War and have given stability within the Armed Forces and within the national economy. No sound economic alternative for the cold war has been offered to

this policy, and this task force overwhelmingly endorses it as a basic premise for both preparedness and the preservation of economic freedom and health.

Seventh. Improved psychological techniques and timing are necessary, but by far the best antidote to the attempted Communist strategy of conditioning is an ideological initiative, not to force beliefs, but to articulate beliefs through purpose and public conscience.

Eighth. Essential to a dynamic public strategy is a continuity of successful policies from one administration to the next, an offering of a real alternative by those who criticize, policymaking machinery within Congress to produce responsible partisanship, and executive machinery for overall evaluation and articulation of our strategy and strength. The foundation of any public strategy is national character, conviction, and confidence.

The task force study papers are inserted in the CONGRESSIONAL RECORD under the following Task Force Report headings.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study paper No. 1: "National Character as an Element of Power," by Dr. William Y. Elliott, professor of government, Harvard University:

NATIONAL CHARACTER AS AN ELEMENT OF POWER

(By Dr. William Y. Elliott, professor of government, Harvard University)

National character is probably one of the most fought-over fields among sociologists, philosophers, political scientists, and others who occupy themselves with this kind of thinking. The first thing to be said about it is that there is no such thing as a single national characteristic that is enduring and simple and overwhelming in its control of all other factors in any country.

People who have written about this essence of a nation with the grace, for instance that Salvador de Madariaga did in one of his better books—"Englishmen, Frenchmen, and Spaniards"—do nevertheless try to find some identifiable national characteristics. Perhaps the best way to approach the problem is to ask how national characteristics are formed; what the balance is in what might be called defects and virtues; and how they stamp the behavior of a people in responding to leadership, in creating leadership, in supporting it, and in correcting it, if necessary.

This country inherited in its early stages primarily, of course, a British tradition. But it did have ingredients, even at a very early period, from Dutch as well as German traditions. The French influence comes also, both from Canadian contacts and the Acadians, who it will be remembered were resettled in Louisiana. We also have had some measure of Spanish culture from our country's beginnings. But these were all borne along the main stream: until the potato famine in Ireland our immigrants were mainly British.

These ingredients gave us a national political and constitutional characteristic which meant that we inherited, institutionally, a great constitutional framework of law, as well as a conception of government as a limited government.

De Tocqueville noted clearly this concept of limited—and legal—government in "Democracy in America." With French eyes, he saw this as meaning that there was no feudal element really in the United States that was resisting the evolution of the country. Turner, the historian, put this in "The Significance of the Frontier in American History"—and it is still a frontier in every way—as science carries us whizzing into the future. Lord Bryce, too, made some of the most sage comments on our character in "The American Commonwealth."

We cannot neglect these national origins and, above all, the cultural heritage that they brought. They brought, for instance, Shakespeare and the Bible which were the molding influences upon the American epic of Lincoln. They brought as well the Puritans and the Baptists and Episcopalians, the Quakers, the Methodist circuit riders and the Presbyterian dominie and the Catholics in Maryland.

These religious elements of our culture are absolutely fundamental. They are the foundation of our morality—to which we do not attach sufficient meaning. Whatever our defection from them, or our falling away, they have shaped the ethos of America profoundly. These religious values have given us a sense that we are not the creators of the universe. This is our basic challenge to communism and to all other "magic formula" ideologies. They have given us, in short, a faith by which we live—however poorly and however badly we fulfill it. Nevertheless we do live by it.

Whatever else may be said of us, no one will deny that our values are profoundly religious ones, a fact which accounts for one characteristic in our behaviors which is extremely important: It stresses charity or loving kindness in the full Christian sense. It stresses also the concept of duty to offset the idea of rights. And to the degree that we have lost that conception of duty as a balance we have been false to our own tradition. We lose one of the great elements in American character when we stress only a philosophy of "rights."

Rights, protecting freedom and the development of responsibility are basic to freedom. We call these "natural rights." But, taken in the debased form of "what I get out of it," they degenerate into self-interest or group-interest—not those of mutual moral responsibility implying equal stress on duties. The rights that are mistranslated into "gimme" or "grab" are the basis of pressure-group activity, of self-interests, of egoism and of the softness that chooses the pursuit of pleasure instead of the pursuit of true happiness which Emerson rightly said was achieved by finding and following principles. Selfish rights that are concerned only with "what do I get out of it" erode the moral character of any civilization. The eye of the soft man cannot confront hardship. It will look away. The man behind the eye will choose evasion, not responsible action, courageously faced.

Character cannot be had without risks, hardship and suffering, as we can observe from a great deal of human history which is difficult to refute. Men decay as men when the going gets so soft that there is no challenge. This, at least, is one problem we do not have to contend with. We are now confronted with a clear and visible challenge to our national life. It is a challenge that embraces not only a military field, though certainly the challenge from ICBM's is serious enough.

It encompasses not only will but what lies behind will. Indeed, self-will will never help us in the struggle in which we are involved, for it is precisely the thing that weakens people. Self-will is generally and easily related to appetite—what Shakespeare called a "universal wolf." If a nation does not recognize its duty and destiny and, therefore, a positive mission, it has lost its character because it has lost its ethos. An ethos is the shaping force of a nation. It is the essence of national character. We are molded from our mother's knees and our father's hands, our great-aunts, our great-uncles, and our grandfathers and grandmothers, our schools, our churches, the discipline of our games with our fellows from childhood on. A great variety of forces all converge on what is accepted as good, noble, heroic, or "what is done." What one "gets by with" in the "softest" manner, and what is "smart" and "slick" is the other, the dark side of ethos is habit. To that degree a nation's character is shaped not only by its leaders as examples (exemplars), by its Washingtons, its Jeffersons, its Jacksons, its Lincolns. It can be undone by an unbalanced diet of dubious TV personalities, bred under glass and klieg lights, to whom a wisecrack or a risque joke is more precious than a good name or a just and firm character.

One can have no doubt after he reviews history in these terms that the great epics that have shaped civilization have shown the trials and the struggles of a hero who represents the highest concept of folk character. The epic of the hero is what the bards sing to the youth and what mothers teach their children to be like. It is what young men grow up by imitating as a model. It is what the Arthurian legends, as treated by Mallory and Tennyson, did for England. It is what Shakespeare did in his great historical plays, too, nurtured on Plutarch's "Lives" and Holinshed's "Chronicles."

These lift the imaginations of all men who read them. Even "Doctor Zhivago" is pulled around in this direction, coming from a very different cultural background in all sorts of ways. It is worthwhile to note that the late author of "Doctor Zhivago" was a great Shakespearean scholar.

This epic tradition of the hero, of nobility of purpose and deed, of greatness and magnanimity—if this is lost out of a nation, how can it have character? How can it wish to serve? Who, but a fool, on any basis of pure self-interest, would ever embrace public office or the duties that carry him frequently to obloquy, certainly to savagely hostile criticism, and possibly to destruction through loss of health as well as wealth.

What is it that makes people recognize and follow true leaders? They may kill them, but sooner or later they acknowledge and follow the great leaders of history. When we put up pictures of Washington, of Jefferson, of Old Hickory or Stonewall Jackson, of Lee, and of Lincoln, and of other great Americans, so that we can look at them, it is because we know that the models of the men we produce shape our characters. We can learn from their weaknesses as well as from their strengths.

This is the essence of the problem of how to continue a great tradition of leadership that is simple, humble and wise in the biblical sense of "understanding," that is rooted in man's turning for guidance and strength to God, his Creator, as Lincoln did. What are our assets and what are our liabilities in these terms?

First, from the religious heritage, we are an excessively amiable and open people.

This spirit is plainly evident in our doughboys and GI's. It is this unfailing sense of "buddy," "partner"—an openness, a kind of

fraternal cooperation, first rooted in the frontier spirit and the openness of our society. This amiability, this trustfulness puts a wonderful stamp on our national character because it means that there really is in us, almost universally shared by Americans, a consensus juris (a universal agreement on what is right as the basis for law) that makes us feel "alike," no matter how diverse the racial strains are. It is this spirit that overcomes differences so we can work together as Americans. We not only close ranks against class and other hatreds from outside lands. We open ranks to all men who believe in true human rights and duties of freedom and justice. We don't believe in leveling down but in freeing and educating to grow up.

But the corollary defect of this openhandedness is that we are extremely unsuspicious people and trustful. Since we are peaceful, we accept all pacifists in good faith, even Lord Russell and "Pugwash" Eaton. We are willing to give Stalin, Khrushchev or Mao Tse-tung the benefit of the doubt—in spite of the record of planned deceit and the tactics of terror and subversion, including takeovers by disciplined mob violence, turned off or on. There are times when we should remember the Biblical injunction to be "as wise as the serpent as well as harmless as the dove." It is necessary from time to time in the world we live in, to open our eyes to evil and to discern how to deal with it and not to be overcome by it. This characteristic of watchfulness is not adequately present in our tradition; or at least we might say it is being produced by necessity but very painfully. It is well to state again the basic objective, grounded on a balanced view of human nature, that we aim at as a culture:

Our Constitution is based upon the idea that men are neither angels nor demons but that they have ingredients of both in them. The angelic can be victorious only if the demoniac is controlled. Therefore, we have checks and balances to prevent the usurpation of power or the abuse of it, to limit the Government, to see that men have a right to develop on their own responsibility and by their own choice. That is the only way we can achieve any true morality. All other morality is conditioned—socially imposed by some leader's magic pattern in the manner of Pavlov's trained dogs.

With whatever inscrutable wisdom Providence has put us here, one condition of human life is certain; that we have our own salvation to work out in fear and trembling, that we do have to develop as individuals. The moment we concede that the other "imposed" morality is moral—which is that we are conditioned by our environment like the animals in Pavlov's experiments—we are no longer human. We have retrogressed back down the tree of life—headed back down the evolutionary road perhaps to wind up as completely "adjusted" as the ant heap and the beehive, which are arrested societies. They are indeed in some ways naturally marvelous societies; but they are finished societies: they have no further evolution. They have adjusted themselves to their environment completely. Instinct governs them, not reason. They punish deviation ruthlessly.

How do we show our national purpose? Best of all through the lives, the faces, the families of men and women, bred in freedom, who grow in stature and show it by their faces, by their words, by their deeds. What human race would rather breed Khrushchevs or Stalins or any other such leader than any 10 of the best citizens of any town, city, state, or free nation of this world? The ant heap is not humanity's destiny.

The American tradition is a restless, questing tradition, which has the weakness perhaps of being always on the move and looking for new things, sometimes without digesting and settling down in the old: Main Street lies right down the middle of the town, with houses on each side. It marches through and marches on and the people are always on the move. This is disrupting in some ways. Yet it has advantages; it "mixes" us all up in the process so that there are no castes.

But it is a little extreme to compare us to a melting pot or a mixing bowl, or something that shakes us up, that whips us in, and maybe homogenizes us, or sifts us into the sameness of soft flour. We resist this atomizing by our sound habit of protecting the individual and keeping his own richness and flavor.

The great traditions of any society are carried in people who have their roots deep down in home ground, rooted in the unconscious behavior and social heritage of the past as well as the projection into the future. If we do not want to be windblown by all the passing doctrines, we have to have security in our own background, in our institutions, and in the models that have been set us—the old men and the old women we have known who have set a model like that—our parents, our friends, our community, our neighborhood, and traditions. What is considered right is done because in some ways it has been proved to be a good thing for a long time. We are a conservative people, in the best sense, innovating to preserve old values, tested truths, to meet new times and technologies.

One weakness of American character has come from our supreme eagerness to conquer a continent and to push faster the things that we do with our hands—the creative work of the builder. This was good and necessary. But we have sometimes fallen into the trap of regarding success in these things as an end in itself. That is materialism not as blatant as that of communism, which is materialistic in its origins as well as in its ends. But it is materialism, if it looks only to goods. Let us not have ends that are materialistic. We must use our goods for moral good. Let us attempt once more to balance the virtues of the spirit with organic needs—both for individuals and society.

Aristotle's observation, in short, about the nature of virtue—the golden mean between the extremes, which has become a good part of Christian doctrine in various ways—is a true interpretation of real character. It was rooted in the Judaic tradition, too, of the Old Testament. That is something to remember. That is what checks and balances in our system mean. It is what restraint and moderation mean in a man's character. Without it he is a slave to something, perhaps to his lower self, to appetite. He cannot be a free man on that basis. This is equally true of a nation.

Now, how does this bear on leadership? And how does it bear on power?

The ultimate ingredients for real power in any man depend on his capacity to develop sustained support and "contagious" leadership. To help develop others for leadership is to broaden leadership. It is the real aim of education in the broadest sense, along with understanding the need and the way to pick leaders and to support them. We all depend upon this conception of individual responsibility and duty as being a part of human development. But we do not sufficiently recognize the effect of models and the duty of examples, the contagion of courage and devotion. This must in turn reflect itself (and be reflected in) an image of a national ethos; a mission, a model for humanity and for realizing this model in human life.

Everything depends upon morale in any nation. Weapons are only useful to the degree that they can be used and that it is reasonably clear they will be used. A posture of strength is relatively worthless and can become dangerous, particularly if the posture is a purely defensive posture that never anticipates anything except a resistance of the kind that does not punish but that tries only by piecemeal resistance, on grounds of another's choosing, to prevent the Sino-Soviet bloc, often through "stooges" from pushing freedom out of the world. That is what John Foster Dulles fought, with the courage of a Christian and a free man—and what, God helping us, we Americans shall always understand and fight.

Morale means, first of all, the faith that a nation has in its destiny and its world position and mission. That is quite important. If a nation loses that faith in its own chosen destiny it has lost its battle of conflicting faiths. And it is exceedingly important that leadership should, therefore, be measured in terms of keeping alive this faith of a nation in its destiny. It cannot be done by leadership alone because leadership is a product of a nation's character which is the best guarantee of morale. A nation's leadership is bound to be reflected by the morale of its people, and limited by it.

At certain periods of our history when we have had no very grave challenges, our leadership has reflected it in the most obvious way. At the times when we have had challenges as profound as the Civil War or as that period in which our revolution was fought and the Constitution was created we have produced leadership that was incredible, that stood as a symbol to the entire world. And we have produced it again at very important periods of history and in our own times. Sometimes, of course, and inevitably, that leadership has been fallible, and is after all human. But it was great leadership measured in terms of growth to new potentials of creating national tone."

Well, there never was a time in our history more propitious for great leadership than now. We face a challenge beyond any other that this country or probably humanity has ever undergone, certainly since what were in our known past only the dim struggles for human survival against other forms of life in prehistoric periods. At no time before has the human situation been so fraught with really apocalyptic possibilities, both for good and for evil; for evil in terms of the destructive potentialities of weapons systems that we know about.

What is a more important threat perhaps is the possibility of success for a systematic syllogism of terror, practiced openly by Mr. Khrushchev and his Chinese allies. Certainly both of them are now quite bold in resorting to nuclear weapons as a threat, the risk of which is calculated to deter us from any action anywhere in the world. If we accept Khrushchev's assumption that he can and will destroy us if we don't concede his demands, and that this is the only open alternative if we wish to be "allowed to coexist"—then, of course, he doesn't need more than threats—untested. He can take us at will—the richest prize in history, lost through cowardice in the face of a man who plays up his anger and his terrorization with an actor's skill and a tyrant's method.

At the time of the Quemoy-Matsu crisis in 1958 and at odd moments since then, we heard many arguments to the effect that these small islands were not worth the risk of nuclear war, that they are really part of the mainland of China, etc.; therefore we ought to consolidate our position at some point where we have more of the support of the world, perhaps on Taiwan proper. Yet, on this reasoning there is no better title to Taiwan than there is to Quemoy and Matsu, unless one takes the Chinese Republic as being the legitimate Government of China and as being in de facto possession of both. The same logic that would give up Quemoy

and Matsu would, the next time, when the risk of nuclear weapons and the chips are down on the test of who will support us in the showdown, find equally compelling reasons for yielding our position on the new point d'appui. And where does one draw the line on that basis? We have to reject Khrushchev's first thesis—both that he can and that he would destroy us if we refuse his demands.

In any case, we have made this clear enough as our basic belief and policy. Now, more than ever, we ought to prepare ourselves for resisting terror as a tool. Those in positions of leadership in this country should attempt to prepare other people for facing this kind of challenge with an adequate response. As surely as we do not face this kind of challenge with an adequate response and with that firmness that allows no miscalculation on the part of the other fellow, we have encouraged the most dangerous element in international affairs to miscalculate our intentions and our ability to back them up.

There has not been one single iota of evidence on any record of Russian or Chinese behavior that does not suggest that if we stood absolutely firm we would be confronted with a situation which at the moment risks a good deal more for them than it does for us.

This is what the deluded followers of Bertrand Russell and Cyrus Eaton, the Pied Piper of Pugwash, miss: their logic seems to many softheaded and hysterical intellectuals to be overwhelming: "Better be Red than dead." But we might be Red slaves and still dead, through a falling-out among our masters of the Sino-Soviet bloc, or just over who will run the world even within Russia. Our renunciation of nuclear weapons won't control their future employment by others. Indeed, it will make that employment to destroy any centers of courage and freedom, piecemeal, easy—where an all-out struggle would threaten the safety of both China and Russia (by massive worldwide fallout) on the very premises that Russell has popularized. Even if we were destroyed by adequate surprise, this would still be so.

But to disarm unilaterally—the real theme of the miscalled sane nuclear policy, advocates of slavery rather than extinction—would be the surest way to make extinction probable. Khrushchev has lost control of Mao. Indeed, one day Mr. K., or his successor (and he may have one sooner than he thinks), may reckon us as a restraining force on a Red ally, Peiping, grown to the stature of a challenger for world mastery.

Under those conditions, the undoubted capability and the certain will to punish an aggressor in the measure of his aggression remains our surest hope of peace—by restraint through that power. It is not perfect nor is the world perfect. But it is calculably far more a protection not only for liberty but for the life of most of humanity than encouragement of Khrushchev and company and Mao to risk a showdown of terror because they felt Pugwash had washed out our national character and crippled our unity of will and purpose.

Lord Russell's politics and history are either cynical (puckish) or naive, maybe both. Wars are bred by miscalculations to which Russell may prove a chief contributor.

In other words, the alternatives to the assumptions are always the things we must look at. Our leadership must teach us to do that because it must be as wise as the serpent in these time; but it can only do so if it convinces the people of this country that firmness—not weakness—leads in the direction of just and lasting peace. When this has been made clear, leadership has done what is necessary to have people take the risks with the fortitude and conviction which will enable us to meet, under God's guidance, this challenge with which we are presently confronted.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. FORD. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study paper No. 2: "Fundamentals of a National Strategy," by Dr. David M. Abshire, task force staff director:

FUNDAMENTALS OF A NATIONAL STRATEGY

(By David M. Abshire, task force staff director)

I. WHAT IS STRATEGY?

This paper explores fundamentals of a strategy designed to promote our national policy objectives. The paper will seek historical perspective—or the "big picture"—behind these fundamentals which often have explained the rise and collapse of nations.

A sense of historical perspective within the Communist ideology has furnished the fuel for Soviet achievements, whether in space or in a rising industrial output. We think the Communists' sense of history is wrong, but they are right in believing that history is as much of the unwritten future as of the written past. They are right in viewing an age as a whole. This is why Russia and Red China have the most integrated, unified doctrine of military strategy in human history, and this integration maximizes the advantages of their physical strength.

Their principal strategic advantage has resulted from this historical or integrating perspective, and consequently our strategy needs a counterpart historical perspective—except we want our perspective to be true. America traditionally has disunity of policy and a short-range point of view, further fractured by political partisanship. This American disadvantage could enable Russia, although weaker industrially, politically, and spiritually, to overcome the United States, stronger in all these respects.

How is "strategy" defined?

In pre-World War II thought, strategy frequently was understood as the art of moving armies and navies to gain maximum advantage prior to actual battle. Tactics was the art of fighting the battle itself. Some military writers argued, however, that in certain types of conflict, blockade, economic strangulation, or attrition could accomplish the work of battle. Regardless, all agreed that the purpose of the advantage sought was the destruction of an opponent's will to resist, or of a bellicose nation's will to aggression.

Sun Tzu, the ancient Chinese military theorist, wrote in 500 B.C.:

"To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting."

Thus, the best of the ancient Chinese militarists recognized that the final objective of strategy lay in the moral or psychological realm, that power is a function of the will, and that if there is no will to fight, there is no power.

Since World War II, strategy increasingly has been translated into an extended time dimension. Indeed, a "protracted conflict" lasting an entire historical era is not a new concept, for the Hundred Years Wars between England and France, and long before that the extended wars between Italy and Carthage are two of many examples of protracted conflicts. But again, the Communists have perfected a "protracted strategy" for the nuclear age through the intensification of the extended pressures by a varying but constant threat of all-out holocaust. This they do through exploiting the dilemma: the struggle with the Sino-Soviet powers could last a century of cold war or could burst into a hot war Armageddon which conceivably could end within a week.

But the protracted conflict alternative is more probable than the Armageddon alternative, since the true Communists believe that "historical inevitability" or the "wave of the future" is on their side, and consequently that they do not have to undertake gambles such as many past conquerors have undertaken. Hence in the present conflict with Russia, strategy may be defined especially as the art of optimum utilization of resources, before hot war is ever commenced, to destroy or block the will of an opponent. For a peace-loving power it becomes a protracted art in which the pay-off may not be in battle that destroys an acquisitive opponent's will to further aggression, but in a superior diplomatic, technological, or economic position, which deters an acquisitive opponent's temptation for aggression. In fact, for either a peace-loving or an acquisitive power, real "victory" would have to be achieved without nuclear battle, nuclear battle being self-destructive of almost any conceivable national policy.

II. ARE THERE FUNDAMENTALS OF STRATEGY?

In view of these new influences or emphases within the strategic equation, can it be said that there remain certain constant fundamentals of strategy? In 1914 and in 1940, the French talked a lot about principles of war and then fought the next war in archaic terms of the last war. The trouble with the French was that they tried to apply to dynamic change static principles derived from certain temporary conditions of tactics and technology.

Our strategic thinking must not be tied down, to say, fleets, armies, or geographical positions, and project static World War II concepts onto the dynamic time-space age. We must seek fundamentals in recurring relationships between humans trying to utilize to best advantage the resources at hand. It is human nature that does not change.

Britain's brilliant military theorist, G. F. R. Henderson, noted:

"The first thing is to realize that in war we have to do not so much with numbers, arms, and maneuvers, as with human nature.

"What did Napoleon find in the history of the campaigns of Alexander, Hannibal, and Julius Caesar? Not merely a record of marches and maneuvers, of the use of entrenchments, or of the general principles of attack and defense. This is the mechanical part* * *.

"No; he found in those campaigns a complete study of human nature under the conditions that exist in war; human nature affected by discipline, by fear, by the need of food, by want of confidence, by overconfidence, by the weight of responsibility, by political interests, by patriotism, by distrust." [1]

In conflict situations, how human beings obtain maximum advantage with material and human resources forms the basis for any true fundamentals of strategy. Those fundamentals, in a way, are merely highest commonsense.

III. THE FIRST FUNDAMENTAL: THE OBJECTIVE

On the field of battle, the unpardonable military sin always has been for the general

[1] G. F. R. Henderson, "The Science of War" (London, Longmans, Green & Co., 1908), p. 174.

to forget his objective, or to get a false objective (an unimportant piece of land or a useless fort) substituted in his mind for the real objective.

General McClellan made Richmond, not Lee's indefatigable army, his objective. Without the destruction of the mobility and freedom of action of Lee's army, the war could not be won. Grant, avoiding McClellan's mistake, devised a strategy that, through his and Sherman's maneuvers and battles, would paralyze Lee. When this was accomplished, he offered Lee magnanimous terms of surrender, in accord with the objective of the war as laid down by Lincoln: The restoration of the South, in spirit and in fact, to the Union. He used unlimited military means to obtain a limited political objective. Both Lincoln and Grant possessed long-sighted views of strategic and political objectives.[2]

The first step toward a public understanding of a national strategy is understanding of clear national objectives. Karl von Clausewitz, in his book, "On War," pointed to the fact that modern war had become "an affair of the whole nation" where all factors—military, psychological, and political—were involved. He asserted that "political aims are the end and war is the means, and the means can never be conceived without the end," or expressed differently, "war is nothing else than a continuation of political transactions intermingled with different means."

A. Failures of two World Wars

Clausewitz, often pegged as a militarist, was saying that war, to follow any rule of reason and be more than a suicidal absurdity, had to be the instrument of policy, the servant and not the master of national goals. This is quite the opposite of militarism. Clausewitz's central truth was grossly ignored in World War I and World War II. World War I did not serve the true policy ends of the Allies, if those ends or objectives aimed at a stable peace. The phrase "a war to end wars," followed up by a policy of victory wrought by unconditional surrender, might have been means to stir the public effort and enthusiasm, but were self-defeating ways toward an objective of stable peace. Instead of achieving stable peace, we bred the depression, fascism, nazism, and a worse war. As already noted, Grant too used "unconditional surrender" as a military means. But at the end of the war, he conformed to the temperate political objectives.

The conduct of World War II, on the part of the Allied Powers, similarly violated true objectives of American interest. The unconditional surrender policy inaugurated at the Casablanca Conference was carried through to the peace policy and made inevitable a postwar European vacuum which Russia would fill. Again, the demands of shortsighted military expedience dictated many of the concessions to Russia at Yalta, concessions which violated the true aims of the United States.[3]

B. Defensive objective of opposing communism

In the cold war, is America pursuing a self-defeating policy as she did in the two World Wars? What are our true objectives, our grand design, our overall concept? Is our aim to survive the Soviet threat? Or is our aim something beyond survival?

For America in the cold war, the real objective must not be opposing Russia and counteracting communism. Communism thrives on chaos, on the vindictiveness of the have-nots against the haves, on the frustrated hope for order and for total, planned solutions in the human soul. Communism is not the cause, but the product of world disillusionment. Communism is but one solution proposed to bring a sort of order and a kind of progress out of disorder and retardation. A policy or an objective of simply opposing communism is self-defeating. In the long run, communism can only be overcome by a different and more satisfactory answer to man's needs, frustrations and longings. Communism is a faith, a religion, and can only be replaced by a better faith, a better religion.

C. The objective beyond survival

Certainly a proper goal beyond survival is the preservation of freedom in America. But what type of freedom? Freedom from fear of Russia? Freedom from the destruction of the atomic bomb? Or freedom toward greater happiness, greater prosperity, greater humanity, greater constitutional liberties, greater rule of law, greater faith, greater creativity and harmony within and between individuals?[4]

Certainly the objective is somewhere beyond survival and framed in freedom at home and compatible values abroad. Through that frame lie still greater values, according to man's particular faith, religion and conviction that become his ultimate concern, to use theologian Paul Tillich's term.

In the protracted conflict, if we are to follow the principle of the objective, this question must be posed: What do we really mean by a free society based on the foundation of constitutional liberties? When do we reach the point of jeopardizing that freedom? How much are we willing to sacrifice for security? Or rather, how much freedom can we safely sacrifice without violating the ultimate objective—the preservation of freedom?

D. Giving up freedom to preserve freedom

Confronted by the Kaiser's Germany and Hitler's Germany in World Wars I and II, this was an easy question to answer. Our military expenditures, during fiscal year 1945, were at $75.9 billion. Freedoms were given up. Regulations and controls were instituted in almost every economic phase of American life. Our youth was drafted into the service. There was a temporary abdication of freedom—rationing, higher taxes, price controls, the draft—to fight for the preservation of freedom. We were confident our Nation had sufficient constitutional flexibility to regain that freedom after the war.

But now we are in a continuing cold war, a lasting struggle, a protracted conflict. As President Eisenhower quite clearly explained on May 19, 1953: "We live, as I have said, not in an instant danger but in an age of danger. * * * We must think and plan and provide so as to live through this age in freedom—in ways that do not undermine our freedom even as we try to defend it."

Thus, it becomes not a matter of giving up for 3 or 4 years; it was a matter of giving up for possibly a hundred years.

At the peak of World War II, the Nation spent about 45 percent of our national product on national security, without going bankrupt. As Col. George Lincoln notes in his book, "The Economics of National Security":

"Up to perhaps half our national product, the question is not how much can be taken. It is rather a questioning of what extraordinary economic measures we are willing to institute to enable the efficient expenditure of dollars for defense while at the same time stabilizing the economy. * * * Whatever the proportion, there is a limit beyond which economic controls become necessary. When the budget of the security plan goes beyond a certain level, that budget plan must be associated and coordinated with a plan for exercising the necessary government control (including taxes) over the economy. If the Congress and the people accept both plans, then we can afford a very large budget. If not, then a large budget can be very dangerous indeed to the economy. In chapter I we posed the question, 'How much will you pay to live?'"

This question is on the level of survival only, without guarantees of liberties. Is the young American graduating from school content to just survive—without real choice of where he lives or where he works? That would be his lot under communism or socialism. Indeed, Bertrand Russell thinks the question in the nuclear age should be put on this level of survival only, with or without freedom. In colloquial terms: "Better Red than Dead."

But Colonel Lincoln goes further in his discussion and says: "There is an associated question, 'What government economic controls will you accept to live?'"

Such a question, posed before the age of space and of cold war, would carry with it the inference that unwillingness to accept the necessary controls and the necessary sacrifices would be a sign of national softness. In the space and cold war age, there must be genuine concern for the permanent loss of freedom in an attempt to defend freedom. When the period of "giving up of freedoms" may run beyond the average lifetime, the "giving up" is permanent. President Eisenhower was quite conscious of this when he said on May 19, 1953: "We didn't want to become a garrison State, we wanted to remain free. Our plans and programs had to conform to the practices of a free people, which meant essentially a free economy."

This objective must be kept foremost in mind. In the forthcoming decades, it will be quite necessary to increase the amounts being spent on national security. There is no amount which can grant us absolute

---

[2] The best explanation of Grant's strategy is found in Maj. Gen. J. F. C. Fuller, "The Generalship of Ulysses S. Grant" (London, John Murray, 1929).

[3] Hanson W. Baldwin, in "Great Mistakes of the War" (Harper, 1950, pp. 1 and 2) notes:

"The United States has fought wars differently from other peoples. * * * Unlike the British or the Russians, we have had no grand design, no overall concept. * * * During World War II our political mistakes cost us the peace. The British and the Russians thought and fought in terms of the big picture, the world after the war; we thought and fought in terms of what we could do to lick Germany and Japan now."

[4] To this question, Max Ways has addressed his attention in the book "Beyond Survival" (New York: Harpers, 1959).

"We have been struggling for survival and we have survived. Success? Our condition does not have the look or feel of success. So we turn the statement: we have been struggling only for survival and we have only survived. * * * To test our policies now, in the short years that count, we need standards beyond survival, beyond the particular perils of any month's crisis, beyond the kaleidoscope of news."

William Y. Elliott and his associates in a study project for the Woodrow Wilson Foundation ("The Political Economy of American Foreign Policy," New York: Henry Holt, 1955, p. 383) appropriately point out a larger implication of the objective:

"Security is not achieved in a world of dynamic struggle by mere defense.

"Successful protection of the national interests * * * means also that, given the nature of contemporary problems and values, these protective or preventive objectives are not likely to be realized except as part of a broader concern to create new institutions and relationships in the non-Soviet world capable in time of achieving and maintaining the economic health, political effectiveness, and defense capabilities of the other free countries."

security. The amount selected must be based on balanced judgment of short-range and long-range security and objectives. Then the increased security should be financed not by inflation but by a sound tax program and a cutting back on nondefense Government spending.

E. Reaction to the external challenge

Arnold Toynbee notes that challenges arouse nations to unprecedented efforts.[5] Yet he observes that the stimulus of the blow can be too great, especially if prolonged over a long time, as was the case of the Hannibalic war in Italy.

True enough, the Communist empire could break up within a decade or so, but if the struggle continues over a century, the severity to us could be far more dangerous than one single military blow tomorrow.

Liddell Hart makes an apt comment in this regard:

"The acquisitive state, inherently unsatisfied, needs to gain victory in order to gain its object—and must therefore court greater risks in the attempt. The conservative state can achieve its object by merely inducing the aggressor to drop his attempt at conquest—by convincing him that 'the game is not worth the candle.' * * * Indeed, in attempting more it may defeat its own purpose by exhausting itself so much that it is unable to resist other enemies, or the internal effects of overstrain. Self-exhaustion in war has killed more states than any foreign assailant" (Liddell Hart, "Strategy," Praeger: New York).

One danger of the protracted struggle is illustrated by the case of Sparta. She met external challenge with an internal militarization and statism. This so absorbed her energies that she had none left over for real development.

Negative missions and objectives on the part of the United States in the present protracted conflict could produce a similar effect—deprive us of our rationale of freedom at the time we are opposed by a revolutionary rationale of communism. Historians would write that in the protracted conflict, as in World Wars I and II, our means of conflict destroyed our national objectives.

F. The military objective: Destruction of the will to wage war

In military conflict, the immediate objective is to destroy the enemy's will to continue to fight. To accomplish this, force must be applied to sensitive or decisive areas which will destroy the will.

What constitute the most decisive target areas?

In the past decade, the Air Force has argued for a counter-force strategy, i.e., concentration against the enemy forces which will strike at us. By and large, this seemed an appropriate strategy during the air age. But it appears that the equation may shift during the missile age, where, while still maintaining a mix, primary reliance will be placed on what has been labeled a minimum or finite deterrence strategy as the surest road to decision and the greatest comparative advantage for a defending nation. Gen. Pierre Gallois, recently head of the atomic-warfare planning staff of the Western Alliance, noted:

"Simple arithmetic is enough to show the difference between the means needed for defense and those needed for aggression. If the defending nation, for instance, had 400 missile-launching sites thoroughly dispersed throughout its territory, and if these launching sites were well protected, it has been estimated that the aggressor would have to expend some 22,500 missiles—each with a warhead of 1 megaton—to destroy them. But the defense could wipe out 30 of the aggressor's largest cities with less than 50 missiles.

"And so, in this era of long-range ballistic missiles even more than in the age of the airplane, the advantage lies with the defense. The defense can prevent an aggressor from resorting to force by the threat of a relatively small number of missiles capable of reaching the highly populated areas that constitute their objectives." [6]

Certainly the retaliation would be unwise if he made the missile sites, many of them emptied, his primary targets. Retaliation would be aimed at heartland, population, and production. These would be decisive in destroying the will of the opponent. This price would be too great for the aggressor, and hence deterrence would occur.

There is little logic in arguing that such a retaliatory strategy should be outlawed as a violation of the principle of the objective. From the moral point of view, the United States, right or wrong, already inaugurated the use of atomic weapons against population and industry at Hiroshima and Nagasaki. Secondly, the use of unlimited means is necessary to counter the unlimited objective of our opponent—our total obliteration. But at the same time, our unlimited means do not require us to set for ourselves unlimited objectives. We dropped the A-bombs on Japan and then offered conditional, not unconditional surrender, in what became the model peace of human history.

General Grant, as already noted, employed an unlimited strategy to promote a limited political objective.[7]

IV. ECONOMY OF EFFORT

How do we best utilize our resources to accomplish our objectives?

In any conflict, the resources of both contenders are limited, even though the resources of one contender basically may greatly outweigh the resources of the other. Victory has not necessarily fallen to the contender with the greater resources. Alexander, Hannibal, Gustavus, Adolphus, Frederick, Napoleon, and Hitler defeated larger armies and superior nations or alliances. The principle explaining their successful art of getting the most from the least is known in classical military literature as economy of effort.

When this term was first used, the economy part of economy of effort meant the best management of effort, the maximum use of the resources at hand, knowing when and where to spend effort, and knowing when and where to conserve effort to gain a comparative advantage. To gain this advantage in the decisive areas meant conserving in less decisive or lower priority areas. Winning in the decisive, critical area was like cutting the vine at its roots; its branches would wither of their own accord.

The application and misapplication of this fundamental is very easily illustrated by the strategic bombing campaign against Germany in World War II. In January 1943 at the Casablanca Conference, five primary target systems were established: submarine construction yards, aircraft industry, transportation, oil industry, and other industrial targets. This dispersion destroyed effectiveness. In June 1943, a new directive concentrated the air attack on the German aircraft industries. The theory was correct, but the objective was wrong, because the Germans partially nullified the attack by greater industrial dispersion. It was not until May and June 1944, that a new strategic decision was made fully to concentrate on the German oil industry—the key to transportation, a correct and decisive target. Consequently, transportation and resupply slowed towards a halt; the munitions industries were no longer being adequately resupplied.[8]

Here then are two illustrations, first the wrong way: trying to be strong everywhere and ending up with being affective nowhere; and secondly, the right way: economizing in areas of secondary importance in order to concentrate in a decisive area.

A. Flexibility and the mixed force concept

Flexibility is a necessary ingredient for economy of effort. When the Allies chose to concentrate on destroying the German air frame industries, they were applying economy of effort, but they had selected the wrong target. At least the Air Forces had the flexibility to shift to a decisive target. Inevitably, mistakes will be made. As Napoleon said, in war the successful general is not he who makes no mistakes. "No mistake" is impossible. But he is the general who makes the fewest mistakes.

Flexibility allows for correcting mistakes before the opponent can capitalize on them. Flexibility means having alternate plans, or as Bourcet said:

"Every plan of campaign ought to have several branches and to have been so well thought out that one or other of the said branches cannot fail of success."

The 1956 state of the Union message called for an "effective flexible type of power calculated to deter or repulse aggression and to preserve the peace." This was flexibility for a given diplomatic or military crisis, for a general or a limited war—fixed in time and space. By and large, this flexibility has been achieved through the "mixed force" concept. Rather than reliance upon one weapon with a given characteristic, reliance is placed on a combination of abilities to retaliate: SAC bombers, liquid fuel ICBM's (soon in hardened sites), aircraft carriers, hound-dog air-to-ground missiles, IRBM's around the periphery of the Sino-Soviet bloc, and soon the solid fuel nuclear-tipped Polaris. The very "mix" of the forces tends to add to the invulnerability of the striking capacity.

Economy of effort through a "mix" achieves comparative advantages and especially high returns from our mutual security program. Our own defense budget provides a military establishment of about 2½ million men. The $2 billion the administration requested for military assistance facilitates the effective utilization of over 7 million allied personnel in their military structures. A greater return comes at lower cost.

B. Flexibility and technological breakthroughs

Equally, the administration has stressed research and development flexibility over the decades of the cold war where both blocs

[5] Arnold J. Toynbee, "A Study of History" (New York: Oxford, 1947).

[6] The Reporter, Sept. 18, 1958, p. 25.

[7] Maj. Gen. J. F. C. Fuller, in his "Second World War 1939–45" (New York: Duell, Sloan, and Pearce, 1949), criticizes Winston Churchill for initiating a civilian bombing campaign against the Germans. This, he claims, violated British self-interest in maintaining Germany as a counterforce to Russia. The politico-military mistake of the Allies, as Churchill constantly pointed out during the war, was not the bombing, but the failure to occupy central parts of Germany before Russia did. West Germany has certainly revived into a counterforce against Russia.

[8] Observed the postwar Strategic Bombing Survey: "Even if the final military victories that carried the Allied armies across the Rhine and the Oder had not taken place, armaments production would have come to a virtual standstill by May; the German armies, completely bereft of ammunition and motive power, would almost certainly have had to cease fighting by June or July." (U.S. Strategic Bombing Survey, "Effects on German War Economy," p. 14.)

of powers will seek to make new technological breakthroughs and weapons advances. The decision of when and where to place the emphasis demands a sensitivity to change and an unusual sense of balance. As the Secretary of the Navy said in March 1954, we often have to choose between "too-little-and-too-late and too-much-and-too-soon"; we have to "buy our security in installments with the most promising weapons of the day."

This especially involves flexibility in regard to Executive-congressional actions on transferral of funds. Before a weapon has proved itself, economy of force is flouted by rigid over-commitment in advance. When a piece of technology has proved itself, however, major reevaluation is called for.

An example of the type of shifts constantly necessary occurred when the President on April 6, 1960, approved changes in the Navy and Air Force budgets.[9] These actions resulted from increasingly favorable technological and strategic estimates based upon tests of the workability and value of the weaponry concerned. By the time action on the defense appropriations bill had been completed by the House subcommittee, still other shifts were made, incidentally, without changing by 1/1000 of 1 percent the dollar increase over the President's request.[10]

Economy of effort, incorporated into a protracted conflict strategy, demands this constant willingness to make changes, to reassess, to shift funds, to make new decisions, to cut back or cancel out-dated programs. Economy of effort becomes the fulcrum of the see-saw, with too-little-too-late on one end, and too-much-and-too-soon on the other, with the point of balance of the fulcrum having to be constantly shifted. As Secretary of Defense Gates said: "It takes courage to change, to cancel an expensive program that has been overtaken by events, to close an installation employing trusted competent people, or to abandon a proven military mission of the past in exchange for a better way." [11]

In regard to the Atlas, for example, economy of effort demands a never-ending series of shifts and reappraisals. The first generation of missiles is enormously expensive and vulnerable and, in accuracy, it has been estimated that from 6 to 60 of them might be required to take out 1 enemy launching site.[12] Any type of effective counterforce capability, therefore, would demand a considerable superiority of such missiles over the Russians. In accord with the dictates of economy of effort, then, every effort is being made to better utilize our resources by (1) speeding the development of the solid fuel mobile Minuteman, (2) improving the "mix" of our overall retaliatory capability, and relying more on Polaris, (3) covering the period of transition by increasing the SAC air alert and hence its invulnerability, in proportion to the increase in Russian ICBM capabilities.

Obviously, the solution—posed by some critics—to match our Atlas missile for missile with the Russian counterpart would gear our national strategy to a rigid numbers concept of matching the Russians man per man, liquid fuel ICBM per liquid fuel ICBM. Indeed, that would escape hard decision of evaluating the cost and capabilities and effective operational years of Atlas with the mix, flexibility, mobility, and economy of efforts possible from the solid fuel generations. But it would flagrantly violate every commonsense idea that makes up the concept of economy of effort.

C. Economy of effort and fiscal management

This principle of economy of effort, with its demand for flexibility and adjustment, applies to our fiscal economy.

Defense spending, if financed by improper means and methods, can destroy the flexibility and mobility within our fiscal structure. To finance spending by inflationary measures is to invite catastrophe, especially if high levels of expenditures are projected over the entire length of the protracted conflict. To finance high levels of expenditures by higher taxation of the type which destroys savings, investments, and incentives—in short, destroys the ingredients for sound growth and a fluid economy—is likewise to court disaster.[13]

The traditional foundation of American military policy had rested upon a sort of three-point concept: a preeminent industrial base for expansion, comparatively weak forces in being, and dependence upon time to move from no mobilization to full mobilization after attack or great peril. The time-space age shattered this three-point concept. Needed was, first, a plateau of preparedness through an age combining perpetually peace and war; second, a design for forces in being prior to any attack of an aggressor, whether it occurred in 1955 or in 1985.

These new needs of the time-space age were not incorporated in our military policy from 1945 through 1952. Our Government, in the face of Russia, dismantled the greatest military force ever assembled within 2 years of the end of hostilities. Our Armed Forces has been reduced from a peak of 12,125,000 men to about 1,500,000. We were still rapidly cutting the residual force in 1950 when the Korean aggression took place. Then started another massive mobilization back to 3,636,000. In 1953 the new administration conducted a reappraisal which recognized that such extreme fluctuation of peaks and valleys, from a 1945 defense budget of 79.9 billion to 11.9 billion in 1950 to 43.7 in 1953, could spell disaster to America if the Soviet strategy actually was a protracted conflict perhaps extending a century. The defense burden and deficit financing, in part, explained the 50 percent loss of value of the dollar from 1939 to 1949, which meant we were getting 50 percent less defense per dollar.

In a speech on April 16, 1953, President Eisenhower inaugurated the long-haul concept. Not only was this demanded by the principle of the objective, but also by the principle of economy of force. Policy was not to be geared to any "magic critical year" but was to be based upon the "sounder theory that a very real danger not only exists this year, but may continue to exist for years to come," and the old policy would be replaced by a new, long-range policy which would avoid "inefficient and expensive starts and stops."

D. The matching fallacy and England's great strategic mistake

Today we hear cries about a missile gap; in 1955 we heard cries about a bomber gap. The simple advent of the solid fuel Minuteman, which many now picture as an absolute final weapon, is not going to stop the constant flow of technological change. There will be gaps and rumors of gaps from now on. To try to eliminate all gaps would be to try to zig and zag with the Communists and copy the particular weapons which offer the greatest advantage to Russia. Military advantage seldom comes from a strategy of duplicating or matching everything an opponent does. It comes from being stronger in certain specific areas of advantage.[14]

Britain, after nearly a century of the Pax Britannica, abandoned her naval strategy of small land armies striking with mobility out of the blue. The German Empire, in the rapid growth of youth, was making startling advances industrially, economically, and militarily. It was within the shadow of the German peril that Britain forfeited her native national strategy and tried to copy and match Germany division for division. She developed and committed vast land armies to the continent where her sea mobility offered no advantage. Whereas previously, Britain had retaliated against an aggressor at times and places of British choosing and with the unique weapons of Britain, in 1914 she met German aggression at the time and place of the choosing of the German general staff, in a strictly defensive policy. The cost was that Britain never regained her world leadership.

E. Economy of effort and human resources

Especially is economy of effort paramount in relation to human resources in the field of research and development. Dr. Mettler, executive vice president of Space Technology Laboratories, pointed this out to the House Committee on Science and Astronautics (March 31, 1960):

"Space technology was obviously a field in which major projects would become increasingly large and complex and expensive and would increasingly tend to take on the character of national and even global undertakings. And to further complicate matters, a rapidly multiplying number of alternate projects became technically feasible. With limited economic and intellectual resources, it was—and still is—very important to distinguish between what is possible, and what is needed—between what could be done and what should be done. A relatively few large projects must be done superbly well."

Our economic effort behind the space program would be limited even if we doubled

---

[9] Eighteen Atlas ballistic missiles ($226 million) were added to the 130 already scheduled for launching pads by the end of 1962. An additional $86 million was shifted to accelerate development of the Midas, BMEWS warning system, and the Minuteman. $153 million for nuclear reactors and other components needed for six more missile-firing submarines, was added to the Polaris programs.

[10] As Representative GERALD FORD, ranking Republican on the subcommittee, explained on the floor:

"Such changes in this fast-moving world are not only necessary but highly desirable. The maintenance of the status quo is indefensible. Adherence to flexibility is absolutely essential for our national security." Commented Representative MAHON, ranking Democrat on the subcommittee:

"The initial request of the President 'was worked out last fall, and in this rapidly moving world it is expected that changes would be made, and we made a number of them, and the Department of Defense made a number of them.'" (CONGRESSIONAL RECORD, May 3, 1960, p. 9253.)

[11] Annual meeting of the Associated Press, New York City, April 26, 1960.

[12] Johns Hopkins Study on Weapons Technology and Foreign Affairs, p. 109.

[13] See "The Problems of National Security," July 1958, by the Committee on Economic Development, p. 20:

"With national security making huge claims on the Nation's resources, it is indisputably more essential to minimize waste in the use of public funds in both defense and nondefense programs, and to retrench public expenditures that are luxuries we can no longer afford. There must be a new look at nondefense expenditure programs of Government. Since we are facing a protracted period of large defense requirements, what is called for is close examination of the size and character of continuing programs, not temporary deferral of necessary expenditures" (p. 20).

[14] It is interesting to note that in 1952 the Joint Chiefs of Staff reaffirmed that they "consider the general period of 1954 to be the most dangerous for the security of the United States in the foreseeable future." (Report quoted CONGRESSIONAL RECORD, Feb. 23, 1960, p. 3181.) As it turned out, 1954 was not a "dangerous year" at all.

the space budget tomorrow. The human resources behind the space program are even more limited. For example, thousands of engineers are involved in the present Atlas project. It becomes a very critical decision, then, where this scientific talent should be placed after the termination of the Atlas project. Should it be moved into the space field, or the defense field, or split between both? Such decisions are crucial in maintaining a better economy of effort than Soviet Russia.

V. FREEDOM OF ACTION

Freedom of action, necessary to accomplish economy of effort, implies the mobility to retain the initiative. It means dictating—not being dictated to. In all levels of policy, its application becomes quite evident. The freedom of action or mobility needed for flexibility in shifting scientific, industrial, and economic resources can be lost by political and lobby pressures exerted to maintain the status quo or promote a vested interest. The recognized failure of the so-called containment policy was in its lack of freedom of action on the politico-military level.[15]

How is freedom of action gained in a conflict situation? A boxing match furnishes the answer. The negative or defensive part of the match is an ability of a contender to keep the guard up and ward off the punches. The positive part is his ability to deliver the punches into sensitive areas of the head and body, so that the opponent will lose his balance and equilibrium.

In an all-out missile war, the negative, defensive part would come from a relatively secure or invulnerable retaliatory capacity, such as the mobile Minuteman, Polaris missile systems, BMEW:, Midas, and early warning systems should offer. The positive, offensive part would come from an ability to strike at decisive areas of the enemy's defensive structure, so that the enemy will lose his stability, and eventually his capacity and will to resist.

A. Reciprocity of military action: Limited and unlimited war

The relative success of opponents to strike at each other will be determined by which side has a technology and weaponry "one better than the other." In an all-out struggle, each side chooses its own weapons. A man with his fists only is not going to beat a man with a pistol. The one that chooses the pistol forces the other to try to select an even more effective weapon. This principle, Clausewitz called "reciprocity of military action." He said:

"War is an act of force, and to the application of that force there is no limit. Each of the adversaries forces the hand of the other, and a reciprocal action results which in theory can have no limit." [16]

This does not mean that war must be unlimited. With the two boxers in the ring, the fight is limited because they had a referee and they both agreed to limitations. But limited war can only be a product of limited aims of not just one, but both sides. In the age of chivalry, knights settled the disputes of states. Hoffman Nickerson points to the medieval truce of the church as a successful attempt of the papacy to limit war throughout Europe. In the 18th Century, limited wars were often fought over territorial disputes, a duchy or a province. In all cases, the political policies of the states were limited and were not aimed at the ultimate destruction of the opponent.

When the violence of the French Revolution and Napoleon was unleashed in Europe, the nations accustomed to limited means quickly fell before Napoleon's strategy. Not until the allies abandoned their limited means, and adapted themselves to an all-out struggle, was Bonaparte overcome.

With this, there is an interesting parallel in the age of cold war. The Communists have set off an unlimited ideological struggle which reached global proportions after the defeat of Germany and Japan in World War II. While this does not mean that the Communists will unleash nuclear holocaust, it does mean that they hope to maintain the initiative by constantly operating in all areas—economic, psychological, political and military—with less limitations and consequently relatively more powerful means than we. In the late 1940's, they played this game successfully because of our self-imposed limitation, containment. Like the allies opposing Napoleon, the tide globally did not turn in favor of the Allies opposing communism until the new administration in 1953 altered this strategy of containment limitation which played into the hands of the unlimited strategy of our opponents.

B. Graduated retaliation

Dulles realized that deterrence is not just military, that it depends upon conviction and credibility, that power is a function of the will, and that without will there is no power.

The only way, then, that America can maintain its freedom of action is to convince a potential opponent that America will not subscribe to the limitations that an aggressor chooses to place upon war caused by its aggression. The aggressor must know that we will escalate our means or places of retaliation—not all the way to nuclear holocaust, but a notch or so—enough to make aggression not worth the cost.

This concept was applied to NATO, at first ineffectively and then effectively. The original North Atlantic Treaty concept in 1949 envisioned no integrated Allied defense plan; nearly all the forces were on occupation duty disposed administratively. Nevertheless, these factors furnished a wire to trip off a pyrotechnic which could signal for atomic retaliation in case of Soviet aggression.

With the Soviet A-bomb development in September 1949, and the Korean war in June 1950, the inadequacies of threatening major atomic retaliation (we had no atomic weapons, only our strategic bombing capabilities) became apparent. Notes Prof. Lincoln Gordon, "From the tripwire extreme, the NATO strategic concept shifted in 1950 to the other extreme of containing the Soviets by conventional defense." [17]

Certainly, continued reliance on conventional deterrence for the defense of NATO would have been a step backward toward World War II strategy. In order to mold NATO strategy and tactics around one unified, flexible force which employed to better advantages than the Soviet the tools of war born in the nuclear age, decisions were made in 1954 and 1955 which produced the shield and sword concept. The sword of NATO includes the U.S. Strategic Air Command, the U.S. Navy carrier striking forces, the U.K. Bomber Command, IRBM's in Great Britain, ICBM's based in the United States, and soon the well-nigh invulnerable Polaris. The shield forces, not merely conventional forces as planned in 1950, possess tactical atomic capabilities. Yet their conventional capabilities of ground divisions are adequate to cope with probing or ambiguous actions of Soviet satellites. Their tactical nuclear capabilities are adequate to cope with actions still short of all-out conventional aggression by the Soviet Union. In effect, then, the shield function is avowedly to meet the type of aggression with a response one grade higher in the strategic spectrum.

Thus the ultimate deterrent, the sword, is translated into a flexible deterrent at all possible levels of challenge. By clearly defining the strategy to the Soviet Union in advance, any idea that NATO will tolerate the Soviets setting the limitation or rules of an aggression is eliminated. In effect, the Soviets have no choice in the spectrum of aggression, unless they are prepared and willing to initiate all-out nuclear aggression.

This follows Karl von Clausewitz' concept that war is a reciprocal action and that only a limitation of ends can logically result in a limitation of means. That is, provided the opponent which unilaterally limits his means desires to place himself at a decisive disadvantage and fight with one hand tied behind his back.

C. Credibility of the deterrent

Such a theory has indeed been critized: William Kaufmann comments:

"Our actions should symbolize the intentions of the United States to confine both the conflict and the issues over which it is being fought within the narrowest limits commensurate with the security and tactical initiative of our forces." [18]

He then cites the attrition strategy in Korea as a good example of his policy. But we lost initiative, mobility, and freedom of action in Korea.

Critics assert our strategy of graduated retaliation lacks credibility. In situations of lesser magnitude, it is not credible to the Soviet Union that we would meet a probe against NATO with a nuclear strike at Moscow. But it can be and has been made quite credible to Russia that a Soviet probe, or border raid will be met by full division strength, and that a full division attack will be met by tactical nuclear weapons.

It has been argued that, if we do have such a credible deterrent, then the Soviets might launch an all-out attack on us in advance. If they do, it will not be because our strategy of graduated retaliation has failed, it will be because of the conditions already mentioned, namely, first, because Russia feels she can win in an all-out attack, or secondly, a mad ruler of Russia seeks war in desperation, or thirdly, because of diplomatic miscalculations.

Adm. W. F. Boone, former U.S. Representative on the Military Committee and on the Standing Group of NATO, points out [19] that the NATO deterrent comprises three essential elements: (a) a massive retaliatory force, (b) a shield force, and (c) the manifest will to use these forces. If this third element is lacking the whole strategic theory crumbles. It is this danger which makes some criticisms about our defense posture so dangerous. Such criticisms could reach a temper that would indicate a lack of national resolve. That could jeopardize not just the NATO strategy, but the entire global strategy of the United States.

If the credibility is so destroyed, then indeed it would be proper for the United

[15] George C. Reinhardt, in "American Strategy in the Atomic Age" (University of Oklahoma, Norman, 1955, pp. 16–17) points out the failure this way:

"Containment gives the Soviets no inducement to settle down. It precludes our creation of pressures which they cannot ignore. We are, in fact, precariously containing our opponents but effectively blocking ourselves. * * * Containment does not meet the Communist challenge. They may and can decide to challenge us at any point or time of their own choosing. We are under permanent threat; they are under none."

[16] Karl von Clausewitz, "On War" (New York: Modern Library Edition), p. 5.

[17] Lincoln Gordon, Yale Review, spring 1959, p. 323.

[18] William W. Kaufmann, "Military Policy and National Security," p. 116. See also comments of Bernard Brodie in "Strategy in the Missile Age," Princeton, 1959. Also, Gen. Maxwell Taylor in "The Uncertain Trumpet." Also, Henry Rowen in "National Security and the American Economy in the 1960's" for the Joint Economic Committee, p. 44.

[19] U.S. Naval Institute proceedings, April 1959, p. 24.

States to reverse its strategy and follow a concept closer to that advocated by the critics. The only alternative to graduated retaliation would be geared to meeting every Soviet challenge within the limitation set by the aggressor, and at his place and time. It would demand a much higher degree of mobilization and much greater conventional war forces. It would destroy our freedom of action, our economy of force, and place in jeopardy our ability to develop a national strategy which would further, and not be self-destructive, of national objectives which lie beyond mere survival. It would play directly into the hands of the Soviet strategy of protracted conflict.

D. Limited and unlimited challenges

Some critics have become confused by two different sets of challenges. The first is specifically that of the Sino-Soviets. The second grows, not directly, from Russian or Chinese communism, but indirectly from power vacuums, disorder, and conflicts of nationalism and anticolonialism. Russian and Chinese communism indeed exploit and agonize these latter situations, yet their basic causes lie beyond communism.

The British and French actions in the Suez crisis and the U.S. landing in Lebanon fall into this second category. In these limited actions, no major power aimed to destroy another power. Thus, limited aims called for limited applications of force. During the Suez crisis, British cruisers were ordered not to use 8-inch guns. In the Lebanon crisis, Americans were ordered to land without Honest John rockets, since they had the capability of firing an atomic warhead. In other words, we purposefully avoided resorting to a larger calibration of force. The objective, and therefore, the means were limited.

Once the conflict becomes translated to where Russia or Red China is our opponent, or where their pawn is our opponent, the conflict is basically and potentially an unlimited one in aims. The law of reciprocity of means applies and we would destroy our freedom of action by necessarily using only conventional means.

In the case of these genuinely limited conflicts (not involving Russia or Red China) the United States is restricted to limited war forces. In such cases, limited war forces, whether our own STRAC or marines, need to be capable of lightning response, immediate transportation by sea and airlift, landing facilities, and modern equipment once landed. The British sorely bungled the Suez crisis because their reaction was slow, cumbersome, and delayed. It is the quality, not the quantity of the forces, that count.

Many advocates of so-called "limited or conventional war forces," however, call for an entirely different strategic concept than that just outlined. Some critics advocate massive conventional war forces to engage the Soviet Union or Red Chinese forces and pawns directly. Success of such a strategy would depend, first of all, upon our ability to mass adequate conventional war forces to defeat the aggressor on his terms. Secondly, it would depend upon possible victory not being nullified by the aggressor then upgrading or escalating to tactical nuclear weapons. Consequently, such a strategy appears to ignore the reciprocity of unlimited conflict, the Soviet protracted conflict design, and the need for America to retain freedom of action.

The critical need for limited war forces is greater mobility, and as Admiral Radford often has noted, mobility is a matter of more staging bases, of paring down requirements to absolute minimums, and of developing improved technology. But a type of "wall of flesh" strategy, which met the enemy on his terms, would demand huge conventional war forces which would lack mobility.[20]

VI. FORCE IN BEING

This follows the traditional concept of a fleet-in-being, a concept of great moment during the heyday of Dutch and British sea power. The fleet, without going to battle, had a decisive influence upon diplomacy by the very fact that it was "in being." To exercise this effect, however, the Nation in question had to convince other nations of her unquestioned willingness to go to battle if necessary. During the Pax Britannica, there never was any question as to Britain's willingness to use her fleet. This willingness made the fleet-in-being a credible deterrent.[21] Thus, the objective was accomplished without resort to battle.

Nuclear holocaust in our time can be avoided by the capability of force-in-being, if that force resides upon a superior position so clear and credible that the opponent is deterred from temptation to fight. In the Ulm Campaign of 1805, Napoleon deceived the Austrians while he maneuvered around their right flank, crossed the Danube, and blocked their rear. General Mack surrendered to him without a battle, so convinced was he that Napoleon would fight, would not limit or restrict himself during the fighting, and would win. The Japanese Government on July 1945 sought terms of surrender because Japanese leaders were convinced General MacArthur had drawn up invasion plans that would work, and that the United States had A-bombs which she would use. The U.S. capability had the same effect as a battle-in-being.

A. The necessity of the will

On the other hand, military history verifies that the nation unwilling to risk war for the preservation of its vital interest cannot have peace. That nation can never experience the diplomatic dividends of a force-in-being. The rise of Hitler Germany in the 1930's—the move into the Rhineland, Austria, the Sudetenland, and remaining Czechoslovakia—is replete with examples of the peace-loving powers destroying their own deterrent power and the credibility of their military forces—far superior to Hitler's—by lack of national resolve and unity.

The credibility of our deterrent system is not destroyed by Russia's also having a nuclear capability. But the credibility can be weakened by an American attitude which refuses to consider any chance of all-out nuclear war and passes it off as unthinkable. The deterrence of our forces-in-being will be improved when Russia is convinced that we have the will and capability to fight and survive such a war, that we do not consider it—regardless of how horrible—something unthinkable.

B. Skill always counts

Which opposing power comes out best (even though we could not call it victory) in this court of last resort, would depend upon strategy—skillfully using the means at hand. The makeup of this strategy, unlike the strategy which terminated in the battles of Waterloo, Gettysburg, Sedan, or the Ardennes—will have begun long before the campaign of Armageddon is joined. The strategy, in part, would have to be a product of the research and development field over the decades, molded by scientists, engineers, as well as the military. The strategy, in part, would have to be derived from maximum use of geography, of dispersed bases, of mobile and underwater launchers to give us the most invulnerable striking capability possible.

Even in the court of last resort, where destructive power by nuclear weapons staggers the imagination, strategic ability still will count. It is possible for America to retain a position of advantage over Russia, and for Russia to recognize this in advance. If we possess the physical capabilities and moral will to fight through such a contest, then there is a chance of our force-in-being producing a Pax Americana. For the struggle with the sino-Soviet powers is a battle of wills, and the best safeguard the United States has to all-out war is firmness of will.

VII. UNITY AND MORALE

The importance of unity of national will led Napoleon to form his maxim: "the moral is to the physical as three is to one." Napoleon utilized and appreciated the zeal, morale, and unity of spirit of Revolutionary France as contrasted with the negative, disunified purposes of monarchies like Prussia, Austria and Spain, which were filled with negative purposes, splintered alliances, and limited defensive aims.

Morale and the will to resist continue to be more important than the physical. And determination, unity, and conviction equal morale, or moral force.

This moral force explains the rise of communism in Russia and China; small, disciplined minorities held together by indomitable morale that overcame vast numbers. It was not superior numbers of Communists that took over Russia in the "October" 1918 Revolution, but a small, dedicated, determined group that "found power lying in the street and picked it up."

Today, it is this same unified minority which remains a greater threat than missiles or bombs to America. It is this threat which enables Russia to make inroads into uncommitted nations, with less expense than that of the United States. And this is all by

---

[20] Comments Hanson Baldwin:

"Exercise Big Slam/Puerto Pine has stressed, as all troop transportation exercises have done, that any attempt to combine mass and mobility adds up to astronomical aircraft requirements.

"The airborne division has 52 light liaison aircraft and helicopters in its organization. These must be disassembled for air transport and the Army now contemplates using a naval aircraft carrier to transport them.

"In Lebanon, a sea 'tail' of about 25 ships was required to back up and support one airborne battle group of about 2,000 men.

"Thus there are many observers who believe that the Army has set its airlift requirements too high and that the concept of total air transportability—the so-called air transportable army—is beyond achievement now or in the foreseeable future.

"Instead of attempting to move masses of troops and equipment by air, the objectives should be the extremely rapid transportation of fairly small numbers of troops—lightly armed and with limited staying power—to any part of the world.

"These fire brigade forces could then be reinforced and supplied, not only by airlift but also by prepositioned stocks of arms and equipment in various parts of the world and by support from the sea.

"Airlift is essential for speed but sealift is equally essential for mass and staying power." (Hanson W. Baldwin, "The Airlift Problem—II," in the New York Times, Mar. 23, 1960.)

[21] In 1827, during the Turko-Grecian struggle, the allies—Russia, France, and Great Britain—had sponsored a truce between the warring powers. When provoked by the violation of that truce, Admiral Codrington, the allied commander, sunk the Turkish-Egyptian Fleet. Despite the tactical action, no war occurred. Or to put it in another way, war was deterred by the British willingness to take fleet action. See David M. Abshire, "The Battle of Navarino," U.S. Naval Institute Proceedings, January 1959.

design, for Lenin said, resounding the tactics that won Rusisa for the Communists:

"The soundest strategy in war is to postpone operations until the moral disintegration of the enemy renders the delivery of the mortal blow both possible and easy." [22]

Now the Communists successfully employ this concept globally.

The Soviet psychologists brilliantly use military and space developments as psychological weapons to produce, bit by bit, moral disintegration, confusion, and pessimism within our country. Indeed, sputnik was an enormous Soviet achievement, but the greatest and most lasting part of the achievement was psychological, not technological. Today, the totality of our space program is ahead of the Soviets' despite their superior rocket thrust. The United States has placed more satellites in orbit and derived much greater scientific information.

Secretary of Defense Gates has aptly described the Soviet psyochological and moral success in our reaction to sputnik:

"The United States reacted with self-criticism. Doubt and worry produced little that was constructive. A feeling of inferiority swept across the land, a feeling of being second rate began and persisted. No real sacrifices were offered. People were quick to blame, but life went on as usual. Big expense accounts, short working hours, long vacations, and the easy way remained. Men did not change the normal pattern or orient themselves toward the business of government.

"The role of the United States in its free world responsibility was having growing pains at a time we could ill afford them.

"Certainly we should not have reacted with complacency, but we should not have gone with a sense of guilt into a process of tearing down our fundamental beliefs and institutions. This was the time to comprehend fully our defenses and to realize that sound planning existed and anticipated much of the demonstrated Soviet capabilities. The pendulum swung too far." [23]

A. Role of the opinion makers

Ways to gain moral solidarity and national conviction become, indeed, a fundamental necessity for any U.S. national strategy. Criticism must be channeled into constructive, not destructive, avenues. National success must be recognized and dramatized just as much as national failure. The body politic must gain an overall and long-range view, built upon a foundation of recognizing basic advantages of our system of government. For there is no leader who can resist public opinion when it becomes strong enough. As a Council on Foreign Relations report to the Senate noted:

"The Government must be generally responsive to public opinion. It cannot get too far ahead or too far behind. It works under a great handicap if the public is ill-informed on the significant issues or if political leaders choose to play domestic politics with them." [24]

B. Concord

Certainly the formulation of the Marshall plan and the NATO alliance by a President of one party, approved and advanced by a Congress controlled by another party, remains as a shining example of American unity. Initially, NATO, physically, was weak indeed. But the moral support given it by both political parties immediately bolstered its deterrent value far out of proportion to any inherent physical strength.

Ortega y Gasset in "Concord and Liberty" notes how dissent on surface issues promotes progress, but how dissent on the fundamental issues in a society, as in the latter days of the Roman Republic, spells the doom of that society. Concord in the United States will be increased when the individual American develops a sense of mission, and a closer personal identification with the role of the United States in offering world leadership toward free, open societies. And upon this identification within the body politic can spring a national strategy far superior to what the Communists possess.

We have defined strategy and reviewed a set of its fundamentals. A strategy becomes a national strategy when employed by a nation to promote its national policy ends. Hence a national strategy, in terms of the United States, is reflected in National Security Council documents.

But the review of these fundamentals clearly indicates that a national strategy is not enough, and that it is a public strategy which is needed. The term is used in this paper in a context similar to that used in Walter Lippmann's term "public philosophy." A national strategy becomes a public strategy when the majority of the people understand and support it. As already noted, the modern day advantage of the Communist Party members is that they do have a public strategy which furnishes a means of total integration of national effort into clear purpose.

VIII. IS A PUBLIC STRATEGY POSSIBLE FOR A REPUBLIC?

This leads to the question: Can a republic such as ours truly understand and embrace a unified public strategy, achieve continuity from one administration to the next, and one party to the next? Perhaps upon the answer to this question hangs the future of the Republic.

A. First case: Pax Britannica

Historically, Great Britain was able to develop such a strategy, fully understood and approved by the butchers, bakers, merchants, and housewives of England. The protection of Antwerp, a potential naval arsenal for invasion of the island kingdom, and a base from which the Channel could be controlled, became the key to British national security: In strategic defense of Antwerp, Charles II in 1670, Anne in 1704, Chatham in 1742, and Pitt in 1792 took England to war.

In the 19th century, British national strategy became so perfected as an instrument of state policy that the Pax Britannica resulted: major war was deterred from Waterloo to Sarajevo. In unity there is strength, and the strength of the British deterrent sprang from popular English understanding and appreciation of all the elements which made up that national strategy: the uniqueness of the British island position as a springboard for maritime power; the need for a small, highly mobile amphibious army, rather than an attempt to match man per man the cumbersome continental armies; control of the narrow seas and global bases like Gibraltar, Malta, Aden, St. Lucia, Cyprus; an integration of military and naval power with economic power of peacetime commerce and industrial supremacy.

Why did the British strategy produce an effective deterrent to war? Because the British did not destroy its workability by internal disunity and destructive criticisms. Germany, France, and Russia fully realized that Britain had committed herself wholeheartedly to the defense of this policy, and was willing to fight for it.

B. The second case: The Monroe Doctrine

There are also encouraging examples in American history of an ability of the body politic to adopt a public strategy. Notably, the Monroe Doctrine was a unique application of a public strategy to the particular American geography, interests, and need for deterrence of European intervention in the New World. Crystallized in 1823 by President Monroe and Secretary of State John Quincy Adams, this initial expression did not make it fully "national policy," it is significant to note. In fact, this doctrine aimed initially at deterring England's greed in America (as Professor Perkins' research has shown) [25] was in turn enforced, from 1823 to 1845, not by the United States, but by England. Finally, in 1845, James K. Polk, in his annual message, grabbed the doctrine back and brandished it at Europe, particularly at England, its recent custodian, to demonstrate that the United States would allow no colonization in California.

Even with this dramatic reassertion by Polk, the doctrine was championed for the next decade by only one political party. Although it became a topic of public conversation, the United States still did not always act upon it: During the American Civil War, with impunity France violated it in Mexico and Spain violated it in the Dominican Republic. Why? To have enforced the doctrine in the midst of our Civil War would have jeopardized a greater objective—the preservation of the Union.[26]

Failing to act, when not to our best interest and when the setting was incorrect, did not invalidate the strategy, as Henry Wriston has commented.[27]

Its validity and force grew, however, with the almost universal public support it received in the United States after the Civil War. American public opinion, Republican and Democratic alike, united behind the "maxims of Monroe," maxims so sacroanct by 1923 that a noted American religious leader typified national sentiment by writing "I believe strictly in the Monroe Doctrine, in our Constitution, and in the laws of God." [28]

C. The third case: Mahan's strategy

The United States adopted a clear, decisive national strategy, beginning with the Manifest Destiny Period of 1896 and blossoming fully during the Theodore Roosevelt administration.

In lectures, articles, and books, Capt. Alfred Thayer Mahan, supported by Theodore Roosevelt and Henry Cabot Lodge, integrated naval, economic, political, and even religious

---

[22] "Surveying in turn the decisive battles of history, we find that in almost all the victor had his opponent at a psychological disadvantage before the clash took place. Examples are Marathon, Salamis, Aegospotamoi, Mantinea, Chaeronea, Gangemela (through grand strategy), the Hydaspes. * * * Austerlitz, Jena, Vicksburg, Koniggratz, Sedan." (B. H. Liddell Hart, "Strategy" (New York, Praeger, 1955, p. 163.)

[23] Address before annual meeting of Associated Press, New York City, April 25, 1960.

[24] "Basic Aims of U.S. Foreign Policy": Study prepared at the request of the Senate Committee on Foreign Relations, Nov. 25, 1959, Washington, GPO, p. 19.

[25] Dexter Perkins, "The Monroe Doctrine, 1826–1867," Baltimore, the Johns Hopkins Press, 1933, ch. 2.

[26] It is interesting to note that after the war was over it was a Republican Secretary of State, Seward, who issued to Napoleon III a declaration supporting the Monroe Doctrine principles, inaugurated by the Democratic Party. France did withdraw; the doctrine regained renewed respect in Europe; the doctrine in America truly became national bipartisan policy. In 1896, incidentally, both party platforms subscribed to the doctrine. (Julius W. Pratt, "A History of United States Foreign Policy," New York, Prentice-Hall, 1955, p. 344.)

[27] "The Doctrine was not a law, not a flat, but a desideratum. Occasionally there was no opportunity to act effectively * * *. At other times those in charge lacked the understanding, the energy, the skill, or even the will to pursue our fundamental national objectives. None of these circumstances affected either the reality or the validity of the policy itself." ("Diplomacy in a Democracy," New York, Harper, 1956, p. 74.)

[28] Dexter Perkins, "Hands Off." (Boston, Little, Brown Co., 1941, pp. 370–371.)

considerations into a strategy to promote national greatness and prosperity. The question, whether to follow an expansionist course based on trade, colonies, and naval power, reached a crux during the summer of 1898 over the annexation of Hawaii. Arguments were clearly stated on both sides, in the Senate and House, by proponents Senators Lodge, Platt, and Beveridge, and by opponents Speaker Read, Senators Hoar, Vest, and Mallory. Public opinion was truly allowed to crystallize; by and large, it crystallized in favor of the national strategy advocated by Mahan. When T. R. Roosevelt entered the White House, the people and the President, jointly, supported a unified, clearly defined national strategy of international firmness and national preparedness, incorporating our Navy as a deterrent to intervention of foreign powers in the New World, promoting our strategic control of the Caribbean, pushing the construction of a canal to increase maritime mobility, and inviting the public to look outward toward the Pacific. Public debate over real alternatives and issues had made possible a public consensus which led to an acceptance of such a well-defined public strategy.[29]

IX. WHY THE BODY POLITIC HAS NOT REACHED A CLEAR CONSENSUS ON A PUBLIC STRATEGY

Since World War II, sufficient public debate on the long-range issues of the decades has seldom occurred, and hence, neither has there developed a genuine public strategy. Political partisanship and constant confusion from swift technological change has further clouded clear alternatives and at times has led to an onslaught on much constructive thought and leadership.

How the public has been distracted from the true issues is easily illustrated. In the Korean war, the Truman administration, the Congress, and the public were confronted with this fundamental issue of cold war: What type of national strategy is needed to meet a type of Communist aggression where the bases for aggression are located in a major Communist power, but the battlefield itself is located within a pawn of that power. The real questions were: Would America respond purely defensively against the power or would she seek a policy of initiative to punish the real aggressor? Did isolated events—Yalta, Potsdam, the Communist coup in Czechoslovakia, the Berlin blockade, the takeover in Red China, and then the Korean aggression—point to a pattern? Were the crises related in some kind of grand design? Could each crisis only be met, not in isolation and panic or in a packaged solution for each emergency, but by a long-range national strategy, prepared, if necessary, for a century of crisis between freedom and communism?

Perhaps such questions could have crystallized had there been the type of debate that took place over the Monroe Doctrine or the Theodore Roosevelt-Alfred Mahan strategy. But in popular discussion, the Korean issue became distorted into secondary surface issues, such as civilian control over the military, or the personality of MacArthur versus the personality of Truman, or the right of the Executive to fire MacArthur.

Although the public did not come to see the need for a long-range national strategy at the time of the Truman-MacArthur dispute, the public, by supporting the 1952 presidential candidate committed to seek a positive solution to the Korean war, did revolt against the indecisive, stalemated Korean war. Thereby, it also revolted against containment policies.[30]

X. EFFORTS OF PRESIDENT EISENHOWER AND SECRETARY DULLES TO DEVELOP A PUBLIC STRATEGY

Following this electoral mandate, the new Eisenhower administration, in the words of Secretary of State Dulles, notified the aggressor that the new administration would not tolerate a privileged sanctuary in Manchuria, and that "the fighting might, to the aggressor's peril, soon spread beyond the limits and methods which he had selected." It seems reasonable to conclude that this warning—that the United States would follow a new strategy of initiative—had a decisive effect on ending the Korean war.

Next, Secretary Dulles attempted to codify this successful strategy for global use, so that Red China and Russia would not again be tempted into new Koreas in other parts of the world. In a speech explaining the policy before the Council of Foreign Relations on January 12, 1954, Dulles referred to a secure, massive retaliatory capacity. He did not mention a concept whereby the United States would meet any scale of aggression by dropping atomic bombs on Peking and Moscow. His point was that we had abandoned the pure containment policy which forced us into the inflexible defensive position of having to meet any aggression by limiting ourselves to the ground rules of the aggressor. At the same time, the strategy sought to improve the position of NATO, the best product of the containment era. The new strategy amounted to a policy of maximum flexibility, firmness, and initiative whereby we would respond to aggression by going beyond the particular limitations, geographical or weaponwise, set by the aggressor. In terms of Korea, for example, he proposed the possibility of striking at the privileged sanctuary of the Red Chinese in Manchuria, if aggression were renewed.

The subsequent public debate, however, took form around a doctrine of meeting all aggression by threatening general war with Moscow, as opposed to a doctrine of meeting all aggression in kind. In short, the public was not debating the Dulles policy at all. What came to be interpreted by certain segments of the public as the Dulles policy of "massive retaliation" was not his policy.

What is more, administration critics seized upon the Indochina crisis of 1954 as evidence that the administration had failed to follow its own strategy, thereby proving its fallacy. The truth of the matter was that it failed to be in our national interest to intervene in Indochina, just as it failed to be in our national interest to intervene in Mexico or in the Dominican Republic in 1861. Mr. Dulles explained on June 11, 1954, requisites for American intervention, assuming Red China did not openly intervene. Intervention would have to be a collective, not a unilateral effort; there would have to be agreement that Vietnam, Laos, and Cambodia would be granted independence. France would have to maintain her forces in the combat. It was not our strategic concept that failed; it was that unilateral action would not have served our objectives. On the other hand, a United Nations Security Council resolution had furnished a legal and common basis for intervention in Korea.

Considering how long it took the Monroe Doctrine to obtain public acceptance and understanding, it is not surprising that the Eisenhower-Dulles strategy is still not fully understood. It is esential, however, that the American public really debate this strategy in its true context of meeting aggression on our terms. Then the public may reach a consensus of opinion and a philosophy of action which will be the first genuine step forward toward understanding an American strategy for the second half of the 20th century. Then the Eisenhower-Dulles strategy could furnish the beginning of a doctrine comparable to the Monroe Doctrine. We will have much less confusion over such things as missile gaps, deterrent gaps, and even about whether to put more emphasis on the Bomarc, the Nike-Zeus, the Polaris, or the aircraft carrier. For the Eisenhower-Dulles strategy coordinates military with diplomatic strategy by asserting we will meet aggression, not on enemy terms, but with the weapons best suited to our purposes. And this focuses on the need to develop the weapons system to our greatest advantage, intead of matching Russian weapons.

XI. STRATEGY REVIEW MACHINERY ON CONGRESSIONAL LEVEL

The policymaking machinery for developing a consensus on a public strategy could greatly be advanced by both political parties in the House and the Senate by following the 1946 recommendations in regard to policy committees of the La Follette-Monroney Committee on Reorganization of Congress. This committee recommended, as a step toward better party accountability and responsibility, that each party establish policy committees elected respectively by the Members of House and Senate. In matters of great concern to the national welfare, the four policy committees could meet in executive session with the President. While this recommendation was not concerned with a public strategy, the merit of the machinery in this regard is obvious.

What is more, each party policy committee could establish a subcommittee on national strategy. This would bring into one body congressional Members from key congressional committees in a manner they are not brought together now.[31]

---

[29] Although A. Whitney Griswold, in "The Far Eastern Policy of the United States," (New York, Harcourt, Brace & Co., 1938, p. 32) asserts that the debate over the 1899 Philippines problem largely centered on constitutional and moralistic arguments, and not upon American interests in the Far East; Julius W. Pratt, in "Expansionists of 1898" (New York, P. Smith, 1951, p. 350) observes the opposite: for example, Senator Spooner feared possession of the Philippines might involve us with Asiatic powers. Prof. S. F. Bemis has termed this phase of diplomatic history, the great American aberration ("A Diplomatic History of the United States," New York, Holt, 1951, pp. 463–475), opinions echoed by George Kennan in his "American Diplomacy 1900–1950" (New York, New American Library, 1951). See differing opinions in Foster Rhea Dulles' "America's Rise to World Power" (New York, Harpers). Whether or not the policies were carried too far in regard to the Philippines, this national strategy, from 1898, through the Theodore Roosevelt administration, successfully guided our rise to world power, gave us security in the Caribbean and in the Pacific through Hawaii, without which we might have incurred war on our very shores. See J. Fred Rippy, "The Caribbean Danger Zone" (New York, G. P. Putnam's Sons, 1940). The second point is, such a national strategy must be based on a conviction of right, a reasonable sense of moral justification. The fact that morals can be turned into hypocrisy does not mean the cure is to abolish morals and conviction. This Admiral Mahan understood quite well. The best account of Mahan's philosophy and its influence is William E. Livezey's "Mahan on Sea Power" (Norman, Okla., U. of Oklahoma Press, 1947).

[30] Samuel Lubell says, in "The Revolt of the Moderates" (New York, 1956, Harpers, pp. 45–46): "In his conduct of the Korean war, President Truman fought to preserve the concept of a limited war, in which atomic weapons would not be used. The political effect of the 1952 election was to repudiate that concept." And, on p. 39: "The angriest condemnations of the Truman administration from traditionally Democratic voters were provoked by the grievances that rose out of the Korean war—higher taxes and higher prices and the drafting of 'our sons' for a 'useless war.'"

[31] See article by Samuel Huntington in Foreign Affairs, January 1960.

Through studies and resolutions from these subcommittees, key issues could be presented to Congress and thereby to the public. Where bipartisan agreement existed between the subcommittees of the two parties in House and Senate, joint resolutions could be issued to articulate aspects of national strategy and unanimity of concepts of deterrence. Differing opinions between the party subcommittees would serve to point up the real issues of debate. As a special benefit of such policymaking machinery, each Member would take back to his particular standing committee (Foreign Affairs, Armed Services, Joint Atomic Energy, Appropriations, Government Operations, etc.) a much enlarged knowledge of the overall requirements of national strategy. This knowledge would eventually be translated into more effective legislative action.

In the century of protracted conflict, it is indeed essential that the Congress and the public reach an understanding of a basic national strategy. When this happens, citizens will begin to view each day-to-day crisis in the larger context of long-range concerns and will surely demand of all politicians a greater effort to see our century, our strategy, and our strength as a whole. Granted, such an attitude would not eliminate the risks. But it would certainly strengthen the national will, reduce the anxieties, and immensely diminish the possibility of all-out war through cumulative evasions of the real alternatives and fundamentals of a public strategy.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ARENDS. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD, study papers Nos. 3 and 4, "How Democracies Die," by John H. Stambaugh, vice chancellor, Vanderbilt University; and "An Appraisal of Soviet Economic Capability," by Congressman THOMAS B. CURTIS, of Missouri, member of the Joint Economic Committee, as follows:

HOW DEMOCRACIES DIE

(By John H. Stambaugh, vice chancellor, Vanderbilt University)

The prominent historian, Channing Pollock, addressing a group of teachers observed that most democracies last for about 200 years. They are conceived and developed by simple, vigorous, idealistic, hard-working people who unfortunately with success become rich and decadent, learn to live without labor, depend more on the largess of big government and end by trading domestic tyrants for foreign tyrants.

With the end of the second century of our democracy a short 16 years away, it appears very much in order to examine its political, social, and economic structure, to ascertain whether it contains a unique character which makes it impervious to the lessons of history.

Are our people subject to the same frailties as the citizens of the democracies that died in the past?

Can we overcome these weaknesses and remain the strongest and most blessed people on earth?

Are we willing to stand firmly with the basic American idea that there can be no substitute for individual initiative and productivity?

An indication of weakness became evident when the Soviet rocketed Sputnik I into orbit in October 1957. A strange state of mind seized the United States. We seemed to question our own abilities. Some Senators and Congressmen screamed for sputniks in their Christmas stockings and an ICBM in each garage. The rest of the world looked on in amazement and seriously questioned whether we would demonstrate the same toughness and dedication that we had demonstrated in past international crises.

Fortunately some of our leaders, and in particular the President of the United States, refused to accept the premise that this great Nation could be overwhelmed by the Soviets' material contrivance. This faith was dramatically justified when in a short 4 months, under extreme pressure, Explorer I soared heavenward. Since that time, the scientific value of American achievement in space has vastly outstripped the Soviets'.

THE BASIC DANGERS FOR A DEMOCRACY

However, there are dangers other than the fantastic space-age weapons, dangers much more persistent and insidious. These dangers are two:

One from without—Communist ideological and economic penetration.

The other from within—the loss of our individual freedoms by a willingness to let the Central Government be all things to all people.

If we use our resources positively and wisely we have within the framework of free enterprise capitalism all the tools necessary to demonstrate to the world the fallacy of the Communist doctrine of absolute economic and social control by government.

Surely the system which permits our 6 percent of the world's population to produce and consume 40 percent of the world's goods can win this struggle. This system can win, if its exponents practice what they preach while investing our capital abroad and trading throughout the world. It can win if we refuse Government subsidies and protection, welcome competition, and support the sovereignty of the market. It can win the struggle with communism if its people have the will.

THE DANGER FROM WITHIN

It is the second danger which is the more frightening, the danger from within. Among our citizens an attitude of dependency on Washington has developed. This trend toward "Let Uncle Sam do it" argues in effect that only Federal bureaucrats and their intellectual associates are wise enough to tell us how we attain "life, liberty, and the pursuit of happiness." We have come to depend on the Central Government to finance many of our responsibilities which we should assume in the home or at the city and State level. While doing so, the Federal Government inevitably lays down the rules of the game. This trend can lead only to the weakening of the American family and of our State and local governments and hence to destruction of the Federal system.

The liberal editor, John Fischer, of Harper's magazine, has pointed out:

"Up till now, at least every nation of continental size has had to be governed in one of two ways: either as a federation or as an autocracy. The coming generation of politicians, therefore, will have to find some way to renovate the idea of federalism and get it back into working order."

If we permit our system to be destroyed, not only will the lessons of history be reaffirmed but Communist Chief Khrushchev will indeed have been a prophet when he said to five visiting U.S. Senators, "I prophesy that your grandchildren in America will live under socialism."

THE WILLIAMSBURG IDEA

The President of the United States, speaking at the Governor's conference in Williamsburg, Va., in June 1957, gave evidence of his deep concern for the preservation of our way of life. President Eisenhower rang the alarm with the statement, "Those who would be and would stay free must stand eternal watch against excessive concentration of power in government." He then challenged the conference of Governors to join with him in an effort to reverse the trend toward Washington.

The Joint Federal-State Action Committee was thus created by the President of the United States and the Governors of the 48 States as a task force for action—a joint committee charged with three responsibilities:

"1. To designate functions which the States are ready and willing to assume and finance that are now performed or financed wholly or in part by the Federal Government;

"2. To recommend the Federal and State revenue adjustments required to enable the States to assume such functions; and

"3. To identify functions and responsibilities likely to require State or Federal attention in the future and to recommend the level of State effort, or Federal effort, or both, that will be needed to assure effective action."

The conference of Governors readily accepted the President's proposal. For years it had concerned itself with problems of Federal-State program responsibilities, the division of tax revenue sources between the Federal and State Governments, and with emerging problems calling for governmental action—Federal, State, and local. Many State Governors were deeply troubled by the same trend which so concerned the President. The conference, accordingly, authorized its chairman to appoint a committee of Governors to serve with Federal representatives chosen by the President on the Joint Federal-State Action Committee.

It is interesting to note that this is the first time in our history that a President suggested action be taken to reverse the growing trend toward reliance on the central authority for services to our people far beyond the responsibilities originally intended for assumption by the Federal Government.

The initial phase of this mission was a limited one. It was to recommend that action be taken to shift a small number of governmental functions and revenue sources from the Federal Government to the States and to define more clearly certain responsibilities that might continue to be shared by Federal and State Governments. The purpose was not to accomplish the whole job, but merely to demonstrate that a long-term drift to governmental responsibility toward Washington is not inevitable.

OPPOSITION TO LOCAL INITIATIVE

Many with overdeveloped senses of Federal responsibility reacted strongly against this move by the President. They protested that the complexity of our society requires the Central Government to concern itself more and more with the welfare of the individual citizen. In turn they argue that State and local governments are poorly organized and unable to finance adequate public services. Yet rather than join in a realistic examination of ways to revitalize State and local governments, these opponents fall back on a familiar plea that the Central Government solve all problems on a crash basis. What these so generous people fail to acknowledge is that each time the Government assumes responsibility for our personal economic and social welfare, we take another long stride away from those principles which have permitted us through

individual initiative to become the most privileged of the earth's people.

Unfortunately, even the President of the United States joined by a committee of the Governors of the sovereign States, was unable to do much more than slow down the trend toward more dependence on the Central Government. Northern Democratic Governors from highly populated and rich States resisted the effort. In spite of the protest of some of the more moderate in that party and the Republican Governors, mostly from the Middle and Western States, the centralist view prevailed. The northern Democrats prevailed because the traditional States rights Democrats of the South had been so seduced by the Federal dollar that they refused to take back to the States the responsibilities which must be assumed at that level if the term "States rights" is to be anything more than just that—a term.

The simple fact is that for every dollar of Federal aid, the citizen who believes in State sovereignty forfeits a dollar's worth of States rights. It is entirely logical that Federal control follow Federal funds. This has to be because when a Congressman from New York votes to support a project for Tennessee, he has a right to say something about how the money is spent. His constituents after all are paying their share of the bill.

OTHER PROBLEMS

There are other evidences of this voluntary weakness on the part of our people. The great moderate masses of our society have withdrawn from the political scene as a consequence of the very abundance which our free system has provided, the blessings of education and the advances of technology. The professional and businessman, the technician, the white-collar worker, the highly trained and productive operator of our massive machines, all enjoy a way of life which leads them to prefer to be left alone. The businessman is restrained from political participation for fear of public criticism or the loss of a customer, not understanding that it is much better to lose a customer than to lose the climate which permits him to make a profit.

In the meanwhile, highly militant and well-organized minority groups control the body politic.

The overwhelming desire for security rather than for opportunity on the part of our young people has been encouraged even by our great corporations. Recruiters visiting the campuses of our universities no longer challenge the young American male with opportunity, but instead with what is going to happen to him 45 years hence. This young American with a mind like a sponge and muscles of steel then is tempted to enter the competitive world looking for a pension rather than a risk, little realizing that his forefathers who developed this great country were risk-takers above all else.

CONCLUSION

The historical cycle of the body politic indicates that man progresses from bondage to spiritual faith—from spiritual faith to courage, from courage to freedom, from freedom to abundance; and then comes the warning, from abundance to selfishness, from selfishness to apathy, from apathy to dependency, and from dependency right back into bondage again.

It does not require the talents of the highly trained political scientist to show us where we are in this cycle. It only requires a little serious thinking on the part of any reasonably intelligent citizen.

Certainly all thoughtful people must agree that if the system we cherish is to survive we must learn to understand that democracy is more difficult to maintain than to attain. Only by our individual efforts can we be sure that the lessons of history do not catch up with our Republic.

AN APPRAISAL OF SOVIET ECONOMIC CAPABILITY

(By THOMAS B. CURTIS, Congressman from Missouri)

One of the most vital aspects of the long-run competition between the United States and the Soviet Union is the economic one. With both sides likely to abstain from any all-out and mutually destructive military clash, the more subtle and basic contest of economic strengths comes to the fore.

Following the ancient axiom, "Know thy enemy," it is incumbent on us to appraise accurately the Soviet's economic capability.

THE JOINT ECONOMIC COMMITTEE'S STUDIES

In November 1959, the Joint Economic Committee's Subcommittee on Economic Statistics held panel hearings based upon 31 study papers on comparison of the United States and Soviet economies prepared by some of the leading students of Soviet Russia's economy. The publication of these series of papers by the subcommittee was described by Prof. G. Warren Nutter as "more complete and covers more ground, than any other such publication I know of." These papers and the hearings on them have been widely acclaimed by students of the Russian economy.

However, the subcommittee failed to issue a report to the Congress and to the people of the United States based upon these materials and other materials available to the subcommittee upon the important subject of Soviet economic capability.

The failure of the subcommittee to make a meaningful report to the Congress has left this subject shrouded in unfortunate ambiguity. In some quarters there is a tendency to exaggerate the economic progress and potential of the Soviets. Apparently there are those who have found fear of Russia to be an effective emotional appeal to gain popular support for particular political objectives.

IMPORTANCE OF ACCURATELY APPRAISING SOVIET CAPABILITY

Presenting Russia's economic achievement through a false magnifying glass has two extremely damaging effects upon the United States. The greatest damaging effect results from unintentionally aiding and abetting Soviet Russia's own propaganda among the uncommitted nations concerning her prowess and the superiority of the Communist system over the private enterprise system. Indeed, Russia would not dare make some of the extravagant claims of achievement that some Americans make for her in an effort to frighten the United States into a course of action which, in a calmer context, would never be considered seriously.

The second damaging effect is undue complacency in the public mind, when the people find that exaggeration has been employed. It is true that we are in a tough economic competition. This being the case, our people need to know the true picture of the adversary we face. If an exaggerated picture is later discredited, undue complacency is sure to follow.

The best course and the course of wisdom is to seek the truth as best we can. We should neither overestimate nor underestimate an enemy. There is much room for honest dispute even among experts who undertake to appraise Soviet economic capability.

For this reason, it was appropriate that the Subcommittee on Economic Statistics undertake the appraisal of Soviet economic capability inasmuch as one of the greatest limitations we have in this undertaking is that of our economic measuring devices.

LIMITATION OF THE STATISTICS

Even before we examine the limitations of statistics for finding the truth about Russia's economic capability, we must recognize the limitations we face in determining what is the economic capability of the United States. It is generally recognized that the economic statistics of the United States are the best in the world. Yet the Subcommittee on Economic Statistics is constantly confronted with the inadequacy of our own economic statistics in measuring economic factors which are fundamental in determining economic capability, such as total plant investment and capacity; human skills available by accurate nomenclature and number; productivity figures in various industries, and especially for the economy as a whole; convertibility of plant, equipment, and skills from civilian type operation to military oriented operations; and many other data. Even such a simple concept as the cost of living involves problems of measurement which have been often debated by scholars appearing before the Joint Economic Committee.

We in the United States have no statistical series that really measure the industrial, transportation, communications, raw materials, human skill capabilities. There are no series that can measure the extent of the organizations that relate human skills to plants and machinery. There are no real figures that give us a clear insight into productivity. There are some figures of capabilities in a few of our industries. We have some data on steel capacity and capacity to produce some basic metals and raw materials, but these are indeed raw figures and certainly we have little breakdown information for example in steel production as to shapes and forms, grades, etc.

There are some productivity figures by individual industries, but even these are quite limited and before these figures are usable they need considerable interpretation. It is because our statistics in this direct area are so limited that we have resorted to such broad statistical series as gross national product to try to measure economic capabilities.

Certainly we know by just a casual analysis of the gross national product indicator its great limitations in measuring the economic capabilities of a society. Yet the gross national product indicator is probably the most meaningful indicator we have.

The limitations of gross national product as a device for measuring economic capability might be partially listed as follows:

1. It measures yearly effort not capability.
2. It measures waste product and economic mistakes equally with sound economic production.
3. It does not suggest the real significance of research and development, education, discoveries, and breakthroughs.
4. It unduly weighs newly built capital plant, heavy industry, and industrial products in relation to other equally important economic factors which go to make up economic capability.
5. Increased productivity can receive a negative weighting (e.g., eliminating a long transportation haul by building plant and raw material source closer together will decrease its contribution to gross national product).

These and other limitations affect our own measurements of gross national product as well as other countries. But when we look at the further difficulties in measuring Soviet capability, the problems increase. Testimony before the subcommittee was quite explicit on this problem.

The statement of Robert W. Campbell, University of Southern California (p. 33, hearings), noted as follows:

"The statistics of any nation have their parochial distinctiveness, but those of the Soviet Union are particularly difficult to compare with those of other countries. Because they are used to glorify as much as to illuminate, the numbers released by the Russians tend to be ambiguously defined and subject to change in meaning over them. Obscurities in meaning might be clarified, were there an abundance of data

because of the many interrelationships existing in any fabric of statistical economic description. But the statistical raw materials for the Russian side of comparisons are unfortunately sparse as well as ambiguous."

Hans Heymann, Jr., economics division, the Rand Corp., Washington, D.C. (p. 31 of hearings), stated:

"In the last 3 years the Soviet authorities have released more statistical information about their own economy than they have in the preceding 20. The new data fill some gaping voids, afford us greater opportunities for checking internal consistency, and provide a somewhat more rounded picture of Soviet economic development. But the new data are still a long way, indeed, from meeting what would be considered in the Western World minimum acceptable standards of statistical adequacy. Thus, despite its recent easing, the restrictive and propagandistic Soviet information policy continues to impose on us a heavy burden of statistical compilation, interpretation, and verification, and seriously impedes our ability to reconstruct a reliable, balanced, and undistorted statistical image of Soviet progress."

Therefore in making any appraisal of Russia's economic capabilities we must do a great deal more than usual in checking internal statistical inconsistencies.

THE TRICKY QUESTION OF ECONOMIC GROWTH

Thus far we have not yet alluded to the further statistical problems which arise when we get into the area of economic growth.

Economic growth rate based upon gross national product figures is an even more dangerous method of estimating economic capabilities and yet it is the growth rate that has become the basis of much present misconception in evaluating Russian capabilities vis-a-vis U.S. capabilities.

The limitations on the use of rates of growth measured in gross national product might be listed as follows:

1. A rate depends upon the base from which it starts. The smaller the starting base the more rapid the rate in the initial stages and the slower the rate in the more mature stages.

2. Economic growth has a real relation to the maturity of an economic society. This relationship has been inadequately studied, but it is nonetheless real. The more mature an economy the less the rate of growth measured in gross national product.

3. The limitations of gross national product as a measuring device listed above become even more limited, indeed, almost antithetical, when placed into the rate of growth measurements. For example, investment in capital plant for heavy industry shows up more heavily than anything else in gross national product and accordingly an emphasis upon growth in this area will make the overall growth rate look high. Yet sustained growth depends upon a broader economic development. It particularly depends upon great sums of investment going into research and development and into education which show up poorly in gross national product and growth figures based on gross national product.

4. Productivity increases upon which much future sustained growth is based, frequently show up as a negative in growth rates. Furthermore, labor efficiency as one of the bases of productivity increase, is dependent upon such things as health improvements, better housing, more education and training, and other things frequently and falsely referred to as consumer items and luxuries.

5. An industrialized country recovering from war damage to its industry will show very rapid growth rates which show up some time after the actual plant replacements. It is more than a coincidence that the industrialized countries of World War II which had extensive war damage are in the countries showing the very rapid rates of economic growth. Russia is merely one of this group.

The economists testifying before the Joint Economic Committee over a period of years have made the valid point that economic growth per se is almost meaningless. The tests to be applied are where is the growth needed for a well balanced economy and where has it been occurring. The U.S. gross national product is higher in one sense than it should be because of unwanted farm production. How silly it would be to have more rapid growth measured in gross national product occurring in that area. Does the United States need more steel production? More oil? What does Russia need? It is in respect to the specific areas of an economy that we are most apt to find our answers to present economic capabilities and meaningful projections into the future.

To the extent that overall economic growth rates are of any value, it is worth noting that as respected and cautious an economist as W. Allen Wallis stated without equivocation recently:

"In short, there is no possibility that the Russian economy will overtake ours, at any time in the visible future—certainly not in this century."

SOME IMPORTANT QUESTIONS

It is clear that the Soviet Union poses to us a challenge, economically. However, any serious appraisal of Soviet economic capability must raise certain questions which have too often gone unasked.

For example, how much of an economic plant did the Communists simply take over from the prerevolutionary regime? Our Director of the Central Intelligence Agency, Allen Dulles, made an interesting observation on this point during the joint committee's hearings (p. 4):

"The year 1913 is taken as the base for many Soviet studies and claims. The Soviets try to picture prerevolutionary Russia as the economic counterpart of black Africa today. The official myth about the relative backwardness of imperial Russia has been deliberately created so that Communist economic achievements will appear to be even greater than they have been. * * *

"The weight of the evidence, as I see it, would place prerevolutionary Russia as the sixth or seventh largest industrial power of its time, though it is true it was relatively backward by then existing Western European standards of per capita output."

Another key question is how old is Russia's economic plant? Some of it dates back to the czars, particularly in agriculture and housing. On the other hand much of it is quite modern, particularly that which constitutes a replacement of World War II destruction.

How balanced is its economic plant? This is the area where I believe any fair analysis will show that not only is Russia far behind the United States in gross figures, but even farther behind in the area that must be developed if she is to catch up. She has built the plant that shows up the largest in gross national product indicators and neglected that which does not show up.

It is worth examining three specific industries each of which is crucial to an appraisal of economic capability, especially as it relates to the question of balanced capability. These industries are transportation, communication and power, and housing.

TRANSPORTATION

One of the weak links in the Soviet economy is the transportation system.

In transportation Russia has so throttled her economic growth that her economy can be described as a string of beads. The string is her railroad lines and the beads are the industrial plants strung on it. Move off the main rail lines and you find no industry. Russia's transportation is over 80-percent rails and the rails have no feeder lines or feeder highway system. Even the length of her trackage is a small part of the United States and yet she has three times the distance to cope with. She seeks to overcome her transportation bottleneck by a more extensive use of what she has, but primarily she seeks to overcome it by subjecting the shipper to the needs of the transportation system—a cramp which our producers would regard as unthinkable.

Russia apparently has little plans for immediate building up of her transportation system, weak as it is, except through a stepped-up program of dieselization of her locomotives. The transportation system is so weak that it is doubtful if she can have the production she claims she has in other sectors of her economy.

Such a transportation system renders the Soviet economy brittle. Consider the vulnerability to military attack such limitations and rigidities mean. Furthermore, her usage of her rail system is probably over 100 percent, which means that there is not the shutdown for necessary maintenance. In the long run this eats into the capital investment itself and can only be replaced by calling upon the rest of the economy to produce more rail equipment than would be necessary if proper maintenance practices were followed.

Relate this picture to U.S. transportation. The U.S. transportation system is so widespread and filled with variety that it gives amazing flexibility to the rest of the economic plant, including mobility of labor. It is being used at well below capacity. These characteristics minimize the destruction and disruption that can come from military attack but, even more important, give an economic capability that probably could be tripled in the event of mobilization.

COMMUNICATIONS AND POWER

The same story exists in regard to the other lifelines of a modern industrial economy—communications and power. Russia's communication system is not even on a par with her transportation system. U.S. communications system is unparalleled in extent and flexibility anywhere.

The story on power shows a similar vast disparity between Russia and the United States.

In 1958 Russia had a total generating capacity of 53 million kilowatts. The same year the United States had a capability of over 167 million kilowatts.

In 1959 Russia jumped to 59 million kilowatts.

During the same period the United States jumped to 183 million kilowatts.

Russia's announced goal for 1965 is 110–112 million kilowatts.

The United States is expected to have about 245 million kilowatts in 1965.

One of the important aspects of power is its usability, and this depends to a large degree upon transmission lines.

At the end of 1957 the total length of transmission on lines of 35,000 volts and above in Russia was about 46,485 miles.

In the United States the same year the total length of lines 35,000 volts and above was 240,000 miles.

These facts should be viewed in the light of the knowledge that Russia has at least three times the distances to be covered as the United States.

In 1958, 80 percent of the power generated in Russia was devoted to industry and construction. Only about 16 percent went for rural and residential use.

In 1959 Russia produced 1,161 kilowatt-hours per capita.

In 1959 the United States produced 4,481 kilowatt-hours per capita.

The average home use of electricity in Russia is about 400 kilowatt-hours a year.

In the United States the average home use of power in 1959 was about 3,550 kilowatt-hours per year.

But even in utilization of personnel in the power industry itself (which Russia has upgraded well ahead of almost any other industry) we find some startling contrasts—as we should expect when we analyze the health, housing, and educational standards of Russia. From 1950 to 1957 the number of personnel per megawatt of installed capacity was reduced from 9.6 to 5.6 persons. By 1958 in the larger power stations with a capacity of 500,000 kilowatts or over, the number of personnel was 2 to 2.5 persons per megawatt of installed capacity. In the United States, according to the Federal Power Commission, the large coal-burning plants built during the last decade require from 0.2 to 0.5 employees per megawatt of plant capacity.

Available power is a good indicator of overall economic strength of a society. Certainly it relates to potential use of the overall economic plant, flexibility, and mobilization multiplier.

HOUSING

Adequate housing is not just a matter of nice living—it has a direct relation to worker efficiency and productivity. Worker health also is related. Certainly electric power in the home has real bearing on worker productivity if for no other reason than it permits home study. Vacations and the 40-hour week were adopted in the United States for reasons of increased productivity as well as the well-being of the human being.

It is foolish to speak of America's high standard of living as if it were merely a matter of luxury and were not directly related to worker productivity. It is this high standard of living that produced worker productivity. Furthermore, it is no cliche to state almost as an axiom that free men have greater efficiency and productivity than slaves.

Furthermore, overall national good housing means greater worker mobility and worker mobility is important in keeping any economy dynamic. It seems strange that all the reasons we have used to persuade our people to increase their standard of living which we have rightly related to economic productivity are completely forgotten by some of our American scholars in their evaluation of Russia's economic capabilities.

LIMITATION OF A CONTROLLED ECONOMY

Shortcomings of the Soviet economic capability in the fields of transportation, of communications and power, of housing—these evidences of gross imbalance tend to blur the image of Russian economic power.

Socializing an economy does not eliminate economic mistakes; it merely buries them from view. The cost of the economic mistake is bound to have its effect somewhere. This is illustrated by the interesting fact that Russia has not cared to develop a realistic system of cost accounting. This stems either from a belief that costs are not real or from a more cowardly and cynical approach which seeks to thwart the truth by hiding from it. We have the same problem in our society in dealing with the Military Establishment. There seems to be an inherent faith that dollars are not devices for measuring manpower, material, and the business processes of putting the two together.

There are those who argue that a dictatorship makes fewer economic mistakes than a free market economy because the dictatorship knows what it wants to do and accordingly can short-cut the economic process. Their misconception arises from two fundamental errors: (1) A misunderstanding of the essence of a free market economy; (2) a misunderstanding of how our own military establishment fits into our free market economy.

The essence of a free market economy is that it is a laboratory, testing new ideas, new products, new processes. It is through this kind of testing that mankind, under our free system, moves ahead into the unknown.

Certainly an observant dictatorship may benefit from the experiments being conducted in the laboratories of free societies. This is a parasitic relationship, however, which will always keep it second best. Furthermore, the very failure to establish a laboratory to test new economic and social ideas which is inherent in a totalitarian government where political and economic power is merged, is fatal.

The second misunderstanding is shared by an altogether too large body of American thinkers. They do not distinguish clearly the fundamental difference between our military institution and our civilian society. The systems are antithetical.

This is in the nature of the case. An effective military organization is bound to be based upon principles fundamentally opposed to those of a free and growing society. And yet, to protect that society we must allow for coexistence of a military organization. Our code of military justice has been in essence a common law code, not a statutory code, evolving from centuries of battle and experience. When, after World War II, we tried to introduce elements of the civilian code of justice, we destroyed a good military code and ended up with something that was neither good for the soldier nor the civilian.

Actually the military institution can exist and should exist as a separate system, restricted to military matters. The difficulties arise when we extend the military jurisdiction into areas where military organization is not necessary to achieve the results.

THE REAL NATURE OF THE THREAT

Russia's economic capability shows severe limitations on close inspection. However, it is precisely because she has channeled her strengths so single-mindedly into certain areas that she constitutes a threat.

In testimony on the last day of the Joint Economic Committee's hearings, in a colloquy with the witness, Mr. Lovestone, I pointed out what I believe is the nature of this threat. (p. 223):

"The question is how much of that system which seems to me so lopsided can be set up to transmit power into a military machine which could be a threat and, secondarily, how much of that power can be set up and transmitted through the machine of subversive devices * * *.

"Nazi Germany's system in the long run could not prevail. Yet by channeling its efforts into a military force, it came very close to taking over systems that were better suited in the long run to prevail.

"The result would have been disaster and I think that is the very point to watch for."

Russia is a threat to us, of course, in a military way, just as every man, regardless of his size and physical prowess, became a threat to every other man when the pistol was perfected. In gangster language a pistol is referred to as an equalizer because it made the little runt equal to the biggest and most powerful male. So atomic bombs are in effect equalizers among nations which have atomic bombs and the ability to deliver them.

But should the strong man be afraid of the little man if both have guns? He has to look at things a bit differently, but it is spiritual values that are the test of whether he is or is not afraid, not weapons.

The real threat to America is ideological. If we believe in the private enterprise system then we must understand it and promote its philosophy. The facts of history and of the present day demonstrates beyond much doubt that communism is self-defeating. To the extent that we in this country have abandoned some of the basic features of the private enterprise system by substituting political bureaucratic or industrial oligopolic decisions for the decisions of the marketplace—and we have—to that extent we have weakened ourselves. Herein lies our danger, not Russia's economic capability.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. RHODES of Arizona. Mr. Speaker, as part of the Task Force Studies on American Strategy and Strength, I place in the CONGRESSIONAL RECORD, study papers Nos. 5 and 6: "International Tension and National Defense," by Robert G. Neumann, director of the Institute of International and Foreign Studies, University of California at Los Angeles; and "Key Factors in Future Military Planning," by Adm. Arthur Radford, retired, former Chairman of the Joint Chiefs of Staff:

INTERNATIONAL TENSION AND NATIONAL DEFENSE

(By Robert G. Neumann, director, Institute of International and Foreign Studies, University of California, Los Angeles)

Tension is the watchword of our times, and it is therefore perfectly natural that much of our thinking should gravitate around the problem of how that tension might be reduced.

In this connection, however, it is sometimes overlooked that tension is not only the result of certain situations and policies, but as far as the Soviet Union is concerned, frequently is policy in itself. Tension favors subversive activities; it encourages conditions in which the wildest rumors flow freely and authority is undermined. Tension favors revolutionary activities in which Communist movements may try to tie themselves to, and infiltrate, revolutionary movements which in themselves may be quite non-Communist and even anti-Communist.

In the realm of diplomacy, tension is frequently and deliberately engendered by Soviet policy in order to place impending negotiations under great pressure. And when tension is then allowed to decrease slightly—in as artificial a manner as it was originally increased—an actual gain for the Soviet side may be made to appear like a concession merely because it is perhaps somewhat less extreme than that which the Soviets demanded at the height of the crisis.

This technique has been invariably pursued before every major international conference, and the exploitation of the U–2 incident and the blowup of the Paris summit conference are merely another evidence of this policy of tension, although undoubtedly not the only explanation for this latest Soviet step.

Because the creation and manipulation of tension is an important Soviet policy, one cannot assume that it will be readily abandoned. No country feels inclined to give up a policy which is clearly in its own best interests. Hence, it must be clear that Western concessions made entirely or primarily for the purpose of reducing tensions are fruitless. The Soviets may indeed permit

tension to die down on one issue only to arouse it again somewhere else or even in the same area where and when it meets their purpose. Western concessions to the Soviet Union can be very much in point where they are met by concrete, realizable Soviet counterconcessions. They are a pointless abandonment, however, where they are merely designed to insure Communist good behavior. Such a policy of abandonment without quid pro quo tends to create an unending opportunity for blackmail, making it possible for the Soviet Union to demand in effect, "What will you pay me for not kicking you around?"

EFFECTS OF STRUCTURAL CHANGES WITHIN RUSSIA

A number of observers have expressed the view that tension in the world might relax as a result of certain important structural changes occurring within the Soviet system, and that it might be possible to return to the more realistic methods of power politics and classical diplomacy in relations with the Soviet Union, free from the pressures and the smokescreen of ideological considerations. Mr. Walter Lippmann, in particular, is to a considerable extent a proponent of this interesting analysis.

Now it is an unquestionable fact that important changes have occurred in the Soviet Union. Since the end of the Stalin era the living standards of the Soviet people have considerably improved, and the coercive machinery of the state, while still formidable, is now less in evidence and its forays less deadly then they used to be. There is also the beginning, or perhaps the potential beginning, of a certain amount of decentralization. In addition the eventual rise of a new managerial class with some relatively independent ideas, lately comparable to a middle class, cannot be excluded.

It is however, in my opinion, a fundamental error to believe that only the Stalinist version of communism constitutes true communism and that all important modifications indicate a departure from communism itself. Just as the capitalistic or free enterprise system of the 19th century, the century of heavy capital accumulation, was very different from the free-enterprise system of the 20th century, so the communism of Stalin's era of capital accumulation and brutal buildup at any price is different from the communism of Khrushchev. For all its structural changes, Soviet communism has given up none of its theoretical claim to infallibility, nor its messianic fervor, nor its unabated desire for world domination.

Nikita Khrushchev has been most explicit on these points, and to believe that he does not really mean what he is saying when he speaks about the aims of communism, is as dangerous as it was to disbelieve the words of Adolf Hitler about the aims of nazism.

There is perhaps this much to the abovementioned theory: If the improvement of the living standard within the Soviet Union is permitted to continue, if the internal security mechanism is further relaxed, if the process of decentralization is pursued, then it is conceivable that at some time in the distant future the Government of the Soviet Union may not be quite so free to embark upon an aggressive policy, because its people may have acquired too much of a stake in a peaceful development and may have acquired some means of impeding such a Soviet Government policy.

But surely nobody would argue that this is the situation now. Whatever the possibilities for the future, the structural changes in the Soviet Union are in their infancy, and the Soviet Government and the Communist Party high command have every opportunity to arrest this development and to reverse the course should they so desire. Hence, these changes in the Soviet Union, whatever their potential future significance, do not have much of a bearing on the present crisis.

EFFECTS OF RELATIONS BETWEEN RUSSIA AND CHINA

Another area of intense speculation is that of the relations between the Soviet Union and Communist China. It is sometimes suggested that these two rash countries are likely to have a falling out before long. From this expectation, some draw the conclusion that we should have a much softer policy toward the Soviet Union in order to separate her from China, while others feel that we ought to ease Red China's road into the United Nations and to general recognition in order that she may speak for herself rather than through Russia.

Now it is quite true that a considerable body of evidence is available, indicating tactical differences between Russia and Red China. During my recent travels in the Middle East and north Africa I have come across quite a number of such instances. It is, however, only too easy to exaggerate these differences.

The evolution of communism in the Soviet Union and China is in two entirely different phases in the two countries. Moreover, due to its size and significance, China never was and has never been treated like a Soviet satellite.

To this must be added the fact that in the Communist family Mao Tse-tung is the last of the remaining great founders and his position in the evolution of Communist theory is more comparable to that of Lenin than to that of Khrushchev. It is also undeniable that Mao's theory and Chinese Communist practice have powerful attraction in Africa and especially Asia, where the Chinese are regarded as fellow Asians, and the Russians, after all, as Europeans. Also Mao's theories on revolutionary warfare have been required reading in areas of revolutionary or colonial struggle, especially in the prisons which have bred leadership of anticolonialism.

The Chinese Communists are feeling their oats, and in their doctrinaire rigidity they often enjoy the support of those Eastern European Communist leaders like Walter Ulbricht who, because of the weakness of their support, instinctively fear and distrust any relaxation of Communist control. Thus there is considerable material for conflict and diversion of views between the Soviet Union and Communist China.

But in their search for expansion these countries need not be in each other's way for a long time to come, and their leaders are far too intelligent not to see that any serious conflict would be bound to benefit that Western World which they both regard as essentially hostile. It would therefore be more realistic to regard the conflicts between Russian and Chinese tactics as comparable to the differences of views which exist between the United States and Great Britain, rather than to indulge in the idle hope of a major conflagration.

IMPLICATIONS FOR U.S. DEFENSE POSTURE

For these reasons it might be concluded that while the aspects of the struggle between communism and the free world may be subject to occasional variations, the conflict itself remains unabated. It is a long-range conflict and our policies and defense posture have to assume the same long-range nature.

This means in particular that our defense needs must not be assessed in terms of a given crisis. Certainly it must be clear to everyone that in view of the complex nature of modern military equipment, especially in electronics and rocketry, any step-up in expenditure could have practical results only years hence, and therefore could not possibly have a practical bearing on a crisis which has already broken out.

Our defense needs have to be assessed for a variety of crises. And, as the long-range forecasts must take into consideration the likelihood of continued, though perhaps, intermittent tension, our defense level must be an appropriately high one. In determining the desirable level of our defense effort, we must take into consideration the probable nature of any conflict that might break out. This means, in particular, that we must face the fact that we are politically and psychologically incapable of striking the first blow. Our defense posture is therefore determined not by a pointless counting of missiles, but by our capacity to absorb the first murderous blow and reserve enough retaliatory capacity to strike decisively against the enemy. In other words, our defense, no matter how strong or weak in numbers of missiles and other equipment, can serve as a true deterrent only if the potential enemy realizes that we have the means to protect enough of our weapons, of our means of delivery, and of our population to return to the fray and deal him punishing blows. The very variety of our means of delivery is therefore in itself a strategic advantage which makes it more difficult for a potential enemy to bring us to our knees in one destructive blow.

It is, however, necessary that we take a hard second look, not only at our much publicized, probably too much publicized missile program, but also at our means of protecting the missiles against a first attack, and in particular at our system of civil defense. Because our ability to protect at least a large portion of our population from possible destruction is an integral part of our defense posture and our deterrent capacity, it seems highly doubtful that this important sector of our national defense should be left to a largely voluntary effort.

IMPLICATIONS FOR DISARMAMENT

It is a common saying that an armament race leads to war. Historically this generalization is far from correct, but it is nevertheless true that an arms race does increase tension and make for general fear and uneasiness. It is therefore obviously in our interest to reduce or even eliminate the arms race if that were possible. There is little doubt that the peoples of the world profoundly hope for such a course. And in an era where the struggle between East and West is also, to a very large extent, a struggle for the minds and the decisions of largely uncommitted nations and peoples, this desire for disarmament cannot be lightly dismissed.

But whether we like it or not, we cannot afford to lose sight of an unpleasant, but nevertheless very real fact; that the uneasy peace of our time, the fact that despite all tension and provocation, full-fledged war is not likely to break out, is primarily due to this "balance of terror" which has made it very unsafe for an aggressor to unleash atomic war. If, by the same token, disarmament were to be undertaken in such a way as to gravely upset this balance, either by being too unilateral or by being too uncontrolled, then such action would not be a step toward peace, but would, quite on the contrary, immeasurably increase the fearful danger of war.

Because of the highly complex nature of this "balance of terror," because of the high complexity of modern defense systems, any suggestion toward immediate and total disarmament, such as Mr. Khrushchev proposed is revealed as unserious and as pure propaganda. The only serious and possible form of disarmament is a gradual and controlled one.

This is also the course of action which our delegation has pursued at the 10-power Geneva disarmament negotiations. We have suggested that disarmament be achieved through four stages, each of which is to be carefully controlled: That (1) it might begin with a system of regulation and control

of existing armaments; that (2) these armaments be limited either at their present level or at a lower one; and that (3) a level of armament be gradually reduced until it is possible to reach the final level; (4) namely, that of disarmament proper. The keyword here is "control" in order to prevent an imbalance which might easily and speedily lead to war or to enforced surrender.

In view of the overriding importance of this point, it would seem that the argument that an "imperfect control agreement is better than no control agreement at all" is more than questionable.

LESSONS OF THE SUMMIT

Many people had hoped that the Summit Conference of May 1960 would result in some concrete steps toward disarmament. The brutal breakup of this conference by Mr. Khrushchev has therefore filled many people throughout the world with bitter dismay and dark foreboding.

I doubt that these fears are any more justified than was the unwarranted optimism which preceded this conference. One does not have to be any inverted Pollyanna to say with considerable assurance that the Summit Conference of 1960 never had a chance.

When busy heads of government get together for a few days, they can indeed make important decisions and bridge gaps between their positions, if the original gaps had been sufficiently narrowed in previous conferences on lower levels so that a final decision can close the gap. But when, in exceedingly complex and technical subject matters such as disarmament, only very insufficient progress has been achieved on lower working levels, a miraculous solution at a summit conference is out of the question, or can be achieved only if one side blunders badly. It is equally clear that not enough progress had been made on the problem of Berlin to warrant great expectations.

The breakup of the Paris summit conference should serve, at the very least, to discourage the holding of other summit conferences without an agenda and without essential preparatory work. Let us hope that this shocking experience may help to place greater emphasis on the more traditional methods of diplomacy which, because of their quiet and more confidential characters, are further removed from the war of propaganda, and which, because they take place without the pressure of time that characterizes a summit conference, may have greater chance of success.

A return to the more normal ways of diplomacy will also give us an unparalleled opportunity to test the true intentions of the Soviet Union. For if the Soviet Government really desires agreement on a given subject, it will permit its representatives to make at least some concessions and generally to allow some progress to be achieved. If this is not the case, it ought to be pretty clear that even a summit conference could not clear up the issue, but rather that another gigantic propaganda trap would be in the making.

Progress in diplomatic negotiations is usually very slow; it becomes far slower still when Soviet representatives participate, for their disregard for time can take on oriental proportions. They know very well that being in a hurry is a Western, and especially an American characteristic, and that if you are too much in a hurry to reach agreements you are likely to make all the concessions. Progress, if any, will therefore have to be excruciatingly slow. But if any progress can be achieved by these means, it will be far more real than the ephemeral "spirit of Geneva" or the "spirit of Camp David."

Patience and a calm outlook are therefore of the essence. But our diplomats and representatives will hardly be in a position to exercise this requisite patience, if they are constantly pushed by a nervous and impatient public. The cold war takes place on many fronts; one of its most important is the nervous equilibrium of our people. By our realizing and accepting the fact of life, which means the fact that we shall have to live with crisis, we can all add immeasurably to the strength of our country and help to make it truly invincible.

KEY FACTORS IN FUTURE MILITARY PLANNING

(By Adm. Arthur W. Radford, former Chairman, Joint Chiefs of Staff)

Many factors are involved in military planning, but eight are particularly basic. Their resolution one way or another vitally affects not only our military planning, but our whole military structure.

First, it is well to note what makes a good plan. An effective plan must provide for changes in short-range and even long-range objectives, for shifts in policy as a result of varying degrees of success and failure, for changes in relative strengths and alinements of our enemy and our allies, and for the counterplay of the programs of our enemy and our friends. It must anticipate what a probable enemy can do in the future, and what we will need 2 or 3 years from now. It goes, almost without saying, that it must be both comprehensive and flexible.

Then there are the men who must carry out these plans. This country needs men who are not panicked by problems but men with the wisdom, the intellect, and principle to find solutions rather than faults, to come with aid rather than anger, to encourage and not to discourage and to do good for the Nation rather than good for themselves.

I believe that today we have such men—in the President, in the Department of Defense, who are making a very real effort to solve the difficult problems with which this country is faced.

I. NUCLEAR WEAPONS

The use of nuclear weapons is what I would call the No. 1 planning factor. Our present military force structures and our war plans provide for integrating nuclear weapons with other weapons in our military arsenal. There has been no change in this policy, nor has there been a change in the conditions which dictated the need for this policy. In fact, if the policy were changed, it would have a tremendous effect on all our forces' structure.

General Gruenther has said he feels that if nuclear weapons were banned, it would require our forces to adopt a wall-of-flesh type of strategy. If such a situation can be avoided, it certainly seems foolish to match man for man the regimented military power of the Communist bloc. A would-be aggressor must be made to understand that he cannot hope to carry out any attack, even a surprise one, which would destroy our ability to strike back in a devastating manner.

Briefly, here is how this policy came into being: In July 1953, the President and the Secretary of Defense asked the Joint Chiefs of Staff to reassess our national strategic and logistic capabilities in the light of foreseeable developments and the world situation. The motif for our study took into account many factors: the armistice in Korea, the changes in the military posture of nations and in the regional defense arrangements around the world, and technological advancements, particularly since 1950. Despite familiar Soviet protestations to the contrary, there was no evidence of any fundamental change in Soviet long-range objectives.

After receipt of the JCS study in August 1953, and following discussions in the National Security Council, two basic decisions were made by our President: First, to base our defense program on "preparations for the long pull"; secondly, to maintain "a great capacity" to retaliate by means and at places of our own choosing. These decisions became national policy and the cornerstones to our strategy. Atomic weapons became part and parcel of our military arsenal.

At the top of my list of myths is the one that assumes atomic weapons will remain locked in the barn. I do not believe it. First of all, there is no atomic stalemate. Nor could there be—so long as wars involve human traits of cunning and wit, skill, and training, and willpower and determination.

Besides, the Soviets have not hesitated to break agreements whenever it has served their purpose. The Senate Judiciary Committee has studied nearly a thousand treaties and agreements in which the Soviets have been involved. Their staff found that in the 38 short years since the Soviet Union came into existence, its Government has broken its word to virtually every country to which it ever gave a signed promise.

A Senator once asked me whether I thought any nation, including our own, would keep modern weapons locked in the barn while it went down in defeat using the equivalent of the flintlock. I had to give him a frank and candid answer: "No, I don't." Atomic weapons, like other weapons, are part of our arsenal. It is imperative that every individual with a role in military planning know and understand that this is national policy.

II. STABILITY OVER THE LONG PULL

Through the decades of American history, our military strength usually had its ups and downs. In case of war, we went all-out for mobilization. In case of peace, we went all-out for demobilization. The peaks depicted our alarm in an emergency; and the valleys depicted our apathy in peacetime. Such is the path charted from Lexington and Concord all the way to Korea. Prior to 1950, the United States liquidated the most powerful military machine in American history, and placed it at such a low level as prectically to invite aggression. Even during the first year of the Korean war, we had to more than double our Armed Forces. Again, we paid a heavy price for a swift demobilization, the one that followed World War II.

In the reappraisal of 1953, it was the aim of the administration and the Joint Chiefs of Staff to eliminate forever these cycles of feast and famine. In their place was adopted a defense program based on preparations for the long pull.

Since 1953 strength and defense budget levels have been based on world conditions, on improved military preparedness of other free countries of the world, on improved weapons ssytems, on better utilization of manpower, on the continued Communist threat, among many other factors. There are, of course, a number of intangibles always to be considered when determining our required force levels. One of the greatest intangibles is just exactly where, when, or how the next shooting war might be forced upon us. If we knew we were going to face a major onslaught in the next 6 months, then we might need additional manpower and appropriations. On the other hand, if we were guaranteed that we were not going to be forced into a war for the next 20 to 50 years, our force levels could be reduced. We cannot guarantee such a course of events and, therefore, must be prepared for the possibility of war.

The provision of adequate military strength is indispensable to our future safety. Moreover, it is imperative that from here on out, our country have a defense program that is reasonably stable—one that is not materially disturbed by every hot and cold effort of an unfriendly nation, or wishful thinking on the part of ourselves or a friendly nation. Large upswings or downswings in force levels have disastrous effects upon defense planning, just as they do on business. Not only is this wasteful but it also involves serious risks which militarily we cannot afford to take.

Stability in all the Armed Forces, stability which is being made possible by the President's program, is probably the most important single defense policy we want to see continued. It permits planning, orderly procurement, and efficient operation. It gives us a defensive posture which is readily appreciated and understood by the rest of the world.

III. COLLECTIVE SECURITY

A third key factor is collective security. Most planners believe in collective security; they understand the need for allies. They realize that the Communists are continuing to work for the piecemeal collapse of our friends, and are doing everything possible to undermine Western defenses. National security policy is predicated on our having allies, and on our giving them selective military assistance in building and maintaining those forces of their own which will best contribute to collective military power.

Our collective security and our retaliatory forces give us what might be termed a "two-fisted defense." Like any good fighter in the boxing ring, there is in one glove a defensive fist to meet, parry, and defend against an enemy's blows. This is the collective defense force—the worldwide system of allied forces which constitute the guard or the shield. American forces are part of that shield. By participating in various regional defense pacts, our forces help dissuade a would-be aggressor from a hostile act which would touch off a war. The other fist is the counterpunch—the fist that can retaliate and strike back. The American portion of the retaliatory fist includes long-range air forces, ICBM's, IRBM's, carrier task forces, and our active striking forces of all services.

IV. ARMED FORCES TEAM

A fourth key factor is the nature and variety of our Armed Forces team. Our ability to defeat the major enemy in a global war depends first of all upon our ability to survive the initial phase of such a war, and then subsequently upon our ability to gain superiority over the enemy.

The initial phase, however, could be the decisive phase, since we, the United States, have to assume that we will not be the aggressors and, therefore, may have to survive a surprise attack. At the same time, it cannot be assumed that a next war will be only a short, violently destructive affair, and will terminate in a period of only a few weeks. Hence, our forces also must be prepared to initiate subsequent operations of much longer duration.

We are not, and must not count too much on one weapon, or one service, or one type of warfare. No one weapon, service, or form of military action is sufficient to meet all our security needs. Specifically, the United States needs highly mobile atomic striking forces and strategic reserves in a constant state of combat readiness. We must emphasize forces for defense of our continental U.S. vitals, and for swift offensive counterblows, plus the necessary forms of military assistance to back up and support our allies, thereby increasing their defensive strength. Our national strategy presently requires and probably always will require the combined and varied capabilities of all the Armed Forces.

V. MOBILITY

If our forces are to constitute a real deterrent, we must be willing, and potential aggressors must be made to understand that we are willing to apply quickly whatever power it may take to defend against Communist aggression. To be able to apply power quickly, we emphasize mobility—the ability to move ready forces rapidly into forward areas to reinforce other forces or to fight unassisted.

Mobility needs better definition. We want mobility, and more of it. But all too frequently there is an inference that more mobility is merely a matter of more airlift and airplanes and ships. The advocates of this say that with more airplanes, we could shorten all our time factors for the movement of our divisions and air groups.

This is rather wishful thinking, for mobility is much more than numbers of airplanes or ships. It is, for example, a matter of bases. In addition to the facilities in an area of projected deployment, mobility is also affected by intermediate staging bases and by the status of our petroleum products, both at the end of the line and at intermediate staging bases. Mobility is further affected by the availability of supporting personnel and maintenance personnel, both at the destination and en route, both during the actual movement and during the logistic followup. Finally, mobility is a function of minimum requirements. It is a matter of paring down requirements to basic minimums lest we destroy the very mobility we seek.

The mobility U.S. military planners must seek is the kind that comes first from streamlining the units to be deployed after the technical services have designed equipment that fits into the mobile concept. These comments are applicable to all the services.

VI. TECHNOLOGICAL RACE

Inherent to our mobility is another factor, namely, first-class weapons and equipment. The main danger we must constantly guard against is our tendency to be complacent. In a sense, this is the most insidious weakness a nation can have. Any conclusion based on the premise that the Soviet scientists and engineers are not as well qualified as ours will not hold water. Because of the Communist capability of enforced concentration on technical skills, there is always the grave possibility that the Soviets can develop in some particular field a weapon more radically advanced than one that we may have. No stone must be left unturned to insure that our rate of technological progress is the best.

All political, military, and scientific leaders must help other Americans to understand the great influence that technology will have on the future. This is not to spread alarm, but rather to develop a full understanding of the need for a technological base that is without peer in the world. An increasing portion of our young men must be encouraged to become scientists and engineers, good ones, particularly if we are to develop and support the weapons of tomorrow necessary for survival. Skilled men must be used wisely and not wasted on jobs others can do.

VII. TRAINED, CAREER MANPOWER

Our long-range planning has achieved reasonable stability in numbers within the services. The next step must be to achieve stability of personnel within these numbers—to further reduce personnel turnovers, and increase the ratio of career personnel to total personnel. The governing limitation on the future size and effectiveness of the Armed Forces will not be money, nor weapons, nor research, nor production. The governing limitation will be that of obtaining and holding the qualified people in the numbers we need. Our personnel policies, and our national attitude toward the man in uniform, must be shaped accordingly.

VIII. CONVICTIONS

The final factor has to do with the courage of our convictions and our ability to express and explain the reasons for our convictions. It is obvious the Communists have made amazing gains, largely because they know what they believe, why they believe it, and can explain it. They are educated and completely versed in it.

On the other hand, we who are free have many times been incoherent or have lacked the verbal ability to explain or defend completely what our way of life really is.

Our Founding Fathers established the framework in which freedom could flourish. Those who conceived this Nation, and brought it to life, breathed into it a sense of mission, of destiny, and of progress. As representative government grew, Americans realized that our governmental processes would have to be free of dependence on the few, and rest on the informed cooperation and hard work of the majority. We rejected tyranny, and took up democracy. We became, in fact, the living proof that freedom is the most worthwhile heritage of all.

But this is not a heritage we are able to take for granted. Communism continues to be the major challenge to our way of life. At issue is the true nature of man himself. There are voices which say we live in a world which could be destroyed without notice, that our national values have decayed, that we have no great cause to guide our future history, and thus it is futile to try to maintain feelings of true patriotism and self-sacrifice. This leads, of course, to a newer version of an old saying: "Eat, drink, and be merry, for tomorrow we die." Perhaps this comes from Communists themselves who would like us to think that communism is irresistible.

Yet, the United States, its institutions, its people, and its great progress are refutations of the Communist dogma. Our free system is the complete antithesis of Communist dictatorship. But our Nation must know itself. "We hold these truths * * *"—indeed we hold these noble truths right in our own hands, in trust. If we doubt our mission in the world, we probably will cease to progress. If America ever loses confidence in herself, we will retain the confidence of no one.

Our ultimate strength lies in our faith in God, the same faith that sustained our ancestors against the perils of their time, the same faith that encompasses our greatest hopes for the future.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. LAIRD. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD, study paper No. 7: "U.S. Defense: Policies and Posture," by Dr. Donald H. Ackerman, task force staff:

U.S. DEFENSE: POLICIES AND POSTURE

(By Donald H. Ackerman, Jr., task force staff, formerly on faculty of Western Michigan University, currently on staff of Representative GERALD R. FORD, JR.)

AREAS

1. U.S. defense policies, 1945–52.
2. Long-range goals of U.S. defense, 1953–59.
3. Current issues of U.S. defense policies.
4. U.S. military capabilities—1960 and beyond.

[May 1960]

PREFACE

In a study of past, present, and future defense policies of the United States, so much ground must be covered that of necessity selection of inclusions and exclusions

becomes a great factor. The topic has been divided into four shorter papers which can be used either as entities or as part of the organized whole.

The first, reviewing the history of U.S. defense policies and programs since World War II, serves as a background for the present and compares, in a sense, the approaches of two administrations to the defense picture. Recently, President Eisenhower suggested that such a project be undertaken to show how, when, and why certain issues evolved as they did.

From there, we proceed to an examination of the long-range goals of U.S. defense policy today. Frequently, critics of a program will denounce a specific item without critically examining its place in the total picture. We do have a consistent policy today, and perhaps through an understanding of the long-range elements thereof a better critique of plus and minus factors can be made.

Issues evolving from current defense stature range from the need for personnel increases to the alleged missile gap. Recent indictments of one or more of these by General Taylor, Lanphier, Kissinger, Jackson and others must be answered by hard and fast examination of each component as well as the total deterrent picture, rather than merely by stressing the infallability of President Eisenhower and top military experts.

This total picture is represented by American capabilities now and in the future, taking into account intelligence data, future weapons systems, Russian performance and capabilities, and the future of defense in our world to come.

The recent Johns Hopkins Foreign Policy Research Center report on "Development in Military Technology and Their Impact on U.S. Strategy and Foreign Policy," concluded with the statement that "a relatively stable strategic-nuclear stalemate and a reasonable degree of protection against nonstrategic aggression can be established, provided the United States equips itself with a secure retaliatory missile force and, with its allies, creates strong dual-purpose defense forces backed by readily available reserves." [1]

A close examination of our past record, present posture and future capabilities should convince the thinking public that this protection exists today and will continue into the future.

DEFENSE POLICIES OF THE UNITED STATES, 1945–52

The issues of today are often rooted in the past. While we strive to see present problems in the U.S. defense posture, and look into the future to judge the effect of new weapons systems, diplomatic efforts and defensive developments, many defense policies of our administration are based on lessons of the past—both of a sound or mistaken nature.

On June 30, 1945, the close of the fiscal year 1945, the United States had over 12 million men in its Military Establishment.[2] A war which had cost the Treasury around $350 billion,[3] exclusive of later debt interest incurred and veterans benefits paid, was ending. How we came from that point to the issues of today is a fascinating and vital story.

National security expenditures for the period varied from over $50 billion, in fiscal 1953, to a low of less than $12 billion during 1948. Military strength ranged from the aforementioned 12 million to the 1¼ million plus manpower figures at the close of fiscal 1950. Through the passage of 15 years the strength of our Nation bobbed up and down on the waves of world tension and power relationships.

It is always easy to second-guess with historical hindsight and the related temptations to blame and praise. We can see which alternative would have brought the optimum results, while those taking part in the unfolding drama had no such opportunity. However, it is part of our democratic tradition to examine history with a view toward examining performance as well as antecedents of current issues and trends. As examination of American military posture and policy since World War II is made, one can see that, while both the Truman and Eisenhower administrations performed in superb and ragged style at certain times, it was only with the advent of the latter that a sound, consistent, long-range policy evolved with its purpose to build America's strength to keep the peace.

Disarmament, demobilization and disillusion 1945–52

When World War II ended, American policy recognized the new responsibilities of America in compatibility with the basic interests of free people everywhere. Adherence to principles of generous peace treaties, establishment of the United Nations, emergence of colonial peoples to self-government and democratic institutions for former captive peoples were all undertaken with the hope that the powers of the United States and the Soviet Union would continue their wartime cooperation into the peacetime period.

However, even during the war, some military and diplomatic officials having firsthand dealings with the Russians sent warning after warning that the Soviets had not forgotten their long-range plans of world domination.[4] The Soviet was undergoing only a partial demobilization, planned to leave her ground forces superior to those of the Combined Western Powers. By 1948, the Russian actions had caused revival of conscription in the United States, based on enumerated actions such as: [5]

"The Communist coup d'etat in Czechoslovakia, the excessive pressure put upon the Government of Finland immediately thereafter, the Soviet diplomatic probings on the Scandinavian Peninsula, the severe and annoying restrictions put upon the American occupation forces in Berlin and Vienna."

It took the explosion of an atomic device by the Russians on September 23, 1949, to wake some up to the comparative capabilities as well as the intentions of the Russian military machine. In February 1948, General Gruenther briefed the White House on our military capabilities and their failure to measure up to our intentions and commitments in foreign affairs.[6] The House Committee on Armed Services had by now realized that 1,384,500 men were not enough to enable the services to meet their commitments.[7]

What had happened, among other things, was that the administration, echoing the sentiments of the American citizenry, gave little thought to the method and effect of demobilization of manpower and instead strove to "get the boys back home." Despite the existence of fairly comprehensive plans for demobilization of European troops, a public clamor for this wholesale return, only natural under the circumstances, along with the unexpectedly sudden end of the war in Asia, led to a dilemma solved by putting off the long-range security of the United States until later. As General Marshall testified: [8]

"The rate of demobilization has been determined by transportation facilities and by the availability of trained personnel to carry its administrative requirements out. It has no relationship whatsover to the size of the Army in the future."

Results included the loss of the older and experienced men in units, due to the individual rather than unit discharge plan. There thus was a dearth of trained personnel to adequately occupy conquered areas, to keep unit equipment in operating condition, and to impart training and necessary knowledge to replacements.

Especially was the situation critical as far as disposition of surplus war material was concerned. By 1946, the Army had close to $32 billion in surplus property and the Navy about $17 billion.[9] The program had been slow in forging ahead due to changes in administration from the Surplus War Property Board to the Surplus Property Board to the Surplus Property Administration to the Reconstruction Finance Corporation to the War Assets Administration. Due to the lack of trained manpower, conflicting and complicated criteria and the resultant failure to make an accurate inventory, the goals of prompt disposal on a broad basis with a fair chance for the purchaser, good price for the Government, and avoidance of disruption to the national and world economy alike were not met.[10] It is of interest to note that the value of surplus war property at the end of calendar 1946 exceeded the total military expenditures for fiscal 1949, 1950, and 1951 combined.

On the positive side, our commitments to principles of collective security were both necessary and beneficial. We worked to settle disputes through the United Nations, but a series of Russian vetoes tied the hands of the U.N. Security Council. Through bilateral and multilateral treaties, notably the Rio Pact (September 1947) and the North Atlantic Pact (April 1949), we became fully cognizant that peaceful but free nations must help themselves by promising the assistance of others. Financial, economic, and technical assistance through the Truman doctrine in the Near East, the Marshall plan (Economic Recovery Program) in Europe, and later addition of technical assistance to constitute the point 4 program all over the world had a great impact on our defense programs and showed Americans that we were in the world to stay.

Senator Arthur Vandenberg perhaps best summed up our foreign policy as related to defense by the so-called Vandenberg resolution, which stated that the policy of our Nation was "to achieve international peace and security through the United Nations so that armed force shall not be used except in common interest. * * * The United States should associate itself with such regional and other collective arrangements as are based on continuous and effective self-help and mutual aid, and as affect its national security." [11]

At the time of signing of the Southeast Asia Collective Defense Treaty and Protocol (SEATO) in Manila, September 8, 1954, the United States was tied by defense treaties to

[11] S. Res. 239, 80th Cong., 2d sess., June 11, 1948.

42 other nations [12] and by bilateral defense assistance agreements to 51.[13] The implication for future defense policies and expenditures was plain, even though it took a "conflict" to stop the decline of men and money for the protection of our Nation.

On the home front, meanwhile, a special committee under Vice Adm. J. O. Richardson had since 1944 been studying the matter of unification of the Armed Forces under one head. The recommendations of the committee provided for just such a thing, urging a single department with a single commander and civilian Secretary. They reasoned that because of the failure of necessary integration in theaters of operation "the theater commander's ability effectively and efficiently to carry out his command decisions is hampered by conditions over which he has little or no control." [14] Admiral Richardson dissented. For those who presently quarrel with the Joint Chiefs of Staff system and the "bickering in the Pentagon," it must be recorded that for over 2 years bickering between civilian and military leaders alike reached a new height back in the postwar years, and resulting compromises no doubt led to long-range defense policies existing even to today.

Hearings and debates failed to point up the problem more sharply, and it was apparent that the traditional arguments between the services regarding their roles and missions were being continued in this great debate. The advice of Senator Welsh to Secretary Forrestal leading to the formation of the Eberstadt Committee in 1945 may have held back successful unification of the services for another 4 years. The report recommended change of existing departments to War, Navy, and Air; set up the National Security Council idea; but recommended no superior Department of Defense and paved the way for the inadequate National Security Act of 1947, a compromise in that it tried to unite federation and confederation. Secretary Forrestal commented that "good will can make any organization work; conversely, the best organization chart in the world is unsound if the men who have to make it work don't believe in it." [15]

These and other comments on the National Security Act of 1947 seemed to weaken its effect, which was to establish a federated agency to merely coordinate 3 separate executive departments, and showed that unification was still a theory and not an established fact. It was obvious to groups like the Eberstadt Task Force and the Hoover Commission that the authority of the Secretary of Defense to bring about certain reforms and to exercise control over the military departments must be extended. On August 12, 1949—some 5 years after the Richardson Committee began its deliberations, Public Law 216 was adopted to set up the Department of Defense as an executive department, expand the authority of the Secretary of Defense, and give him staff assistance in the Department of Defense and the military departments.

This seemed too late to mitigate the controversy over missions of the Armed Forces, which raged from 1945 on through the end of the Truman administration. Issues such as strategic bombing, amphibious operations and delivery of the atomic bomb separated service from service and often resulted in decisions primarily affecting one service being made by another with less access to pertinent information and more liable to be based on pettiness and jealousies.

While conferences at Key West and Newport in 1948 solved some current issues, no meeting of the minds within the Armed Forces actually resulted. In 1949, investigations by the House Armed Services Committee turned up a dispute which resulted in waste of money and materials, and which has had its effect on the U.S. defense posture down to this day. Those interested in the details of the controversy can find the details of the B–36-Carrier problem in the hearings and report on "Unification and Strategy." [16] Suffice it to say, the Navy interest in strategic air warfare rather than mere strategic bombing led to opposition of the B–36 as a long-range intercontinental heavy bomber, while Army and Air Force spokesmen felt that the building of the carrier *United States* was a waste of funds, since they saw no logical employment of such a supercarrier in future wars.[17]

Though investigators vindicated the B–36 and never did assure the Navy that carriers would continue to be important, time and subsequent developments have changed the picture to the point where the need for control of the seas is implicit in long-range military strategy.[18] Most budget-conscious citizens felt that the tragedy of this controversy was the cancellation by Defense Secretary Louis Johnson of a project (The *United States*) on which $10–20 million had already been spent. In light of the current efforts of the Navy to build up their carrier force, the far-reaching tragedy may still be felt today.

Following President Truman's recommendation of universal military training, revival of conscription and the Marshall plan on March 17, 1948, the House Armed Services Committee issued a report significant in its contributions to future defense policy. Besides recommending strength to bring the Armed Forces up to about 2 million (something never approved by the administration since our military strength as of June 30, 1950, was still only 1½ million), the committee established the valuable balanced forces principle as a justification for selective service. The committee concluded that "no single military arm can be fully effective unless adequately supported by the other arms" and "a 70-group Air Force is not a substitute for selective service." [19] Since the Army needed "beefing up," a temporary two-year draft was the answer.

Meanwhile, Russia got a taste of America's willingness to use power to promote peace. When a Soviet inspection system of Allied personnel entering the Russian zone of Germany was extended to the halting of all rail, road and waterway traffic between the Western zone and Berlin by August 4, 1958, the Berlin airlift resulted. Were it not for events in Korea, the Truman military policy might well have been judged more favorably, as this would have constituted its high-water marks. Results of the prompt and effective American action included not only a lifting of the blockade the next year, but also a rise of prestige, strengthening of the North Atlantic Alliance, and, ironically, stationing of two SAC B–29 units capable of carrying the atomic bomb in bases in Great Britain.

After the Russian explosion of a nuclear device in 1949 and a growing realization that the Russian threat was on the rise, President Truman announced that he had directed the Atomic Energy Commission to continue its work on the hydrogen bomb as well as all forms of atomic weapons. Coming at a time when some scientists felt the atomic bomb to be an ultimate weapon, this decision turned out to be most fortunate. Since, by October, 1953, Soviet explosion of a thermonuclear bomb had been confirmed, Truman's decision no doubt saved the United States considerable embarrassment in future years. It became evident at this point in history that the United States could no longer slacken research and development because of the feeling that we had reached the ultimate in any weapons system—all weapons systems from then on would be relative to Soviet capabilities in the field.

It appeared that actions of the Truman administration would affect weapons systems for some time to come. The decision on development of the H–bomb added to the U.S. capability, but taking the economically easy way out in other matters had violated the principle of balanced forces and placed so much reliance on SAC and the delivery of atomic bombs that other arms capabilities suffered.

Forrestal reported that President Truman proposed a strictly mathematical limit on defense spending for fiscal 1948, 1949, and 1950, which led to respective ceilings of $11, $12, and $15 billion.[20] Rather than stretching out adequate programs and force levels, the decision was made for reduction instead.[21] While the former policy would have been amenable to acceleration in an emergency like Korea, the latter policy proved disastrous. As Secretary Lovett explained, "We have never found a situation before in this country where we are fighting a war in Korea with one rate of expenditure; trying to provide initial equipment for three services as rapidly as possible; and at the same time trying to provide a mobilization system for vastly larger services." [22]

Those who today talk of a missile gap and look back on recent ICBM and IRBM appropriations often forget the early history of the programs. For fiscal 1961, total ICBM and IRBM funding requests total $3.424 billion.[23] This marks an increase of about 36 percent over fiscal 1960, 8,200 percent over fiscal 1955, and 51,778 percent over the total budget requests of President Truman over the period for fiscal 1946–53, inclusive.[24]

From fiscal years 1946–49, the Air Force MX–774 ballistic missile research program operated on total funding of $2.3 million. This precursor to the Atlas ICBM was stunted quite quickly when the budget request dwindled from $1.9 million in fiscal 1946 to $0.1 million in 1949 to nothing for fiscal 1950.

When Brig. Gen. D. N. Yates submitted the requests and justification for Air Force Research and Development in the fiscal 1952 budgets, the statement was included that "during preceding years, accomplishments in this area for the most part have been minimized due to the pressing requirements for funds in other areas or activities." [25] By the next year, General Craigie was able to state, "this pilotless aircraft program has reached the stage where quantities of test

vehicles are required to obtain the data and experience necessary for the development of the ultimate full-scale weapon."[26] Many feel that an earlier start during the critical years 1948–50 would have resulted in either a reduction or elimination of the missile gap facing us today.

In a speech on January 12, 1950, Secretary Acheson had said that "so far as the military security of other areas in the Pacific (other than Japan, the Ryukyus, and the Philippines) is concerned, it must be clear that no person can guarantee these areas against attack."[27] Whatever judgment historians give to this policy of the administration, these facts remain. First, no military guarantee had been given the independent nation of South Korea. This speech obviously meant that in the event of an attack, they would first have to meet it themselves and then hope for help from the United States. Second, our forces were withdrawn from Korea by late summer, 1949. Third, North Korean ground forces invaded South Korea over the 38th parallel on the morning of June 25, 1950.

Whether a deterrent force in South Korea would have prevented this or if a strong declaration by Secretary Acheson in early 1950 might have changed the minds of those who pulled the trigger will never be known. But the facts are clear. The assistance rapidly dispatched to bolster the South Korean forces marked the advent of military as well as economic, moral, and technological assistance to free nations of the world.[28] It started controversies over terms like "limited wars" and "political objectives." It caused a rapid mobilization of an understrength and underequipped Army. Many today still feel that military action had become necessary as a price of political mistakes.

General Wedemeyer's report on Korea hints at similar views. He felt that American withdrawal could lead only to a Korea unified under Soviet Communist direction, and feared as far back as 1947 that such a development could only weaken the American strategic position in the Far East.[29] Some felt that the economic reasoning for our agreement to the United Nations recommendation for a general withdrawal of troops from Korea was a result of a "background judgment about the relatively minor importance of Korea when weighed against the values of maintaining a clear U.S. position in the United Nations."[30]

From a military point of view, Donnelly states that "new measures to rebuild had been practically countered by the administration efforts to balance the budget and strengthen the Nation's economy."[31] Since the Korean war demanded experienced men, and since the haphazard demobilization of 1945 resulted in recall to duty of those who had served in World War II instead of men who had had no duty, morale was not as high as would have been the case with consistent Reserve and training policies. The buildup of combat effective troops to raise our Armed Forces strength from 1,460,000 to 3,250,000 in a year's time could not be accomplished by mere drafting and training of inexperienced youth. Thus, to many the system seemed unfair, to others insufficient, but to all a haphazard rather than planned policy. To Donnelly, "the effects of the lack of an effective postwar Reserve policy and program became very apparent."[32]

During the period from 1947 on, some progress was made in study and evaluation of the Reserve programs and policies. The report of the Gray board on the National Guard, however, was implemented by a joint Federal-State mission responsibility for the National Guard which set the stage for future conflict between areas of jurisdiction as in the Little Rock dispute. Provisions of the Armed Services Reserve Act of 1952 provided seven components and three categories of Reserve forces. By 1954, it was apparent that insufficient motivation existed for transfer to the Standby Reserve from the Ready Reserve.[33] Weaknesses of the Reserve system eventually were somewhat resolved by the Reserve Forces Act of 1955.

As history has recorded, the Korean conflict slowly ground to a close as the Eisenhower administration took over. Instead of adopting rapid demobilization policies, the President began an era of searching analysis of defense issues and attempts to find long-range solutions to what had been solved previously only by temporary and inadequate actions.

DEVELOPMENT OF LONG-RANGE GOALS OF U.S. DEFENSE POLICIES 1953-59

After the Korean armistice, the Eisenhower administration set out after an evaluation of long-range defense goals which could be pursued regardless of peaks and valleys in the cold war, economic trends and other variables. Admittedly, the Truman administration had programmed such an attempt, but events like atomic explosions, the Berlin blockade, budgetary requirements and finally the Korean conflict upset the timetable.

By 1951, General Bradley came to the conclusion that "we face a period of tension for a long time, and I would think that the only way to solve that is by some long-range policy, military policy, which would provide adequate defense and security forces."[34] However, it remained for President Eisenhower to bring this long-range planning into being, and for the first time the military services could make plans for consistent buildup of forces, research and development programs, establishment of an effective Reserve system and modernization of equipment on a more valid budgetary basis than merely crisis-to-crisis requests.[35]

Over the 7-year span of the Eisenhower administration, events have transpired to indicate that the U.S. defense policy has been channeled into a consistent pattern of objectives and emphases. If we look at the overall picture, we find that these objectives can be classified quite well into five categories, which include:

1. A long-range buildup of forces, based on a capability to defeat aggressors over an extended period of time rather than on critical danger dates. As President Eisenhower said in April 1953, "This policy of ours will not be tied to any magic, critical year * * * but will be based on the sounder theory that a very real danger not only exists this year but may continue to exist for years to come; that our strength * * * must now be made stronger, not by inefficient stops and starts, but by steady, continuous improvement."[36]

2. A flexible and selective posture of deterrent strength. This would include not only the maintenance of strong capabilities for massive retaliation, but also the highly trained and mobile forces equipped with both nuclear and conventional weapons as the situation demands to deal with local emergencies in order to stop their expansion into a general war.

3. The United States must be able to wage war effectively. While we must be able to engage our forces, especially in limited situations, the fact that future wars will differ from those in the past in that deadly blows will be delivered at the outset will make actual warfare a function of both deterrence and continental defense.

4. Establishment of continental defense and warning systems to make the effective destruction of the U.S. retaliatory potential an objective the enemy cannot hope to achieve by surprise.

5. Goals of defense must be coupled with the overall goals of plans for economic expansion. Certainly this is a twofold goal, on the one hand keeping the economy strong and expanding and, on the other, to refrain from letting our military effort interfere unduly with economic expansion.

These consistent courses of action in military circles should lead America to attainment of the national objectives voiced by General Bradley in 1949, when the then-Chairman of the Joint Chiefs of Staff enumerated them as consisting of:

1. The national desire is for peace and security without sacrifice of individual rights or national sovereignty, but not peace at any price.

2. We want the maintenance of our political way of life and our form of government; we do not require other nations to have either.

3. We wish to maintain and raise the American standard of living.

4. We seek peace and security for the entire world.

5. We will work for an effective world organization, based on the United Nations.

6. We hope ultimately for the elimination of warfare as a means for the resolution of international dispute.[37]

The long-range nature of our goals pointed out the fallacy of what President Eisenhower called inefficient and expensive starts and stops. On April 23, 1953, he stated that "for anybody on the defensive position to base his defense on his ability to predict what the exact date of attack would be was crazy."

In later comment about the current issue of personnel, charts show the more steady figures for size of the Armed Forces since fiscal 1955, as presently compared to the rise and falls of previous administrations. Granted that policies of demobilization and rapid mobilization at the onset of the Korean conflict made long-range personnel and fiscal planning difficult, the fact still remains that a drop from 12 million in military forces to 1¼ million and then back to 3¼ million again within 7 years' time constitutes an unbalanced force at best. A sound economy was not aided by national military expenditures ranging from $43 billion to $11 billion and up again to $50 billion within 7 years' time. If practical, a plan based on moderate long-range goals is a key one if proper planning in related fields is to be possible.

This New Look also spread to our international commitments. Early in 1953, our search for revitalization of rearmament led to the North Atlantic Council approving a long-haul schedule of defense planning in April. Again, this did not reflect a relaxation of effort, but rather a firm, continuous commitment of resources as well as a firm distribution of effort throughout the alliance.

Almost all writers on our present defense stature, critic and apologist alike, agree in substance with the goal of a flexible and selective posture of deterrent strength for both general and limited war situations. Definition of terms and practical use of weapons systems to meet this requirement constitute the reasons for debate and difficulties in expressing exact opinions on our defense posture.

Gen. Maxwell Taylor's celebrated outline of 1956, "A National Military Program," showed as the objectives of the national military program "the maintenance of military strength which is capable of dealing with both general war and aggression under conditions short of general war. The military strength of the United States and her allies must be so constituted as to prevent war if possible, limit war if it occurs, and successfully defeat any aggression that may threaten the national interest." [38]

Brodie's work, "Strategy in the Missile Age," propounds this theory in a different way. "Thus it seems inescapable that the first and most basic principle * * * is * * * a great nation which has foresworn preventive war must devote much of its military energies to cutting down drastically the advantage that the enemy can derive from hitting first by surprise attack. * * * It means above all guaranteeing through various forms of protection the survival of the retaliatory force under attack." [39]

The well-publicized study of the impact of developments in military technology on U.S. strategic and foreign policy, conducted by the Washington Center of Foreign Policy Research of the Johns Hopkins University, emphasized the need for balance in the deterrence by stating that "the overriding objective of such a strategic weapons program should not be that of matching assumed Soviet capabilities in number of ICBM's, but, instead, the early attainment of such an inventory of diverse and relatively secure retaliatory systems that the potential aggressor could not have confidence in his ability to locate and destroy a sufficiently high proportion of them to risk launching a surprise attack." [40]

This flexibility was also expressed by President Eisenhower in his state of the Union message of January 6, 1955, when he warned that "undue reliance on one weapon or preparation for only one kind of warfare simply invites an enemy to resort to another," [41] and also the next year, when the President called for a program emphasizing "an effective, flexible type of power calculated to deter or repulse aggression and to preserve the peace." [42] He later clarified this by saying that we must constantly improve our defense by "substituting power, speed, mobility, flexibility for just men."

In terms of the long-range defense policy of the Eisenhower administration, flexibility means a balanced security, where the United States can choose its time, place and means of warfare. By making security generally attributable to scientific and technological development, by increasing the rate of combat personnel to total strength, and by making the most efficient use possible of weapons and techniques, our concept of flexibility means that within the concept of feasibility our military posture must be relative to the emphasis to be placed on airpower and new weapons, and which will reduce forces in some areas and expand in others, depending on the problems posed by general or local aggression. This is to be preferable over staking preparedness on one type of weapon or one type of situation.

The matter of selectivity of deterrent force is one to which little attention has been paid by critics of the administration defense policy. When the late Secretary Dulles made his famous speech before the Council of Foreign Relations in New York, January 12, 1953, he stated that "the way to deter aggression is for the free community to be willing and able to respond vigorously at places and with means of its own choosing. * * * The basic decision was to depend primarily upon a great capability to retaliate, instantly, by means and at places of our own choosing." [43]

This was not a particularly new doctrine. General Bradley, in 1949, testified that "lacking such forces in being, our greatest strength lies in the threat of quick retaliation in the event we are attacked." [44] But when Secretary Dulles announced this policy, critics were quick to condemn this policy of so-called "massive retaliation" as one relying completely on nuclear-armed strategic forces, as one deterring the threat of conventional military aggression on the same basis as deterring a direct attack on the United States, and as one diverting from the creation of tactical forces which could give substance to a strategy of local defense.

This criticism continued despite assurances by Secretary Dulles himself, along with Admiral Radford, Senator Flanders, Secretary Wilson, Secretary Quarles, and others that what some called "massive retaliation" could be better characterized as "graduated, or selective, deterrence."

Brodie fears the assertion that the thermonuclear bomb can do everything, and finds the key question to be in this case finding sanctions for keeping out of action gigantically, powerfully centered military instincts even though we must keep them standing by in order to similarly hobble the opponent." [45] General Taylor feels that limited war forces must be given equal priority with the size, composition and modernization of the atomic deterrent force." [46] He would place main, rather than sole reliance upon conventional weapons. His National Military Program of Flexible Response would contain "at the outset an unqualified renunciation of reliance on the strategy of massive retaliation," and would have the United States "prepare itself to respond anywhere, any time, with weapons and forces appropriate to the situation."

The Johns Hopkins study claims that "the United States and its allies remain in a dangerous position as long as they must rely primarily on the effectivenes of such a form of deterrence (massive retaliation). * * * The precariousness and dangers of these situations will necessarily increase as growing Soviet strategic power diminishes the credibility of the American interest. Therefore, both the United States and its allies have a vital interest in establishing a more reliable deterrent to limited Sino-Soviet assaults." [47]

It must first of all be said that almost all critics have artificial and differing definitions as to what constitutes "limited" and "general" war. Taylor defines general war as being synonymous with a nuclear exchange between the U.S.S.R. and the United States with limited war covering all other forms of military operations. Brodie felt limited war involves deliberate restraint, avoiding strategic bombing of cities with nuclear weapons. The Johns Hopkins study constantly differentiates between deterrents of attacks on the United States and that of attacks upon our allies.

Whatever the definition, and many would say that any difference was purely a matter of degree, the fact remains that the United States has embarked on a program of great diversity involving collective security, foreign assistance, diplomatic leadership, broadcasting truth behind the Iron Curtain, and the maintenance of a powerful military force adequate to cope with the emergencies ranging from limited, local conflicts to total war.

Peeters states [48] that partisanship has failed to prove that the defense program achieved by the Eisenhower administration within the limits of a balanced budget has jeopardized national security because of too much emphasis on air-atomic power at the expense of conventional armaments.

Yet, the criticisms continue. Senator KENNEDY said on August 14, 1958, that "our past reliance upon massive retaliation has stultified the development of new policy", while Senator JACKSON previously had said on February 1, 1956, "up until now, the Soviets have been put on notice that all-out Red aggression could be answered by our air-atomic strength." All these critics had done was to reveal their ignorance of the meaning of so-called massive retaliation and of our overall defense strategy.

Secretary Dulles sought several times to clarify this point. Before the Senate Foreign Relations Committee, he stated in March, 1954, that "the possession of this capacity does not impose the necessity of using it in every instance of attack. It is not our intention to turn every local war into a general war. * * * It seems to have been assumed that we were committed to instant massive retaliation against any form of aggression. That is very far from the truth." [49]

Admiral Radford asserted the same thing when he told the Committee that "our planning does not subscribe to the theory that the ability to deliver massive atomic retaliation is, by itself, adequate to meet all our security needs. * * * I believe that this Nation could be a prisoner of its own military posture if it had no capability other than one to deliver an atomic attack." [50]

The late Secretary Quarles put it on this basis. "If the decision is made to come at our forces, it must be expected that we will at once bring to bear those weapons that will be most effective militarily in the task of repelling the aggression. * * * This is not a program designed to make a big war out of a little one. It is a program to avoid any kind of war through the strength of our deterrent. * * * It is true that the vast strength of air/atomic power may reduce the number of divisions and combat ships we require. It may also reduce the number of combat wings we require. * * * From now on, potential aggressors must reckon with the air/atomic power which can be brought to bear inevitably in whatever strength, and against whatever targets, may be necessary to make such an attack completely unprofitable to the aggressor." [51]

THE THEORY AND PRACTICE OF LIMITED WAR

Despite the obvious intent of our flexible, selective deterrent policy, critics still ask if we have adequate equipment and personnel to cope with another crisis like Korea or Indochina, and what assurances we have that the use of limited nuclear warfare will not spread into an all-out total war. on current defense issues should help with these problems.

At any rate, statements and actions of defense officials have emphasized that the United States must and will keep its Armed Forces so organized, equipped, and balanced that it can cope with any emergency, large or small, with the type of weapons and force which the situation calls for.

General Taylor states that "if one regards the force structure of our three services, one finds that nearly all of the Army and of the Marine Corps, much of the Tactical Air Force, some of the Navy's carriers, and large parts of our strategic air and sea lift must be associated with limited war forces and are available in an emergency." [52]

In his testimony before the Senate Subcommittee on Disarmament, Atomic Energy Commissioner T. E. Murray testified on April 12, 1956, that "increasing concentration should be set on the stockpiling of very small weapons. * * * With this diversified nuclear armament, America and her allied military forces of reasonable size would be equipped to handle all the various wartime contingencies that might arise." [53] This limited warfare by nuclear weapons is a possibility for meeting local war threats.

Critics, of course, state that the use of even limited atomic weapons will snowball into the use of thermonuclear bombs. They claim that Suez, Indochina, and Lebanon showed that limited war deterrence was not aided by limited use of nuclear weapons. They will also say that we need more equipment and personnel, more airlift capability, more SAC combat readiness to stop local aggression.

The answer to all this may well rest on the allegations by Peeters that one more division in NATO or one more division in Korea is not the answer. We would not win a ground war in Korea or Europe today because we are not preparing for it. We do want to deter local aggression by what General Ridgeway calls "military power, real and apparent to all concerned," and by application of that power to specific situations as they arise.

We do have such deterrents to local aggression. Besides our general nuclear deterrent, we have tactical atomic weapons. We have over 2 million men, 900 ships, and 35,000 planes which are certainly more than mere byproducts of general war deterrence. In the Lebanon crisis, we moved in with a great determination to do what was needed at that particular time. Our 15,000 soldiers in the area were as overwhelming at that time and place as were millions in the European theater of World War II. To have committed more planes to an airlift when we had no more airfields or fuel available would have been folly.

Basically, then, our defense policy at present has the determination and ability to deter general war by so-called massive retaliation of all sorts of nuclear weapons of massive destructive capabilities. This "massive retaliation" also has relevance to limited aggression, both in deterrence and in tactical use. In both general and limited war situations, our Armed Forces can cope with any emergency, and will judge on the basis of the situation what action is called for, taking it instantly and successfully.

CONTINENTAL DEFENSE POLICIES

Some will object to the inclusion of a defense goal encompassing continental defense and warning systems. Recent cutbacks in the BOMARC program,[54] and problems created in development of the Nike-Zeus anti-missile-missile system cause doubts that there is a chance of a new weapons generation emerging from development of defensive systems that could nullify progress in the speed and range in the carriers of destructive nuclear weapons.[55]

The Johns Hopkins study cites handicaps of the defense as including the offense's initiative in technological development, in choice of time, place, and method of attack, plus the destructive force of the payload bombers now can carry. Due to the great destructive potential of individual nuclear bombs, an impractically high level of defense effectiveness would be required. The study also concludes that to reduce the impact of the offensive by more than a modest fraction, it becomes more costly than is the price for the offense to take the needed steps to overcome defense measures that have been taken.[56]

However, despite its pessimistic tendencies, the study states that "disastrous consequences could accrue to the side whose opponent first produced a highly effective aircraft and missile defense. * * * The desperate effort to find a defense counter to actual and even potential offensive threats can and must go on." [57]

President Eisenhower, in his budget message of January 17, 1955, announced the creation of a separate air defense command reporting to the Joint Chiefs. Including weapons, aircraft control, and warning networks, the Army antiaircraft and guided-missile battalions, the Navy radar ships and other means of continental defense, this CONAD setup works at constantly detecting, identifying, intercepting, and destroying enemy threats by air. The more practical aspects of this policy will be discussed later. But, as General Partridge pointed out in 1956, "the mere existence of an air defense system in this country forces the enemy to adopt many measures which he would otherwise be able to avoid."

General Taylor's theories for a national military program include reliance upon "a continental defense system, including both active and passive measures, strong enough to prevent an enemy from delivering a crippling blow to the continental United States." [58]

Brodie places emphasis on the defense of our deterrent force, whether by active defense consisting of shooting at enemy planes or missiles or by passive defenses involving hiding, shielding, or dispersing the targets. "Known ability to defend our retaliatory force," states Brodie, "constitutes the only unilateral attainable situation that provides potentially a perfect defense of our homeland. A compromise inability or unreadiness to defend our retaliatory force tempts him (our opponent) to an aggression he might not otherwise contemplate." [59]

So, although admittedly prospects for an effective missile defense are not too promising, the effort must go on. At the time of the Battle of Britain, a 10 percent attrition on attacking bombers was rare indeed. More recently, however, estimates of the probable effectiveness of surface-to-air and air-to-air missiles range around 50 percent. The theoretical possibility thus envisions a defense which could mitigate the increase in weapons destructiveness and the extended geographic scale of the strategic battle.

Wilcox states that it does not appear possible to create a 100-percent effective antigravity screen or other defense system, especially when man now has the means to "kill every living thing on the earth at a level of biological organization higher than that of insects and plants." [60] However, others, knowing that it is difficult to rule out any possibility over the technological horizons, state that present research may yet turn up an antimissile beam or some other similar defense.[61]

Other aspects of the continental defense system include our comprehensive radar early warning system, which has been commonly misunderstood as to goals. Many criticize this drive for 15 or 30 minutes' warnings of coming attacks as of little solace to those killed and displaced by subsequent attacks. However, the early warning system is but one of several means to insure that the effective destruction of the U.S. retaliatory potential is a strategic objective that the enemy cannot hope to achieve by surprise.

Thus the primary purpose of our air defense is not to shoot down bombers and missiles or evacuate cities, but to deter aggression. Antimissile missiles, early warning systems, and other defensive devices are all mere functions of that goal. The recent developments in radar technology permitting earlier detection of ballistic missiles and faster aircraft are important steps in our continuing efforts to deter attacks. Thus the potential loss to the United States in the event of nuclear bombing is so vast that any measures which tend to deter such an attack are not too steep a price to pay.

ECONOMIC ISSUES OF DEFENSE POLICIES

We must guard not only against the Soviet threat in a military way, but we must also have an America which develops with determination its productive power. As Representative GERALD FORD stated at Mount Pleasant, Mich., "I submit that America can and must face up to the hard fact that if our free society is to be preserved, we as a nation can afford neither the luxury of inadequate defense nor an unsound economy stemming from habitual unbalanced Federal budgets. * * * This Nation must reject the philosophy that our only choice in order to prevent military surrender to the Russians is to spend ourselves into an economic and political defeat." [62]

Many critics whose theory involves merely the spending of more money overlook the total Soviet threat in their concentration on defense posture. In countless ways, the Communists demonstrate that military force is but one of the means that they expect to use to take over the world. Director Allen W. Dulles of the Central Intelligence Agency, stated that "while we must be ever mindful of the Soviet emphasis on the military applications of science and technology in order to anticipate any attempts at a breakthrough which would change the balance of military power, it is most probable that the fateful battles of the cold war will, in the foreseeable future, be found and fought in the economic and subversive arenas."

Despite sharp criticisms of restricted expenditures for defense in his RAND study, Dr. Brodie states that "if the criticism is intended to imply that there is too much concern with dollars in the apportionment of resources, and often it seems to have that character, then it is nonsense. The absence of a deep and constant concern with dollars in military claims between weapons systems would argue the grossest kind of incompetence. It (holding the line on defense budgets) has indeed helped in making some choices, especially where inter-service and political issues were not greatly in-

volved. In an imperfect world, that could be much to be grateful for." [63]

When it was first developed, the first-generation Atlas showed an initial cost of $35 million per missile. To get a picture of that price, if 100 workers, each making $5,000 a year, were to turn over every cent of their earnings for the next 70 years, their total wages would buy 1 Atlas. One submarine, loaded with 16 Polaris missiles, costs over $110 million. The B–52 costs $8 million as compared to a cost of just over $1½ million for the heavy bomber used at the end of World War II. The cost of modern weaponry, of course, is no excuse for not developing a strong retaliatory force, but it is a cause for keeping alert to the damages that could result from extravagance.

The constant criticism that the Eisenhower administration is sacrificing strength for economy and that we were trying to achieve national security in the large, economy size is an inconsistent argument without regard for the overall goals of American defense policy. The Secretary of Defense, the Chairman of the Joint Chiefs of Staff, and the Chief and Secretaries of the services have been in support of the President's budgets since 1953; in fact, have in some instances complained that we were overstructured. One might want more of the total spent for one item, but by and large the support given by Taylor, Ridgway, Radford, Carney, Twining, Burke, White, and civilian Secretaries have agreed with the policies of Secretaries Wilson, McElroy, and Gates as to the overall adequacy of the budget for carrying out their assigned missions.

Even if they had not, any attack on so-called economy in defense must contend with the fact that appropriation figures are established by Congress, and over all but 4 of the past 28 years the Democratic Party has been in control of Congress. An attempt in 1959, for example, was made to establish a floor of size for the Army at 900,000, and was defeated by a 43-131 division vote. Congressman WEAVER stated that "for nearly $39 billion we are not buying total, impenetrable defense. If we could spend $200 billion or even 10 times that amount, we would not buy a total defense this year. There are too many, too rapid changes in the scientific and technical knowledge at our command and at the command of a potential enemy." [64]

Since the administration has requested the new obligational authority it has deemed necessary in view of a well-established program of procurement and expenditures (leaving, incidentally, unexpended funds from one fiscal year to the next to make available funds far in excess of appropriations) and since Congress has by and large approved these appropriations with a very small fluctuation,[65] and since it will be argued in the next section of this paper that not to make cuts in certain items would have led to intolerable waste, Peeters assumes that "a stronger defense is not necessarily a more expensive defense" and "it is true that the American economy could support greater defense expenditures, but would the few billion dollars that it could thus support make so much difference?" [66]

Donnelly, in "U.S. Defense Policies Since World War II," summarizes the goals of present defense problems and issues (1957) as including "the economy of the United States is to be kept strong and expanding, readily able to convert in support of a war effort." [67] Basically, national security and solvency are indispensable requirements for keeping America strong. Secretary Thomas Gates agreed in 1960 that defense spending through at least 1964 should be in the general area of $41 billion "because I feel that we are in a continuous struggle with those people that may last for the rest of my lifetime. This is going to be the kind of spending that is going to be required to have an adequate defense. Actually, the present level of defense spending is a high one. It is about $5½ billion higher than what it was in 1955, in fact, it's only about $2½ billion under the Korean war peak." [68] When asked by Chairman MAHON if he thought that for the time being we need not be unduly concerned about whether or not we can keep the ceiling constant and level while the price of everything is going up, the Secretary answered, "That is correct." [69]

It is evident that the United States must have not only the military but also the economic strength to induce the Soviets to refrain from all forms of aggression. On May 24, 1957, Khrushchev stated that "we do not intend to blow up the capitalist world with bombs. If we catch up with the United States in per capita production of meat, butter, and milk we will have hit the pillar of capitalism with the most powerful torpedo yet." [70] Thus inflationary pressures resulting from defense spending for spending's sake could cripple our economic and military strength alike, for us and for future generations.

SUMMARY

We have reviewed in this paper the theoretical, long-range goals of the United States defense policy since the advent of the Eisenhower administration. There seems to be little disagreement on those broadly stated goals. Secretary Gates summed it up by stating that "the two principal objectives of our defense program continue to be: First, to deter the outbreak of general war by maintaining and improving our present capability to retaliate with devastating effectiveness in case of a major attack upon us or our allies; and, second, to maintain, together with our allies, a capability to apply to local situations the degree of force necessary to deter local wars, or to win or contain them promptly if they do break out." [71] This emphasis on deterrence is a logical one, primarily concerned not with the fighting and winning of a war but with the discouragement of Soviet aggression, be it generalized or localized.

Critics of the administration policy have generally failed to assume the need for or advantages of these goals of long-range defense policy. Without understanding at least their basic nature, it is foolish to base an argument on issues like 25,000 men or 6 missile squadrons. An understanding of these goals and their practical application to present defense issues, to be presented in the next paper, can and should make subsequent controversy on the means by which they can be pursued under present and foreseeable circumstances of considerably less sharpness and duration.

An awareness of the place that continental defense, personnel needs, and specific issues such as the so-called missile gap, manned bombers, and other play in the current picture must be the next step in this series of papers. If we bear in mind their place as functions of deterrence to the outbreak of general war and maintenance of capability to apply the proper degree of force necessary to deter local wars, they will fall in a much more orderly pattern. Critics must not lose sight of that orientation, nor can they fail to heed the warning of Senator DENNIS CHAVEZ, chairman of the Senate Defense Appropriations Subcommittee, when he stated that "second only to our need for security is the necessity for keeping our economy strong, for this is the mainspring of the Nation. We know that the Communists believe that our form of government will destroy itself through economic collapse. Excessive spending by the Government, that breeder of rapid inflation, could contribute to such a condition." [72]

CURRENT ISSUES OF U.S. DEFENSE POLICIES

Since 1953, several critics of the Eisenhower defense policies have kept up a fairly steady barrage against various principles of our defense posture.

One classification of criticisms, chiefly instituted against budgetary restrictions, fails to stress positive values, but instead constantly criticizes subordinating a $40 billion defense budget to principles of fiscal responsibility. They offer no suggestions as to the priorities a $45 or $50 billion budget would entail. Rather, they feel that money expended somehow will automatically be channeled to the proper function of the military forces, and will somehow inspire improvement.

More constructive criticisms have come from those who on the one hand have pressed for increases in our retaliatory atomic capabilities, especially in the way of the so-called missile gap, and on the other have bemoaned our lack of conventional armaments and modernization for limited wars. It is a tribute to most of these that not too many take both means of attacking our defenses. However, it is to the administration's credit when one group can ridicule the overkill capacity of our nuclear retaliatory force and extol preparations for limited war while another group searches for an overwhelming nuclear deterrent that will close the missile gap.

Each year the critics seek to convince Congress that billions should be added for Army and Marine personnel, more and faster manned bombers, speedier modernization and airlift capability for limited wars, faster development and hardening of ICBM's, stronger continental defense systems, concentration on disarmament proposals and better Department of Defense organization. Many of these specific issues will be briefly explored in this paper.

However, the best overall reply to these criticisms is to look at the results of congressional deliberations on the defense budget. Under the present system, overall review and coordination on the service recommendations take place at the Defense Department level before Presidential recommendations. Months of review through hearings before the Defense Appropriations Subcommittees of each House result in a budget markup which is approved before the respective Appropriations Committees, the full House and finally the Senate. A conference committee compromises any differences in the bill as approved in the two Houses, and, after final passage, the bill is enacted after Presidential approval.

With all this analysis and these built-in safeguards, and on the basis of expert testimony year after year of over 200 witnesses annually, Congress has cut $3.5 billion from the Presidential recommendations for fiscal years 1955–60, inclusive.[73] It seems that re-

gardless of disputes over "how the pie is cut," Congress seems satisfied with the cost of the entire pastry despite the complaints of individual Members and outside critics.

PERSONNEL

In our stabilized years of 1948–50, our Armed Forces averaged around 1½ million in personnel, following the peak year of 1945 (12 million) and preceding Korean strength of 3¼ million. Programmed for fiscal 1961 is a military personnel of some 2½ million. This marks an increase of 67 percent over the stabilized personnel of the Truman years, and, as we will see, marks an even greater increase due to improvements in the quality of the U.S. personnel due to recent legislation and its factors. Fringe benefits, proficiency pay, and the added legislative improvements have increased the cost of personnel even though they have eliminated the need for excess numbers.[74]

However, attempts are annually made to up personnel figures, especially in the Army and Marine categories. In the hearings for fiscal 1961, we find a typical statement of this philosophy in Representative FLOOD'S remarks on Marine Corps personnel. "I do not want you to have any idea that the Congress of the United States is going to abandon the Marines on this 175,000, because this is not so. We are going to keep at this until you go back to the strength that the Congress and the people think you should be." [75]

These critics cite the low cost of proposed increases—about $50 million to up the Marines from 175,000 to 200,000, and $70 million for an Army increase from 870,000 to 900,000. This is an obvious fallacy, since if proof of a need for such an increase were offered, then the amount of money would not be a serious factor. Congressional sentiment on this point has most recently indicated that such a move has not been justified.

However, the personnel of our Armed Forces is the result, for the first time in our history, of a studied evaluation of supporting the amount and kind of forces necessary in peacetime so as not to jeopardize the Nation's security. Admiral Radford described the plan as "attempting to explore overall manpower ceilings in the various services which could produce major combatant forces, and examined them to see whether they would be adequate. We did not limit—in fact, we encouraged each individual service to do better as far as units were concerned if they could within their manpower ceiling. * * * Under that policy the personnel limitations for the next 4- or 5-year period would be somewhere between 2,800,000 and 3 million.[76]

Contemporary examples of this policy of increasing combat strength of fighting units without raising personnel requirements include the fiscal 1961 addition of two Marine battalion landing teams and two Hawk missile battalions, along with rearrangements that General Lemnitzer described as adding two Army battle groups and European equivalents of two battle groups for fiscal 1961, also without increasing Army size.

Chief reasons for this improvement without increased size have been the fringe benefits and other improvements granted by major personnel legislation since 1955. At a cost of $5.5 billion, estimated through fiscal 1960,[77] legislation such as the Career Incentive Act of 1955, Survivors' Benefit Act of 1956, Military Pay Act of 1958, and seven other public laws has increased improvements far beyond the original hopes of Congress.

Let us take the Army, for an example. Even before the Eisenhower administration some felt that post-Korean demobilization would take the greatest toll on the Army. As of June 30, 1951, the Army strength was 1,531,774. Ten years later its size is planned to be 870,000—a cut which to the eye appears to be one of 43 percent. But is it in actuality?

Improvements in mental standards, health, effectiveness and behavior have made the Army more battle-ready than ever before in its history. The removal of Nike-Ajax batteries to the Army National Guard will relieve about 7,400 Active Army personnel for other duties.[78] The noneffective ratio is now at an all-time low, and the health of the Army is as good as it ever has been.[79] In fact, the noneffective ratio (excused from duty per 1,000 men strength) has lowered from 21.8 in calendar year 1949 to 11.8 in calendar year 1959—a drop of some 8,700 in an 870,000-man army.

Disciplinary problems have dropped, showing a reduction of 9,000 in the Department of Defense from fiscal 1957 to fiscal 1959. This not only has saved the Army in fiscal year 1960 $816,063 as compared to the 1956 expense for apprehension of deserters, absentees, and escaped prisoners, but has led to the reduction of 85 percent in prison population since 1955 and the closing of 4 disciplinary barracks and 15 Army stockades since 1957.[80] Courts-martials have affected 33,000 less in fiscal 1959 as compared to 2 years earlier.[81]

It is of interest to note that Army reenlistment rates increased 7.5 percent from fiscal 1957 to fiscal 1958 (24.8 to 32.8 percent). During the same period, Marine Corps reenlistments jumped 10.7 percent. This not only led to the retention of more trained personnel [82] but also resulted in the earmarking of fewer Army personnel for the purpose of getting others in battle-ready condition. General Lemnitzer testified that "we are getting better people—more experienced people, who are staying in the service. Therefore, less effort is required for training and more effort is available out on the line." [83]

Enactment of Public Law 85–564, authorizing increases in induction standards, has resulted in substantial reductions of the percentage of new intakes from mental group IV, the lowest acceptable mental group, in all services. In the Army, for example, the percentage of Army inductee accessions in this mental group went from 39.5 to 30.8, a decline of 22 percent in 1 fiscal year.[84]

Some have felt that adding up all the "bodies" saved by Army personnel improvements would more than make up for the 30,000 extra men requested by those critics emphasizing the need for more Army forces. At any rate, the expenditure of over $5.5 billion in 6 years to improve the quality of Defense Department personnel is impressive when compared to the issue of 30,000 Army troops and 25,000 Marines.

Secretary Gates summed up this point by concluding that "recruitment capability has improved * * * first-term reenlistment rates have generally increased * * * the enlisted force has become more experienced * * * mental quality is definitely higher in all services * * * and there has been a gratifying reduction in disciplinary rates." [85]

Russian troop cuts required Khrushchev to explain to the Supreme Soviet that "the proposed reduction will in no way reduce the firepower of our armed forces and, this is the main thing, after all. * * * This enables us to reduce our armed forces without harming the country's defense capacity." This policy, followed by the United States since 1953, has made us stronger and not weaker.

Critics of personnel policies of the administration forget that the largest army in the world today could not win a war, even if one could be won or lost, without deterrent strength. They forget the changing basis of war, making large military force a waste. Examples of this include Congressman KOWALSKI'S disclosure of large numbers of enlisted men performing personal services to generals and lesser officers, and the fact that one man today can fire a machinegun with the firepower that took 1,400 men to duplicate in flintlock days.[86] Personnel cuts do not necessarily amount to combat personnel cuts—under the Eisenhower administration personnel policies have led to stronger, combat-ready military forces.

THE MISSILE GAP

The idea, fancied or otherwise, that Russia is several years ahead of the United States in the production of missiles has led to the defense controversy of our time—the missile gap. In the early months of 1959 and 1960, disclosures by defense officials, Congressmen, and civilian experts that from 1961 through early 1963 the Soviet lead in ICBM's would range up to a 3-to-1 ratio caused a stir replacing the manned bomber controversy as a headline topic.

Joseph Alsop, of the New York Herald Tribune, penned a 6-part series on the missile gap in February 1960, stating, among other things, that "the Eisenhower administration is literally playing a gigantic game of Russian roulette with the national future" and "if these first estimates (American intelligence estimates prepared at the time of the first sputnik) happened to be correct, the Kremlin may already have enough ICBM's to wipe out our nuclear deterrent." Walter Lippmann called the philosophy behind the 1961 Eisenhower budget "deadly, and it will reduce this country to a second-class power."

Secret testimony on January 29, 1960, by CIA Director Allen Dulles credited Soviet missiles with greater accuracy than estimated by Secretary Gates a week before, according to Senator HENRY JACKSON, of Washington.[87] He stated that "nothing in the briefing warranted taking the risks I think Gates is taking in the missile field." A week or so later, the situation had proceeded to the point where Senator SYMINGTON told the Preparedness Senate Committee that if the administration did not admit the official intelligence estimates shows the future missile gap to look worse than it did in last year's estimate, he would give the true percentage figures to the public.

Even General Taylor, who had a year before testified to the excess of our retaliatory massive deterrent, published a book confessing that he had reluctantly come to accept the "reality and significance of the so-called missile gap. * * * Somehow it must be made clear to our citizens that the Nation will face a serious crisis beginning in about 1961. For a period of years thereafter the balance of military strength will tip dangerously in favor of the Communist bloc unless we take drastic action now." [88]

Experts have fixed the greatest danger as occurring in 1962 or possibly 1963. Gen. Bernard Schriever, commander of the Air Force Ballistic Missile Division, said the So-

[74] The Air Force, with 100,000 fewer men, has added $300 million in their personnel budget—the Navy $150 million for 57,000 fewer men, all in the past 5 fiscal years. (See House defense appropriations hearings, fiscal year, 1961 II, pp. 136, 329.)

[88] Taylor, op. cit.

viets could achieve the capability of launching relatively large numbers of missiles in salvo by this date.[89] James Shepley finds that the Soviets are assumed to be capable of 500 ICBM's by 1962 compared with a programmed force of some 200 U.S. ICBM's by mid-1963.[90] Alsop, more pessimistically, estimates force levels as 30 vs. 100 missiles in 1960; 70 vs. 500 in 1961; 130 vs. 1,000 in 1962 and 1,500 in 1963. He feels this gap will exist until it closes by mass production of solid-fuel ICBM's in 1965–66.[91]

Former Secretary of Defense Neil McElroy was quoted as saying in 1959 that, "If the Russians build all the ICBM's they can and if the United States produces the number it now plans, the USSR will maintain a 3-to-1 lead through the early 1960's."[92]

After questioning by the Defense Appropriations Subcommittee in preparation for the fiscal 1961 budget, Secretary Gates submitted a statement to the effect that "on the basis of our current intelligence * * * we do not believe that the Soviet superiority in ICBM's will be as great as that previously estimated."[93]

The picture is thus one of an acknowledged missile gap, with ratios running anywhere from slightly in favor of the Soviet Union to the 12-to-1 extreme reached by Alsop. The probable Soviet lead in numbers of ICBM's during the early and middle 1960's which may neutralize the U.S. strategic deterrent seems to some the greatest danger to its security that America has ever found.

Before the numbers game leads the reader to panic, may I state parenthetically that there are certain characteristics which must be asserted about this missile gap before proceeding further. This gap is not due to the policies of the present administration, and is narrowing, even though the gap is, in a sense, deliberate. It is based on our intentions and the Soviet Union's capabilities. Russia and the United States, due to certain capabilities, cannot be compared in a sense, anyway. Finally, ICBM's are but one of a total picture which shows the United States far ahead in total deterrent and general military strength in 1960, as it will be in 1962, 1965, and for years to come.

The fact that Russian capabilities rather than intentions are taken account of by the missile gap theorists is a critical distinction. Four years ago it was estimated that the Soviet Union could have by 1959 600 to 700 long-range jet bombers in operational units. As we now know, they did not divert the entire energy and scientific capability needed for this and instead built only a fraction of that number. This is why Secretary McElroy last year was careful to define the missile gap as being the difference between the number of ICBM's the United States actually plans to produce and the estimated number that the Soviet Union could produce.[94]

Thus, if the missile gap is supposed to be 300 to 1,000 (a good educated guess) by 1963, there is no reason to assume that the United States could not build more than 300 by that time if it so desired. For example, a new Pentagon order in March 1960 sped up long-range missiles by increasing the number of Atlas long-range missiles on launching pads during calendar 1962 to 12 missiles on each of 6 bases, rather than only 9 on each. This could be done again.[95]

Also, there is no reason to assume that the Soviet Union would reach its potential in ICBM's any more than it had in manned bombers. Secretary McElroy stated that "past experience has demonstrated that the Soviet Union does not always do what the estimates say it could do. * * * It (the missile gap) is not intended to mean that the Soviet Union will actually produce the numbers of missiles that have been estimated."[96]

A glance at the history of the missile program shows why we are still at work catching up with the Russians. IRBM funding, of course, did not start until shortly after the beginning of the Eisenhower administration, with a $4.4 million request for fiscal 1956. Meanwhile, ICBM funding, limited to $6.6 million total budget requests from World War II through fiscal 1953, jumped to a request of $13.9 million in fiscal 1954 through a $2.47 billion original request for fiscal 1961. Total requests in the Eisenhower administration totaled $7.061 billion, or over 1,000 times the rate of expenditure under 8 years of a Democratic administration.[97]

An example of the 1945-type thinking is revealed by the statement of Dr. Vannevar Bush, wartime Director of the Office of Scientific Research and Development, who said that a 3,000-mile rocket was impossible and would be for many years. "The people have been talking about a 3,000-mile, high-angle rocket, shot from one continent to another, carrying an atomic bomb, and so directed as to be a precise weapon which would land exactly on a given target, such as a city. I say, technically, I don't think anybody in the world knows how to do such a thing. * * * I wish the American people would leave it out of their thinking."

Fifteen years later Lieutenant General Schriever was able to tell the following story: "In February, 1954, Dr. John von Neumann told the American Air Force that an operational ICBM could be achieved by this country in from 6 to 9 years, provided that an all-out development effort was initiated immediately. On September 1, 1959, the Defense Department announced to the American people that the Atlas ICBM had become operational. This was just a little over 5 years from the time that the accelerated ICBM program had gotten under way." Atlas had a range of over 7,000 miles (as of May 20, 1960, over 9,000) as compared to a 5,500 range set by the Von Neumann committee, while their hopes for a 5-mile accuracy goal has been by far exceeded by shots within 2 miles of the target.[98]

In his history of the ballistic missile program, Representative AREND states that today these programs involve the "expenditure of 10 times as much each day as was spent in all of fiscal year 1952."[99] After showing how skepticism as to the practicability of long-range ballistic missiles held efforts down to low-support studies, AREND concludes that "it is hardly remarkable that as of 1960, 15 years after World War II, American long-range rocketry is in some respects matched or surpassed by the Soviets. What is remarkable is how rapidly the ICBM and IRBM programs of the United States have advanced in less than 6 years.[1]

Even the Committee on Science and Astronautics of the U.S. House of Representatives, in summing up their study of progress of the Atlas and Polaris missiles, concluded that "the fact is that both projects are progressing at a highly satisfactory rate and that there is no doubt in either the Air Force or the Navy that their respective missiles will be operational on or about their scheduled dates" and that "both the Air Force and the Navy have achieved an outstanding record in the planning, organization and management of their respective research and development missile programs.[2]

Once missiles proved out, the Administration has been quick to expand and speed up successful programs. In March and April of 1960, the Defense Department added $90 million to the Atlas program, $27 million to long-range Minuteman appropriations, and $153 million to the Polaris IRBM program; all for the fiscal 1961 budget. For that matter, President Eisenhower, contrary to the notions of his critics, added almost half a billion dollars to the Air Force submission for missile procurement for fiscal 1961, from $2.610 billion to $3.024 billion in his budget estimate.

Clearly, Administration policy has been to rectify past mistakes and errors of judgment in previous estimates, upgrading where the probability exists of benefits accruing for our deterrent program. Our missile program is now at a more than adequate level. General Lemnitzer testified that "there was general agreement on the overall ICBM, or Polaris-type program—retaliatory missile program, let us put it that way," when questioned by Congressman Ford as to the opinion of the Joint Chiefs on the adequacy of the ICBM program for fiscal 1961.[3]

In answer to "numbers critics," General Thomas White said on January 31, 1960, that though the Russians may be ahead in missiles, in the whole defense picture "I don't think we're behind at all. * * * The U.S. missile program and our defense program is a properly balanced one, in my opinion, and will continue to give us the deterrent capability we desire."[4]

The same day, Secretary of Defense Thomas Gates, while admitting that Russia will have slightly more missiles until we start catching up in 1962, said "we believe we are in a first rate, first position compared with Russia. We are expanding our missile program * * * putting missiles in our bombing force and bringing into operation Polaris submarines which we believe will offset any so-called missile gap, at least from the point of view of the validity of our deterrent."[5]

Therefore, because of the difference in the needs of Russia and the United States, and because of our concentration on a balanced deterrent force, a numbers game is mere nonsense and, in a sense, our failure to pour money and men into indiscriminate crash programs for missiles is not only due to the unfeasibility and waste of such a program, but is also a measured decision.

In answer to questioning of Representative MAHON, who asked, "is it not correct to say that the so-called ICBM gap has been more or less deliberate in view of the many circumstances in the defense picture?" General White replied, "I think that is correct, everything considered." Mr. MAHON continued, "Would it have been better if we had gone crashing through and been able to

match missile for missile in the intercontinental ballistic missile field?" General White replied, "I do not believe that with our lead in really good manned aircraft that it need have been closed. I do not regret that we have not done it.[6]

Why? For one reason, Russia has much more need to build ICBM's than the United States.[7] Since they are by nature most liable to commit a surprise attack, a missile is a more useful weapon for them, but merely one of several weapons systems in our deterrent posture. Russia does not have the advantage of a circling ring of bases from which to launch IRBM's, nor Polaris submarines to lob missiles from under water onto enemy shores; thus must concentrate on longer-range missiles. The lack of balanced forces and deficiencies in aircraft carriers, manned bombers and amphibious forces has further made Russia a one-weapons-system nation, and spurred them to concentrate on missile research, development and production.

Despite the claims of the missile gap critics, several of our military leaders feel that we have developed an overkill in retaliatory forces. On page 330 of volume I of the House Defense Appropriations hearings for fiscal 1960, General Taylor testified that "when I add together all those vehicles capable of delivering the atomic retaliatory attack, in my judgment the aggregate is excessive to the requirements." This despite his recent conclusion that "there indeed is such a gap which * * * has a most significant bearing on military security."[8] General Pate, Admiral Burke and General Twining agreed in many ways with his fiscal year 1960 opinions in their testimony.

The ultimate answer to the missile gap critics is that you can play the numbers game in many ways and come out with almost any ratio you choose. Do you count the Polaris or not? Do you include the air-breathing intercontinental missile, the Snark? Do you use the capabilities of the Soviet ICBM force, or their actual intentions? Do you include factors like hardening, early warning, mobility and accuracy? Nothing detracts from the fact that any missile gap ratio is a guess based on the assumptions of the guessor.

Even with an agreed ratio, the missile gap, closing though it may be, is a false index of the relative power of two nations with widely divergent needs and backgrounds. We include the ICBM as only one element in an overall military capability which takes advantage of control of the seas, regional alliances throughout the free world, superior bombing forces and other strong points. Thus we limit our first-generation ICBM production and concentrate on the Minuteman and other missiles of the future.

Basically, then, our strength is superior to that of the Soviet Union, changing the critic's quizzing to the more logical question of whether Russia can ever catch up with us in overall deterrent capability.

MODERNIZATION

One of the key issues of modern defense is the problem of modernization, especially in view of personnel problems of today. The Eisenhower administration has consistently planned for modern weapons systems, strategy and transportation devices to greatly increase the combat strength of fighting units.

The Department of Defense has done much to accelerate research and development on a scale which would meet the Soviet challenge in the modern arms race. An Assistant Secretary of Defense was provided for research and development under the reorganization plan of 1953 while a 1956 proposal to provide research and development assistant secretaries for each of the services failed to win congressional approval. We find that in fiscal 1955 only $3.4 billion was spent for overall Department of Defense support of research, development, test, and evaluation work as compared to a request of $5.2 billion in the 1957 budget. This request was over twice the estimated annual expenditure for research and development by private industry. Much use has been made of university and private research organizations on a constant contract basis in pushing this enviable record forward.[9]

ARMY

In the past 6 years much has been accomplished toward the adaptation of nuclear weapons to tactical use, along with development of new conventional weapons, as well. The older "square" division of infantry organization, more suitable for the time of trench warfare, has been converted to pentomic divisions, with five combat groups, organized around five rifle companies. Thus a change has been made in the interest of mobility of movement, especially by air, resulting in a reflection of Army adaptation of tactical doctrines to the nuclear age.

As the Army has become more modernized, its combat-effective ratio has increased greatly. After the Korean conflict, the Army had a total of 567,000 combat troops as compared to 966,000 others, a ratio of 1:1.7. By the end of fiscal 1956, this ratio had been reduced to 1:1.1, almost parity.[9a] This ratio between combat and support forces, almost an exactly balanced force, has led to cuts in the noncombat forces and more effective use of Army personnel, even though plans for fiscal 1961 only approached a 1:1.4 ratio.

One of the big issues of defense today is the claim by some Army spokesmen that modernization has been held up by the lack of available funds. In 1960, the Army presented a shopping list of equipment that would be bought to expedite the modernization of the Army if additional funds were made available. Included were battlegroup assault weapons and ammunition, combat vehicles, artillery; air mobility, missiles and rockets (Pershing, Honest John, Little John, Hawk, Redeye, and Davy Crockett), communications and electronic equipment and tactical vehicles. The total cost of the shopping list for 1 year in added funds would be, by the Army estimate, $928 million.[10]

Actually, a sound program has been developed which provides significant quantities of equipment in all of these fields, and which is based on an overall view of modern forces which takes into account needs of the Army, Navy, Marine Corps, and Air Force alike. In this orderly improvement of Army capabilities, both conventional and nuclear Army procurement has been raised to $1.5 billion in recommendations for fiscal 1961, as compared to just over $1 billion 2 years before. It is significant that in the Army ordnance and vehicle procurement activity (the bulk of ground force modernization) the 1961 level is over 300 percent of the 1959 figure. In the research and development account, the gateway to future modernization, almost three-quarters of a $1 billion plus Army R. & D. budget for fiscal 1961 is devoted to support of all problems facing the maintenance of a modern Army.

In looking at what this money is already buying for the Army, we find first of all that missiles have been accented. First deliveries will take place in 1961 of the Davy Crockett (man-carried, nuclear capable rocket for the use of frontline troops), Little John rocket (lightweight and air transportable) and Sergeant missile (larger and longer-range). Initial procurement of the Redeye is provided for in the fiscal 1961 budget, with that portable missile earmarked for the defense of forces in the field against low-flying aircraft. Finally, new deliveries in the coming year will increase inventory of the Hawk surface-to-air missile, providing field forces with a mobile defense against aircraft and air-breathing missiles.

Small arms modernization has been accelerated to the point where the Army will receive some 180,000 new M–14 NATO-standard 7.12 millimeter rifles and 15,000 7.62 millimeter machine guns in 1961, with the budget also allowing for procurement of another 120,000 rifles and 12,000 machine guns. Acquisition of surveillance drones, modern helicopters, and the Mohawk turboprop observation aircraft will allow for greater battlefield surveillance, while procurement of the lightweight M–113 armored personnel carrier, two types of improved helicopters, and the Caribou transport aircraft, along with 21,500 trucks, tractors and jeeps, will enhance greatly tactical mobility.

A few years back, constant criticism was heard of the World War II vintage tanks and artillery still in use by the Army. During fiscal 1961 alone, 720 new M–60 tanks armed with 105 millimeter high velocity guns and equipped with a longer range diesel engine will be delivered, while the new budget provides for a continuation of this procurement along with first procurement purchasing of a new family of self-propelled artillery pieces.

In addition to this, action by the House of Representatives for fiscal 1961 added some $207 million to the Army modernization program, which will allow the Army to procure additional quantities of the new M–14 rifle together with ammunition for the rifle and the new 7.62 millimeter machine gun, 600 additional armored personnel carriers, 300 additional battle tanks with supporting ammunition and fire control equipment, additional artillery pieces with necessary supporting equipment and ammunition, over 6,000 additional Davy Crockett weapon systems and 13,000 additional 115 millimeter chemical rockets and multiple launchers." [11]

NAVY

The complexity of Navy modernization was best expressed by Admiral Burke, who stated that "we are going from props to jets, from oil burners to nuclear reactors, from subsonic to supersonic, from TNT to nuclear weapons, from conventional shells to missiles, from atmosphere to space." [12]

Specific examples of Navy modernization include the commissioning of the Nautilus in 1955—bringing a new age of ship propulsion. Since then nuclear power has been used whenever combat advantages justify the additional cost, as in the use of nuclear aircraft carriers. Cruisers and submarines have been equipped with the Regulus I, a surface-to-surface weapon, and more recent improvements of that missile.

The 1960 operational status of the *Polaris* submarine means that our vessels can carry, submerged in the ocean depths, 16 missiles, each capable of destroying a good-sized city. It is relatively invulnerable to ICBM attack and thus forms a great part of our retaliatory capability. While original proposals were geared to progressive expansion of our Polaris force at a minimum rate of 3 per year, recent modifications by the President and by the Department of Defense have led to an expanded Polaris program, completely

financing 14 submarines and partially financing 7, and thus providing for a 21-submarine program which will add 336 Polaris missiles to the strategic forces of the United States.

In propulsive power, the Albacore-type submarine with a hull designed for minimum underwater resistance has meant that its speed and maneuverability under water is greater than anything that we have had before. When combined with nuclear-propulsion power, a new field has been opened up for naval vessels to operate under water. Present emphasis in the Navy is on antisubmarine warfare. Secretary Thomas told the Senate Armed Services Committee in 1956 that "this problem receives our highest, our best, and our constant attention."[13] The House took this problem most seriously as well, adding $321 million to the defense budget for fiscal 1961 for ASW in financing three nuclear attack submarines, two destroyer escort vessels, and financing further high priority research efforts in this field.

It is fairly evident that House action in adding some one-half billion dollars to the Navy modernization and development program for fiscal 1961 takes note of the importance of seapower and control of the seas during any future general or limited war. The $293 million saved by their deletion of an aircraft carrier which had been requested may still be reversed by Senate action, and most of those who view the Polaris and carrier as complementary units feel that both are needed even in times of nuclear wars.

AIR FORCE

While the Army has increased battlefield mobility and capability, the Air Force has achieved a similarly spectacular change and adjustment in the art of warfare. "In adaptation of jet power to produce higher speeds and altitudes, development of air refueling to make two-way intercontinental operations feasible, and greatly improved weapons systems in the field of strategic air warfare, modernization of the Air Force has been especially significant."[14]

In 1953, our strategic retaliatory forces consisted of propeller-driven B–36's and some medium-range B–47's. Today the B–36's have been replaced by B–52 jets, and supersonic B–58's are augmenting our B–47 striking power. Since the feasibility of lightweight nuclear warheads became evident in early 1954, thousands of smaller land and carrier-based aircraft also acquired a nuclear capability.

Our long-range bombers are supported by a fleet of refueling tanker aircraft, and are being equipped with Hound Dog air-to-surface missiles which can be launched hundreds of miles from their targets. When the Sidewinder comes into operation, this distance can be approximately doubled. Thus planes can disorganize defenses from a distance, come in with safety, and perform their missions still carrying a payload several times greater than an Atlas missile.

Research and development continue on the B–70 prototype program. Problems of large airframes and propulsion systems at Mach 3 (three times the speed of sound) are now being explored with future consideration of this plane as a weapons system, though many doubt its advantage over the B–58 against the ground defenses of 1965, 1967, or 1968, when varied estimates have been made as to the operational date of such a system. By 1965, as well, four systems of ICBM's will be operational, thus raising the issue of weapons systems competition and duplication.

Air Force modernization also looks to the future. Besides expansion of forces equipped with the Atlas, Titan and eventually the Minuteman ICBM, a progressive buildup to three wings is planned for forces equipped with the B–58 supersonic bomber. Our mix of Matador-Mace missile squadrons will go completely to the Mace missile by 1962, completing the operational setup of four squadrons. It should be noted that the Mace missile by far exceeds the total explosive power expended against all Axis military targets in Europe during World War II.

Thus we see that today an intensive program is under way to expand and improve all elements presently giving us superiority over the Russians, while progressing through the research stage on new projects to continue this. In research and development as in procurement, the most modern and effective techniques and equipment possible are being provided for our Armed Forces here and abroad.

U.S. CONTINENTAL DEFENSE

Obviously, the first line of U.S. continental defense is the deterrence of war through a strong retaliatory force capable of discouraging aggression. An aggressor seeking to destroy the United States would first need to insure that we could not retaliate with force great enough to cripple his own warmaking potential. Through our primary goals of defense policies, we seek to assure a strong deterrent which will make continental defense an unneeded luxury.

However, for several reasons, the United States finds it necessary to develop a strong continental defense system, both now and in the future. For one thing, the usual assumption is that we will never be an intentional aggressor, making it necessary to provide the means by which our defense can soften blows to the point where we could develop and deliver a devastating counterattack. Also, the fact is that the first nation that develops a highly effective defense against aircraft and missile attacks would thus have the ability to threaten war without fear of major retaliation.

This may be an impossibility, due to the initiative possessed by the offensive in both technological development and choice of the time, place and method of attack. At any rate, many now feel that there is a possibility of a weapons system to deal with ICBM's, even though these experts doubt mastery of such a system. Certainly the potential loss to the United States through a missile attack is so great that any measures to try to alleviate the damage from such an attack are worth while. General Partridge, the commander in chief of CONAD, stated in 1956 that, if air defenses were strong enough, losses to an enemy trying to get through would act as a deterrent other than mere fear of retaliation. It must be borne in mind, however, that he was speaking primarily about manned bombers and defenses against them, though many feel our greatest threat is currently still from this source.[15]

While the search for antigravity screens, antimissile beams, and antimissile missiles goes on in the field of research and development, the United States has also tried to combine the elements of continental defense under one master plan. Establishment of the CONAD (Continental Air Defense Command) has led to a vast complex of radar warning nets stretching across the northern edge of the continent and extending down across the Atlantic and Pacific approaches. One BMEWS (ballistic missile early warning system) station will be in operation during calendar 1960 and another next year. Giving us warning of ballistic missiles on their way toward us will permit us to launch a retaliatory strike. Long-range radars will be able to detect an enemy ICBM at about the midpoint of its trajectory. The MIDAS early warning system, under accelerated development, would be able to detect enemy ICBM's at "blast-off" time, thus giving us 30 minutes warning instead of 15, enabling a very large part of our bomber and missile forces to be on the way with counterstrike force. The evaluation and coordination of information secured from various aspects of our continental defense system by SAGE (semiautomatic ground environment) has[16] increased the capability of our air defense system by a factor of something like 5 or 10.

If a manned aircraft attack should come, nuclear-capable surface-to-air missiles, such as the Nike-Hercules and Bomarc, as well as all-weather supersonic interceptors armed with air-to-air missiles (some with atomic warheads) all stand ready to repel the attack. In the case of missiles, of course, the problem has been accented. In efforts to develop an effective ICBM defense, development work has been under way for some time on the Nike-Zeus system, as well as on the Bomarc B and advanced Defender project, which tries to explore detection, warning, tracking, discrimination, and destruction of missiles on a new basis.

Some time ago, the Army established an aggressive antimissile program,[17] under their responsibility for point defense as contrasted with the Air Force area defense concept. Through fiscal 1961, over $1 billion has been provided for our most advanced effort for an effective antimissile defense. As of now, many problems remain. A range of only 75 nautical miles is provided, thus creating the need for Nike-Zeus installations in great numbers. Prospects of the Nike-Zeus, to some, look brightest as far as spot defense of a relatively few vital targets from a relatively primitive missile attack.[18]

Since Nike-Zeus relies on the same general concepts of active terminal defenses as does the Nike-Hercules, skepticism has been aroused as to its effectiveness against swarms of warheads approaching targets at speeds of 250 miles per minute along with confusing and disrupting devices.[19] Though the Army requested $1.5 billion for Nike-Zeus for fiscal 1961, it was cut to research and development money of $302 million by the Secretary of Defense on the recommendations of the Joint Chiefs, a difference of over $1.2 billion.[20] To go into production at this time was thought impossible by these experts along with the Appropriations Subcommittee and, for that matter, the House of Representatives.

O. M. Gale, Special Assistant to the Secretary of Defense, stated in a letter of April 19, 1960, that "we still don't know whether this system is really going to work, and if it does work, whether it will work well enough to justify the investment of the $15 billion or more that would be required. It seems prudent to withhold our decision until our problems are licked."

However, as stated previously, we must continue to try to find a defensive counter to actual and potential offensive threats, as "desperate and disastrous consequences could accrue to the side whose opponent first produced a highly effective aircraft and missile defense."[21]

Besides early warning systems and supplementary 15- and 30-minute alerts, and over and above the need for active defense against bombers and missiles alike, the administration has concentrated to date on so-called passive defenses such as hardening and dispersal of our retaliatory weapons and civil defense policies to more or less harden our population in an organized fashion in underground shelters.

[21] Johns Hopkins, op. cit., p. 70.

We plan to expand forces equipped with Atlas missiles to a total of 13 squadrons by 1963. All but the first of these squadrons will be hardened in underground sites and dispersed. In 1961, forces equipped with the Titan ICBM will become operational, with that force built up to 14 squadrons sometime in 1963, all in hardened bases. When "in-silo" launched capabilities and storable fuels are added to the Titan, we will be even better prepared to meet the threat of a sudden enemy ICBM attack.

Recent administration action included planning for 12 missiles on launchers at each of the last 6 Atlas squadrons rather than the previously planned 9. One reason why this is important is the subsequent raising of the number of attacking missiles required for the destruction of our retaliatory force. Murphy estimated in April 1959, that if the Soviets attained an ICBM of high reliability (less than 2 miles accuracy) and a 2-megaton warhead by 1962, at least 13 such missiles would have to be launched at a hardened ICBM site to provide a 90-percent probability of its destruction; or a salvo of 1,500 missiles to destroy the then-programmed U.S. force of 110 Titan hardened and dispersed missiles. With a missile accuracy of only 3 miles by 1962, the total number required to take out the Titan force would increase to 6,000.[22] Recent expansion of planned Atlas and Titan squadrons would raise that number to a figure even farther from the scope of reality.

The administration has been careful to disperse and harden Atlas and Titan squadrons rather than merely to try to match numbers with the Soviet. A large number of cumbersome first-generation ICBM's, especially if deployed in fixed, unprotected positions above ground, is hardly the answer to the problem, and would expose the missile to easy destruction by enemy ICBM's.

Thus we will concentrate on second-generation, solid-fuel ICBM's like the Minuteman, which will be moved around the United States on railroad cars, and which will be capable of survival even when deployed in fixed, but well-dispersed and hardened, underground sites. Starting in 1963, forces equipped with the Minuteman ICBM's will become operational, and some hint that it may be much sooner than this.

Our mix of continental defense components were further implemented by action of the House Defense Appropriations Subcommittee this year. Funds were provided in the bill for both the ballistic missile early warning system, to detect and track missiles once they are well on the way to targets; and for the Midas early warning system to provide almost instantaneous warning through a satellite project to detect mass missile launching. The committee provided extra funds for the Midas, Samos, and Discoverer space projects. On May 24, 1960, a Midas test satellite was orbited and drew attention as a "spy satellite" in light of the then-recent U–2 spy plane incident.

The committee provided an increase in airborne alert funds, not for the purpose of instituting such an alert, but for "the procurement, storage, and distribution of the extra engines, spare part stocks and supplies that would be necessary to sustain the accelerated rate of aircraft operation should it become necessary.[23]

Re-evaluation of the air defense program by the Air Force and Department of Defense in February 1960, resulted in a voluntary reduction of $381.1 million in funds for the Bomarc-B program. Further reductions were instituted by the committee, which were applied in the amount of $215 million to fighter planes as replacements for Bomarc missiles. Combined with continued research on the Bomarc and Nike-Zeus, the procurement of an additional two squadrons of F–106 fighter aircraft, fully equipped and ready for operation, establishes a much more desirable move "from the standpoint of an overall defense posture."[24] Added to this, of course, are the consistent efforts being made by the OCDM and other groups to increase awareness and adequacy of civil defense operations.

Johns Hopkins' report concludes that "a high degree of national security is likely to remain an objective unattainable by military means during the next decade."[25] However, we will continue to emphasize research toward this end, and meanwhile will depend on our ability to deter an enemy from using his strategic weapons, destroying them before they can be used, and protecting our retaliatory power by the dispersal, multiplication, and mobilization of our weapons systems.

REORGANIZATION OF THE DEPARTMENT OF DEFENSE

It was definite at the outset of the Eisenhower administration that something would be done about the poor organizational setup of the Defense Establishment. The National Security Act of 1947 had added the will of Congress toward a degree of unification, but had resulted in a unique compromise of a federated agency coordinating separate executive departments. Amendments in 1949 at least converted our National Military Establishment into an executive department and gave the Secretary of Defense more control over the departments and more assistance through an Under Secretary and Comptroller.

Conflicts over the roles and missions of the Armed Forces continued even after the Key West and Newport agreements. Extent of naval air operations, size of the Marine Corps, delivery of the atomic bomb, controversies between advocates of the B–36 and of the supercarrier, and subsequent questions over obvious duplications in the fields of antiaircraft guided missiles and the IRBM led to disputes which exploded far beyond the Pentagon.

A memorandum by the Secretary of Defense on November 26, 1956, angered some but resolved many of the interservice disputes. Based on previous statements of missions and on 9 years of operating experience under the National Security Act of 1947, it clarified and interpreted roles and missions to a much higher degree.

In air defense, for example, the Army was assigned responsibility for point defense (with appropriate missiles such as the Nike-Zeus and Talos) while the Air Force was made responsible for area defense (including the Bomarc system). Operational employment of the IRBM was left to the Navy and Air Force for sea and land systems, respectively, which served to end the duplication of Jupiter and Thor development up to that time, and paved the way for successful work on the Polaris project. Finally, the directive differentiated between the battlefield air missions of the Army (observation, liaison, combat transportation, etc.) and the airlift, tactical reconnaissance, and combat air support responsibilities of the Air Force.[26] These decisions eliminated many duplications and pointed the way ahead for more sure development in the future.

Controversies, however, continued over such matters as tactical air support, the adequacy of the airlift for Army ground forces, antimissile missiles, control of IRBM's, and carrier versus land-based aviation, much of it caused by elements that resulted from the failure of many to accept the new order. This served to bring into clearer, sharper focus the need for new legislation spelling out details of a more effective, reorganized Department of Defense.

Launching of the Soviet sputnik served to bring matters to a head, as did recommendations of the Senate Preparedness Subcommittee on January 27, 1958, which called for reorganization to prevent duplications; complex, unrealistic civilian controls; and interservice rivalry against the public interest.[27]

On April 3, the President offered Congress a plan for defense reorganization that would unify strategic planning, form our fighting forces into unified commands, streamline military command channels, give the Joint Chiefs professional military assistance, and expand control by the Secretary of Defense over research and development. Among the specific recommendations made by President Eisenhower included several Executive actions as well as legislation to remove obstacles to the full unity of our commands, remove limits on the size of the Joint Staff, remove the restriction on voting by the Chairman of the Joint Chiefs, remove any statutory authority vesting responsibility for military operations in officials other than the Secretary of Defense, eliminate provisions for separate administration of the military departments and reduce the Assistant Secretaries in number from nine to seven.[28]

It is interesting to note that the President's legislative request included mostly negative things, while his Executive orders were aimed at strengthening and broadening in a positive way. His specific legislation was introduced as H.R. 11958 and S. 3649, while H.R. 11001, on the other hand, expressed the views of Chairman Vinson and two other members of the House Armed Services Committee. Differences between proposals concentrated around the powers to be given to the Secretary of Defense, the separate entities of the military departments, and the type of military staff to be furnished the Secretary of Defense.[29] To some, the issue devolved into a fundamental checks-and-balances problem. The resulting legislation was a compromise, but a forward-moving one.

The President got much of what he had requested, but Congress gave in most reluctantly on points hinting at transfer of constitutional authority of the legislative branch, or at weakening of the ties of the separate services. The Secretary of Defense was strengthened in many ways: for example, the services did not have to be separately administered but had to be separately organized. However, Congress did not repeal section 202(a) (6) of the National Security Act of 1947 which permitted any service Secretary or Chief of Staff to present to Congress any suggested recommendation—an avenue, incidentally, which General Taylor never chose to use, despite its availability.

Provisions of the Department of Defense Reorganization Act of 1958[30] plus the directive issued by Secretary McElroy on December 31, 1958, put into effect several changes coordinating and tightening our Defense Establishment. In hearings held on the defense budget in each House during the early months of 1960, Secretary Gates, General Twining, and other top Defense Department officials expressed cautious satisfaction over early experiences with the new organization, and announced no requests for changes at that time, preferring to let the new law and directives operate for more than a year before offering new suggestions. This is in sharp contrast to the suggestions of some

who would change the new establishment before the new ideas were given adequate testing.

One result of the 1958 reorganization was a greater accent on research and development work, with the establishment of the office of the Director of Defense Research and Engineering as the principal adviser to the Secretary of Defense. The Joint Chiefs of Staff were given a staff similar in organization to that of the unified commanders instead of the old system of committees, groups, and working teams. Thus the cumbersome command system has been channeled into a direction which would leave the JCS to deal with matters of command and would leave support and administration to the military departments. Formation of ARPA (Advanced Research Projects Agency) and creation of a Director of Guided Missiles showed the emphasis on space and the attempts to eliminate previous duplication on missile and rocket projects.

As is usual with such orders and laws, some were convinced that the change had gone too far, and many felt that there still remained too much rivalry and too little coordination. In retrospect, it seems that the resulting changes were most beneficial and marked a true legislative process compromise wherein executive and legislative differences resulted in functional effects. Donnelly states that the result was to "amend the original Key West-Newport agreements to bring them into consonance with the latest concepts and laws for organizing and insuring our national defense."[31] This major change is over and above the usual improvements in defense financing, procurement policies, fiscal policies, and national stockpiling, which have gone on through the entire administration.

Criticisms continued, however. General Taylor has particularly suggested changes in his "Uncertain Trumpet," despite his favorably worded testimony on the Defense Reorganization Act of 1958.[32] However, all his suggestions would interpose more persons and committees between levels of present administration, or would change the defense organization which has not as yet been given an adequate test.

Secretary Gates has already put into practice several improvements in organization by gradual implementation, though in office less than a year. Other suggestions, less earth shaking than General Taylor's but perhaps sounder in practical effect, have been offered. Most experts recognize the need for a sort of review board to choose ultimate priorities and budgetary guidelines on a level separated from control by the administration, the Bureau of the Budget, or congressional pressures. However, to place such a board in the chain of command, as would Taylor, merely would lead to more confusion and disorganization, as well as the probability of added duplication of authority and responsibility.

Speaking before the Electronics Industries Association "Defense Market Planning Seminar" in Washington, D.C., ranking minority member of the Defense Appropriations Subcommittee, Representative GERALD R. FORD, JR., suggested, among other things, "the establishment, by legislation if necessary, of an independent and continuing National Defense Planning Group, which would encompass or have within it knowledgeable representatives from industry, from the executive, and military branches of the Government, and the legislative."[33] Others have suggested that such a group could be part of the staffing of the Joint Chiefs. At any rate, thoughts such as this and such as the ideas of Secretary Gates that he take more responsibility in screening industry claims in the choice of products for procurement and in meeting with the Joint Chiefs on knotty subjects and problems, are positive steps in the process of evolution of Defense Department organization to the point we are all striving to reach.

With the legislative and executive mandates we have had since 1953 for this purpose, and with the suggestions now being offered for change within these basic frameworks, we may be sure that Defense Department organization will continue to keep up with the times, balancing unification with service identification, and service rivalry in its healthy aspects as against duplication and overlapping on the other.

U.S. MILITARY CAPABILITIES—1960 AND BEYOND

In summarizing American defense posture and in comparing it with Soviet capabilities now and in the future, it seems that the basic orientation depends upon what book your interests dictate or on what authority you study. The reader has the choice among those who criticize our defense policies today and see a rosy picture from 1964 on; those who downgrade both our capabilities and our potentialities; and those who feel our defense is adequate as a deterrent to war today and that it will be in the measurable future.

A reason for this difference in both direction and shading of thinking about defense might lie in the fact that for unclassified details on U.S.-Soviet comparisons today the student must roam far and wide. Even classified estimates rarely attempt predictions beyond the next 4 or 5 years.[34] Perhaps the best method of comparison would be to sketch the present capability of American and Soviet forces in both general and specific terms, and then to detail as much as possible new systems now undergoing research and development in our military planning.

ARMY

The Soviet Army today is composed of roughly 2½ million men, organized into about 175 line divisions. On January 13, 1960, Premier Khrushchev announced that Russia would cut its conventional armed force one-third as a result of their buildup in nuclear rocket striking force. "Khrushchev set present strength of the Soviet armed forces at 3,623,000 men and said they could be slashed by 1,200,000 because of what he called Russia's growing rocket superiority."[35]

Though the Soviet divisions (tank, mechanized, and rifle) range in size from 12,500 to 15,000 men, not all are maintained at full strength. Some estimates credit the Soviet with 60 percent combat-ready divisions, implying that combat would require substantial personnel augmentation in 40 percent of these divisions.

Committee testimony showed that as of November 1, 1958, Russia had 175 divisions and the Soviet bloc 217, for a total of 392. Their 7,800,000 men compare to our 6 million free world and allied strength. Some committee members were puzzled as to how we could be within 2 million of Soviet strength with about half as many divisions, but the smaller size of the Russian division coupled with the number of skeleton Soviet divisions were mentioned as explanations.[36]

Further information leads us to believe that Soviet ground forces have been completely modernized since the end of World War II. Army sources claim that the Soviet Army has on hand "modern material to equip its 175 line divisions and to support them in combat. * * * including that required to fight either nuclear or conventional wars anywhere on the Eurasian or Middle East landmass. In quality they about equal our modern equipment—they lag behind us in some items, have drawn even on some, and surpass us in others.[37] General Twining, in evaluating the fighting strength and attack superiority of the Soviet, assured the committee that Russia had a sufficient force to launch an attack and maintain it."[38]

Soviet ground troops are supplied with a group of 7.62 mm. small arms, the identical caliber of weapons with which we now equip our own ground forces. Besides 50-ton-heavy tanks with 122 mm. guns, tactical amphibious vehicles include 15½-ton light tanks with 76 mm. guns, while the T-54 medium tank uses the 100 mm. gun. Of the surface-to-surface rockets and missiles, the Soviets have at least 4, ranging from the "Honest John" type rocket with a 15-mile range to tactical missiles with a range of over 300 miles.[39]

There are some problems the Russians must meet in nonmilitary fields. Drinking water barrels, dishes being washed by hand, men detached to process cabbage, and military men carrying firewood for stoves in their barracks all do little to conserve scarce manpower.[40]

Revisions have been made to possible return to the territorial system of military organization which existed in the Soviet Union prior to 1939. This would mean that the majority of ground personnel would become part-time soldiers—similar to our Reserve or National Guard. This, together with the proposed reduction in armed forces, shows graphically the personnel problems resulting from requirements for farm labor, problems of low worker productivity and the losses in male population due to the staggering toll of death during World War II and the subsequent drop in the birth rate.[41]

As compared to this, our Army needs are substantially different from those of the Soviet. We do not need to patrol our borders with unfriendly nations, nor maintain control of restless satellites. All our ground forces are ready to respond to limited or general war demands.

Our Army and Marine forces of 1,045,000 are equipped with modern, mobile nuclear-capable missiles in addition to a complete arsenal of conventional weapons. A good portion of these forces are deployed in advance positions around the Communist bloc, and are backed up by ready forces in the continental United States, and by Reserve forces ranked at their highest level of readiness in peacetime history. Support by 3 air wings of the Marine Corps, 33 wings of the Tactical Air Command of the Air Force, and by the carrier-based aircraft of the Navy is of higher quality than the Soviet Union, which has no all-weather, supersonic fighter-bomber such as our F-105.

Through our alliances with other nations of the free world, we have access to some 250 bases, and additional forces sufficient to set the free world strength at 5 million men, air forces of 30,000 planes and sea control of 2,200 combat vessels. Most estimates give

[41] Over 24 million lives were lost as a result of World War II in the Soviet Union, while a loss of 11 million occurred in the age group born during and shortly after World War II.

credit to the contribution of our allies as being far more significant than that of the Communist satellite armies.

At the end of 1961, our Army will have 14 divisions and 25 other major units including 9 battle groups, 5 armored cavalry regiments and 5 missile commands, one battle group and one missile command more than planned for the end of 1960. By the end of fiscal year 1961, there will be about 500 additional helicopter and 109 more fixed wing aircraft in the active inventory as compared to June 30, 1959.[42]

Committee action coupled with administration requests led to "a substantial increase over the 1960 level in Army aircraft procurement of such modern aircraft as the Mohawk (turboprop observation), Caribou (transport), Iroquois (utility helicopter) and Chinook (helicopter). The bill will also provide for a versatile range of missile and rocket weapons including the solid fuel longer range Pershing; the shorter range Little John, Honest John, Sergeant and La-Crosse; air defense missiles such as the Nike-Hercules, the Hawk and the Redeye; and the Davy Crockett—a man-carried nuclear weapons system. Finally, the recommended funds will provide for significant quantities of such modern equipment as the M–60 tank, M–113 armored personnel carrier, a new family of self-propelled howitzers and the 7.62 mm NATO-standard family of small arms." [43]

Additions of $207.6 million to the Army modernization will have an effect traced in the last section of this paper. Recent maneuvers at Fort Benning with these weapons illustrated the importance and magnitude of those weapons which will be procured with this sum over and above procurement contained in the specific recommendations of the President for fiscal 1961.

The new tactical missiles and rockets compare well with Soviet procurement to date. The Pershing range of 700 miles more than doubles the range of the most powerful Soviet army tactical missile, while the Davy Crockett can be fired in the field by one or two men with a range of 5,500–8,800 yards and a nuclear warhead. Shoulder-fired bazooka-type rocket weapons like the Redeye weigh but 20 pounds but meet Army requirements for use by combat trops against low-flying aircraft. The 1,275 pound Hawk surface-to-air missile has a range of 22 miles and is slated for oversea deployment by the Army and Marine Corps and is to be supplied to our allies.

Development of future systems like the Lobber, Missile A, and Shillelagh continue as well. The latter, intended for vehicle-mounted use against armor, troops, fortifications, etc., will be a surface-to-surface close support guided missile of great promise. Also ahead are decisions to add two Army surface-to-surface and three and one-half Army surface-to-air missile battalions to our oversea deployment, with conversion of seven other battalions from conventional to rocket missile capability.

In summarizing the relative ground forces of the United States and the Soviet Union today, Secretary Gates stated that "the Soviet Union clearly outnumbers the United States, but a comparison of the ground forces of the Sino-Soviet bloc with those of the free world allies, including the United States, is more favorable. It is not necessary to match the ground forces of the opponent on a unit-by-unit basis. Our Army and Marine Corps make substantial contributions to our deterrent strength. The Army furnishes an important part of the shield forces in Europe and Korea which, with U.S. air and naval units in such oversea areas, provide ready evidence of our willingness to contribute our fair share of forces to the common defense and our continued faith in the policy of collective security." [44]

NAVY

There is no doubt whatever that the United States is far superior to the Soviet Union in terms of global naval power. For one example, the U.S.S.R. has no aircraft carriers and they are apparently building none. For the United States, four new Forrestal-class carriers have already been commissioned, three more are under construction, including the first nuclear-powered carrier, and another is still a possibility in the current budgetary process, depending on Senate action. We have a 24-hour carrier task force in both the Mediterranean and in the Far East, backed up by additional carriers in the Atlantic and Pacific fleets. This is equivalent to the advantage Russia would have if they could deploy a carrier task force off California and in the Caribbean. As it is, our carrier task force is a means of maintaining our military presence in critical areas of the world far from our own shores, while the Soviet surface fleet is more of a defense power without the capability of operation at long distances from home bases.[45]

In nuclear power, the Soviets are estimated to be in the process of achieving the first operational capability with nuclear-powered submarines, while we have 32 nuclear-powered submarines either in commission or under construction. While the Soviet ice-breaker, the Lenin, is their first nuclear-powered surface ship, it is in shakedown status at a time when the U.S. mix includes the *Savannah*, a merchant ship, along with a nuclear-powered aircraft carrier, guided missile frigate, and guided missile cruiser, all under various degrees of construction.

Basically, the Soviet Navy is the second largest in the world, having undertaken a program of naval expansion since World War II to build up to 25 cruisers, 140 destroyers, 400–500 submarines, and an air arm of some 3,500 land-based aircraft. Surface ships are losing their importance in Soviet theory, with no carriers and a halt in the building of cruisers, though some suspect a changeover to nuclear cruiser building. Recently Khrushchev forecast that "in the navy" the submarine fleet is assuming great importance and surface ships can no longer play the role they played in the past.

Since the free world has more than 95 percent of world shipping, these differing requirements led the Soviets to build 400–500 submarines as compared to our approximate number of 120. This "sub gap" has caused us to step up efforts in antisubmarine warfare. One-half the Soviet submarines, it might be added, are incapable of operating in distant areas, while the others are challenged by our Navy, with wartime experience and skill in antisubmarine warfare operations as well as including ASW capabilities in the equipment of almost every naval vessel. Four permanent naval task groups now provide training for destroyers, ASW carriers and hunter-killer submarines. A year ago, U.S. intelligence informed Congress that Russia has slowed down their submarine production, thus leading to the feeling that they would construct new and improved types of submarines (missile and/or nuclear propulsion.[46])

Congress provided for fiscal 1961 the financing of three nuclear attack submarines (one more than the original budget request), two destroyer escort vessels, and finance for high priority efforts in research of anti-submarine warfare to the tune of $321 million additional funding. Inasmuch as numbers of submarines marks the only gap in American naval superiority today, the Navy is giving top priority to antisubmarine warfare. This is in marked contrast to the Soviet Union, which has no ASW carriers, no hunter-killer forces and only limited numbers of the specialized aircraft needed to detect and attack submarines.

Introduction of several new items of ASW will take place in the American military inventory in fiscal 1961. These will include ASROC, a rocket-assisted torpedo and depth bomb; new sonar equipment; the HSS–2, a new all-weather search helicopter; the S2F–3, a carrier-based ASW aircraft, and Dash, a drone ASW helicopter, all of which should be operational by mid-1961.

Perhaps the biggest advantage in the near future our Navy will have is the Polaris submarine missile force. The marriage of the atomic submarine with the Polaris fleet ballistic missile promises to give us one of the greatest deterrent weapon systems yet devised, according to the House Appropriations Subcommittee on Defense,[47] which also characterized the atomic submarine with its performance capabilities together with advancements in armaments as "the most formidable naval warship yet devised." [48]

Budget adjustments proposed by the Secretary of Defense on April 6, 1960, led to approval of a Polaris submarine program of 21, with 5 fully funded in fiscal year 1961 and 7 partially financed. This program, added to the 9 already funded, will result in an addition of 336 Polaris missiles to the strategic forces of the United States as already stated. While the committee recognized the capability for massive destruction of the Polaris to be less than the ICBM's and admitted that it is a costly weapons system ($241 million extra for full funding rather than partial funding of two submarines) and that it has not been fully tested as yet, the report called the Polaris weapons system "because of its almost complete invulnerability to enemy ICBM attack and its other capabilities, of great importance to the nation's deterrence in the ICBM era." [49]

Two Polaris submarines will be operational by the end of calendar 1960, and thus it will be possible to more accurately assess their performance. Since Secretary Gates testified that "if the Polaris proves out sooner than expected, a reconsideration of the program would be undertaken," [50] good performance in the operational submarine will no doubt lead to further expansion of the program.

For the near future, the active fleet will be maintained at a level of 817 ships, of which 382 will be warships. In 1961, the Navy will receive from construction 29 new ships representing more tonnage than was received in any one year since World War II. Two Forrestal-type aircraft carriers, the first nuclear-powered carrier, 9 nuclear submarines and 7 guided missile frigates are included. Heavier and more powerful modern naval aircraft are being introduced into the force. Meanwhile, Congress provided funds for fiscal 1961 to institute a ship-building program of 31 new ships; to continue the fleet rehabilitation program for 14 more World War II destroyers; and to procure advanced aircraft such as the A3J (supersonic), F8U–2N and F–4H.

Significant missile procurement will continue. Included will be fleet air defense missiles like the Talos, Terrier and Tartar, plus additional quantities of the air-to-air missiles Sparrow and Sidewinder. As examples of our lead over Soviet naval forces, the Terrier is a good example—a solid-pro-

[50] House defense hearings, fiscal year 1961, I, p. 9.

pellent surface-to-air missile, it can be launched from a cruiser and has a range of 10 miles, with an advanced version with greater range in production. The Sidewinder is now operational and has been supplied to several allied air forces, and features a range of up to 11,000 feet at 50,000 foot elevation, along with accurate infrared heat-seeking guidance. Development of the Eagle long-range (100 mile plus) air-to-air missile will some day mean a new departure since it could be launched from long, slow patrol type aircraft. The Corvus will serve as an air-to-surface stand-off missile of supersonic speed and range of over 100 miles, while the Astor, Subroc and Asroc will fire at submarines from other submarines or surface ships.

As a summary statement on U.S. naval forces today, we turn to Admiral Russell, Vice-Chief of the Navy, who said that "the United States has the strength to maintain control of the seas today. This strength embraces a versatile and diversified capability for limited and general war on the one hand, while on the other it permits a selective demonstration of strength in the cold war as may be required in support of our national policies. Naval forces, due to their mobility at sea, might comprise the major residual capability following an all-out nuclear exchange." [51]

AIR FORCE

Other than the "missile gap" commented on in the last section, Soviet aviation itself includes but 20,000 modern aircraft plus about the same number of obsolete planes in reserve. The tactical command contains about one-half of the total air strength, continuing the traditional emphasis on the importance of ground combat.

However, there has been a recent emphasis on long-range aviation capability in the Soviet Union. From a copy of our B–29, the Soviets have increased their posture in this field to the point where their strategic manned bomber force is second only to our own. Both their Badger (medium jet bomber) and Bison (heavy jet bomber) are capable of delivering nuclear weapons.

The Badger has a maximum speed of about 600 miles per hour, and an unrefueled combat range of 1,500 miles, while the Bison, of about the same speed, has a range of about 2,700 miles. The use of bombers as tankers to develop refueling capabilities has cut into the number of bombers available for long-range bombing missions.[52]

At one time, General Twining reported to the House Appropriations Subcommittee that by 1959 Russia could have 600–700 long-range bombers. Reduced estimates of Soviet bomber forces by January 1959, were explained as either meaning that Russia had experienced technical difficulties in the operation of these planes or that the drop was a matter of policy in concentration on other weapons such as missiles.[53] Thus the Bison, with a general performance somewhat similar to our B–52 but with a somewhat shorter range, has been downgraded in Soviet intentions as contrasted with capabilities.

In contrast to this picture, the United States has four to five times as many intercontinental jet bombers and somewhat more medium jet bombers, supported by a large fleet of refueling tanker aircraft. The U.S. long-range bombers are being equipped with Hound Dog air-to-surface missiles which can be launched up to 500 miles away from the target. This force is manned by experienced crews, capable of delivering night or day with pinpoint accuracy bombs whose individual explosive power is greater than all bombs dropped by all bombers, enemy and Allied, during the entire course of World War II.

We are continuing to improve the tried and proved manned bombers. The budget for fiscal 1961 includes funds for B–58 supersonic medium bombers, B–52 H heavy bombers with the new turbofan engines, and the associated KC–135 jet tanker. Hound Dog missiles and Quail decoy missiles are provided in the budget to be carried by the B–52's, improving greatly the penetration capabilities of our manned bomber force.

Funds are available to continue development work on the B–70, designed to fly at 3 times speed of sound. Two prototypes of this advanced bomber will be available for flight testing, so that the Air Force will be in a position to determine the future course of its development. Many have felt that the $5.5 billion program scheduled for the bomber to be operational by 1965 was optimistic both in terms of cost and time period, especially in view of its duplication of four strategic ICBM systems and its questionable advantages over the B–58. Meanwhile, the B–58 supersonic bomber program is progressively being built up to three wings. Protected by the capabilities of airborne alert, the 15-minute BMEWS and research on the MIDAS 30-minute system, a SAC manned bomber program will continue to form a major part of our deterrent strength.

A brief summary of our future ICBM capabilities shows the Atlas as now operational, with additional missiles becoming operational within the next several months. The Titan will be operational in 1961, with the Minuteman scheduled to be operational on or before June 1963. The Atlas will be built up to 13 squadrons and the Titan to 14 by 1963, with all but the first few Atlas squadrons hardened. The Minuteman, of course, promises mobility rather than hardening alone, and progressive expansion of this solid-propellant missile will go on after 1963.

Though the program for the Air Force in fiscal 1961 shows a reduction of 2 wings because of the phase-out of aging B–47 medium bombers, the House subcommittee feels that "total retaliatory capability will continue to grow despite this reduction as B–58 medium bombers and additional B–52's with their Hound Dog and Quail missiles are delivered.[54]

Delivery of the nuclear-capable F–105 attack aircraft and more tactical missiles, plus procurement of 760 aircraft, an increase of 200 over the quantity purchased in 1960, insures an improved aircraft program for 1961. Included are additional quantities of the improved B–52 H heavy bomber, the B–58 medium bomber, the KC–135 jet tanker, all already mentioned, plus the supersonic F–105 fighter-bomber, the supersonic, all-weather F–106 interceptor and the C–130 and C–135 type transports.

Among the missiles still in development, the Skybolt would double the range presently achieved by the Hound Dog, hurling at hypersonic speed 1,000 miles to its target from B–52's and B–58's. The Longbow has now supplemented the Crossbow as a development antiradar missile, designed to home on enemy sites as defense measures for incoming U.S. bombers. Slam (supersonic low-altitude missile) will have a range of over 6,000 miles under a nuclear ramjet power system now being developed.

Air Force comparisons were best summed up by Secretary Gates, who stated that "manned bombers are still the primary means of delivering heavy nuclear weapons in the volume and with the accuracy needed to strike a decisive blow. In this category, the United States far excels the U.S.S.R. We have several times more intercontinental jet bombers and more medium jet bombers. We enjoy a marked qualitative advantage and can claim credit for the most experienced bomber crews in the world. We are well ahead of the U.S.S.R. in air-to-air refueling capabilities, air-to-surface missile development, and other important air warfare techniques.[55]

RESEARCH AND DEVELOPMENT

Our overall research and development program includes over $200 million a year for projects assigned to the Advanced Research Projects Agency (ARPA). Among ARPA projects are included ballistic missile defense, which takes up approximately half the appropriation for fiscal year 1961; solid propellent chemistry; materials research; communications satellites; navigation satellites and tracking.

All services have some space development occurring at a rapid pace, attempting to do things in space that will permit the services to better do their respective jobs on land, on the sea and in the air. The Navy, for example, is taking over the transit space system from ARPA, as the Army takes over Notus and the Air Force Midas, Samos and Discoverer. This is in line with the theory that more interest and enthusiasm will occur where projects are placed in the service that has a substantial interest.

Some of the more amazing accomplishments planned for the future include for one the Navy Typhon, which will be effective against submarine-launched ballistic missiles, tracking down and shooting these missiles when they are coming out of the sea. As Representative FLOOD said, it was like "knocking down one bullet with another bullet." [56]

The Army has design-tested an armored vest with a ballistic collar to decrease neck wounds—it is expected to reduce wounds in this vital area by 11 percent based on Korean war experience figures.

Meanwhile, the Air Force will test next winter an ice-jet snow and ice removal vehicle which would not only melt the ice and snow on runways, but actually evaporate the resulting water.

In the area of CBR warfare (chemical, biological and radiological) appropriations have been raised from $35 million in fiscal 1959 to $57 million in fiscal 1961. In hearings on the fiscal year 1961 budget, Dr. William Summerson, Deputy Commander for Scientific Activities, Research and Development Command, stated that "with this budget we expect to have in the time from 1963 to 1965 a program to give us for defense the following items: an improved alarm for the rapid warning against chemical agents; vaccines for defense against these biological warfare agents where vaccines are known to be satisfactory at the present time; and we expect to have adequate nerve gas treatment." [57]

In summarizing our research, development, test and evaluation at present, Dr. H. F. York, Director of Defense Research and Engineering, said, "I believe that the R.D.T. & E. program presently under way and planned for fiscal year 1961 by the Department of Defense is in proper balance with the other important defense programs and that it is adequate to support our national military objectives." [58]

SUMMARY

Former Assistant Secretary of Defense W. J. McNeil used to graphically illustrate the differences in our economy with Russia by suggesting that we imagine swapping our economy with that of the Soviet Union. At present, this would entail our abandoning

[58] Ibid., VI, p. 18.

three-fifths of our present steel capacity. We would have to destroy two out of every three hydroelectric plants and get along on about one-tenth our present amount of natural gas. We would rip up about 14 of every 15 miles of paved highway and 2 out of very 3 miles of railroad tracks. We'd sink 8 out of every 9 oceangoing ships, scrap 19 out of every 20 cars and trucks, and shrink our civilian air force to a fraction of its present size. In reducing our standard of living to one-fourth of what we presently enjoy, we would destroy 40 million television sets, 9 out of every 10 telephones and 7 out of every 10 homes.

Even if the goals of the Soviet 7-year plan are attained in total, a remarkable achievement, Soviet economic capacity in 1965 would still be significantly below that of the United States today. Their crude steel capacity by that year would reach 90 million tons—our pre-Korean level. Even conceding the Soviet Union a 6 percent growth rate in gross national product to our 4.4 percent, the gross national product gap would grow to $345 billion (630–285), a rate of over 2 to 1 and an absolute gap of over $90 billion in excess than the difference today. In light of the close relationship between economic policy and military posture, the Soviet Union must give great weight to the problem of alternative uses of limited resources in military as in economic progress.

Perhaps the best military summary would be a similar exchange of military capabilities with the Soviet Union:

In ICBM production, we would have an operational ICBM, but so would the enemy. If we went ahead with first-generation ICBM's, we would have more in a few years, only to be faced with successful enemy development of second-generation ICBM's and submarine missiles, flexible and reliable. These would be moving into the enemy arsenal while we still sought to achieve mathematical first-generation ICBM supremacy.

As previously recounted, our jet bomber force would be faced with a nuclear force four to five times as large. Our continent, virtually defenseless, would be faced with enemy bomber forces operating from bases in Bermuda, Hawaii, Alaska, Venezuela, and Newfoundland. We would have nothing comparable to the power of thousands of fighter aircraft, bombers, tactical missiles, pilotless aircraft, and IRBM's at dozens of bases scattered through nearby Canada, Mexico, and the Caribbean Islands.

Remember that in air defense we would have a few ground-to-air missiles clustered around our metropolitan centers and elsewhere would have only antiaircraft guns. The enemy would have a worldwide system of radar warnings, a powerful all-weather fleet of jet interceptors, substantial ground-to-air missile bases and promising developments in antimissile missiles.

On the ground, lest we forget, we would face one-fourth million nuclear-armed enemy troops in Mexico and Canada and these would be allied with large and powerful forces of other nations in our own hemisphere. Our large ground troop array would be required to maintain internal security, to defend our borders and to maintain our domination of a restless satellite empire.

On the sea, enemy naval forces would be cruising a few hundred miles off our coast, with aircraft carriers capable of launching nuclear bombers, and Polaris submarines, soon to join the fleet, ready with 16 missiles each. We would have nothing comparable.

Finally, let us not overlook collective security. With our tinderbox of satellite nations subdued by military dictatorship, we would face enemy allies of free men banded together in collective organizations and treaties ringing us with 250 strategically located bases for planes and nuclear missiles in addition to ground forces.

As President Eisenhower outlined the force some would be willing to swap: "This is a force not unduly dependent upon any one weapon or any one service, not subject to elimination by sudden attack, buttressed by an industrial system unmatched on earth, and unhesitatingly supported by a vigorous people determined to remain free. Strategically, it is far better situated than any force that could be brought to bear against us."[59]

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CHAMBERLAIN. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD, study paper No. 8: "The Requirements of Deterrence," by Prof. Paul Peeters, Iona College:

THE REQUIREMENTS OF DETERRENCE

(By Paul Peeters, Iona College)

1. National strategy is not developed in a vacuum. It has to fulfill many tasks. It is subject to variable conditions, and its success depends on an environment which is economic, political as well as ethical.

The complexity of the challenge now facing the United States is best understood when stated in dialectical terms: the dialectic of peace and power, of collective security and leadership, of economic and military strength.

Partisan criticism follows a dialectic of its own. It appeals to idealism when national policy ought to be realistic (nuclear testing). It advocates political realism when a question of principle is involved (Berlin). It opposes unilateral action by the United States when this country must act alone (Taiwan). It calls for decisive leadership when the situation facing us demands evasion (Suez).

The purpose of this paper is to redefine some of the fundamentals of successful deterrence while distinguishing the proper dialectic of national policy from the fatal dialectic of partisanship.[1]

I. PRINCIPLES

2. The Communist threat is presently centered in the growing military power of the Soviet Union. As an ideology, communism is failing. It cannot make decisive advances without using force. If it were not identified with Soviet power, communism would soon lose control over what it has conquered, and slowly cease to be itself. To maintain our military posture is, therefore, the first task of national policy, not only because our survival is at stake, but because peace is the true antidote to communism.[2]

In our partisan debates, we have denounced this interpretation as a naive description of Soviet objectives. We have said that communism in essence was not a military problem, but a great social movement. We have pressed the United States to launch "the greatest political offensive in history," to get out in the marketplace of ideas, to compete for the minds of men, and to tackle the "real" problems of poverty, sickness, and illiteracy. When the time came to resist to Communist probing, however, we made frantic pleas for an all-out military buildup. The balance of power had supposedly shifted to the Communists. We were not ready. The hour was late, and the agenda of the things we had failed to do was long. A war was going to break out. The Communists were not bluffing, but we found ourselves in the straitjacket of past policies, at the brink of war, and alone.

National policy considers Communist power as the core of a many-headed threat. Dialectical partisanship, on one day, denounces national policy as narrowly militaristic. On the next day, it speaks as if we only faced a military threat.

3. The U.S.S.R. has specific strategic assets and specific needs. So does the United States.

By developing our own assets, we can do much to strip the Soviets of their assets and increase their needs. One of the tasks of national policy is to prevent the Soviet Union from doing the same to us. One of the pitfalls of partisan debates is to measure our assets in terms of Soviet needs, and to evaluate our needs in terms of Soviet assets.

4. We do not think in terms of national defense alone, but rather in terms of the total defense needs and capabilities of the entire free world.

Dialectical partisanship seeks to thrust upon us the full responsibility of defending allied countries, but it denies us the right to draw from their capabilities. These countries may refuse to support us, but we are forbidden to do anything alone.

5. Our present strategy is a strategy of total deterrence and graduated retaliation. It is based upon our massive retaliatory power and complementary forces that we must be able to maintain indefinitely for global as well as for limited war.

So defined, national policy leaves no room for partisan controversy. First proclaimed by Secretary Dulles on January 12, 1954, this complex strategy has been consistently enforced by the Eisenhower administration ever since. It has been completely successful. The fact that it survived revolutionary technological changes is a further proof of its fundamental validity.[3]

6. The world is now approaching a condition generally called "nuclear stalemate." The interpretation of this term is of paramount importance.

In our partisan debates, we have often alluded to the administration's "Maginot line" mentality, its reliance upon strategic weapons, and we have denied that there was any balance of terror in existence. Yet we have

---

[59] Speech of February 21, 1960.

[1] Partisanship refers here to a certain type of criticism, and not to the party affiliation of the critic.

[2] As Albert Wohlstetter wrote in the New York Times of June 16, 1960, "we need not sound excessively disdainful about the value of keeping alive. Physical survival is necessary to achieve our other widely shared purposes, even though it is not enough."

[3] Most Americans, including noted specialists, have chosen to overlook the complexity of the Dulles-Eisenhower strategy. In spite of overwhelming evidence to the contrary, they obstinately asserted that the United States had no strategic plan other than knocking down a number of Russian cities in case of war.

One of our favorite techniques of debate consists in pushing national policies into a Procrustean bed—making the administration say more and say less than it actually did—and then we proudly announce that such policies have been abandoned and largely forgotten. In 8 years, the critics have proved unable to move away from the pitiful oversimplifications they had fabricated.

also claimed that war was now impossible. Neither the United States nor the Soviet Union could initiate an attack, no matter how provoking the other side would become. The balance of terror thus existed, after all, and it amounted to signing a nonaggression treaty with Russia, and the only alternative was coexistence.

This again is a dialectical inversion of what national policy truly is. The thought that war is impossible can be a counsel of despair. As President Eisenhower said, on September 30, 1953, there is a tragedy "greater than winning a war," and this "would be losing it." We must be ready to defend if need be by life itself, the values and interests for which we stand. Any willingness to abandon our values would only give to the Communists the hope of achieving their goals without war.

National policy also holds that military superiority is a notion that has lost much of its meaning in the atomic age. Since we occupy a defensive position, however, and we want to deter the aggressor, this depreciation of military power benefits us.

Finally, the administration never said that the very existence of nuclear weapons created a reliable balance of terror. A nuclear stalemate is not a static condition. It is in our power to develop a strategy and the means to implement it that would give us global superiority over Russia in spite of a numerical inferiority in some sectors.

7. The adequacy of our military posture is under constant review. The opposition has legitimately disclaimed major responsibility for defense planning, and the administration has never claimed having discovered any magic formula for achieving perfect security—a formula that would never have to be adjusted to changing circumstances.[4]

No fundamental change in our present strategy has proved to be necessary yet. Even if we did not have the will nor the means to implement it at this time, our defense policy would still be valid and necessary. Doubts concerning the adequacy of our military means have induced many to believe that long agreed national strategy had suddenly become controversial or even that it had been discarded. Such assertions are simply not founded.[5]

II. THE DETERRENT

8. "Any orderly balance sheet of military strength must be in two parts," President Eisenhower said on January 9, 1958. "The first is the position as of today. The second is the position in the period ahead."

A. Forces in being

9. Deterrence is achieved, at any given time, only by existing forces. Weapons still in development are no deterrent. Conversely, if weapons in being are adequate, deterrence has been achieved, and we can act accordingly.

This simple point had to be made because it is so often inverted in partisan debates. We often speak as if deterrence today had to be achieved with weapons we did not yet have—the weapons of tomorrow—and as if we had to rely, for future deterrence, on today's weapons—which we know to be already obsolescent.[6]

10. "What you want is enough, a thing that is adequate," President Eisenhower said on February 3, 1960. "A deterrent has no added power once it has become completely adequate." But what is adequate power to deter the Communists from general war? This question must be answered dialectically.

11. "Major aggression is unlikely unless the aggressor has the advantage of surprise and can hope to strike a blow that will be devastating because it is unexpected" (J. F. Dulles, Nov. 10, 1955).

National policy must emphasize the feasibility of a surprise attack upon us, and so undertake whatever measures are necessary to protect the country against it. Now surprise attack is feasible because of the nature of modern weapons and because of the relatively small number of targets to destroy by the enemy in order to cripple our retaliatory capacity. Dialectical partisanship asserts, in contradistinction, that there is no evidence that Soviet planning is based upon a surprise attack against the United States. In other words, we would be preparing ourselves for an attack that would never come.

In order to achieve deterrence, national policy also proclaims the unfeasibility of surprise. A surprise attack is unfeasible because of the countermeasures we take, such as intelligence, warning, dispersal, and hardening; because of our mixed deterrent concept, and also because the enemy can have no advance certitude that our retaliatory potential will be effectively wiped out. For in order to be successful such an attack must strike all targets at the same moment. It must destroy most of our retaliatory capabilities. A surprise effect measured in terms of minutes must be achieved. Unless these three conditions are actually met, a surprise attack is suicidal.

Dialectical criticism of national policy holds that a Soviet surprise attack is feasible. Striking at a time and with tactics of its own choosing, the U.S.S.R. would quickly recover from the damage inflicted by a small, uncoordinated American force, operating in a postattack environment against a fully altered enemy and evacuated Russian population centers.[7]

12. "Wars have a way of coming about in circumstances that have not been fully foreseen by humans," President Eisenhower said on August 27, 1958. He added that he did not see any reason for saying that "we necessarily have to take the first blow." Consequently, we are not basing our requirements on just bombing the Soviet Union for retaliation purposes. A valid deterrent thus includes the capability of attacking the enemy's military power before he has the possibility to bring complete destruction upon us.[8]

The critics have disassociated themselves from the suggestion that we must contemplate striking first. Having so ruled out the possibility of any preemptive action from our part, they have exaggerated both the destructive power of our strategic forces—for they assumed that these forces would be exclusively used for retaliation purposes—and the relative weaknesses of our retaliatory capacities—since they assumed a postattack environment.

The validity of national policy on this point is not open to question. The application of counterforce will be necessary in situations where the national survival is at stake in order to blunt the forthcoming attack upon us. The secondary aim of a preemptive action will be to paralyze Soviet postretaliatory operations. We are not going to prevent war unless we have the capability to initiate a war and the power necessary to engage the enemy.

It is not in the national interest, however, to make the distinction between retaliation and counterforce any clearer than necessary to deter a potential aggressor.

13. "No responsible person would contend that our present defenses are inadequate to our needs," Senator L. JOHNSON said on February 23, 1960. "The real issue," he added, "is whether the course we are following will continue to build our defenses at the needed rate. In other words, in the foreseeable future, will we have enough power to meet the anticipated power of a potential enemy? This is of vital importance, because today defense requires a leadtime of a number of years. The decisions we make today will set the limits of our power for some time to come."

B. The foreseeable future

14. The progress accomplished in stabilizing military planning and procurement during the two Eisenhower administrations contrasts strikingly with the chaotic decade that preceded his tenure of office. The principles that guide our present policy for the long-range outlook cannot be reasserted too strongly.

15. Mr. Robert Sprague has testified on February 24, 1960, that "the idea that an increase in spending for survival will bankrupt us is, to put a plain word on it, silly." The question—as he saw it—"is whether we are willing to use a small fraction of our increased wealth for the defense of our way of life." We would rather be safe than sorry. If we increase our defenses and if they are not needed, all we lose is money.

The emotional simplicity of this argument is apt to deceive. No matter how much we spend, we will not have absolute security. In addition, the critics are satisfied with simply begging the question. They assume that increased spending is needed for survival; that the administration has claimed that such an increase would bankrupt us; that the American people would not consent to it if it were proved that it is needed—the very points that the critics had to prove.

The truth of the matter is far from simple. The long-range outlook is for an endless series of attempts on both parts to achieve

---

[4] See, for instance, J. F. Dulles' article in Foreign Affairs, April 1954.

[5] As H. W. Baldwin wrote in the New York Times of Feb. 14, 1960, "we have not really outgrown the Victorian age of our security. Despite nuclear weapons, jet planes, and missiles we yearn for and half believe in the possibility of a return to the security of yesterday."

In 1954, the Dulles-Eisenhower strategy was described as stillborn. With the advent of tactical nuclear weapons in 1955, the critics declared that the policy had been finally interred. In 1956, some merits were recognized to it, but only for the pre-Bison era. The same was said in later years of the pre-sputnik and the pre-ICBM periods. In spite of its many lives and in the eyes of those who criticized it so relentlessly, the policy was never good.

[6] To give to the American people what he later called a "ballpark feeling," Gen. T. S. Power, SAC's commander in chief, said on Jan. 19, 1960, that "with only 300 ballistic missiles, the Soviets could virtually wipe out our entire nuclear strike capability within a span of 30 minutes." He never meant to say that the Soviet Union had the means to do so. He had said, on the contrary, that "if the Soviets decided to launch a surprise attack on this country today, they would have to rely mainly on their long-range bomber force," a force that was, in his own estimation, inferior to SAC in every respect. If, God forbid, we should ever fall behind Russia militarily, it would be soon enough to adopt what Senator KENNEDY once called the "underdog strategy." then, and not a single day before. But if we are strong, why should we act as if we were weak? Nations seem to have as much difficulty as individuals to live in the present.

[7] As Secretary Gates noted on Jan. 13, 1960, we are dealing here with "a complex situation under changing circumstances." The Soviet Union could have more missiles than we have, but numbers alone are misleading. "Factors that deal with time of warning, relative hardening, dispersal, mobility, and most important, accuracy must also be considered. If you change any factor in this formula you change the result."

[8] To quote from the House Appropriations Committee's recent report on the Defense bill, "this is an element of deterrence which the United States should not deny itself. No other form of deterrence can be fully relied upon."

a certain military balance at one's advantage, and to unbalance any balance temporarily achieved by the other side, with overall costs and danger projecting upward. Continuous technological advances and the inflexibility of military procurement mix up with budgetary limitations that cannot be removed just by brave talk and wishful thinking. As Secretary of the Navy, R. B. Anderson, said on March 9, 1954, we must choose between "too little and too late and too much and too soon."

In that connection, it is well to remember that we ought to be able to move quickly into any breakthrough in good and reliable weapons that we can get; that we often have to reserve judgment as to what we might want to do about weapons still in development, and yet have the capability to decide at a later date, to procure them. This is being done by the administration. Funds are being requested by the Department of Defense to exploit promising developments and to expand or accelerate programs, such as Polaris, when progress achieved proves this wise. Finally, the administration has repeatedly stressed that it would not hesitate to depart from its long-range programs in an emergency and to take any necessary measure.

16. To give to the world at large the impression of a country that does not know what it wants is the one thing that we cannot afford. "We want to keep adequate forces and we want to keep as strong in our hearts and our heads as we do in our military," Mr. Eisenhower said on March 11, 1959, "and then carry forward our policies." It would be foolish indeed to be pushed off the plans we made "time and again by something suddenly described as a crisis. What we have to do is to stand steady * * *, to be alert, to watch what we are doing, and to make certain that we know how and where we would have to produce action, if action became necessary."

17. The administration has tried to achieve what George Washington called "a respectable military posture." Our defense policies should not induce the enemy to overestimate his own needs. Such a prolification of weapons would only increase the dimensions of our own task. The position of relative superiority that we should attempt to maintain should be measured and rational. One of the greatest merits of our present strategy is that it allows us to reconcile the principle of relative superiority with a nonprovocative defense effort.

As long as our deterrent remains adequate, the U.S.S.R. would do well to act in conformity with the basic law of a nuclear stalemate instead of wasting its resources on first generation ICBM's. It has no reason to engage into crash programs, but should rather tailor its own defense effort to the size and nature of our forces. And for the same reason, we should consider what the Russians actually do as closely as what they are supposedly capable of doing.

18. It remains, however, that we have now entered into a period of transition. When we have hardened and mobile missiles and a mixed deterrent, we will find ourselves in a condition that will be much more stable than the one in which we are today. As General Power pointed out, we will then reach a point where even surprise attack would not substantially minimize the risk of retaliation.

The point is that we will soon have the possibility to build up a relatively invincible deterrent. The issue is whether we should do so as rapidly as we know how and without stretchout. There is no question of whether it should be done—and it will be done.

19. A potential aggressor primarily needs counterforce capabilities, and we need a deterrent which is indestructible. If our deterrent cannot be destroyed, the enemy is not in a position to calculate that aggression is a paying proposition.

The size and composition of our deterrent is mainly determined by its counterforce function. If we possess a mixed, flexible, and numerically adequate deterrent, the enemy would be forced to develop a retaliatory deterrent.

If counterforce on either side is neutralized by retaliation on the other side, the notion of deterrence would undergo a qualitative change. Together with large land armies, attack submarines, and air defenses, the ICBM would be relegated to a role of passive deterrence. This weapon might be well suited for the initiation of a strike, but it can hardly be fired on the basis of warning. Before retaliating, a country that feels threatened must make sure that it is attacked. An important advantage would then accrue to the country that could engage in active deterrence.

Active deterrence refers to weapon systems that can be deployed without automatically unleashing general war, and it also refers to diversified deterrence: Manned aircraft armed with ballistic missiles, aircraft carriers, missile submarines, reliable alliances, nuclear stockpiles in allied countries, and national deterrents.

Obviously, the United States is in a much better position than the Soviet Union to develop active deterrence.[9]

20. The United States enjoys, at present, a global strategic superiority over the Soviet Union. But we can assume, for argument's sake, a Russian numerical superiority in strategic missiles. SAC's ability to penetrate Russian territory does not need to be proved any longer. Recent events have served to illustrate that the nuclear balance is more stable than generally believed in the sense that it cannot be upset by any single advance or temporary superiority, even in a weapon as critical as the ICBM.

If it were to materialize, the missile gap would not be a deterrent gap. Under the cover of adequate deterrence, we can develop our own programs without engaging into wasteful emergency measures or investing heavily in interim weapons. This only applies, of course, to weapon systems that are known to be of limited or temporary value; and we should keep in mind that we are dealing with one of the most unstable empires in history.[10]

21. If followed, the principles now guiding national policy will enable us to maintain our deterrent posture in the foreseeable future. "If you will take the things that the Soviets could probably do 3 or 4 years from now, and then we sit like we are now and do nothing, well, that's a different story. Now, as we go ahead, they will go ahead," President Eisenhower said on February 3, 1960. "Three years from now, if we are working as hard as we do now, we are going to be in the same relative position."[11]

III. COMPLEMENTARY FORCES

22. From 1953 to 1956, the Eisenhower defense program, achieved within the limits of sound budgetary practices, has been criticized on the ground that national security had been placed in jeopardy because too much emphasis had been put on air-atomic power. Advocating a conventional strategy, the critics demanded more Army divisions, more airlift, more of everything.

The controversy then shifted to the B–52 program. The critics suddenly became the apologists of a supermassive retaliation concept. They demanded an overwhelmingly superior deterrent.

A year later, the B–52 was described as a major blunder in view of Soviet concentration on the ICBM. The Russians had supposedly led us to believe that they were building a great long-range bomber force, and we had fallen for it.

The grave inconsistency of such an approach was disguised by accusing the administration of having placed economy ahead of security. The limits set by budgeteers had caused reductions in conventional forces as well as the inadequacy of our retaliatory forces.

Taken as a whole, the partisan argument is fraudulent. The adequacy of our conventional forces is a problem that must be treated in context, but separately. As we shall see presently, the critics have taken it out of context by failing to discern that local defenses and conventional forces were complementary to the deterrent; and they have refused to discuss the problem on its own merits by failing to distinguish it from the problem of deterrence.

23. The conventionalist argument generally proceeds in two parts. It is first said that "massive retaliation is a two-way street." The deterrent cannot be used. In case of war, we will have to fall back on conventional forces which are said to be utterly inadequate as compared to Russian forces. The critics secondly refer to ever-renewed cuts in military personnel, to the aging of the fleet, to the obsolescence of MATS planes, and so forth.

24. This obviously relates to the hypothesis of total war. Now if a general war started with a massive surprise attack and counterattack, neither the United States nor Russia would possess the ability to move large amounts of personnel and materials; nor would they be in a position to engage at once in large-scale operations. In that first phase of a general war, a fraction only of our conventional forces—airlift, for instance—would directly support our retaliatory actions; the balance would be used for operations that can be called, at best, holding actions.

Our present defense program recognizes the criticality of the initial period of a conflict. It is tailored to assure the full combat

---

[9] Active deterrence does not nullify passive deterrence, of course. Assuming a condition of stalemate, critics have often ascribed this active deterrent function to defensive weapons—such as the antimissile missile—and to conventional forces. This problem is partly discussed below. Mobile forces for intervention in local war situations are part of an active deterrent, but conventional forces as such are not. Active deterrence has also been confused with counterforce.

We must also keep in mind that in a general nuclear war, missile forces cannot "destroy their enemy counterpart without destroying the corporate body of the enemy state itself" (Adm. A. A. Burke, Feb. 20, 1959). This also tends to reduce the difference between retaliation and counterforce.

[10] As a matter of fact, the administration's decision to bank on second generation ICBM's has already proved to be right. It is not a matter of speculation any more.

[11] See the statesmanlike speech of Representative MAHON in the CONGRESSIONAL RECORD of May 3, 1960. "If we continue to maintain our bomber strength, our oversea bases and military personnel, and our fighting ships, and if we move forward as planned with our long-range missiles, and if we develop a strong and thoroughly dependable airborne alert, and if we move along with our ICBM detection systems as planned," the Representative said, "I see no reason why there should be a deterrent gap during the next 3 years. I believe we will move forward. Therefore, in summary, I would say there should not be a deterrent gap during the next 3 years."

capability of the primary forces at any given time.[12]

Would the enemy ever start a full-scale conventional action, daring the United States to use its deterrent? By doing so, he would lose the benefit of surprise and expose himself to a preemptive action. Such an extreme provocation as a direct offensive against us is inconceivable in the atomic age. It means all-out nuclear hostilities.[13]

25. Our inability to rely upon conventional forces for deterrence of general war does not stem from a lack of will or a lack of means, but from the very nature of the problem. The advent of nuclear power has forced us to revise not only the size and composition, but the very character of security. The critics often seem to consider nuclear weapons as conventional weapons of unusually large yield. They still seek to integrate the notion of deterrence into the strategic patterns of the past.

If conventional forces are to be increased considerably, we would need a defense effort that would amount to mobilization. Now, mobilization would not reduce world tensions; it would not diminish the risk of Soviet attack; and it would make sense only if we were able to predict when the attack would come. But, as the President said on April 23, 1953, "for anybody on a defensive position to base his defense on his ability to predict the exact date of attack was crazy."

The opposition was careful enough never to determine the levels of force that should be set up to meet its own criticisms. It was satisfied to pretend that the ideal Army should have 925,000 men instead of 870,000, or to propose an increase in military expenditures of $3 billion "for immediate defense needs." None of the changes ever proposed in this fashion would justify scrapping our present defense plans or shifting to a conventional strategy.

Such gimmicks are all of doubtful honesty, but none is more unworthy of us than the assertion that, if more imagination had been displayed, we would have long found the solution to our problems. The grandiloquent, amateurish call for fresh ideas always leads to the accusation that the arms race and the cold war are the only grand strategy we have.

The fact is that a workable alternative to our present strategy has not yet been formulated and that the critics are most vulnerable on this point. Whatever can be said to rationalize such an abuse of the democratic process, it is unpatriotic and irresponsible to pull national policy to pieces on such a vital point without replacing it by something better.[14] The debate on the adequacy of our complementary forces thus limits itself to the limited war problem.

26. In a typical inversion of national policy, we have spoken derisively, in our partisan debates, of "massive retaliation," and advocated "graduated deterrence." But the notion of graduated deterrence is nonessential. It is in the nature of deterrence to be total or not to be.

Any aggressor must be put on notice that his aggression will be met with appropriate retaliation. If war breaks out, in spite of our efforts to prevent it, deterrence has admittedly failed, but only to a point. For it remains necessary to stop the aggressor effectively, and to prevent the conflict from spreading.

Graduated retaliation means that a variety of responses to military aggression is feasible. It refers to the flexibility of striking power that we possess. We do not have to resort to the most destructive weapons.

The gap that existed between the largest TNT weapon and the tactical nuclear weapon of the smallest yield has been largely eliminated. The small yield of tactical nuclear weapons makes their use in local hostilities more likely. And the continuity that exists between chemical and nuclear firepower allows us to use nuclear escalation. The means of retaliation are thus available. They are credible. They are graduated.

It has been said that anything that has to do with atomic power is too dangerous because the enemy would retaliate in kind; weapons of a larger and larger yield would be used on both sides, and the conflict would eventually graduate into total war. This is another dialectical interpretation of national policy. Partisan criticism believes in escalation in reverse—a crude notion that combines lingering ignorance of nuclear tactics and neurotic self-criticism. For nuclear escalation tends to limit retaliation and it makes it feasible to achieve total deterrence with tactics of limited warfare.[15]

27. Many say that local war is more likely than total war. This truism is relative to the insanity of total war. Under a total deterrence policy, local war is irrational because retaliation is certain and because the aggressor's limited objective does not justify his taking great risks upon himself. If the expected gain is small, the risk is comparatively large.

The perpetuation of a well-planned aggression in cold blood and with considerable means as in Korea seems almost unthinkable today. If it were to break out, however, it would justify some strategic bombing of the enemy and certainly call for the instant use of tactical nuclear weapons. Aggression would then cease to be a paying proposition.

Let us repeat that any discussion concerning our present or future ability to wage limited war must start from the realization that our deterrence policy tends to reduce the scope of any likely limited war. Local situations likely to develop fall into the following categories: (i) War situations in which the United States cannot intervene (Hungary, Tibet); (ii) civil wars or very limited outbreaks calling for what President Eisenhower has called "police actions" (Lebanon); (iii) preventive deterrent actions which do not actually lead to hostilities (Syria, Quemoy).

Considering the nature and the scope of likely situations, the forces that we possess—both conventional and nuclear—are ample, even if their mobility and general effectiveness could be much improved. And they are supplemented by substantial allied forces.[16]

28. The United States shrunk from employing the atomic bomb in Korea. Our allies apparently opposed its being used during the Dien Bien Phu crisis in 1954. The fact that it can be used, however, must be included in the equation of any potential aggressor. In addition, it is not so certain that past indecision deserves praise. Declarations have been made since that time, which clearly intimate that the United States would make a decisive use of its atomic potential right at the outset of any clear-cut aggression of the Korean type.

In view of the risks involved and the limited gain to expect from local aggression, the Soviet Union would be well advised to deter its own satellites from committing aggression by refusing to promise to supply them with atomic weapons of sufficient yield and in sufficient numbers. And it is entirely safe to assume that it would never surrender nuclear weapons to its European slaves, nor allow them to fabricate these weapons under national control. It might not be able to impose the same restrictions on Red China. Now, the position of the United States vis-a-vis Red China is exceptionally secure: atomic weapons are well fitted for the type of retaliatory actions as would be needed against Red China. Finally, to threaten atomic retaliation in order to deter local aggression does not impose any obligation upon us to do so in actuality. We must and can decide in the light of circumstances and according to our own interest.

29. We do not have to be 100 percent ready for any kind of military emergency that could possibly arise, particularly those local situations which do not directly threaten our vital interests. As President Eisenhower said on December 15, 1954, he would, as Commander in Chief, "rather improvise and resort to expedient in little wars than he would in big wars. He would rather cast and mold his security arrangements to meet the great threats to the United States, and take the others, as far as he could, in his stride." Most of our forces could be used in limited wars. Any effort to categorize the various elements of our power is, generally speaking, arbitrary.

30. No strategy would be more unpopular in this country than a strategy necessitating the commitment of ground forces. President Eisenhower's defense policy conforms to our idiosyncrasy.

IV. CREDIBILITY

31. The Soviet Union is well informed of the reality of our military power, and real power is always credible. Therefore, when we ask ourselves the question whether our deterrent policy is credible, we seek a moral alibi. The real question is whether we believe in it, and this is also the only question the Russians ask themselves. In both cases, the question is about ourselves.

The dialectic of partisanship suggests that we cannot threaten the U.S.S.R. with total destruction if, by doing so, we threaten our own existence. Either we do not mean what we say, or we resign ourselves to the folly of nuclear war.

This dilemma is obviously deceitful: It excludes the alternative of successful deterrence which is, to say the least, as valid as

---

[12] The administration has never claimed that a general nuclear war would be short and that it would not necessitate the engagement of ground forces. The term "primary forces" is not synonymous, therefore, to strategic forces. It refers to those forces that will be primarily employed during the first, short, and most violent phase of a general nuclear war.

[13] The same remark applies to the various things the Soviets might do to alleviate their military problems before a general war starts, such as the destruction of our Polaris submarines one by one.

[14] The critics may think that they have made a constructive speech when they list a number of things that could be done to strengthen our defenses without explaining how and why these things should be done. This practice is dishonest and also unintelligent. The classic doctrine that all requirements for assured security must be met is long bankrupt. Balanced security obviously involves some calculated risks. And the reasons why we must deliberately forego some military capabilities are not all budgetary.

[15] This must be understood in the light of the two following paragraphs. I certainly do not mean to say that escalation suffices for achieving total deterrence. It is one of the elements that makes it possible to achieve total deterrence with means of graduated retaliation.

[16] In all fairness to the opposition, we must recognize that there are limitations to the shrinkage process which has affected the effectiveness of our ships, planes, and military personnel. But the urgency of this problem is relative to the fulfillment of essential tasks, and, except for the limited force we need for coping with peripheral aggression (a force which already is in a fine state of readiness), the problem will never have absolute urgency, as the critics seem to claim.

bluff and madness. If our threats were not credible, who would be to blame? Is it too much to expect from Americans that they denounce, in the same manner, Russian bluff and bluster? But if Russian threats are not credible, we have achieved deterrence; and if ours were not, we would have to use graver threats still.[17]

32. The balance of terror is often considered as precarious because the risks of upsetting it are catastrophic. Some people have said that our deterrence policy was irrational because of the degree of rationality it required.

If the risks of upsetting it are great, the balance of terror is relatively stable, and not precarious. For the same reason, the rationality expected from a potential aggressor is elemental. If he does not possess the degree of rationality needed for the success of our deterrence policy, he is insane.

There remains, of course, the possibility that he might challenge us in a fit of madness. Any proof of irrationality in Soviet conduct might force us to change certain features of our present defense program, and to gather more strength for an emergency. It would not be a reason to weaken in our determination to deter a potential aggressor.

33. Much of the debate concerning the credibility of deterrence is academic. We must make it clear that, in case of general war, the U.S.S.R. cannot count upon the effect that a wavering public opinion would exercise upon national policy. Our actions would be instant and long underway before the impact of Soviet destruction would be felt.

The decision to intervene in certain limited war situations can prove to be agonizingly difficult, but no less difficult than the decision not to intervene. In both instances, public opinion will exercise no immediate effect on policymaking.

The study of our recent debates conclusively proves that the noxious effects of partisanship on national policy begin to appear long after the country has already been committed to a policy of resistance and, not infrequently, when resistance has already paid off. This was particularly evident during the two Quemoy crises.

34. National policy suffers most at the hands of domestic public opinion in situations where the enemy is just probing. This is the paradox that we create by our divisive controversies. Our deterrence policy seems to be at its worst when its credibility is actually greatest and where its success ought to be complete and painless.

It is safe to assume that the Soviet Union would not advertise any impending strike by grand maneuvers on the cold war front. Conversely, the Byzantine labors of Soviet diplomacy are wasted as soon as we unmask the threat that they intend to communicate.

The dialectic of partisanship tends to take any Communist threat at face value. Something must be done about it, or a thermonuclear disaster would ensue from our failure to act. The administration is accused of waiting, like Mr. Micawber, for something good to turn up.[18] At the same time, Soviet motives are scrutinized again and again. The crisis is traced back to some of our blunders. And self-appointed augurs divine, from their prejudiced standpoint, the erratic movements of world opinion.

Any credibility is also denied to national policy. As recent history so clearly demonstrated, the need to deter is taken as the proof that deterrence has failed. "Why did policy go so wrong," the critics ask, "that we have to use threats, land troops, and display such a bellicosity?"

Using the same reasoning process, we would put the blame for broken families on social workers, and claim that the very existence of physicians proves the failure of medicine.

Partisanship finally transforms the reasons why we should be firm into reasons why we should fear. The Government then attempts to counter public pressure. It is inclined to overstate the seriousness of the crisis. The more it does, the more public opinion has an excuse to indulge in hysterics and in self-righteousness. The need to deter and the risk of resistance to Communist probing come to be so exaggerated that a certain gratitude is experienced toward the Communist leaders when, sure enough, they decide to relax the tension, at their own time, by announcing that the attack has been postponed or by acting better than expected. Everyone knows that there was no crisis until they created one. Yet the Communists are given the semblance of a moral initiative in promoting peace, and their recklessness is never penalized. These are the true crowbar and sledgehammer that we always again hand over to the Russians to wreck national policy.

Deterrent threats are most effective, insofar as the potential aggressor is concerned, when they are stated in general rather than in precise terms, with relative bluntness rather than rarefied complications.

This salutary vagueness often serves as an excuse for public opinion to pretend that our warnings are too vague to be credible. Once more, we analyze the effect produced upon ourselves by our own threats. Such an introverted behavior leads to paralysis, and not to action. It does not fit the powerful leader of the free nations.

V. COLLECTIVE SECURITY:

35. The Indochina crisis of 1954 has dramatically illustrated the need and the usefulness of treaty commitments. The declarations that were made at the time by the United States did not meet with a full measure of success because the juridical basis for intervention was lacking.

In absence of a commitment that is legally binding, we must resort to improvisations and expedients. Indecision and the caprices of public opinion combine to ruin the effectiveness of stated policy, and the enemy's diplomatic moves achieve maximum impact both upon our allies and upon ourselves. Once we are committed, we must either back down or stand firm.

The Eisenhower administration has successfully completed the legal arrangements required for global deterrence. It has been accused of "pactomania." Fearing an overcommitment, the critics have compared our treaties to ominous sight drafts that could be presented in payment at any time.[19]

The fear of overcommitting ourselves is not founded. It is the same enemy that we face everywhere; it is, therefore, in our power to devise a global strategy to oppose him in every place at once. But if we shrink from committing our support to defend any free country threatened with Communist aggression, we would simply invite the enemy to attack that country. Finally, none of the treaties we have concluded since 1953 creates a legal obligation for us to send troops. They just make action possible if and where we freely decide to intervene.

36. The various security treaties concluded by the United States for the defense of the Pacific area and of southeast Asia reproduce the Monroe Doctrine formula. The United States declares that Communist aggression would endanger its own peace and safety, and that it would be met according to the constitutional process.

Mr. Dulles compared these treaties to the fingers of the hand. Each commitment is independent from the others; the United States is thus able to maintain a bilateral relationship with every one of its partners. But the fact that it has given the same commitment to all gives cohesion and unity to the various parts.

It is for that reason that we have decided not to earmark forces for particular areas of the Far East (except Korea), but to develop what Dulles called, on September 15, 1954, "the deterrent of mobile striking power, plus strategically placed reserves." Such forces would be able, he added, to strike at an aggressor "by means and at places of our choosing. The deterrent power we thus create can protect many as effectively as it protects one." If we attempt, however, to be strong everywhere, we would be strong nowhere.

This strategy is peripheral. It insures great flexibility of tactics. It presupposes disengagement.

37. The same complexity, unity and flexibility characterize our commitments in the Middle East. The Eisenhower doctrine is a unilateral declaration of policy which "authorizes the United States to assist economically and militarily nations which want such assistance in order to preserve their independence."

Aimed as it is at Soviet imperialism and military aggression, the doctrine has been denounced as illusory in view of the fact that Soviet aggression in the area seemed unlikely. But if the United States had not aimed at that target, shadowy though it might be, it would have had to foresake the restraining use of its power east of Suez. The fact is that, far from being useless, the resolution was successfully invoked not less than four times in 3 years.

Acting pursuant to the Middle East resolution, the United States concluded special defense arrangements with Turkey and Iran. These two countries acted through Cento, even though the United States was not a party to it. This osmosis effect again proved the usefulness of the doctrine as well as of Cento.

As in the Far East, our strategy is peripheral, and it requires disengaged forces. It is different on a very important point. The two Quemoy crises have shown that, in some instances, maximum deterrence is achieved by insisting upon the feasibility of powerful, albeit, limited, retaliatory actions to which Red China is particularly exposed and for which the type of power we have is well suited. The reverse must be said of the defense of the Middle East. In this case, no deterrence is fully credible unless we refuse, in principle at least, to limit retaliation arbitrarily. The same is true of the European theater.

38. The parties to the North Atlantic Treaty have agreed that "an armed attack against one shall be considered an attack against them all." They also agreed that, if such an attack would occur, each one of them would take "forthwith such action as it deems necessary." The "one for all, and all for one" principle is thus set in opposition with the restrictive character of the commitment; for the parties are not obligated to do more than what they deem necessary. The time has come to resolve this structural antinomy.

Every new crisis produces aspirations for greater allied unity. These are generally short lived. They cannot stand against the realities of allied policy. The reality of NATO is diversity: the special Anglo-Saxon

[17] The dilemma of bluff and madness is as fraudulent as the two alternatives of nuclear war and peaceful coexistence (as the Communists understand this term).

[18] As the Berlin crisis proved it, nothing could be done, except to stand on our positions, and nothing would happen, except if we fail to stand firm.

[19] Curiously enough, our treaty commitments were also denounced as parts of a general pattern of policy followed by the administration to lower the level of our military effort.

partnership versus the continental bloc; peripheral positions and the central front; the Bonn-Paris Axis and European integration; the Sword and the Shield; the long overdue renascence of European national pride. An entirely new climate would be created in the Western Alliance if these basic realities were considered as assets to be developed rather than as liabilities to be eliminated as soon as possible.

Allied solidarity is always desirable and constructive, if it is genuine and if it can be achieved without entangling us in hopeless dilemmas. Any unqualified, doctrinaire insistence for increased interdependence and integration would only deprive us of our leadership. Being an association of free nations, NATO must steer a cautious course between the Charybdis of stifling unity and the Scylla of disunity.

This means that the Western Alliance must establish its own rules for mutual independence as well as coordinate the execution of tasks and policies that can be fulfilled best by integrated effort.[20]

39. A national deterrent policy is now pursued, with inadequate means and intermittent determination, by France and the United Kingdom. A separate NATO deterrent has also been proposed. We have, in the main, opposed national deterrents with passive resistance.

The advantages of diversified deterrence are manifold, and they are decisive. The idea of a Europe devoid of any deterrent of its own, entirely dependent upon our own deterrent, and fully exposed to Soviet nuclear attack is inconceivable in the long run. Europe must have a capacity for independent action. National deterrents would face the Russian aggressor with the impossible task of destroying everything before doing anything and they would do much to relieve the European nations of their anti-American obsession, and thus lead to greater allied solidarity. This point must be shortly explained.

It is believed that the diffusion of nuclear weapons would greatly increase the danger of accidental war, and that "a stray bullet could blow up the town." This idea is the fetish of our present approach to the problem. Not only have European countries equal reason to fear an accidental war being started by us, and any war that would be started because of our actions would be accidental as far as they are concerned, but we must recall the distinction that H. A. Kissinger has made in his "Nuclear Weapons and Foreign Policy" between the "nuisance" character that nuclear weapons can have in the hands of a foreign country, and the sophisticated apparatus without which they would have no strategic effectiveness. The number of countries that can achieve strategic nuclear power is very limited indeed.

In addition, a national deterrent is a deterrent under national control, but it is not a deterrent that can be used in actuality for a purely national objective. The only decision that a country possessed with a deterrent of its own can make alone is the decision not to use it. Such a decision might be unwise, from the standpoint of our own interest, but it would have no catastrophic consequences. And if it were used against our will, it would be that our will had become so perverse that we would prefer to be Red than dead.

40. The Western Alliance must be disengaged from the nadir of frustrated nationalism. If this were done, the Allies would naturally seek to improve the effectiveness of their defensive shield. We all agree that there should be a force of all the allies in Europe to confront the aggressor with the necessity of raising violence to such a level that nuclear retaliation would become unavoidable.[21] This force should be integrated so as to engage the whole alliance into the conflict. If disengagement makes no sense for the United States, we can say, with stronger reason, that it is inconceivable for any country so directly threatened as France and Germany.

Integration is a shibboleth today because we consider it as the opposite of national sovereignty. It would make more sense to oppose integration to waste, to inefficiency, and to procrastination.

The fact is that integration is most needed in sectors where a sacrifice of national control is the least difficult to consent. Certain defense tasks—such as logistic support and air defense—cannot be fulfilled at all except on an integrated basis, and as far as they are concerned, national sovereignty is a myth. In other areas—research and procurement, for instance—the myth is that a true sacrifice of sovereignty is at stake. And the same can be said of most diplomatic problems confronting the West at present.

VI. CONCLUSION: THE NATIONAL SELF

41. Like individuals, nations tend to develop a complicated rationale of their own self, and they marshal their best talents to draw a picture of themselves. This picture contains attractive as well as ugly features, both of which gratify the national ego.

Self-accusation is one of the commonest tricks we use to fool ourselves. Unjust, unsincere breast beating does not hurt, and it does not help. But a true insight into what we are, would hurt us. It would also liberate the great, the indispensable force of genuine self-love.

Unless this is recognized, a debate on the national self is worse than useless. It would only serve to undermine national confidence still further.

Let us start, then, from the realization that our national character comprises specific qualities and destructive patterns.

Our weaknesses are not better than Prussian militarism or French chauvinism. They are just different.

There is much room, indeed, for intelligent debate and for self-criticism. At no time of our history was it more necessary to stress that an informed public opinion is essential to the conduct of government in a modern, pluralistic society.

All political philosophers have stressed, however, that injustice begins with meddling. There is no validity in the notion that systematic criticism is a sign of democratic validity. It is a sign of the moral decadence of a free country.[22]

As a people, we have a pernicious inclination for abstractions, particularly those abstractions that put obstacles in the way of moral progress.[23]

The great moral issue of the coming election campaign is whether we will continue to hold a pessimistic view of the national self while ignoring our true faults or taking them much too lightly. Are we going to continue to display a naive confidence in Americanism and to deprecate constantly our illusions and complacency, and materialism? Or will we realistically defend the national interest of the United States and love what we truly are.

42. The principle of separation of powers which is so fundamental to our constitutional system can be dangerously misconstrued. If the separation of powers were to give us the right to demolish executive actions while refusing to commit ourselves to national policy, it would destroy our system more effectively than Khrushchev can do it, and Khrushchev knows that well. One of the paradoxes of the present situation is that our enemy—and some of our allies—have well understood the laws that rule our political behavior and that we, in our pride, have decided to ignore them.

There is no alternative, in a democratic country, to a full commitment. This commitment should be actual. It must be given in concrete situations. It is particularly needed when and where a multiplicity of reasons can be invoked for refusing it.

Is it not true, however, that, even in the face of the most vulgar, most extreme provocation, our commitment has the hollow ring of insincerity? We rally—so we think—behind the Government. We warn the Russians not to interfere with American politics. We defend the President of the United States against Communist abuse, and immediately proceed to indict Mr. Eisenhower at the bar of opinion. For there is too much at stake, of course, to sweep the whole sorry mess under the rug in the name of national unity. We pretend that our Government has left to the Russian leaders no choice but to act as they did. We instantly call for an investigation of Executive actions, in due time or otherwise, as if the national survival depended on the immediate revelation of a great scandal. There is nothing much to reveal, however, and the dust soon settles. The investigation ends at the moment when it should have started. There is no room left for sensationalism, and we can praise one another for the mature fairness of our investigators.

The time might come when this double talk could have treacherous implications. To paraphrase Mr. Stevenson's much repeated slogan: "We do not succeed in deceiving the enemy, but we cannot succeed better in deceiving ourselves."

43. A nonpartisan, common quality runs through the Truman doctrine, the Marshall plan, the creation of NATO and SEATO, the Formosa resolution and the Eisenhower doctrine.

The actions taken by the Eisenhower administration which have been the most vocally denounced by a concerted opposition are the actions that the American people have most overwhelmingly supported.

---

[20] Some of the administration's critics have long flirted with the idea of disengagement, and they have deprecated the bipolarity of East and West. As I tried to explain elsewhere, NATO needs a psychological disengagement of American diplomatic influence in Europe, and a multipolar deterrent. Our role in Europe has many parts, and the problem for us is to keep it fragmented. We hold the sword, but we also provide the core of effective landpower. We are the keeper of Franco-German friendship, and the special friend of England, and so forth. In other words, we should not play one big role, but several partial ones.—Cfr. Malcolm W. Hoag, in "World Politics," April 1960, p. 389: "The current trend is toward both a primarily nuclear shield for NATO and independent strategic retaliatory forces. We might get the worst of all worlds."

[21] As Dean Acheson so truly said in his great speech on the Berlin question in November of last year.

[22] "I want my country to be strong, to be safe, and to have a feeling of confidence among its people so they can go about their business," President Eisenhower said on Feb. 11, 1960. The deep wisdom of the President's political philosophy is anathema to the busy-body democratic man. "Government is the people's business."

[23] For instance: "We believe in Soviet backwardness," so Soviet advances can never be exaggerated enough; "Vital information is withheld from the people and the people have the right to know," so we can always accuse the Government of withholding information; "Pessimism has always been distinctly un-American," so we will always be complacent; "A suspension of criticism would be a disservice to the Nation, however appealing such a moratorium on partisanship can appear as a short cut to national unity," so criticism will always be permissible. And we make these idols untouchable by warning the iconoclast that he does not understand American democracy.

The gap that exists at present between the true opinion of the American people and the picture that America projects in the world is the gravest of our domestic problems today. Mass communications have caused a divisive atomization of political consciousness instead of political wisdom.

44. The dialectic that saps our national strength at home also works against us in our relations with the rest of the world.

We generally take a much too lenient view of the insanity of anti-Americanism. We seek to excuse rioting and hostile behavior toward us in terms of our own faults. We report faithfully reckless accusations leveled against us, as if they were expressed in good faith by responsible people. At the same time, we seem anxious to force some of our ideology upon others, with a capricious pendantry that verges on contempt for their cultural tradition and in a manner that is legitimately resented.

Instead of claiming that we have been the source of the revolutionary concepts of human freedom, we would do well to consider that some of our values are not good, and that the true values from which our national strength is derived are not American values, in the sense that they are common to all humanity.

It is our appointed place in history—and also the greatness of our country—to protect, by our strength and power, the spiritual heritage of mankind. And if we do our duty, we will also be respected.

45. We are now concentrating our energies against a cataclysmic holocaust and confronting a total ideological challenge. We cannot, as a nation, fail to ask ourselves the question: What is the purpose of human existence?

Like totalitarian societies, we would like to find our national purpose in some great role to seize and to pursue "with passion." We cry for "leaders."

The democratic state exists for values higher than itself. It makes a direct appeal to our individual conscience. It is based upon the belief that, if our mind is clear and our will upright, we have the ability to distinguish between honest dissent and self-seeking partisanship, boldness and importance, political courage and personal ambition.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. BASS of New Hampshire. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD, study paper No. 9, "Science and Foreign Affairs," by Dr. George B. Kistiakowsky, special assistant to the President for Science and Technology:

SCIENCE AND FOREIGN AFFAIRS

(By George B. Kistiakowsky [1])

The theme of this paper is the impact of science and technology on foreign policy.

[1] Special Assistant to the President (Science and Technology). This paper was originally prepared as an address before the American Physical Society and the American Association of Physics Teachers. Ideas and material from other addresses have been incorporated.

The proposition hardly needs to be demonstrated that the advances of science gradually, sometimes suddenly, are altering the relations between nations and peoples. Of course, it is the technology which is the carrier of change, but it is the basic science, the acquisition of knowledge that constitutes the seed from which man makes technology grow.

After World War II, the advances of science made our political isolation from the rest of the world impossible just as they earlier made economic isolation impossible. In military affairs, perhaps, are visible the most dramatic and fast-moving changes, as technological developments took us from TNT to H-bombs, from artillery to bombers to ballistic missiles, from cavalry patrols to early-warning radar, all with the significance of shrinking the world and of increasing the mutual dependence and vulnerability of nations. Public policy, whether domestic or foreign, must recognize this transformation, cope with the problems it generates, and use it as appropriate for the goals of our society.

If, for a moment, this writer may revert to the language of chemist days, humanity but a century ago was in the condition of a steady state reaction, whereas now it is in the midst of a nonsteady branching chain process and science is the chain carrier.

The need to adjust public policy to changing human conditions, of course, isn't new. What is new today is the rapidity with which the developments of science are altering the human conditions, the rapidity with which policy, particularly foreign policy, must adjust to the changes being wrought by the pace of scientific advance. Not only adjust—policy must prepare for, must predict, the impact of scientific discovery, and must also in some sense attempt to guide it.

This paper will discuss several important aspects of the relation between science and world affairs; then we shall mention the present governmental organization for developing public policy in the field of science; and we conclude with some thoughts on science and public policy in the future.

First, however, let us review briefly scientific developments of the last decade.

A DECADE OF PROGRESS

Ten years ago, Dr. James B. Conant, as Chairman of the National Science Board, concluded his foreword to the first annual report of the new-born National Science Foundation with this urgent warning: "Until such time as disarmament becomes a reality, the free nations must be deeply concerned with finding and developing scientific pioneers, for on their efforts we must rely as much for increasing national security in a war-torn decade as for industrial progress in periods of peace."

Clearly audible today is the echo of Conant's warning—"until such time as disarmament becomes a reality." The reality then—and now—was that temporary comrade in arms became an intransigent foe, reaffirming the subservience of the individual to the state, ruthlessly engulfing unwilling neighbors as satellites; threatening the freedom of peace-seeking peoples throughout the world. The science of the United States had no choice but to focus on the needs of national defense, and this it has done well.

History began to record the early years of a quasi-peace we have come to call the cold war. From time to time its temperature climbed to boiling point, and sporadic outbursts of "hot" war flared up in places distant in miles from our shores but, measured in time, now our next-door neighbors—Korea, Suez, Taiwan, Vietnam.

Science found no release from its association with arms and armament, nor did it seek any, so long as its help was needed to safeguard the liberty of the world by ensuring the strength of our defenses.

Unprecedented funds were unloosed that we might maintain our leadership in weaponry. Corporations, big and small, and even universities, entered into contractual relationships with Federal agencies involving very many dollars, to undergird our defenses. Science and its offspring, technology, flourished and prospered as never before in our history. Under the impetus of this massive Federal support, our scientists and engineers contributed vastly to our storehouse of knowledge and its applications.

Working closely with military people on military problems, scientists and engineers supplied the elan for one of the most striking technological developments to emerge from the postwar period—automatic data processing, using the high-speed digital computer. Most of the stimulus behind this development came from the military sources seeking fast methods for processing data on military tactics, logistics, flight simulators for testing and training, or any other end-product which required the speedy reduction of a vast input of data.

Fortunately for our long-term leadership, more basic aspects of science were not forgotten. High-energy, elementary-particle physics is a field in which vast progress has been made since World War II. Similarly, radio astronomy has pushed rapidly ahead in the last decade, using advances in electronics born out of military-related work. Molecular biology made spectacular advances and brings us near the understanding of the origins of life.

Creativity budded and bloomed in a brilliant burst of innovation. Despite their essential preoccupation with developing the defensive strength of the Nation, science and scientist demonstrated the great rewards of research irrespective of the environment to which it was applied.

In retrospect, the decade of the fifties may become known best for its identity with two capital letters, "R" and "D."

Until the midperiod of the decade, economists had to guess the amount of research and development performed within the United States. At that point, the National Science Foundation, on the basis of a thorough survey of the 1953 period, pegged the dollar figure for R and D, not at the estimated $2.5 billion, but at more than double that amount—$5.4 billion. Today it has more than doubled again, the Foundation's estimate being on the order of $12 billion.

The late, great Harvard economist, Sumner Slichter, coined a most connotative phrase for research and development—"the industry of discovery." We might also call it "the industry for tomorrow." None need be surprised to learn, therefore, that those industries which have invested most in research and development, the electronics and pharmaceutical companies, have shown the most rapid rate of growth in recent years.

The industry of discovery cannot be confined. It is as profitable for mankind as it is for the corporation. Although science, no less than any other human activity, was engulfed by the political strife of the cold war, it showed a way to demolish political barriers during the 18-months' period of the International Geophysical Year, even though such was neither its mission nor its design. Scientists supported by their Government, sought simply to map man's physical environment, to achieve a scientific understanding of the earth and its cosmic environs. They succeeded magnificently in accomplishing their scientific mission. From investigations of the universe made or initiated between mid-1957 and the end of 1958, a microsecond on the cosmic clock, will emerge a volume of geophysical knowledge greater than any theretofore assembled.

For its scientific value alone, the IGY was impressive. But in a world of tensions, it is almost more encouraging as a kind of a breakthrough of its own, to better interna-

tional understanding. Sixty-six nations, representing the free and Communist world, participated in this exploration of the unknown. They marshaled 30,000 scientists and technicians to work together as a team, although separated across the distance between the poles. With but few exceptions, they shared the knowledge they uncovered.

Similarly in the Antarctic, an area for years dominated by rivalries for territorial claims and rights, the cooperative efforts of scientists of many countries served as a pattern of international cooperation accepted as valuable by their political leaders. Work started during the International Geophysical Year, including the exchange of scientific personnel, the sharing of facilities and results, and the efforts to plan cooperative schedules and arrangements, is now more than ever developing a broader spirit of cooperation among the scientists of these countries and, perforce, drawing in the political interests as well. The United States is deeply engaged with its scientific personnel in cooperative efforts and is receiving the same type of help from other countries.

Attesting to the value and importance of these scientific efforts led by the United States, the interested nations have recently drafted and signed a treaty for Antarctica which opens all areas freely for scientific research to all nations of the world, places claims for individual territory in abeyance for the duration of the treaty, and assures all that Antarctica shall not become a place for military operations or military rivalries. Were it not for the scientific effort in this area during, and following, the International Geophysical Year, the pattern for cooperative arrangements in Antarctica would never have been established, nor would there have been the impetus for drafting a treaty.

However substantial were the cooperative aspects of the International Geophysical Year, the period was characterized as well by a heightening of international competition in science and technology. The International Geophysical Year literally thrust us into the space age. Our country can justly be proud for first announcing space satellite plans to assist the International Geophysical Year program. However, the sputnik launch provided the thrust, without doubt. Perhaps though, the emphasis should be on the spectacle of immaturity we made of ourselves over this engineering accomplishment. Today, most of us feel a bit shamefaced about our sputnik-provoked anxiety, particularly when we realize that only the one most recent Soviet satellite remains in orbit that is transmitting information, while several of our own still riding through the reaches of space continue to send back most of the scientific information they were designed to uncover. Even the humblest of these, Vanguard I, continues to remit valuable scientific data. Tiros I proved to be much less of a tyro with a camera than we had thought. The quality of its photographs permits identification of individual hurricanes and other centers of disturbance as well as study of the gross features of cloud cover. The amount of useful information transmitted will contribute to a deeper understanding of the earth's atmosphere for the benefit of all mankind.

Let no nation count the United States out of competition in any contest for superiority in science and technology. Though the frontiers of science are endless, the competitive spirit of frontiersmen is a legacy of the American tradition. By compelling the United States to keep its guard up, our antagonists may yet be hoist on their own petard. The competition in armaments into which we have been unwillingly thrust has served as a driving stimulus to scientific creativity. Because we are fortified with a credo which insists on the primacy of the individual, and are not perverted by the drive for aggrandizement of state, our science seeks to serve, rather than master, mankind.

NEW PROBLEMS OF PUBLIC POLICY

Let us explore now some aspects of the relation of science to foreign affairs that are unique to our age (at least their importance is unique) and that provide us with our greatest immediate opportunities, and some of our major problems. These include:

1. The unparalleled and in many ways unexpected political importance to a nation of having the appearance of world scientific leadership (the word "appearance" is used advisedly).

2. The effect international scientific activities have, and can have, on the relations between states.

3. The importance of the technical component of some prospective arms control measures.

4. The relation of science to technical aid for less-developed countries.

Each of these is worth careful consideration, for they are not always understood, and yet must be understood if the Government and the scientific community are to fulfill the obligations and opportunities ahead of us in these areas.

THE IMPORTANCE OF WORLD SCIENTIFIC LEADERSHIP

First, consider that matter of scientific leadership and its political impact. Scientific and technological progress has acquired status as the symbol of strength because of its obvious relation to military power, as well as of productivity and the good life. This is in evidence within our borders and everywhere beyond. The striving to emulate American scientific and technological progress has become an ambitious and urgent goal for countless millions of people, including, one might note, the Soviet Union.

But unfortunately it is the technological spectaculars which tend to be used by the public at large and, often, the press, as the sole measure of scientific as well as technological prowess, and thus, of military power as well. Achievements in outer space activities are as we have already noted, the prime example of this. Perhaps a few further observations about our space and missile program in this light are in order.

As has been emphasized by Dr. Herbert York, an intercontinental ballistic missile capability is not necessarily dependent on huge rocket booster vehicles capable of sending multiton payloads into space. To the general public, both in this country and certainly abroad, this is not well understood. The Soviet Union, of course, has not been lax in attempting to confuse the issue.

Our development of long range rockets began late because our military planning was founded on air-breathing engines. To move ahead as rapidly as possible in ballistic missiles, we chose to make our missiles as compact as possible to deliver warheads of adequate yield. We could do this with an ICBM with a thrust only one-half that of Soviet ICBM's because of our advanced nuclear weapons technology.

In this we have been successful; first the IRBM's and now the Atlas missile are perfected and are operational. But, the planning and preoccupation with smaller missiles, adequate to do the military job required, led to rocket vehicles with inadequate thrust to send spectacular payloads into space. We did not begin work on large rocket boosters until it was too late to match past Russian performance in outer space. But, it is important to remember that the extra-large rockets are not required for our long-range missiles; hence, our deficiency in outer space payload capability does not indicate an inferior military capability.

We must also recall the important fact already alluded to, that our scientific achievements in space have easily matched those of the Soviet Union. This is generally recognized by the world's scientific community. In addition, we are now making rapid progress toward practical applications of "near outer space" for the benefit of all nations and people.

This is not to suggest that we accept a secondary role in future outer space activities requiring large rocket boosters. We cannot ignore the very real political implications of various spectacular accomplishments in outer space that have come to have symbolic meaning to the world at large. We are indeed moving ahead rapidly to develop boosters for space exploration missions requiring very large payloads and are vigorously pursuing the man-in-space program. But we must accept the technical reality that despite a vigorous national effort to develop such boosters, there are limits on how quickly the gap can be closed and these limits are largely set by technological factors.

In the meanwhile there are for us major opportunities to carry out sound and exciting programs in space science and technology that will redound to our national benefit in terms of enhanced prestige and welfare. For example, the development of meteorological satellites could prove to be of great benefit to all nations and could substantially contribute to our scientific and technological stature throughout the world.

To repeat: We cannot accept a secondary role in future outer space exploration. But true leadership must be seen in the context of far broader efforts. We must be constantly aware that our strength lies in excellence spread over a wide scientific and technological base.

It is a feature of an authoritarian form of society that its government can concentrate efforts in narrow fields. If the total strength of such a society is substantial, as is that of the Soviet Union, then what one might term temporary technological superiority can be achieved by it in selected directions. So long as this superiority is temporary; so long as it does not permit a vital military advantage; and so long as it is not across a broad front, there is no need for alarm, but we must increase our efforts to cancel out imbalances that arise and are significant. On the other hand, we must not permit ourselves to be stampeded into overemphasizing one area at the expense of others. We must constantly bear in mind the sound military doctrine not to accept battle on the field of the enemy's choosing. Rather, we must continue to move across the entire broad front of scientific and technological advance. Thus, as a nation, we will remain a world leader.

EFFECT OF SCIENCE ON RELATIONS BETWEEN NATIONS

Let us turn to the second aspect of the relation of science and foreign affairs, the significance of international scientific activities to the relations between nations. Here is perhaps the most important of the roles science and scientists can play in today's embittered and divided world—not a new role in the sense that international activities of science are part of the lifeblood of science; but new in its potential impact on political relations.

Science today is one of the few common languages of mankind; it can provide a basis for understanding and communication of ideas between people that is independent of political boundaries and of ideologies. Over time, these personal relationships, established with Soviet scientists who form a major portion of Russia's intellectual elite, can provide a bridge between our cultures and perhaps bring about a gradual erosion of the militant aspects of Communist ideology.

Science also provides a sometimes unique opportunity for cooperative endeavors that can contribute in a major way to the reduction of tension between nations and, more positively, to close relations between the United States and other countries. All this,

of course, in addition to offering a way for cooperative attack on problems of interest to all nations.

This has been recognized many times before. Many activities of the Government and private scientific bodies further these goals. Normal international scientific union activity, the IGY, the exchange agreement between the National Academies of Sciences of the United States and U.S.S.R., the very recent McCone-Emelyanov agreement, the U.N. Atoms for Peace Conferences, and many, many others. However, the question must be asked whether we are doing enough in this area, and particularly whether the Government is sufficiently active in terms of projects of its own, in support for nongovernmental activities, and in creation and preservation of the necessary conditions for effective international scientific activity.

What are some of the issues that face the Government in this area?

The most obvious is how to balance the resources for international scientific projects against domestic scientific needs. Should the Federal Government be doing more itself internationally, or should it support private efforts only? In either case, can you justify international support when there are good scientific projects lacking sufficient support within the country?

A good illustration of this problem is presented by the scientific program in the Antarctic, mentioned before. The Government had to face the question of setting the level of Antarctic activity in the knowledge that the funds for that program would detract in some measure from the support of deserving programs within the United States. There are few guidelines for the appropriate scientific level of activity in Antarctica, just as there are few guidelines for the appropriate level of activity in specific scientific fields.

In fact, the problem of the Antarctica is not dissimilar from that of outer space (except for the rather wistful observation that we now have a treaty reserving the Antarctic for scientific research). Political considerations are important in setting this program level also. These considerations relate to the stature and scope of our effort relative to that of other countries, particularly the U.S.S.R., and, in the case of Antarctica, the relation of research to possible territorial claims. And so, the Antarctic program is set as an orderly, sound scientific effort, but with political awareness that there are other attributes to the scope and excellence of the U.S. effort there.

The appropriate means for carrying out international activities comes up time and again. Can it be handled through the scientific community in the way that ICSU planned and organized the IGY? What is the appropriate role for the U.N., UNESCO, for NATO? Should it be a government-to-government project because of the resources required? And if so, are bilateral or multilateral arrangements to be preferred?

A recent example may be illustrative, referring to space science once again. When establishing the U.N. Outer Space Committee, the suggestion was made that the Committee should be responsible for conducting outer space research itself, or at least planning research on an international scale. Notwithstanding our strong desire for international cooperation in space, this was thought to be clearly inappropriate. Because of the large resources required to provide boosters for space exploration, it was considered necessary to keep the final decisions regarding space flights in the Government's hands. On the other hand, international scientific planning and cooperation was clearly desirable at the scientist level, without the complex governmental machinery of the U.N. that would inevitably have to face political issues. Therefore, the U.N. Committee will be concerned with the mutual exchange and distribution of information, the study of legal problems of outer space, the conference on outer space exploration, and the general encouragement of space science. NASA will make formal agreements with foreign governments for scientific cooperation, but both the U.N. and NASA will look to the Committee on Space Research of ICSU for the scientific cooperation and planning to bring about effective international scientific collaboration.

The issue of bilateral versus multilateral agreements is of major interest at the present time, in view of the recent United States-U.S.S.R. agreement in peaceful uses of atomic energy. Notwithstanding the very real gains we may achieve through increased contacts with the Soviet Union, we must avoid any series of moves that would create a United States-U.S.S.R. scientific axis. Thus, it was carefully stated in the agreement with the U.S.S.R. that any joint projects would be carried out under the aegis of the International Atomic Energy Agency where all member countries could participate. Clearly, what may be now the finest high-energy physics facility in the world—CERN—should be included in activities under the agreement.

A receptive climate for international scientific activities requires Government action too, or in some cases, lack of Government action (in a positive sense). Science must not be sacrificed to political expediency, or ignored for political expediency, because to do so would be like canceling one's life insurance on account of temporary financial straits. We must be ever-certain that science is adequately represented in those areas where policy will impinge on science, so that considerations of science will be included in policy formulation. International scientific activity, for example, has moved historically without regard for political boundaries and this is one of its great strengths. This traditional nature of science must not be neglected or forgotten, as it all too often is, in the application of restrictions to be placed on the free movement of individuals among nations. Nothing will erode our basic traditions and our scientific leadership, and our influence, more quickly than a willingness to sacrifice basic long-term beliefs for short-term political consideration.

In the same vein, the needs of science must be adequately represented in international as well as domestic-policy formulation. Radio-astronomy recently almost came to an untimely end, simply through negotiation of an international treaty on frequency allocations without adequate recognition of the needs of this young science for listening windows. Through the good offices of the National Academy of Sciences, it was possible to bring scientists and the appropriate Government officials together in time to establish a U.S. position for the Geneva ITU conference compatible with the needs of the radio-astronomers.

International scientific activities thus carry with them many problems for Government, but their benefits far exceed those problems. To achieve the benefits, however, requires that we be alert to the opportunities and that we be prepared to make some of the necessary policy decisions and commitments of resources.

SCIENTIFIC ASPECTS OF ARMS CONTROL

A third new element in the relation of science to foreign policy is the importance of the technical components of prospective arms control measures.

The negotiations on nuclear test cessation have shown the importance of scientific and technological factors for the formulation of national policy in this area. These factors had to be evaluated by ad hoc groups that found a dearth of experimental data on which to base their conclusions. A similar ad hoc approach had to be employed regarding certain phases of the conference on the problem of reducing dangers of surprise attack. The fact that scientific advice and evaluation were used in both these attempts to reduce military tensions is, in itself, important. It is a sign of the changing attitude and the growing awareness on the part of policymakers that technical considerations and knowledge are essential for the formulation of sound concepts for arms limitation measures—just as they are in formulating development plans for military hardware.

The success of future negotiations to relieve tensions by arms limitation agreements will depend in some measure on the understanding of the capabilities of proposed multilateral monitoring systems and on the understanding of inherent limitations of any monitoring system in a world of rapidly advancing technology. The limitations of technical analysis need also to be fully understood. There is no doubt, for instance, that the reliability of monitoring systems is largely a technical question. But the adequacy of such systems, from the point of view of national security, is not. It is a politico-military one. And we must realize that political issues or disagreements cannot be resolved by technical agreement on facts; the political questions of national interest remain. It is well that these issues be understood by the public as they are being understood by the policymakers. Especially we, as scientists, must understand that we can contribute but one of several inputs that are essential for the formulation of sound national policy.

SCIENCE AND U.S. TECHNICAL AID

The relation of science to technical aid for less-developed countries is the fourth, and last, of our list of new relations of science and foreign policy.

The foreign aid programs supported by the United States are powered by a matrix of motivations made up of altruism, a belief that it is to our best interest to strengthen independent nations, and a desire to contain menacing philosophies. Motivation notwithstanding, it is evident that any program, any experiment, will fall short of success unless it is soundly conceived, soundly planned, and soundly executed.

In helping to achieve a sound aid program, we, as scientists, must not think in terms of developing only the more advanced scientific capability of other nations, which is often a reflection of our own standards and comfortable abundance. We must try to strike a balance between basic needs and sophisticated development.

This requires an appreciation of how science and engineering develop within a nation. The history of science in many lands has not been written beyond the prologue. We must, for instance, be aware of the long-term relation between primary and secondary school education and advance research institutions.

We do little good to provide only for esoteric research facilities when a nation lacks roads, general practitioners, and machine operators. Of course, we do a disservice also when we ignore the advanced educational institutions that set a nation's standards, provide its teachers, offer a future for gifted citizens, and bring prestige to a nation or a region.

An important report was recently prepared by the National Academy of Sciences' National Research Council for the International Cooperation Administration, entitled "Recommendations for Strengthening Science and Technology in Selected Areas South of the Sahara." This report is an outline of how assistance of a technological type should be designed to be properly utilized. It is an intelligent and realistic attempt to strike the necessary balance between the basic needs and sophisticated wants, within a

framework of limited resources from within and without an area. It is also an attempt, a very successful one, to show how a scientific approach can be used in the early planning stages of aid programs.

The reading of the report will have a sobering and disturbing, if not a frightening effect, on thinking individuals. It treats with selected areas of sub-Sahara Africa, a land mass equal to that of the United States and with a population one-half that of our Nation—and this is only part of all of sub-Sahara Africa. It is an area which, within our lifetimes, will be transformed into a multiplicity of independent nations which, collectively, will greatly influence world affairs. What is particularly disturbing about this study are the revelations of extreme shortages that still exist in this region; the nearly complete lack of public health measures and medical service; of communications and transportation; of the means for earning an income; of even the most elementary educational facilities.

Clearly, these embryonic nations need educated people in large numbers to provide not only civil servants, but an understanding electorate to carry them along the path to democracy. But how can the needs for higher education, for doctors of medicine, for engineers, for political scientists, for so many other specialists be properly balanced against the needs to provide even the most primitive health measures, to provide teachers for the many millions of illiterates, and to train artisans and skilled laborers without whom the standard of living cannot rise? Against these multiple desperate needs, indigenous efforts, our aid and the aid of others, appear so utterly inadequate that one becomes fearful lest decades will pass before the level of education and the standard of living will rise enough to make democracy viable.

The question then comes to mind, will the awakening of latent desires permit democracy the time—that is so inherent in its evolutionary nature—or will this region fall prey to the legerdemain appeal of the revolutionary authoritarianism, especially Communist ideology?

For a research scientist this report will have a sobering influence: It will impress upon him that he is a luxury that can, and must, be afforded by an advanced Nation like ours. But in Africa, south of the Sahara, a nurse, an elementary schoolteacher, a technician, these are the luxuries.

Science impinges on aid to technologically more advanced nations also. Various Government departments have for many years supported research overseas. By and large, these programs have been well run. Such programs raise some serious issues for consideration, however, for outside support of science in a given country affects the relationships between that government and its citizens and universities. Some programs, even those in support of basic research, are welcomed by many foreign scientists, and yet cause affront to others. We must therefore, consider the effects of such programs on all who are concerned, and especially on the natural growth of the scientific communities in the recipient countries.

Does such support, for instance, actually retard the development of a healthy relation between science and government in other countries? What commitments for continuity of support are we making once foreign scientists have become dependent on U.S. support, commitments from which it may be impossible to withdraw or which may cause hardship should withdrawal be necessary? What is the effect of our support on the pattern of research in a given country? And is the manner in which our support is given in this area, best calculated to further good relations between the scientific communities of other countries and the United States?

We are not the only ones who are aware of these problems. In its most recent annual report, the United Kingdom's Advisory Council on Scientific Policy, addressing itself to just these questions, had this to say about U.S. research support:

"Whilst we warmly welcome this substantial financial support for research in this country, we recognize that research grants, and particularly specific contracts, of this magnitude (one and a quarter million pounds annually) must have a considerable influence on the general pattern of research undertaken. We, therefore, consider it desirable that the various bodies concerned with the financing of research in our universities and other institutions should be aware both of the extent and the purpose of these numerous U.S. research grants and contracts. We are glad to be able to record that the U.S. authorities have fully appreciated the position and have shown themselves ready to cooperate with us."

Of course, there are no general answers to most of the specific questions raised, for they vary with the country concerned and with the manner in which our support is given in each country. But these questions need to be asked—and answered—before support is provided. These programs cannot be operated independently of foreign policy considerations.

GOVERNMENT ORGANIZATION FOR PUBLIC POLICY IN SCIENCE

It is worthwhile to review some of the measures Government has taken in order to bring these problems into focus, and thus to help bring about corrective action. These steps were taken for a wide variety of reasons, of course, not merely to serve the requirements of foreign policy.

In two speeches during November 1957, President Eisenhower emphasized the need for strengthening science education and bringing our overall scientific and technological effort to peak performance levels.

In the first of these speeches, in which he called for an all-out effort to mobilize the best resources of science and scientists in support of the national security and welfare, the President announced the creation of the office which it is now my privilege to hold. He also reconstituted on the White House level the Science Advisory Committee. Later, in his 1958 state of the Union message, President Eisenhower stated: "In both education and research, redoubled exertions will be necessary on the part of all Americans if we are to rise to the demands of our times."

The office of special assistant to the President for Science and Technology did not exist before November 1957. Nor had there been, except for the wartime National Defense Research Committee, a science advisory committee directly responsible to the President. The NDRC had large operating responsibilities. The present committee and the special assistant do not. Their function is advisory, making scientific advice and analysis available wherever they are needed in the formulation of national policy. The committee also endeavors to insure that science and technology contribute their maximum to the welfare of the United States by seeking ways—

To enhance the excellence of U.S. science, both basic and applied, and to add to our effort, relatively, in basic research.

To extend the recognition of science as a creative activity that augments man's dignity and understanding and affords him intellectual adventure of the highest order.

To recognize that outstanding accomplishments in science appeal deeply to the hopes and aspirations of men everywhere, and contribute to the prestige and good will of nations.

To demonstrate that the democratic environment of the free world is the best environment for achievement in science.

To improve the ways in which our Government uses and supports science and technology.

To apply technology more effectively to improve our national security, to strengthen our economy, to enhance the health and welfare of our citizens and other peoples.

To promote international understanding and good will.

These are broad and ambitious objectives. Even small progress in each area would be a significant achievement.

The organization that works toward these goals comprises the 18-man committee proper, numerous panels involving members as well as consultants, the special assistant, and his small full-time staff of technical aides. The committee's members are representative of those fields of science and technology especially important to the Government. The membership rotates, most of the new appointments being on a 4-year basis. This practice brings to the committee fresh points of view and representation from different fields of science and technology. To discharge its responsibilities, the committee has established panels, some on an ad hoc, others on a continuing basis. First Dr. Killian, and then this writer was elected to the chairmanship of the committee, which knits the whole organization together.

The panel structure has consistently been a distinctive feature of the committee's work. It has made possible intensive studies on problems that could not have undertaken by the committee because of its limited membership. At the present time, over 100 scientists and engineers are associated with the committee and my office in part-time capacities, thus providing a wide range of expert advice. Committee and panel members are selected not only because of their expert knowledge and achievement, but also because they possess something which might be called wisdom in a broader sense. Partnership in this organization means work and, therefore, some sacrifice of personal careers. It is willingly undertaken in the spirit of national service. The magnitude of personal involvement is indicated by the fact that more than 500 man-days of work were needed recently for the study of certain problems in the classified area and the preparation of one short summary report.

A major concern of the committee is how to bring the young generation of scientists and engineers into panels and other types of advisory services to the Government. We need to explore every way of making their services, skills, and fresh ideas available without handicapping their professional developments, or curtailing their contributions to science.

The special assistant, as a member of the President's staff, is invited to attend meetings of the National Security Council and of the Cabinet, and—when appropriate—to present the views and findings of the Science Advisory Committee. He is also a member of, or attends the meetings of, special Cabinet-level interdepartmental committees, such as the Radiation Council. He is the Chairman of the new Federal Council on Science and Technology, consisting of representatives, at the policymaking level, of 10 departments and agencies.

Some of the panels of the Science Advisory Committee deal with unclassified fields of interest to the Federal Government and a few of their activities have led to reports and statements which were published under the imprint of the White House. The titles indicate the broad scope of these activities: "Introduction to Outer Space," "Scientific Information," "Strengthening American Science," "The Argus Experiment," "High Energy Accelerator Physics," "Education for the Age of Science," and "Food Additives."

Other panels' activities result in detailed recommendations to various agencies of the executive branch of the Government, which

are not suitable for public dissemination, such as the work of several panels dealing with classified matters pertaining to the national security.

The creation of the Office of the Special Assistant and of the Science Advisory Committee is, however, but a small part of the actions which the President and Congress have taken recently to strengthen American science and technology and to make the Government process more responsive to a world of rapidly changing technology. These actions include:

Expansion of the National Science Foundation program and a threefold increase in its appropriations for support of basic research and education in the sciences.

Enactment of the Department of Defense Reorganization Act, reflecting the impact of modern weapons technology and systems engineering on the Military Establishment.

Establishment of the Office of the Director of Research and Engineering and the Advanced Research Projects Agency in the Office of the Secretary of Defense.

Assignment of engineers and scientists at policymaking levels in the offices of the Secretaries of the three services.

Establishment of the National Aeronautics and Space Administration to provide a civilian space-science and exploration agency.

Reactivation of the Office of Science Adviser to the Secretary of State, and the appointment once again of science attachés to overseas posts.

Establishment of the Federal Council for Science and Technology as a means of bringing together for common planning policy-level representatives of agencies having major scientific programs.

Enactment of the National Defense Education Act, designed to aid education generally, with specific provision for strengthening science education.

In the Congress, the House of Representatives established a standing Committee on Science and Astronautics. The Senate, also, has created a new standing Committee on Astronautics and Space Science. A number of important actions have been taken by the Congress, and by the executive branch, to improve the status of scientific personnel in the service of the Government.

In addition to these national efforts, there have been important advances in international cooperation which have been mentioned already.

SCIENCE AND PUBLIC POLICY IN THE FUTURE

We have attempted to outline some of the ways science can contribute to foreign policy, the effect of policy considerations on science, and some of the governmental machinery which has been built up to assist policy formulation. But to integrate the scientific with the political, economic, military and other factors that make up foreign policy operations, requires above all, competent people who understand the relationship of science to these other factors.

If we appreciate our responsibilities, we, as scientists, may well have an important role to play in the future in the policymaking process. It will be a different role than the one to which we have become accustomed. It will demand a new breed of public servant, although the appropriate name for him is not immediately clear. The term "political scientist" has been preempted for a very different use than this. None of us would want to be called scientific politicians, and few indeed would dare to lay claim to scientific statesmen. But there is a significance here that is far more important than finding the right name. The role demands that this new breed of citizen-scientist be continually aware that the scientific community must accept its appropriate share of the responsibility for the intelligent and successful resolution of the challenges facing the world.

Another kind of individual must be recruited, too: an individual with training in science in addition to the usual disciplines of the foreign service. The general presumption is that science is so specialized that the only way to provide scientific inputs to policy formulation is to obtain advice from practicing scientists on an ad hoc basis as needed. But as valuable as such advice is, it does not fill today's requirements for a continuing and intimate involvement in the policymaking process of competent people who also understand science and its significance to policy, and who could therefore work effectively with the practicing scientists supplying the specialized ad hoc studies.

Perhaps science and engineering graduates should be attracted for regular careers in the Foreign Service and in our other overseas programs. We must also provide a better scientific background for nonscientists in the international affairs field. This, perhaps, is the most important measure of all. Essential to these efforts is the development of an academic field of teaching and research in the interrelationship of science and foreign affairs, to be able to educate properly and to understand better the underlying significance and opportunities of this relationship.

These are not easy tasks, nor ones that can be accomplished overnight. Unlike toasters, automobiles, and television sets, we cannot push a button to mass-produce diplomats in striped pants and laboratory coats.

In discussing international relations, the American historian, Julius Pratts, states: "Neither the tools of diplomacy nor the tools of force can be suddenly improvised for use in crises. They must be kept in a state of readiness for use. The success of a nation's foreign policy will depend, in part, upon the efficiency and the readiness of the instruments with which the policy is pursued." We, as scientists, must do all we can to help keep the tools of our diplomacy and the tools of our force in efficient readiness.

We have entered a new era, a scientific revolution, as C. P. Snow terms it, in which science and technology are transforming our way of life and the relations between nations. We cannot stand aside and simply watch this process, regardless of where it takes us; we must and we can use science and technology to achieve the humanistic goals of our free society.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. HOSMER. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD, study papers Nos. 10 and 11, "A History of Ballistic Missiles," by Congressman LESLIE C. ARENDS, member of the House Armed Services Committee; and "The Cost of National Security," by Prof. Arthur E. Burns, George Washington University.

A HISTORY OF BALLISTIC MISSILES

(By LESLIE C. ARENDS, Congressman from Illinois)

Major military weapons never spring forth full bloom overnight. The first operational B–17 took a decade to develop. The B–29 and B–52 are likewise the outgrowth of years of effort.

Similarly with modern rocketry. Though it began in America 17 years ago, rocket development turned seriously to long-range ballistic missiles only 7 years ago.

Not until fiscal year 1953 were expenditures in any one year on long-range ballistic missile programs even as much as a million dollars. Since then, these programs have advanced with impressive speed. Today, they involve the expenditure of 10 times as much each day as was spent in all of fiscal year 1952.

In the early postwar years, military studies slowly advanced American ballistic missile knowledge. Propulsion, guidance, heating and weight problems appeared very difficult. Their solution obviously was costly. Yet, the level of effort remained low and sporadic.

Moreover, critical data controlling warhead weights were unknown. Until 1953, the operational feasibility of long-range ballistic missiles seemed far distant to those in authority. As a result, these programs were deemed unworthy of major effort. To be sure, one such program, the forerunner to Atlas, was started as long as 14 years ago, in 1946, but it died 3 years later in the 1949 defense cutbacks. The program was revived in 1951, but even then only as a component development effort.

From World War II to 1953, due partly to this skepticism as to the practicality of long-range ballistic missiles and due also to emphasis on strategic bombers, our missile effort, such as it was, went mainly into air defense missiles such as Nike-Ajax, Terrier I, and Falcon. Some short-range ballistic missiles and some relatively slow nonballistic aerodynamic type long-range missiles did receive some support. Long-range ballistic missile efforts, however, were held down to low support studies.

Viewed in retrospect, therefore, it is hardly remarkable that as of 1960, 15 years after World War II, American long-range rocketry is in some particular respects matched or surpassed by the Soviets. That result was foreordained by years of low-priority attention and lack of funds while the Soviets evidently were advancing their rocketry full blast.

What is remarkable is how rapidly the intercontinental ballistic missile (ICBM) and intermediate range ballistic missile (IRBM) programs of the United States have advanced in less than 6 years. The speed of this advance in so short a period augurs well for the Nation's security. It is convincing testimony to the competence of our scientists and engineers.

It is the purpose of this paper to outline the history of ballistic missile development during the past two decades.

THE WORLD WAR II PERIOD

The year 1942 marks the beginning of our World War II rocket program. The work was principally on solid propellants, which burn like cigarettes within the rockets. It was carried forward, with military support, by the Office of Scientific Research and Development. From it evolved our World War II artillery rockets, air-to-surface rockets, rocket boosters for airplanes, other special rocket motors, and our first serious efforts to propel rockets with liquid fuels. During the summer of 1945, this work produced the Army WAC Corporal, a rocket fueled by nitric acid and aniline.

When World War II ended, the Allied Nations placed scientific teams in Germany to analyze that nation's technical accomplishments in rockets and missiles. A number of the best German scientists and engineers were induced to go to Russia and to the United States. The United States, however, pressed this effort less aggressively than the Soviets.

In the latter part of 1946, the Russians identified other scientists and technicians associated with German missile programs. Hundreds of them were removed to Russia. German research facilities and production plants were stripped of machinery, instruments, blueprints and missiles or missile components. These, too, were shipped to Russia. Thus, the Russians were able to exploit German missile technology. The indoctrination of Soviet scientists and technicians was thereby facilitated, and they acquired faster the know-how to bring uncompleted German ideas to practical realization.

The advantage the Soviets achieved due to their early decision to develop and extend this German missile technology is evident.

THE EARLY POSTWAR YEARS

The years immediately following World War II constitute a period of halting, low-level efforts on long-range ballistic missiles. In 1946, several potentially useful programs had been started. While some of these programs contributed advances during the 1946–50 period, the level of effort and results was meager by today's standards.

For instance, in 1946, the Army arranged to rebuild the German V–2's. In the so-called bumper program, the V–2 was converted into a first-stage booster rocket. It carried a second rocket, the WAC Corporal, which, in turn, carried scientific instruments to high altitudes. Maximum speeds attained during these later tests was about 5,200 miles per hour; maximum altitude was about 250 miles. These represented significant improvement over the standard V–2 performance (3,600 miles an hour and 100 miles maximum altitude).

The year 1946 marked also the Air Force's first attempt on the ICBM. The program, known as the MX–774 at Convair, was intended to advance long-range rocket techniques. It turned out, however, to be rather short-lived when the defense slashes of 1947 terminated this program. For the next several years Convair used corporate funds to carry on MX–774 weapons studies, but at low financial levels.

In 1946 the Air Force also established the Snark and Navaho programs. These were long-range, airplane-type guided missiles, not the ballistic type. However, from the liquid propellant rocket booster to be used with Navaho grew the high thrust liquid propellant engines for today's major missiles, such as Atlas, Thor, and Jupiter.

Also, in the late 1940's the Navy developed the first version of its Viking, a high altitude scientific research rocket.

THE KOREAN WAR PERIOD

During the Korean war, missile development at length began in earnest. Even in this period, however, progress was slow as most official attention was devoted to the immediate problem of Korea.

In the design of long-range ballistic missiles, weight is critical. Generally speaking, it takes about 200 pounds of launching weight to place 1 pound of warhead on a target several thousand miles away. Because the first atomic warheads weighed 9,000 pounds, clearly a major reduction was required in nuclear warhead weight for missile use. Ever since the end of World War II, the Atomic Energy Commission had been working on atomic weapon improvement which resulted in lighter and higher yield nuclear warheads. However, during this entire period the significance of warhead improvement was not applied to the problem of long-range ballistic missiles. For this and other reasons, long-range ballistic missile development languished. During this slack period in the United States, the Soviets appear to have gone full speed ahead with their own long-range ballistic missile programs.

Missile feasibility studies, started in 1949 by the Rand Corp., were completed in the fall of 1950. These studies confirmed the military worth of long-range ballistic missiles.

In October 1950, as one result of the Korean crisis, Mr. K. T. Keller, president of Chrysler Corp., was appointed Defense Department Director of Guided Missiles, with authority to institute a Manhattan-type project for missiles. However, after analysis of the missile programs, Mr. Keller decided against a Manhattan-type project on the grounds that it would take a year to institute such a program. In 1953, Mr. Keller was asked to remain with the new administration, but resigned late that year at his own behest.

In 1950, the development of the Army's Redstone, a 200-mile tactical ballistic missile, was begun. However, not until 1953 was the first Redstone fired, a flight test that was only partially successful. Much of the information obtained from this and subsequent firings was applied later to the Jupiter, when that program was initiated in late 1955.

In January 1951, the decision was made by the Air Force to resume studies of the old MX–774 weapon, redesignated "Atlas." This program, however, was given only a long-term, low-priority objective—that of determining whether a large 5,000-mile ballistic rocket was then technically feasible. Six months later, in June 1951, the Atlas project was formally reactivated.

THE VON NEUMANN COMMITTEE'S RECOMMENDATIONS

On June 16, 1953, Secretary of Defense Charles E. Wilson ordered a review of the guided missile program to identify and eliminate duplication. He stated that "a continuous effort should be made to standardize on one missile for production and use by all military departments, wherever, within the employment limitation of each type of missile, standardization appears to be practicable." As a part of this review, a group of civilian scientists, headed by Dr. John von Neumann, which later came to be known as the Strategic Missiles Evaluation Committee, was requested to review the strategic missile programs.

The Strategic Missiles Evaluation (Von Neumann) Committee reported in February 1954 the highly significant possibility of achieving a major technological breakthrough on warhead size, and expressed its conviction that other technical problems associated with the development of ICBM's could be resolved in a period of a few years. The committee also recommended the formation of a special management organization to assure early ICBM availability. As for technical factors, the Von Neumann Committee recommended that the ICBM project be completely reoriented to take advantage of the advancing warhead technology, thus permitting relaxation of guidance tolerances and propulsion requirements. The committee also noted the potential desirability of an IRBM.

Nine days later the Assistant Secretary of Air Force (R. & D.) approved the broad reorientation of the program recommended by the committee. The Air Force set up a group to study the Von Neumann report and define the organizational realinement required to accelerate the ICBM. From June through August, major management and procedural changes were placed into operation. A streamlined organization under the Air Force Research and Development Command was set up. It was known as the Western Development Division (WDD) and became an autonomous group responsible for directing and coordinating the effort toward primary objectives. Under the command of Brig. Gen. B. A. Schriever, Atlas became WDD's basic mission.

The soundness of the Von Neumann group's recommendations was confirmed during the CASTLE tests in the Pacific through the period of March to May 1954, when the feasibility of developing a smaller lightweight, high-yield thermonuclear weapon was proven.

MILITARY REORGANIZATION TO ENCOURAGE MISSILE DEVELOPMENT

Further indications of the potential importance of missiles led to additional changes. In 1955, advisory committees of scientists urged (1) that two ICBM's be developed concurrently in order to assure earliest attainment of success, and (2) that along with the ICBM effort, an IRBM program be initiated to develop a missile of 1,500-mile range.

In November 1955, shortly after the President had assigned highest priority to ICBM research and development, the Secretary of Defense ordered organizational changes in the military departments to handle the ICBM and IRBM programs. At the same time, he approved a program of two 1,500-mile intermediate range missiles. The first, Jupiter, was to be launchable either from land or sea. It was intended that the second, Thor, would be based upon experience already gained in the Atlas program, while Jupiter would be based on experience gained by the Redstone Arsenal team from the V–2 and Redstone missiles. To provide the desired multiple ICBM approach, the Titan project was established in supplementation of the Atlas program.

The Secretaries of Army, Navy, and Air Force at once implemented the new organizational program, with over half a billion dollars of defense funds reserved to carry them out.

The Air Force placed its ICBM and Thor programs under the already established WDD, now renamed the Air Force Ballistic Missile Division.

A joint management committee was established by the Army and Navy for the Jupiter program. The Navy created the Office of Special Projects and assigned to it responsibility for the technical development of the seabased IRBM. As a corollary to the Jupiter program, which employed a liquid propellant, the Navy also began studies of a solid propellant version to reduce shipboard logistical problems.

Later, land-based IRBM's were assigned to the Air Force and ship-based IRBM's to the Navy, and the Navy withdrew from the Jupiter program.

On January 20, 1956, in order to assure a common interchange of technical information, as well as provide competent guidance for all the programs, the original Von Neumann Committee, now called the Scientific Advisory Committee, was transferred from the Air Force to the Office of the Secretary of Defense. On the same date, this committee presented certain recommendations to assure that the long-range ballistic missile programs would proceed at maximum speed. The office of a Special Assistant for Guided Missiles to Secretary of Defense was established, first with Dr. Murphree and later Mr. Holaday occupying this key position.

TECHNOLOGICAL PROGRESS ACCELERATES

Meanwhile, in the years immediately following the Korean armistice, the tremendous military potential of ballistic missiles began to advance toward practical realization.

In February 1956, the Army activated the Army Ballistic Missile Agency at Huntsville, Ala., under the direction of Brig. Gen. J. B. Medaris.

In September of that year, the Jupiter C, a multistage test vehicle, was fired. It went 3,300 statute miles, rose to 680 statute miles, and reached a maximum velocity of 13,000 miles per hour. During the same period,

Air Force reentry test vehicle flight tests clearly demonstrated that the reentry problem was solvable.

In October 1956, the Scientific Advisory Committee recommended initiation of a new, smaller, solid-propellant IRBM with improved capability of being launched from a submarine. As a result, the Secretary of Defense approved the development of the Polaris program, including six submarines.

POST-SPUTNIK DEVELOPMENTS

The shock of the Soviet sputnik in October 1957 produced, of course, a major effect on U.S. ballistic missiles development.

The President reaffirmed the highest national priority for both Jupiter and Thor systems, aiming to obtain an IRBM capability at the earliest practicable date and provide for continuance of both missiles until one proved successful. The Army was authorized to produce the Jupiter at a rate of five missiles per month. Four Jupiter 15 missile squadrons were to be established with the operational date of the first squadron to be December 1958. The same target date was set for the first squadron of Thor, with three more 15-missile squadrons scheduled later.

A schedule was approved for four squadrons of Titan in hardened bases. Components of the missile system were delivered and a few of them tested.

Research and development of the Minuteman were begun. Minuteman is to be a solid propellant, three-stage ICBM and will carry a nuclear warhead up to 5,500 nautical miles. It will be guided by a self-contained, all-inertial system.

During 1958, major progress was made on the Thor guidance system, permitting an average impact accuracy better than that originally specified. By the end of 1958, Thor was meeting its production schedule with operational missiles being shipped to England for deployment.

The initial increment of the first Jupiter squadron was also ready for deployment in December.

The President, in November, approved a nine-submarine Polaris program. The initial operational capability date of the first Polaris submarine was advanced to late 1960. Later, it was again advanced to early 1960 with four more following at 3-month intervals.

Meanwhile, flight tests proved the performance of the Atlas guidance system and the integrity of the airframe. Among the successful test flights in the development series, one Atlas was placed in Earth satellite orbit in December 1958. Other flights demonstrated the operational radio-inertial guidance system.

PROGRESS IN 1959

All the major missiles programs moved ahead during 1959. A survey of the field shows this progress.

Atlas: Flights of the operational prototype Atlas which began in April had little initial success and the planned date for achieving a limited operational capability was changed from June to September. Considerable effort was devoted to determining the causes of the malfunctions that resulted in the explosion of four out of five Atlas missiles launched before June 30, and how to correct them. Since June 30, causes of the malfunctions have been corrected and the first launch by the all-military team on September 9 at Vandenberg AFB was successful. A plan to improve the system's survivability and provide a faster reaction time was approved. Beginning with the third squadron, the complexes, each with three missiles and three launch positions, will be about 18 nautical miles apart, and, to shorten missile launching time, all squadrons from the third on will have individual missile launchers. Beginning with the fifth squadron, each missile will be dispersed to a separate firing point.

Titan: Progress to date on the Titan resulted in approval of an increase in the number of squadrons from 4 to 11. Each squadron will have 10 missiles. The first six squadrons will be organized into three complexes, each with three launchers and the missiles will have radio-inertial guidance. The complexes will be about 18 nautical miles apart. In the 7th through the 11th squadrons, the nine launchers will be at least 18 miles apart and guidance will be all-inertial.

Minuteman: Prototype Minuteman missiles were fired from silo launchers, verifying the feasibility of launching Minuteman missiles from underground launchers of the silo type.

Thor: The total planned Thor force was reduced from nine squadrons to four, all deployed in England. In January, it became evident that the construction, installation, checkout and modification effort in England would require more time and personnel than was originally planned. This caused about a 4-month delay in turning over the first squadron to the RAF. In June, RAF–USAF representatives drafted preliminary procedures for declaring the U.S. squadrons "satisfactorily operational" in conformance with a governmental agreement.

Jupiter: The operational version of the ablating nose cone for Jupiter was flown on all missiles fired this year, and has proved to be completely satisfactory. Two operational type nose cones were recovered with all their payloads in perfect condition. One of these carried biomedical experiments in support of National Aeronautics and Space Administration programs. A site for two Jupiter squadrons was selected in southern Italy. Each squadron of 15 missiles will be deployed in five sites, with three missiles at each, all launchers to be more than 11 nautical miles apart.

Polaris: All major objectives of the Polaris program to date have been achieved. The launching system for the first Polaris submarine, the U.S.S. *George Washington*, passed its tests. The launcher for the next submarine class entered development; it will accommodate the 1,200-mile missile as well as the 1,500-mile missile planned for 1962. The sixth submarine will have several improvements, one being a greater operating depth. On July 1, contracts were let for the seventh, eighth, and ninth submarines. The first submarine launched in June, will probably become fully operational in late 1960 and the remainder will follow at 3- or 4-month intervals.

SUMMARY

Today, and for the near future, our deterrent and retaliatory capabilities depend largely on the ability of current Air Force and Navy jet bombers to survive enemy attack on the ground and in the air, and to deliver nuclear weapons. However, with passage of time, potential enemies' ability to destroy jet bombers on the ground and in the air may be improving faster than the jet bombers' ability to survive, thus weakening their deterrent qualities. Therefore, in 1955 we gave highest priorities to our IRBM and ICBM programs.

The Atlas, our first ICBM, started in 1946, canceled in 1949, begun again at low priority in 1951, accelerated in 1954, finally became operational in 1959. This missile is the beginning of the ballistic missile phase of deterrence. We can strike a large portion of the earth with 5,500-mile range Atlas missiles launched from this country. On the other hand, potential enemies have Atlas-type missiles also, and our Atlas missiles are vulnerable to surprise attack by them. Therefore, we are hardening and dispersing our newer Atlas launching sites and developing other ICBM's, Titans, and Minuteman, which will be in even harder sites. Titan was begun in 1955 as a backup in case Atlas failed. Minuteman, a smaller, solid-propellant, 3-stage rocket, was begun in 1958. These newer missiles, widely dispersed, will be capable of launching on shorter notice, so that some of them could be launched before enemy missiles destroy the sites, assuming we got sufficient warning.

The least vulnerable deterrent seems to be our Polaris-launching submarines, because they are hard to find. Polaris, begun in late 1956, will be operational late in 1960 with the availability of the first submarine.

From an expenditure of one-half million dollars in fiscal year 1951, programs for IRBM's and ICBM's will reach almost $3 billion in the current fiscal year. Missile programs in the research stage quickly overtake and obsolete those in production. Therefore, programs are designed so as to meet current needs without stockpiling missiles that will soon be outdated. Furthermore, our skilled research and development manpower is being taxed to the fullest on existing and scheduled missile programs. Both because of the evolutionary stages of missile development and the utilization of technical manpower, it is unfeasible and uneconomical to pour more money and men into "crash programs" that might disrupt the sound and orderly missiles program now intended to give the United States full deterrent power.

Department of Defense—Obligational program for missile systems,[1] fiscal years 1946–60

[Millions of dollars]

	IR/ICBM programs	Other surface-to-surface missile programs	All other missile programs	Grand total, all missile programs

[1] Program data reflected in this table cover the developmental and capital costs involved in missile programs; i.e., the cost of bringing missile systems to operational status plus the costs of procuring missiles and related equipment for operational purposes. These data include all procurement, construction, and research and development programs directly associated with missile programs. These figures do not include military pay, operation and maintenance costs for operational missile units and sites and include only those shipbuilding and aircraft costs directly associated with providing missile capability.

[2] Excludes $2,300,000 programed in fiscal year 1946–49 for the Air Force MX–774 ballistic missile research program which was a precursor to the Atlas ICBM.

NOTE.—Estimates are subject to minor revision due to program adjustments.

THE COST OF NATIONAL SECURITY

(By Arthur E. Burns, professor of economics, George Washington University)

No amount of money can guarantee this country complete security. This uncomfortable fact is a consequence of the ballistic missile with its nuclear warhead. For whatever comfort it may bring, the Soviet Union faces the same problem. Since offensive-weapon technology has vastly outstripped the defense, security rests on retaliatory power. Specifically it rests on a highly invulnerable, diversified strike force whose capability is known. Such a force costs enormous sums which augment the growing costs of conventional arms. Rapid changes in technology promise only more complex, more destructive, and more costly weapons systems for the future.

This year the United States will spend about $46 billion in its effort to gain some measure of security. Of this the military services will spend about $41 billion, and related security programs the remaining $5 billion. Some 9 percent of the Nation's output of goods and services—the gross national product—will go into these programs. These absorb over half the huge Federal budget. In more manageable terms, national security expenditures will average $255 per man, woman, and child, or nearly $1,100 per family, this year.

Small wonder then that national security is a major item in political discussion, in economic affairs, and in the personal welfare of the people of this country. It is the most complex business of Government today, as well as the most costly. It is also one of the most contentious issues of the day. The contention that swirls around this matter finds expression in such questions: How much should we spend for national security? Are we spending too much, or too little? Are we spending it for the right things? What do we get for these vast outlays? and could we get more for our money?

These questions cannot be answered definitively. Here we are in the realm of judgment, formed in a context of great uncertainty. Uncertainty surrounds the effectiveness or capability of our own new weapons systems, the weapons systems of the enemy, and his intentions. Judgment on these matters is subject to controversy. Political leaders, professional military men, engineers and scientists, the press, and other less qualified witnesses, differ widely among themselves. Whatever the President might recommend for the military budget and whatever the Congress might appropriate, the fact is that no one is wholly satisfied with the result, and some are deeply dissatisfied.

This paper first considers the underlying reason for these differences and then goes on to examine some of the cost-increasing elements in the defense budget picture.

THE BASIS OF CONTROVERSY

National security poses a basic but familiar economic problem: In this uncertain world we have an urgent need for security against aggression; the resources available to meet this need are scarce and have alternative uses. It is the business of the military to use these limited resources to satisfy this need, or want. The sense of security is the product it produces—the capacity to deter aggression or defeat transgression.

The resources required to produce this service or product can also be used to produce the innumerable other goods and services wanted by the public at large—educational and health facilities, TV sets and household appliances, other consumer goods, industrial plant and equipment, and so on. A larger defense budget and therefore more security comes at the expense of other things—unless there is some slack, or idle resources, in the economic system. The real cost of national security, or anything else, is the alternative that must be sacrificed to get it. If we should double our defense budget, some nonsecurity wants would necessarily go by the board. If taxes were raised to finance the increase, taxpayers would spend and save less. If Government borrowed the funds, capital for private purposes would shrink. If it were financed by credit creation, inflation would cut the consumption and savings of many. Thus we cannot avoid the necessity of choice and the sacrifice of alternatives.

There is no clear-cut, objective criterion for choosing to commit more or less of our resources to national security. The military capability and the specific intentions of an enemy can only be assessed by the exercise of judgment. Similarly our own military capability or effectiveness is a matter of judgment. Rapidly changing technology on both sides injects great uncertainty in this process of assessing relative capabilities. The economic impact of a defense budget, including the alternatives to be sacrificed, enter into the determination of the size of the defense budget. Internal political considerations and foreign policy objectives play their part in the decision.

By way of contrast, consider the budget problem of a business firm, say General Motors. How large an annual budget should it set up? This depends on what the public "wants" from General Motors, measured by the amount the customers are prepared to spend for its products. Judgment and hunch enter into the calculations to be sure. But as the year unfolds GM adjusts its budget and production schedules to meet the public's wants for its products. Here there is an objective, measurable, and simple criterion to guide the firm, to answer the basic question: How much?

Defense planners have no objective, comprehensive measurement of what we need and what we get when they put together the defense budget. The product produced by the military—national security—cannot be "valued" and the need for it cannot be measured. Hence controversy is endless and inevitable—as it is with practically all governmental programs.

Whatever the size may be, the military budget is finite and therefore limited. Again, choices must be made and alternatives sacrificed. How much should go to the Army, the Navy, the Air Force? One thing is certain: each gets less than it wants. Once the budget pie is sliced in three parts, other choices turn up. The more that goes to SAC the less there is for TAC. Funds spent for Atlas, Titan, and Minuteman cannot purchase B–58's. New tanks compete with self-propelled guns, and both with tactical nuclear weapons. More Polaris submarines may cost the Navy another carrier, or antisubmarine warfare facilities. And so it goes, endlessly. Each choice involves a cost; alternatives are sacrificed.

If the military effectiveness of the alternatives could be measured with reasonable precision, division of the defense budget would be relatively simple. But can the effectiveness of the B–70 in 1966 be measured against the effectiveness of, say, the Polaris submarines, or the Minutemen, that might have been purchased instead? Estimates, of course, are made, but no common unit of measurement is at hand. And none can be devised. Professional military judgment, together with service and political pressures, decides the outcome.

Again by contrast, the allocation of the business budget is relatively simple. The General Motors budget must be allocated among its many divisions for the production of a considerable array of end products. The divisional allocation is based on objective criteria: the estimated cost of each product, its price in the market, the prices of competing products, and consumer and commercial purchases of GM products. The effectiveness of the dollars allocated is measured by the financial return. Budget and production plans are quickly altered to avoid, for example, a surplus of Pontiacs and a shortage of Chevrolets. The military lacks this objective criterion which might signal, say, a shortage of airlift planes and a surplus of fighters, relative to need. Compared with the military budget process, business budgeting is child's play.

This, of course, is familiar enough. The lack of a comprehensive measurement of effectiveness, and the vast international and technological uncertainties, make military planning and budgeting a stupendous task. To be sure it is complicated and made more costly by service rivalries, the weight of tradition, business practices, political pressures, budget limitations, ordinary human frailty, and the sheer size of the whole operation. A brief consideration of these comes later. The basic point right now is this: there are no definitive answers to the questions, How much? and What for?

All budgets, therefore, are inherently controversial. And controversy is fed by the fact that each service, and all professional military leaders, usually get less than they want from the budget. This is inherent in the logic of choice; with scarce resources some needs cannot be filled. Every military budget therefore is "too small." This is not to argue that one budget is as good as another, or that the present defense budget is adequate. The purpose of this paper is not to assess adequacy but to bring out the underlying problem. Another $3 billion, or $5 billion added to the present budget would mitigate, but not eliminate, controversy.

THE BUDGET-MAKING PROCESS

The 1961 military budget illustrates the complexity of the budget-making process. The President requested $39.3 billion of new money for the military services. This request culminated 20 months of work and perhaps tens of thousands of man-years of effort. Each service built up its estimates, piece by piece, based on "what it really wanted," and then on several more probable and smaller amounts. The President, the National Security Council, the Bureau of the Budget, the Department of Defense, and the Joint Chiefs of Staff then began the complex job of fashioning a "balance" among the services and weapons systems and a total amount for submission to Congress. The pressure from the bottom is always upward; restraint comes from the top—the President. The result is a vast compromise, achieved by cutting estimates, readjusting programs, dropping this, stretching out that, and adding something new. For each service this is an exercise in frustration, compounded by interservice rivalry.

Budget consideration by the appropriations committees of the Congress is a searching affair. The Secretary of Defense, the Joint Chiefs, and other senior civilian officials and military men lay out their defense of the budget, together with their qualified doubts, uncertainties, and differences in judgment. This is a serious business in which the informed judgment of committee members plays a crucial role.

House committee action increased the total requested by $121 million, and changed some $4 billion in specific budget items. For example, the Polaris program was increased and a new carrier dropped out; the Bomarc program was drastically scaled down; funds for the airborne alert were increased, as were those for military airlift; Army modernization was accelerated and travel funds reduced; proposed reductions in Reserve forces were restored and procurement funds were cut across the board.

Many considerations enter into these changes. Maintaining the reserves is not without political overtones. Increasing the Polaris program at the expense of carrier forces is an exercise of military judgment. Across-the-board cuts in travel and procurement were economy measures intended to

reduced alleged waste of funds. Each service, and the branches within each service, has its congressional protagonists and this weighs in the final decisions. And each service has earned the justifiable irritation of some Members of Congress which helps fashion the outcome. Over it all, we have here an exercise of judgment by knowledgeable committee members and an expert staff.

The Senate Appropriations Committee takes up the budget where the House left it. Similar considerations shape their work. The summit collapse led the Senate to add $1 billion to the House bill. Among other things it restored funds for the Bomarc program, approved the carrier, provided additional funds for the B–70 development, added more money for the Samos satellite, for Army modernization, and for other programs. Again we have the exercise of informed judgment, with a leavening of political and economic ingredients and service loyalties. In the end, the House and Senate compose their differences, usually with prompting from the executive branch.

Budgetmaking is a tortuous, time-consuming process. The end product is not the creature of the Bureau of the Budget, or the Department of Defense, or even of the President. It is the creature of Congress for only Congress can appropriate funds. But the end product is a joint budget, the joint responsibility of two constitutionally separate branches of Government—something some critics overlook. In a sense, the process moves from one arena to another—within and among the services, in the Bureau of the Budget, and the White House. The main event takes place in the most important area of all, the Congress.

This process is not efficient; it was not designed for efficiency but for the balance of political power. In any event it cannot be efficient in the sense of matching returns or effectiveness against the dollars spent. We have no objective, measurable criterion for doing so. The military budget is a product of professional military judgment, service competition, fiscal limitations, political and economic considerations, the assessment of threat, hard work, imagination, and compromise. As with all budgets—personal, business, and public—more results could be gotten from it. And like all other budgets, it is smaller than its managers would like to have. Its adequacy is attested only by results—its capacity to deter and to win should deterrence fail.

COST ELEMENTS

Before discussing some of the elements which account for large military budgets, a few sobering contrasts are worth noting. In the century before 1935 the average annual cost per man in uniform increased about fourfold. Output per man in industry increased far more than this. In the quarter century since 1935 cost per military man increased another fourfold, while output per man at work did not quite double. These rough estimates take into account price changes; real military costs are accelerating, both in relation to their past behavior and to output per man employed. However, military productivity (destructive potential) is rising faster than military costs; that is to say, military technology has greatly reduced the unit cost of its output. The big bombs are getting cheaper and their delivery systems more costly. We face the bleak fact that over the past 25 years the increase in military outlays and the capacity to destroy has far outpaced the growth in capacity to produce and replace.

High and rising costs of national security stem from many causes—some are remediable others are not. Some of the excessive or needless costs are internal to the military; they result from its organizations, procedures, and interests. But the main causes of high cost lie elsewhere. These are due to political policy, strategic considerations, technological change, and uncertainty. By no means is this a complete catalog, but it suffices for present purposes.

First, consider the internal elements that tend to inflate cost needlessly. These come under the general rubric "waste". Committees of Congress, the Bureau of the Budget, the Hoover Commission, the Comptroller General, groups within the Department of Defense and the separate services have probed deeply into the "business" end of the service programs, personnel practices (e.g., flight pay), travel, and the cost of service amenities. On all counts the investigations point to instances of excessive cost. This is particularly true of the business operations: the systems for computing supply requirements, contracting, the cataloging and storing of items, distributing these items, and disposing of surplus. The main criticism is lack of integrated, businesslike operations, with consequent waste of funds.

These operations are sizable. Currently the Department of Defense purchases about $24 billion a year in weapons and supplies. This takes nearly 7 million procurement actions. The personal property inventory of the Department is valued at $118 billion, made up of 3.4 million items, and stored in nearly 600 million square feet of space throughout this country and in foreign depots. Nearly $27 billion of this inventory is surplus. Under present plans some $10 billion of surplus is to be disposed of yearly, at a yield of about 2 percent of acquisition cost.

Examples of waste and inefficiency in the handling of this business are legion. A recent estimate places the annual excess cost at $2 to $3 billion a year. The estimate is probably exaggerated; but, whatever the figure is, it could build up the military effectiveness of the services. This answers an earlier question: Could we get more security from present appropriations?

Defense is the Government's biggest business. Yet DOD has still to take a practical, businesslike first step toward increased efficiency; namely, to establish requirements on a comprehensive, coordinated basis. The remaining phases of the supply cycle are only partly coordinated. Under the prodding of Congress the services are moving toward more efficient supply management operations for items common to two or more of the services, such as single department procurement, cross-servicing of assets, single manager plans, uniform cataloging and standardization. The results are encouraging but not impressive. DOD in time will face the choice: to coordinate the present service supply programs more effectively, or to accept an integrated supply system in the hands of a single agency.

The first choice is difficult, the second is unacceptable to the services. This is so for a number of reasons: service rivalries, different procedures and ways of doing things, organizational interests that clamor for protection, the weight of tradition and inertia. As impediments to efficiency, these elements gradually give way, partly from outside pressures and partly from pressures generated within the services. But progress is slow; the do-it-yourself attitude is deeply embedded in each service. There is a basic and traditional urge for self-sufficiency, for the linking of control with responsibility. Each service is responsible for its mission; it wants a control commensurate with this responsibility. This is understandable and may be worth some added cost, but not the present excess cost. Far better results can be achieved by persistent, practical efforts at comprehensive coordination of the supply function and the overhaul of procedures.

Another aspect of cost internal to the military services receives much attention—the costs of rivalry and duplication in research and development. The Navy is said on occasion to obtain from Aviation Weekly information withheld from it the week before by the Air Force. The same source avers it works both ways. With the enormous emphasis on scientific research and development, and with rapid changes in technology, much is at stake in terms of service prestige and roles. Some duplication and therefore loss of scientific talent undoubtedly occurs in these service programs.

But there is another side to this coin that critics rarely notice. Rivalry in trade, in the military, within the professions, in love, and in the arts produces innovation, drive, and stirs the imagination. Rivalry has its costs, and its advantages—on balance perhaps a net advantage over time.

The maintenance of standby facilities and stores is another practice which frequently evokes complaints of waste. Heavy stores are frequently the result of inefficient supply management, but the need for readiness is the underlying cause. At times the Navy may charter private tankers and lay up some of its own tanker fleet, or contract work out to private shipyards while its own yards are idle. Commercial planes may be called upon to do work that could be done by service planes. At times contracts are let to aircraft companies for planes of low priority. In the short run practices of this type cost substantial sums and at the time appear needless. But commercial fleets, sea and air, are auxiliaries; war production facilities are essential in case of emergency. But for these facilities the military would need to build its own. Probably in the long run the standby arrangement with its annual subsidy saves money.

The military is by no means the only source of its excess costs. Some are imposed upon it. Identical bids from suppliers, the loading of costs under negotiated contracts are among the sharp business practices that inflate costs. Legislation requires the payment of prevailing (i.e., the highest) wage, and limits the purchase of cheaper foreign goods, thus adding to total cost. Political influences have their effect, for example, when a DOD-recommended reduction in Reserves is opposed by Congress, or the closing of an airbase or other installation is resisted. Some procurement programs are prolonged to avoid political trouble. Restraint on the one side and a practical realism on the other limit these costs. Often such propitiation merely shifts the geographical incidence of the outlay without increasing the total materially.

Budget ceilings in the face of rising production costs, and the burgeoning of new weapons systems, add to excessive costs of national security. Ironically, the effort to save money by the imposition of budget ceilings may actually cost money. Fixed budgets are squeezed from below as labor and material costs rise, as more complex equipment is introduced, and as new weapons systems vie for the limited funds. In the face of this squeeze some new programs are stretched out; by the time they reach the production stage the weapons may be obsolescent. Short run effectiveness is sacrificed on the one hand while costs of obsolescence rise on the other. Or the squeeze may work another way. Airlift planes may be sacrificed, ship repairs may be slighted, and Army modernization may be slowed up while the new glamor items are vigorously pushed. Some of these may be in the developmental stage with uncertain prospects of success. Imbalances thus develop at the cost of military effectiveness.

This problem will grow as time goes on. Research and development spawns ever more costly new weapons systems. Meanwhile existing equipment and weapons, if not displaced, require replacement. Naval ship repair and replacement highlights this problem. Most of the ships of the Navy, built in World War II, need replacement soon. This

need must compete with the new technological developments. The tighter the budget ceiling the greater the cost in terms of effectiveness—replacement is delayed or new programs are stretched out, or canceled. This again underscores the fact of limited resources, the necessity of choice and the sacrifice of alternatives. As the alternatives continue to grow in relation to available resources, the sacrifices tend to create imbalances. For this reason efficiency in supply management is a growing imperative.

The pace and uncertainty of technological change add heavily to national security costs. This year the research and development budget approximates $6 billion. The uncertainty of such work is evidenced by the fact that some $4 billion of R. and D. contracts have been canceled in recent years. In other cases the new item in production faces obsolescence—much of the hardware ages almost overnight. In some cases the services have stayed too long with a dubious development. The costs of change and uncertainty are heavy and will doubtless grow.

In retrospect many of these costs seem needless. But the advantage of hindsight is not present when the decision to commit resources is made. We have here the familiar distinction between ex post and ex ante costs. The ex post costs are those incurred; they can be compared with whatever results they bring. If the results are poor, the costs are excessive. The ex ante costs are those projected into the future to produce an expected result. The expected result justifies the decision to spend; as the result materializes the cost, now ex post, may or may not be justified. If not, criticism falls upon the military planners, and often unfairly, for in this field rapid scientific changes and uncertainty loosen the link between expectation and realization.

Strategic considerations and defense policy likewise make national security a costly affair. Our policy is moving rapidly toward the creation of a highly invulnerable mixed attack force. Soon there will be four different ICBM weapons systems in operational status. Diversifying the attack force and giving it mobility increases the problems of a potential enemy and reduces his chance of knocking retaliatory power out with the first strike. That is to say diversification lessens vulnerability and thereby provides a formidable second-strike capability. Since invulnerable retaliatory capability is the presumed goal it assumes forces large enough to withstand the first strike. Hardened ICBM bases, mobile ICBM's, a Polaris submarine fleet at sea, a sizable airborne alert, and possibly airborne ballistic missile capability fit this specification. The cost of achieving this is enormous.

But such capability is designed to deter general war. Mobile forces, to deter, or handle, local war and to be ready in cold war situations, add other elements to the mixed attack force, add greatly to costs. Furthermore, oversea support to allies expands the U.S. deterrent capability through geographical dispersion. This increases cost.

Conceivably retaliatory capability on both sides might be achieved in such degree that neither side could be reasonably certain of success. Such a stability, or equilibrium of force, might level off the growth in arms expenditures. But this is by no means certain. New developments in delivery systems, or in detection and defense, could upset an equilibrium; in any case such developments themselves are costly.

And finally it should be noted that national security is not only a matter of building a highly invulnerable mixed attack force. The threat is not limited to armed aggression. Nonviolent forms of aggression are widely practiced and may grow in severity. The costs of countering these forms of aggression must be charged to national security.

SOME CONCLUSIONS

The range of choice in allocating the national security budget is widening inexorably with the rapid pace of technological change in offensive weapons and in means of defense.

The choice among alternatives is an extraordinarily difficult matter owing to the lack of an objective, comprehensive measurement of effectiveness. With a quiescent military technology this problem is more manageable than it is when, as at present, technological change and uncertainty are the rule.

Choosing among alternatives involves a real cost, which is the effectiveness of the alternatives sacrificed. The basic objective in military planning is to minimize these real costs. In practice, there is no objective and general measurement of them. Tests and evaluations provide a range of partial measurements to guide the exercise of judgment.

However, it might be said that inefficiency is an alternative with zero effectiveness. Any reduction here is a net gain to military effectiveness, or alternatively a net saving to the taxpayers. When the military absorbed only 1 percent of the gross national product annually, the cost of inefficiency was not so pressing a matter as it is at present with an absorption rate of almost 10 percent.

Two general principles to guide the selection of alternative weapons systems may be stated. The first is to choose that mix or combination which maximizes invulnerability. The second is to choose that combination which maximizes the capability of handling the varied situations described as a general war, or a limited war, or an aggravated cold war. This calls for a varied mix with heavy emphasis on weapons systems having at least a dual capability. The general acceptance of these principles in national security budgeting would probably add considerably to present levels of expenditure.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study paper No. 12: "The Economics of National Defense in a Free Economy," by Guy Waterman, task force staff:

THE ECONOMICS OF NATIONAL DEFENSE IN A FREE ECONOMY

(By Guy Waterman, task force staff)

1. INTERRELATIONSHIP OF MILITARY POLICY AND ECONOMIC POLICY

To be complete, the overall design of a nation's policies for achieving national security must include economic policy, as well as military, diplomatic, and other policies. The fundamental interrelationship between military and diplomatic policy is widely recognized. More often we fail to recognize, or fail to act on the basis of, the equally significant interrelationship between military and economic policy.

In the world in which the United States has assumed leadership today, a strong national defense is imperative. Without adequate military preparedness, our leadership position would be lost. Furthermore, as the possibilities of space exploration become actualities, the requirements of our international position extend to the space race as well as more purely military matters.

The United States' position in the world today carries with it another imperative: A strong national economy. A vigorous, adaptive, expanding economic system is itself a key element in a strong international posture. A healthy growing economy makes it possible to meet the challenges of economic and trade competition. It also forms the base which makes it possible to carry a strong military defense program. A nation which lacks economic strength cannot be militarily strong for any period of time. As former Air Secretary W. Stuart Symington stated in 1950: "The Nation can be defeated by economic disaster as well as military disaster." [1]

Military power and economic strength are mutually reinforcing. They are complementary, not competing goals. They are fundamentally interrelated. This point was expressed well by the Republican Committee on Program and Progress (the so-called Percy committee) in the following words:

"We must realize that national security and the maintenance of a stable economy are not antithetical ideas. Indeed, should we be successful in providing defense on the military front and, at the same time, allow our economic system to collapse, we would thereby be sustaining defeat by communism." [2]

Our policy in the economic sphere, however, has broader purposes than just that of serving and enhancing military strength. We seek a strong economy because of other benefits it brings, such as material progress in the form of rising real incomes. Beyond economic strength, we also seek to advance the goal of economic freedom. Freedom is the highest value which we, as the relatively new leader of western civilization, are now called upon to protect and enhance. We seek to survive for a purpose—the maintenance of a civilization which exhalts the dignity of the individual, his freedom, and his opportunity.

The growing importance of economic policy

Strong national defense, a strong economy, and an underlying dedication to the maintenance and spread of economic freedom—these have always been among our important goals. The context in which we pursue these goals, however, has changed radically since the end of World War II. The main difference in the new international situation which we face today is the long-range, almost open ended, nature of the challenge.

In World War II, we confronted an all-out, unlimited war. We mobilized our national war capability to something like the maximum. The conflict lasted a finite period of time and then was over. Having won the war, we converted back to a peacetime economy.

But the peacetime to which we were restored began to be shaken, as the fall of Czechoslovakia, the Berlin blockade, and other events began to show. In 1950, the Korean crisis presented us with a different problem. Again we mobilized for a specific conflict which lasted a finite period of time. However, war was not unlimited; nor did we mobilize our full strength; nor, on the conclusion of the fighting, did we reconvert to a wholly peacetime economy.

What we have settled down to since the cessation of open hostilities in Korea is something new to this country. We are not at war; yet we face a threat to our national security which is perhaps more dangerous than any past wars. We know that we must maintain a strong military posture; yet we know that we may have to hold our

[1] New York Times, Apr. 25, 1950.

[2] Task Force on National Security and Peace, 1959.

military strength for decades perhaps—and may never have to use it. We also know that the challenge we face is not confined to military power, but is being hurled at us from every side—political, economic, and even psychological.

George A. Lincoln has described the security program which this new situation calls for as "a sustained high plateau of preparedness," [3] as distinguished from "full mobilization" (e.g., World War II) and "limited (or partial) mobilization" (e.g., Korea). Lincoln quotes a vivid statement of the problem by Bernard Baruch in a speech before the Industrial College of the Armed Forces on June 28, 1949:

"Both as a nation and as individuals we grew up accustomed to regard war and peace as distinctly separate states, like night and day. Today we live in an around-the-clock emergency, a twilight of neither war nor peace. Reared to think of war as a brief emergency to be rallied to temporarily, we find ourselves confronted by a continuous threat of war, which requires something Americans have habitually lacked—a see-through constancy in action between peace and war." [4]

This new and different situation—"between peace and war"—requires that economic policy play a more important part in our national thinking. In a situation of full mobilization, economic problems were enormous, but there was no difficulty in deciding exactly what our broad economic policy objective was: it was simply, and almost exclusively, the support of an all-out military effort to win the war. Furthermore, our concern for economic freedoms was modified by a willingness to sacrifice certain values during the war with the clear understanding that the sacrifices were temporary. The phrase, "the duration," was commonly used; it expressed the concept of a temporary emergency after which the economic policies of a peaceful world would be restored.

In our new situation, however, economic policy is more complex and more central to the problem. If we are not to enter full-scale mobilization, then we must make certain decisions as to how much of our economic capability we will devote to military defenses. If we are to maintain adequate military defenses over a long time period, we must pay attention to the effects of alternative defense budgets on economic growth and efficiency, since growth and efficiency will make possible better defense later. If this sustained time period is one of rapid technological change, we must make difficult decisions on the allocation of defense effort between weapons now feasible and the development of new ones. Furthermore, if the challenge during this period extends to far more than military strength, economic strength becomes an end in itself as well as a support for military policy.

Finally, the new situation raises troublesome issues with respect to our larger goal of maintaining and enhancing economic freedoms. We may be willing to regard certain freedoms as expendable during a conflict which has a perceptible beginning and an end. But in an "open-ended" conflict, how much are we willing to give up?

2. PAYING FOR MORE DEFENSE

Recently there have been several significant proposals for increasing defense spending by usually unspecified but substantial amounts. If such proposals are being considered, it is important to examine the question of how a large increase would be financed.

In addressing ourselves to this question, we are not passing judgment on the need for such an increase. For purposes of this discussion, we will simply assume hypothetically that an increase is to be made. We will look only at the choices which must be made on how to finance this increase in defense spending.

A number of ways of financing higher defense spending may be dismissed before we turn to the basic question of what choices must be made if we are to reallocate resources in the direction of a large defense effort.

Financing defense via inflation

We should mention, first, the alternative of financing a defense spending increase via a deficit. A deficit does not, of course, increase the country's total resources; it merely shifts the burden. Oversimplifying a bit, this alternative would amount to paying for more defense via inflation.[5] The price level generally would rise and the cost of the increased defense spending would be diffused throughout the economy, with the usual undesirable effects associated with inflation.

This way of financing a greater defense load is not seriously advanced as a responsible policy alternative. While the catchphrase is sometimes expressed that, "national security is more important than a balanced budget," [6] it is generally conceded in serious discussion that if an increase in defense spending is necessary, it ought to be financed in some way other than a deficit. In principle, at least no political figure would favor a planned deficit except as a tool of fiscal policy in time of economic slack. The only danger would be that deficit financing of increased defense spending might result out of an unwillingness to face up to the problem of revenue. However, in this discussion we will assume that some method of financing other than inflation would be desired.[7]

It is to be hoped, therefore, that we may dismiss inflation as a legitimate way of financing higher defense spending.

"Painless" sources of higher defense spending

Several more quasi-serious proposals for ways to finance a higher defense budget should be mentioned, since they are advanced prominently from time to time. Four such proposals might be mentioned:

1. To finance more defense by cutting the "fat" out of the defense budget.

2. To finance more defense by cutting the "fat" out of other parts of the budget, especially the multibillion dollar farm program.

3. To finance more defense by raising more Federal revenues via closing certain tax loopholes.

4. To finance more defense by raising more Federal revenues via a more rapid expansion of the economy than has recently occurred.

These proposals all have two important points in common.

First, they are each based on an important "grain of truth." That is, each of the four suggestions could command almost universal approval if properly restated—yet, is usually so distorted as to invite grossly misleading conclusions.

Second, each of these proposals holds out the hope of a costless increase in defense, financed by means which are virtually painless, at least to the average taxpayer. That is, when closely examined, each turns out to be a more or less sophisticated promise of something for nothing.

(1) Cutting the "Fat" Out of the Defense Budget

One leading advocate of more defense has been reported as saying that present Defense Department procedures are wasting $10 billion. According to one headline, this advocate, a candidate for the Presidency, pledges: "More Defense for Less Money." [8]

The idea of increasing effective defense spending simply by making the Defense Department more efficient is an appealing one. There is ample evidence that the Defense Establishment is not a model of efficiency. Bureaucratic rivalries and interservice jealousies undoubtedly generate inefficiencies. Horrible examples of waste have been repeatedly dredged up. Beyond that, many studies, notably those of the two Hoover Commissions, have outlined specific and, from many standpoints, practical plans for eliminating wasteful and costly practices.

There is, therefore, far more than a "grain of truth" to the suggestion that a serious effort should be made to tackle the problem of efficiency. The urgency of adequate military power over the years ahead gives added emphasis to the value of eliminating defense "fat," a point to which we shall advert again, later in this paper.

It is fallacious, however, to jump from this point, on which there would be little disagreement in principle, to the conclusion that we can now up our military spending plans by X billion dollars, and pay for it by cutting "fat" by the same amount. Yet this is often implied.

It is always appropriate to cut "fat" out of the defense budget. It is always difficult, too. In fact, while optimism may be a virtue, there has never been much dramatic evidence of progress in eliminating waste, progress of the kind which might suddenly free up two or three billion dollars without damaging the effectiveness of existing defense programs. If elimination of waste proved difficult for a commander in chief as experienced as an Eisenhower, and a corporation executive with the credentials of a Wilson, it would appear doubtful that anyone else would produce a magic key for unlocking a problem on which everyone would like to see progress but on which the best efforts have produced only meager results thus far.

At any rate, the important point is the separability of the twin goals of more defense and greater efficiency in defense spending at whatever level. Why gear efficiency only to a need for greater defense? If we can improve efficiency, we should do so not only if we want to strengthen our power, and not only if we want to retain roughly our present strength. The goal of greater efficiency would still be important even if the remote possibility of limited disarmament materialized.

It is, therefore, somewhat irrelevant to promise to finance a specific increase in military power out of unspecified efficiency programs.

(2) Cutting the "fat" out of nondefense budgets

Many of the same considerations apply to a variant of the above argument. This var-

---

[3] "Economics of National Security," 1954, p. 21.

[4] Ibid., p. 26.

[5] Except under certain assumptions which it is not reasonable to anticipate would be borne out fully in the present situation.

[6] As stated, of course, this catch phrase would be endorsed by nearly everyone. Clearly, however, it misstates the alternatives.

[7] An interesting analysis recently by Boris P. Pesek compared the relative impact of inflation and higher taxes on income distribution. Pesek found that, as a means of financing increased Government spending, inflation was the most regressive of the alternatives. The most progressive method, of course, was the income tax; next, a sales tax with food exempt; next, a straight sales tax; and finally inflation. This conclusion would presumably lessen the political attractiveness of financing higher Government outlays for defense (or other) programs via deficits and inflation. (See Pesek, "A Comparison of the Distributional Effects of Inflation and Taxation," American Economic Review, March 1960.)

[8] "Washington Post and Times Herald," Apr. 3, 1960.

iant promises to finance higher defense spending, by cuts in unnecessary nondefense portions of the budget.

A frequent tack here is to point to the multi-billion-dollar Agriculture Department budget. It is fairly easy to secure agreement that the dollars spent on the farm program are not solving the farm problem, are of little benefit to the farmers who most need income, and should be drastically pruned. It is tempting, therefore, to propose that we reduce farm subsidies by X billion dollars and apply the savings to an increase in defense outlays.

Other frequent targets are veterans' benefits, the burden of interest payments on the public debt, rivers and harbors "pork," questionable stockpile purchases, and subsidies in general.

The point on these matters is similar to that on cutting defense waste. Again there is a considerable grain of truth. Certainly economists would agree almost without dissent that the volume of dollars flowing into farm subsidies is only adding to, not solving the farm problem—a conclusion with which the harried low-income farmer would immediately agree.

But just as certainly, no one has produced a simple way out of the predicament. And if practical means are found to reduce unnecessary and undesirable spending on farmers, veterans, bankers, or subsidies of any kind, surely we ought to institute the savings immediately, whether defense needs are rising, constant, or falling at the time.

It is meaningless to say that we should cut farm subsidies by X billions and apply the money to more defense. If we need more defense let us have it now, not when we finally figure out the farm problem. If we find out how to cut X billions off the Agriculture Department budget, let us do it now, and not necessarily shuttle all the money over to the Defense Department (unless we simultaneously radically revise the relative value we attach to military activities).

(3) Closing Tax Loopholes

Another means of financing higher defense spending is to raise more revenue by revision of the tax laws. This proposal envisions closing of what are called loopholes in the tax structure, through which it is estimated several billion dollars of tax revenues go uncollected.

It is vital to distinguish between raising revenue by closing loopholes and raising revenue by a general tax increase. (We shall discuss the latter alternative later in this paper.) The idea behind closing loopholes is that more revenue can be raised without adjusting tax rates generally. Again the hope is held out of financing a considerable increase in defense or other spending without any sacrifices being required (at least not by anyone who can't afford it).

The specific loopholes which are ordinarily introduced for consideration are: (1) The dividend credit and exclusion features; (2) depletion allowances for various minerals, notably oil; (3) lack of withholding procedures on dividends and interest payments; (4) lax policing of expense accounts; (5) loose interpretation of what constitutes a capital gain; (6) preferential provisions in estate and gift taxes; (7) exemption of cooperatives; and (8) inadequate enforcement generally.

The bulk of public discussion of closing loopholes centers around the first two in this list: specifically, the dividend credit and the oil depletion allowance.

There are severe limitations to relying on closing tax "loopholes."

One problem is implied in our use of quotation marks around the word. The two loopholes which are most prominently mentioned are loopholes only to those who oppose these provisions in the code. To those who support these provisions—a majority of the Congress at the time of their adoption, at least—they were fully intended to have a part in the code. Some writers have argued that the term "loophole" ought to apply only to features of the code through which the Government loses income which it intended to tax. Such a loss can occur either because Congress did not write the law carefully enough or because the Treasury Department does not administer the law carefully enough. Under this concept, however, neither the dividend credit nor the oil depletion allowance constitutes a loophole.

Semantics aside, however, there is honest disagreement among policymakers and economists as to the value of these two tax provisions. Many would argue that the dividend credit instituted in 1954 is justifiable on grounds of equity, beneficial to economic growth, and basically more of a reform (i.e., good) than a loophole (i.e., bad). The oil depletion allowance would probably command less support from economists, but certainly more from policymakers.[9] In the case of both provisions, economists would generally argue that the effects of repeal would be shifted, in greater or less degree, so that the income distribution effects of repealing these provisions might not be as different from the effects of a general tax rate increase as might popularly be supposed.

What destroys the practical value of these loopholes as a source of financing higher defense outlays is the improbability of Congress acting on them. It is fairly clear that until major tax reform is undertaken—which will not be in 1960—the major provisions cited above (and particularly the oil depletion allowance) are here to stay. This being the case, it appears that no painless source of financing higher defense spending is available from this source.

With respect to some of the minor loopholes listed earlier, there is less disagreement. Generally speaking, better enforcement of the tax laws would indeed yield more revenue. Here the relevance to increased defense spending is no closer, however, than it is in the case of "waste" on the spending side of the budget books. In both cases, more efficient governmental administration is a meritorious end in itself and in no way can be tied directly to higher defense outlays.

Again, however, as in the case of proposals for reducing "fat" in defense or nondefense budgets, we may note an important grain of truth. That the tax code badly needs reform on a major scale is a proposition on which wide agreement can be found. In the interests of equity, of efficiency, and of growth, the day when genuine tax reform can be accomplished ought not to be long postponed. The demands on our economy of a high level of defense activity add to the urgency of this problem, which, however, would exist under any circumstances.[10]

(4) Revenue From Economic Growth

Yet another "painless" source of financing more defense, increasingly advanced in circles somewhat more sophisticated than those from which the above suggestions emanate, is economic growth. The thesis is that as the economy grows, the tax base grows and more revenue becomes available to the Federal Government, even without any change in tax laws.

In a study for the Joint Economic Committee, Henry Rowan stated this thesis concisely:

"Consider a $10 billion increase in the defense budget. If the increase took place over several years, there would be scarcely any problem with inflation from the extra defense outlays. In 3 or 4 years, growth of the economy would bring in extra revenues amounting to $10 billion annually."[11]

The Joint Committee itself, in the concluding report of its "Study of Employment, Growth, and Price Levels," asserted: "Economic growth in itself, therefore, is a major source for financing improvements and expansion in necessary Federal programs without increasing tax rates."[12]

The "grain of truth" in this increasingly popular position is obvious. A vigorously expanding economy can carry a rising load of any category of expenditure with greater ease than a stationary economy. It is also true that with a Federal tax system based largely on progressive income taxes, rising incomes will tend to generate even more rapidly rising Federal tax revenues.

Nevertheless, it is not logical to proceed from these generalizations to the conclusion that the phenomenon of economic growth provides a growing fund of tax revenues available for financing an expanded defense effort or other public programs (or a tax cut for that matter).

The basic difficulty is that a growing country requires higher Government expenditures just as surely as it produces higher revenues. The hope that economic growth will make more revenues available is based on clear recognition of the automatic expansion of the revenue side of the Federal ledger, but tacitly takes as constant the expenditure side. Yet, as a moment's thought will recall, the forces tending to automatic expansion of the expenditure side are probably at least as powerful as those on the revenue side. The reference here is not to political pressures or tendencies to initiate new Government programs—although these too may be very much a part of the picture. The reference here is to the automatic institutional expansion of existing programs. These are increases in expenditure which can be anticipated in the next few years, just as we can anticipate increases in tax revenues.[13]

The Director of the Bureau of the Budget, Maurice H. Stans, has recently alluded to these automatic expenditure increases with growing frequency, calling them "built-in increases in existing programs which are now producing a continuing upcurve in expenditures." Stans estimates that we already face future commitments of $25–$35 billion for the interstate highway system, $8 billion for public works projects already started, $6 billion for public housing, $4.4 billion for shipping subsidies, and a variety of other obligations.[14]

Built-in cost increases are particularly predictable in the defense field. As weapons technology advances, costs rise (entirely apart from the effects of inflation). Defense Comptroller John M. Sprague recently gave these examples of "the increased procurement cost of these new and more complex weapons. The cost of a fighter airplane, for example, has increased by over 30 times since World War II; the cost of a submarine

---

[9] One Senator, as recently as Sept. 5, 1959, was perfectly candid during debate on the Senate floor. He stated: "The reason why it will not be possible to * * * (cut) the 27½ percent oil depletion allowance is that there are not enough votes in the Senate to do it. It is just that simple." (CONGRESSIONAL RECORD, vol. 105, pt. 14, p. 18212.)

[10] The House Ways and Means Committee, in which all tax legislation must originate, has underway a full-scale study of tax reform. It is widely hoped that this study will ultimately produce the major overhaul of the code which all observers agree, on principle at least, is needed.

[11] "National Security and the American Economy in the 1960's," Jan. 30, 1960, p. 69.

[12] P. 27.

[13] See, for example, Kenyon Poole, "Public Finance and Economic Welfare."

[14] Address before the Tax Foundation, Dec. 1, 1959.

(Polaris), twentyfold. A modern supersonic bomber costs nearly one hundred times its World War II predecessor, the B–17. The Navy's nuclear-powered carrier which is currently under constructon will probably cost eight times as much as the carrier which fought the Battle of Leyte Gulf." [15]

Sprague also pointed out the certainty of rising costs for military personnel:

"More directly, even without a general pay increase, the cost of military personnel goes up about 2 to 3 percent a year. This comes about from a somewhat higher grade structure; increased longevity pay; an increased number of dependents and, therefore, dependents' allowances; the new program of enlisted proficiency pay; and a steady increase in military retired pay." [16]

Dr. Otto Eckstein, then of Harvard University and later staff director for the Joint Economic Committee's Study on Employment, Growth, and Price Levels, in a paper prepared for the Committee on Economic Development (CED), drew some projections of rising public expenditures over the next decade. Eckstein projected rising expenditures from $79 billion in fiscal year 1960 to $97.1 billion in fiscal year 1968 (as a medium assumption), or as high as $105 billion or as low as $87.1 billion.[17] The significance of these projections is that, at present tax rates, most of the increased revenue from economic growth will be eaten up by increased spending under present programs. Under the high projection of spending, about all of the increased revenues will be required.[18] Illustrations of built-in increases in nondefense programs include the Veterans' Administration (pension mostly) from $5,098 million in fiscal year 1958 to $6,375 million in fiscal year 1968; urban renewal and other housing programs from $199 million to $2,040 million; highways from $8,300 million to $13,300 million; Department of Interior programs (reclamation, Indian affairs, national parks, etc.) from $666 million to $1,110 million. In the defense budget, simply continuing present evaluation of security needs, and in the author's words, assuming "continuation of economy policies," the projection runs from $39.1 billion in fiscal year 1958 to $51 billion in fiscal year 1968. Space, AEC, and other defense-related programs also are expected to eat up revenues simply extending the present approach.[19]

Economic growth, therefore, provides no freely available revenue for use in expanding our defense effort. Economic growth produces more revenue, but it also produces more expenditure. We must conclude again that we have failed to uncover a costless source of revenue for higher defense outlays.

The basic question

Reluctantly we come to the conclusion that if we wish to spend more on defense, we are going to have to face the cost. While everyone would like to see elimination of unnecessary spending; while genuine tax reform is desirable on its merits; and while economic growth will strengthen the economic base which supports an adequate defense—while these considerations are all true, we must conclude that none of them offers a free ticket to a costless increase in defense spending.

This fact has been acknowledged by some of those who advocate higher defense spending. There have been several hints that some of the advocates of higher defense spending favor a tax increase to pay for it. However, these indications have always been in most general terms. No major political figure has presented his program for a general tax increase. Nor has anyone indicated which needed nondefense programs should be cut or postponed. But having rejected the possibilities of a something-for-nothing increase in defense outlays, we are forced to analyze specifically what the cost of any substantial increase would be.

3. THE COST OF MORE DEFENSE

The cost of an increase in defense spending may be viewed in one of two ways: Either as more dollars to be spent—in which case, the question becomes: How do we raise the money? or, what do we spend less on in order to spend more on defense? or as more resources to be allocated—in which case, the question becomes: In real terms, what relative shifts must take place in other sectors so that more resources, relatively may be allotted to defense?

If we are going to increase the defense sector, where will the money (or resources) come from?

It is sometimes inferred that an expansion of the defense budget must be financed by foregoing enjoyment of consumer goods, with the implication that this is the only area in which sacrifices must be made. In fact, however, an increase in the defense sector might be expected to be drawn from many different places, including:

1. Consumer expenditures of many kinds, not just luxuries or frills.
2. Savings and investment expenditures.
3. Nondefense Government programs.
4. Lower-priority sections of the defense programs.
5. Defense spending on the part of our allies.

These sources of financing higher defense outlays are discussed in more detail in this section.

(1) Effects on Consumption

When speaking of higher taxes, it is popular to speak as if the tax would cut only into consumption—and indeed, only into less desirable forms of consumption at that. Often, in reply to the rhetorical question, "Can we afford more defense?" the response is that we spend too much on frills now. Our affluent society, it is contended, certainly can afford to forgo self-indulgence in luxury consumer goods in the interests of meeting social priorities, including defense. Tailfins and television are especially fair game. Among more sophisticated audiences, advertising budgets are a favorite target. ("Surely the real waste is not in the public sector.")

The implication running through discussions in this vein is that if we are forced to a tax increase, the tax will reduce consumer spending only in areas which don't really matter. The implication is that when consumers' disposable income is reduced, consumers will reduce spending only on goods which have a lower social importance, like tailfins.

To bring out the fallacy of this approach, it is only necessary to make explicit what is usually treated, albeit in polished phrases, by implication and inference. Clearly, if a tax increase reduces disposable personal income by, say, $5 billion, we do not know what industries would be affected. The only things we can be reasonably sure of are that consumption expenditures generally are very likely to fall, and that the decline will probably be felt along a wide range of consumer products. It may be comforting, but it is not realistic to assume that only "frills" would be adversely affected.

(2) Effects on Savings and Investment

We also can suppose that a fall in disposable personal income would probably reduce not only consumer expenditures, but also personal savings to some extent. While the marginal propensity to consume is thought to be lower going down than going up, it would still be positive, barring some exceptional circumstances.[20]

A reduction in personal savings would put downward pressure on private investment. This would tend to have an adverse influence on economic growth, since the volume of private investment is surely a key factor, if not the main determinant of the rate of economic growth. (Certainly the same amount of dollars spent through private investment would be quite likely to have greater growth effects than the same amount spent on national defense.) If we see economic growth as essential for long-range defense needs, as well as for the economic aspects of the international challenge, then we would want to recognize that a tax increase would probably have some downward effect on growth.[21]

If the flow of personal savings were reduced because of a tax increase, the capital markets might become slightly more difficult for State and municipal governments to secure credit from. In this way, a Federal tax increase could reduce State and local revenues (bond issues) in absolute as well as relative terms. Because the effect is indirect, however, it would probably be small.

(3) Effects on Nondefense Public Programs

As we have seen, it would be unrealistic to suppose that an increase in defense spending would come solely out of certain categories of consumption (those of a low social priority). It is more realistic to expect that a tax increase would come out of consumption expenditures of a variety of types, and further that some of the increase would be likely to come out of savings and investment, with downward effects on growth.

We may go further, however, and raise the question of whether an increase in defense spending should logically be financed entirely by means of a tax increase.

Put in terms of resource allocation, the question is: Should a greater relative defense effort be taken entirely from the private sector? Or should part of it come from the public (nondefense) sector?

In dollars and cents, if we have to raise the defense budget by $5 billion, why raise taxes by the full $5 billion? Why not take $1 or $2 billion (or more) from other sections of the Federal Budget?

It is rather important to distinguish between this point and the suggestion, discussed earlier, that we can finance defense increases by eliminating waste or unnecessary Government spending. The inference in that suggestion is that no one will be hurt by such cuts, that the wasteful spending has little or no value anyway. As pointed out before, wasteful or unnecessary spending should be cut anyway, whether we want to

---

[15] Address before the Electronic Industries Association, March 15, 1960.

[16] Ibid.

[17] Eckstein includes a "very high" projection of $115 billion.

[18] Eckstein projects receipts, with present tax rates, to a level of $104.6 billion in fiscal year 1968.

[19] "Trends in Public Expenditures in the Next Decade." April 1959.

[20] Under exceptional circumstances, a reduction in disposable personal income which resulted from a tax increase could be associated with an absolute increase in consumption expenditures. This would occur if the tax increase was coincident with a bad inflation scare, or with public anticipation of controls and rationing. An international crisis precipitating a boost in defense spending and therefore a tax increase could conceivably be tied to either or both of those two effects. They, however, appear to be remote from the present discussion.

[21] The adverse effect on growth referred to here is entirely apart from possible effects of a tax increase on incentives, a matter discussed later. The effect discussed here is almost a technical function of a tax increase, as opposed to the more intangible effect on incentives.

increase defense spending, hold it constant—or even reduce the defense budget, too. If a practical way can be found to save money by eliminating military duplication and interservice rivalry, or by substantially reducing agriculture payments, or by cutting the interest burden of the debt—if practical ways can be found to make such cuts, surely they should be instituted immediately, independent of decisions on the adequacy of the present defense program.

The point we turn to now involves not wasteful spending which should be cut anyway, but rather Government spending which is not wasteful, which we do value, and which would not be reduced were it not for the hypothetical decision to raise defense spending. Logically an increase in defense spending should be financed by drawing resources from all other sectors, not just private sectors. This implies some reduction in the nondefense public sector.

The newsletter, Economic Intelligence, commenting on the heightened interest in defense and space following sputnik, brought this point into perspective well, as follows:

"Since there seems to be no obvious reason why the relationships previously existing between the social valuations of expenditures in the private and nondefense public sectors should have been radically changed by sputnik, it would seem that the brunt of increased defense should be borne by both of the other two sectors." [22]

In specific terms, this could mean that a decision to expand the Defense Department's budget, or NASA's, should be associated with other decisions involving, let us say, a slowdown in highway construction or suspension of new public housing units or reduction in the agricultural support price for some commodity.

(4) Effects on Defense Budget

To press this point further, if we want to increase defense spending in certain types of weapons, we not only want to reduce private and nondefense public sectors; logically we should also examine other phases of the defense sector. If the value of modern weapons systems has increased in our minds, then presumably the value of some other phases of the defense structure has relatively declined.

(5) Effects on Allies

If ours is a mutual defense, presumably a decision that more defense spending is needed would be a decision agreed to not only by our own people, but by our allies as well. That being the case, the expansion of defense spending would logically be shared by us and them.

Conclusion

This discussion has attempted to point out the impact which an increase in defense outlays might be expected to have. We have attempted to point out that a shift in resources in the direction of a greater relative defense effort would imply relative shifts away from all, not just some, of these sectors:

1. Private consumption.
2. Private investment.
3. Nondefense public spending.
4. Low priority defense items.

Consideration of possible increases in defense spending ought to be undertaken with a full awareness of the implications for private living standards, economic growth, and the progress of public programs other than defense.

4. COMPARISON OF WORLD WAR II AND THE KOREAN WAR

It is instructive to look at the cost of World War II and of the Korean war in the terms in which the cost of national defense has been analyzed in the preceding discussion. In these terms we ask the question, What relative shifts out of other sectors made possible an enormous expansion of defense spending in World War II and a significant, if lesser, rise in the Korean war? After answering this question, we can better judge the impact of current and proposed levels of defense spending. In making these judgments, however, we will also have to note carefully the difference between the new situation and the earlier ones.

The cost of World War II

In table 1, the national income accounts are classified in such a way as to bring out what shifts took place in nondefense sectors to make possible a huge increase in defense spending during World War II. (Note: Items do not add to totals due to rounding, and due to exclusion of net foreign investment, a relatively minor item.[23])

TABLE 1.—*World War II*

Year	Gross national product	Consumer expenditures	Private investment	Nondefense Government	Defense
Dollars (billions):					
1940	100.6	71.9	13.2	11.9	2.2
1944	211.4	109.8	7.1	9.1	88.6
Percent of total GNP:					
1940	100	71	13	12	2
1944	100	52	3	5	42

Source: Council of Economic Advisers.

This table shows that in 1940 we devoted only 2 percent of our gross national product to national defense. In 4 years, this proportion was raised by 42 percent. The table shows that, in order to do this, all other major sectors were scaled down. Private consumption expenditures fell from 71 percent of gross national product to 52 percent. The biggest impact proportionately was felt in private investment which was cut from 13 percent to 3 percent. Government spending for purposes other than defense was also cut way back, from 11 percent to 5 percent.

It should be noted, of course, that a very large part of the defense effort, in absolute terms, came from resources which were unused in 1940. Much of the defense manpower, for example, came by reemploying unemployed workers, expanding the labor force, and increasing the workweek substantially.

The cost of the Korean war

The shifts which took place for the limited mobilization of the Korean war were less pronounced than for the all-out World War II effort.

TABLE 2.—*Korean War*

Year	Gross national product	Consumer expenditures	Private investment	Nondefense, Government	Defense
Dollars (billions):					
1950	284.6	195.0	50.0	24.9	14.3
1953	365.4	232.6	50.3	33.9	58.0
Percent of total gross national product:					
1950	100	69	18	9	5
1953	100	63	14	9	16

Source: Council of Economic Advisers.

Here again we observe shifts away from all other sectors—vagaries of the statistics hide a minor shift out of the nondefense Government sector—to make possible a relative increase in the defense sector from 5 percent of gross national product to 16 percent. Again, it is private investment which falls most, relatively.

Current sector shares

For purposes of comparison and conjecture as to the appropriateness of our current allocation of resources it might be added that the 1959 gross national product was divided as follows:

	Percent
Gross national product	100
Consumption expenditures	65
Private investment	15
Nondefense Government	10
Defense	10

Similarities and differences: World War II, Korea, the present

The all-out defense effort of World War II and the more limited mobilization of 1950–53 show that this country has an enormous capacity for arming itself, if it decides to do so. We are now devoting roughly 10 percent of our gross national product to national security purposes. In World War II, we committed 42 percent and in Korea, 16 percent of our gross national product to these purposes. Clearly this affords us a substantial margin of extra effort should we decide that it is needed.[24]

While the World War II record is some indication of what we can do in a full-scale effort, it is crucial to avoid the fallacy of supposing that it even suggests a measure of what kind of effort can be sustained on a plateau of preparedness for a protracted national security posture. Similarly, the Korean war is no guide to the present problem.

It probably is superfluous to point out the essential difference between a defense effort designed for a temporary war and the kind of long-range challenge we face today. The principal difference is in the timespan involved, what CED has termed the "perspective" of our present position, which is "not merely the crisis of the moment, but the continuing situation of constant danger with

[22] February 1958.

[23] This breakdown of gross national product is rather crude; for example, in terms of our analysis, it would be more appropriate for housing to appear as a consumption rather than investment expenditure. However, the general points stand.

[24] It might be observed that 42 percent of our current gross national product might exceed the total Soviet gross national product, were safe, comparable measurements available.

which we apparently must live for many years." [25]

The wartime mobilization was impressive, but it would clearly not be an appropriate course to pursue today. During World War II (and to a lesser extent, this point applies to the Korean war as well), our goal was immediate production, and we achieved it. But the spectacular increase in output was not on a sustainable basis. The reasons for the spectacular rise in production included:

1. The wartime expansion started from an extremely low depression base, a fact which exaggerates the magnitude of the upswing;

2. Millions of persons were called into the labor force who do not normally work and most of whom (but, significantly, not all) retired from working after the war;

3. The workweek was fairly generally 6 days instead of 5;

4. Patriotic appeals made some extraordinary measures possible which could not have been done in anything less than a shooting war;

5. To an amazing extent, our effort was channelled into the huge current production effort, with little attention to capital formation—we were, as a Nation, "living off capital;" [26]

6. Production was expanded, but not productivity—output was raised almost entirely by an increase in man-hours, while output-per-man-hour was largely ignored.

An important point to observe with respect to the World War II step-up in defense spending is the drastic cut in private investment. In dollar terms, private investment fell by $6.1 billion—more if changes in the value of the dollar (due to inflation) were considered. In the relative share of the economy, the drop was most spectacular—from 13 percent of GNP in 1940 to a mere 3.3 percent in 1944. In other words, when all-out defense spending was necessary, the sector which had to go was private investment.

The significance of this observation is that private investment is the essential element in economic growth. A rapid growth rate comes about fundamentally not because the labor force works harder or longer hours, nor because Government programs are expanded, but because the labor force expands and, most important, productivity is raised, primarily as a result of capital formation—investment in new machines and methods, modernized plants, replacement of obsolete facilities and techniques with more efficient ones. While many public services contribute to the growth process—certainly, education has an important role [27] the really big factor is investment.

Without a high level of capital formation, economic growth cannot be sustained. A society that diverts resources from investment either to current consumption or to military defense—however, enjoyable the former or essential the latter—pays a penalty in terms of relatively slower expansion of productive capability over a period of years.

Thus, many of the reasons for a successful war record, while entirely appropriate in that context, suggest that a short-range all-out war effort and long-range economic growth may be competing, not complementary goals.

Preoccupation with long-range growth considerations would have limited somewhat the success of the war effort. The corollary of this point, however, in the present situation, is that excessive preoccupation with immediate defense needs could limit our long-range growth potential, and thus hamper our long-range national security capability.

The lessons of World War II and Korea are helpful largely as indications of what we could do if the present international situation radically changed (for the "worse"). Those experiences, however, are poor indications of what to do if, as most observers would suppose, our current posture must be maintained for a long-drawn-out response to the challenges of our international adversaries.

5. ECONOMICS OF NATIONAL SECURITY ON A "PLATEAU OF PREPAREDNESS"

As we indicated at the start, economic policy on a "plateau of preparedness," plays a more crucial role than it does in perhaps any other international setting. When national security needs make large and continuing demands on the system, economic growth and efficiency are at a premium. When the Soviet challenge takes, as one of its many channels, the form of economic and trade competition, our response must be swift, strong, and sustainable. As George A. Lincoln put it, "Peace must be waged by economic power." [28]

Anticipating that the demands of national security will remain high for the indefinite future, we need to consider how these demands affect the economic system and what overall policies will enable us to satisfy these demands best. We need to place a very high value on economic efficiency and on economic growth. We also need to insure a stable, expanding system and a free one.

National security and economic growth

Economic growth, valuable on many counts, makes a strong national defense easier to finance. The growth of resources and know-how that accompanies economic growth permits a more efficient defense effort. Because of the long-range nature of our security needs, growth must concern us.

For these reasons, it is imperative to retain and strengthen the dynamic, growth-giving elements in the system. It is also important to make some meaningful progress toward removing roadblocks to expansion.

The importance of economic growth suggests that short-range emphasis on defense spending should not be permitted to detract unduly from capital formation and private investment. It also suggests that research and development in purely military technology must not be permitted to detract unduly from research which is more directly related to advancing productivity, from basic research, or from science education. It is axiomatic in economic development that future growth depends on partially forgoing current consumption. In an analogous fashion, it might be argued that future security depends in part on balancing current defense efforts with long-range strength.

An added consideration affecting growth is the question of how national security expenditures are financed. The tax system is important from two standpoints. First, the structure of taxes must be examined in light of whether it facilitates or needlessly obstructs growth; most economists argue that effective tax reform could significantly improve the impact of the tax structure on growth. Second, the overall level of taxation must be considered in terms of the effects on incentives. The impact of the tax level on incentives has never been agreed on. There probably is some level at which the disincentive effect would become pronounced. We cannot know where that breaking point is, other than that we do not appear to have struck it yet.

Furthermore, we may suspect that it changes over time: in World War II it was surely higher than it is now. It is precisely the indeterminacy of the incentives effect which makes it doubly important to bear in mind.

National security and economic efficiency

Aside from economic growth over time, the demands of security also suggest that we should be concerned about how much we are getting out of the system at any point in time.

There is ample reason to examine closely the effects of a high rate of defense spending on the efficient performance of the economic system. Defense spending is not subject to the market test. One of the chief functions of competition is the pressure it puts on competitors to keep costs down and find more efficient methods of production. The market ruthlessly punishes or even eliminates the inefficient producer.

In the defense field, as in most public programs, the discipline of competition is lacking. The resulting laxity regarding costs is one of the major disadvantages of public management. The problem is thought to be especially acute in the defense budget.

Concern with efficiency suggests a careful eye on results being achieved from dollars spent on defense. It also suggests, of course, attention to a host of built-in or pushed-in inefficiencies in the private as well as public sector—lack of competition in some product markets, Government subsidies and special advantages for particular producers, union activities from featherbedding and encouragement of slowdown all the way through to crippling industrywide strikes capable of closing vital production for a period of months, and other obstacles to effective functioning of the system.

Effects of defense spending on research and development

It is a widely held view that defense support of scientific research and development is a beneficial side effect of a high level of national security expenditures.

Certainly the volume of research and development generated during World War II must have stimulated the pace of scientific advance. One obvious case is the development of atomic energy, but there would be many less dramatic instances. The aggregate figures suggest that the war must have very favorably affected scientific developments. It is estimated that total spending on research and development, as late as 1940, amounted to less than $500 million. As a result of the great surge of Government-supported research during the war, research and development spending rose to an approximate $2 billion level in the early post-war years. It is safe to conclude that the wartime military effort made a major contribution to the pace of scientific progress.

Evaluating the impact of post-war defense spending for research and development is more difficult. Undoubtedly, defense-supported research continues to contribute to scientific advances. But that is not the question. The question is, if the military were not supporting this research, what would happen? Would the net scientific progress be greater, the same, or less than it is at present? Merely listing scientific discoveries which originated in a laboratory doing military contract work does not enable us to compare what would have happened under different circumstances.

The research performed by and supported by the Defense Department is in part competitive with other scientific efforts which might have greater overall scientific significance. The gobbling-up of scientific talent and resources for strictly military purposes (even granting some nonmilitary side products) may in some measure prevent the use of those talents and resources for more productive uses. This is not to contest the

---

[25] "The Problem of National Security," July 1958, p. 2.

[26] The value of industrial construction actually declined after 1941, reaching a low in 1943 and not regaining the 1941 level until 1946.

[27] During World War II, of course, education was also set back. The gap in classroom construction has still not been made up.

[28] Op. cit., p. 4.

priority of defense needs; it is simply to caution against assuming that a high level of military-supported research and development may not necessarily accelerate technological advance as a whole, and may actually retard it.

One way to focus the problem is by an illustration. Consider three alternative hypothetical levels of defense support of research and development from 1946 to the present: (a) For the first, assume that the military supported no research at all from 1946 on, leaving all of the country's scientific resources to find their way into other uses; (b) for the second, assume that the proportion of scientific resources used by the military remained at the peak war-time level from 1946 on; and (c) for the last, take what actually occurred from 1946 on, which would lie somewhere in between (a) and (b), and a fair distance from either extreme. Now ask the question: Would the Salk antipolio vaccine have been developed at the same time under each of these three assumptions? Only conjecture is possible, of course. Furtheremore, to consider the question fully, we would need an agreed-on measure of scientific progress.

Another consideration is that the bulk of defense-supported research is on the development end of research, rather than basic research. Many informed observers have contended that the ratio of basic to applied research should be raised. If proportionately more scientific resources were channeled into basic research, the pace of progress over the long run might be quickened. In this respect, too, the military's research support may have a retarding rather than accelerating effect on scientific advance.

On the other hand, one other effect of the research activity stimulated by the defense program should be noted. While military research competes for the available supply of scientific manpower, it also adds to the total supply. The high demand for scientists and engineers on the part of defense-related research and development activity unquestionably exerted a major influence in expanding the total number of scientists and engineers, especially since 1950.

National security and inflation

A high level of national security expenditures, sustained over a period of years, imposes on policymakers an added reason for vigilance concerning inflationary pressures. If care is taken with the financing of large defense spending, inflationary pressures can be dampened, though they will still very likely be a threat. Arthur F. Burns has noted that, "huge Government spending, even when it is fully met from tax revenues, is likely to release inflationary forces in the economy."[20] Wise fiscal policies, featuring restraint in nondefense spending, together with firm and flexible monetary policy and debt management offer much promise for holding the line against serious inflation. The last few years have provided encouraging evidence. It would appear, however, that should sizable increases in national security be contemplated, one of the costs to consider would be the inflationary pressures which any increase in their present high level would imply.

National security and freedom

Ultimately, perhaps the most important concept which ought to underlie our national thinking about security in a protracted conflict is the relationship of survival and freedom. As we mentioned at the outset, it would be tragically self-defeating to forget what it is that makes national defense worth billions of dollars—or, enlarging the frame of reference, what makes mutual security worth while for all of Western civilization, as well as the emergent nationalities seeking a goal which has to do with liberty.

This question needs to be thought out on two levels. The first must carefully evaluate specific controls and restrictions with the question as to whether the contribution each proposal makes to national security is "worth it" in terms of the freedoms given up. The second must look beyond the specific series of proposals currently under consideration; the second and broader level must constantly reappraise how effectively we are balancing the twin requirements of security and liberty.

With defense spending at a high level, some measure of specific economic controls and restrictions appear inevitable. They are part of the price of security. It will be noted that when defense spending consumes 10 percent of the Nation's gross national product, the proportion must be markedly higher in certain product lines. And when the Federal Government sits over a large share of particular product markets, controls—for example, allocations systems for private users of the product—become very tempting if not actually necessary. The continuing debate over patent policy in defense-supported research and development is one indication of how growth-inhibiting controls tend to be associated with high defense activity.

The problem of economic controls is especially relevant in thinking about a long-range security posture. In World War II and Korea, we took on an extraordinary burden of defense—but, note the controls we incurred also. In World War II we had—

Allocation of scarce materials.

Curtailment of plant expansion without approval.

Prohibition against use of certain scarce materials.

Limitation on use of certain materials to military contracts.

Priority orders for producers.

Centralized scheduling of war-related production.

Ceilings on prices, wages, and rents.

Rationing of many consumer goods.

Comprehensive direction of production, refining, treating, storage, shipment, and distribution of petroleum.

Complete authority over manufacture of rubber.

Priorities over food imports.

Production quotas for farmers.

Control of shipbuilding.

Operation and maintenance and allocation of all shipping.

Regulation of civilian hiring.

Employment ceilings for employers.

The draft.

Jurisdiction over labor disputes.

Consumer and real estate credit controls.

Authority to require temporary rearrangement of electrical facilities.

These comprehensive controls applied only during World War II. However, it is instructive to note that during the Korean War, when our total defense effort was not a great deal larger than it is today, many of these same controls were invoked. It is also instructive to note how certain steps undertaken in wartime become well rooted and remain after the war. Experience with consumer credit control in World War II and the Korean war has left many people interested in reinvoking it today. A classic example was the Government control and operation of the synthetic rubber industry. This was launched in World War II, but it was 1953 before a program was developed to get the Federal Government out, and several years later before the deed was accomplished.

Constant vigilance with regard to specific controls appears to be necessary as long as a high level of national security is required. Beyond that, there needs to be a broader evaluation of the relationship of economic freedom and survival.

Public spending as a whole, including national defense, can be differentiated from private spending in one important and relevant respect.

In the case of public spending, decisions to spend are taken collectively and then enforced on a compulsory basis—in the nature of the case, not because of any alleged evils of bureaucracy or anything of that kind. The mechanism for assuring democratic control is the political process.

In the case of private spending, decisions to spend are made individually and remain voluntary and always subject to change at the individual's discretion. The mechanism for assuring democratic control is the market.

Neither the political process nor the market work smoothly at all times; but we tend to accept them in the spirit of Churchill's celebrated comment, until anything better turns up.

There is an essential difference between the public and private sectors in one key point.

In the public sector, when the political process has made its decision, everyone including a minority of as many as 49 percent must accept the decision. If, through the legislative process, we decide to have a $10 billion highway program, then everyone enjoys that highway program, whether or not 20 percent of the taxpayers would have gained greater satisfaction from an alternative use of that $10 billion, such as school construction.

In the private sector, when the market has made its decision, everyone exercises his fairly free choice as to what kind of product he buys, where, and when. If 51 percent of the consumers want to buy a General Motors car, this in no way requires the other 49 percent to do so. They may splinter their dollars among many other brands, while some buy no car at all and others buy two or three.

These examples may seem a trifle pat. But they do help to bring out a point which is too often overlooked. The political process as we practice (or at least preach) it and the market as it is (or should be) prevalent in most of the private sector—both are essentially democratic. But clearly the market provides a far better defense of individual rights, a safeguard against the tyranny of the majority, opportunity for the nonconformist. Of course, many expenditures most logically fall in the public sector for practical reasons. Our concern for freedom, however, ought to give us a constant bias in favor of the private sector as against the public sector, whenever hard choices must be made.

This kind of framework is helpful in relating the needs of national security to the underlying objective of maintaining, enhancing, and enriching individual freedom.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. WILSON. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study papers Nos. 15 and 13: "An Extension of National Security Council Machinery," by Dr. William Y. Elliott, professor of government, Harvard University; and "The

Economic Challenge of the Soviet Union," by Dr. Don Paarlberg, Special Assistant to the President for Economic Affairs:

AN EXTENSION OF NATIONAL SECURITY COUNCIL MACHINERY: THE CREATION OF A HIGH-LEVEL CONTINUING ADVISORY BOARD TO REVIEW NATIONAL SECURITY PROGRAMS FOR POLICY PRIORITY TREATMENT

(Summary of paper by William Y. Elliott, professor of government, Harvard University)

The progress that has been made in the National Security Council machinery is generally admitted, even by its critics. Yet, many of the participants in NSC procedures have recognized that in the absence of a high-level reviewing staff to relate programs of an interagency import to policies, and to establish priorities for support and follow-through, the Council machinery ground out policies that were too much the product of people who acted as the interested spokesmen for agencies rather than as a unifying policy staff for the President. The problem of getting a high-level staff review always presents, however, the danger of second guessing the responsible high officials whom the President alone controls. To substitute the judgment of any staff for review of basic national defense and foreign policies or programs runs the risk of delaying or of undoing costly programs before they can bear fruit; or alternatively, of encouraging inaction until the review group has given its sanction. It is arguable that the only feasible preclearance is by the Bureau of the Budget plus congressional authorization; and that these hurdles are hard enough to operate under with efficiency and speed, without adding another. Yet the fact remains that the Bureau of the Budget and the Appropriations Committees almost never ask and never answer the basic positive question: Are the programs in the national security area which affect and depend on several agencies getting the right priorities of attention to see that they effectively carry out the President's national security objectives and policies?

The very substantial achievements for improving the National Security Council mechanism and procedures have introduced occasional reviews by groups of outsiders. This method of getting independent high level advice to help the President, as suggested in Eisenhower's first campaign, could be improved by getting some continuity for a single group, and by the selection of people who were more nearly insiders in terms of past experience. This would mean creating a regular program review board to advise, rather than a whole series of ad hoc groups, like the Draper Committee. Many of the same people appeared from committee to committee; so that the experience was not entirely wasted. But there was no continuity through a permanent staff such as there would be in any kind of adaptation of the wartime model of a continuing requirements committee for program review such as we developed in the War Production Board. Priorities set by the Board were translated into allocations by the program vice chairman after the hearings by this requirements committee.

Furthermore, the very necessary effort to see that the sum total of programs would not be beyond the capacity of the country to bear would seem, particularly in this era of advanced costs because of the complexity of technical improvements, to require even closer attention to a discriminating treatment of weapons systems—in terms of time phasing as well as of enemy capabilities and some concern for policy priorities as well as investment efficiency.

Professional political scientists generally underestimated, until after World War II, the degree to which any basic national security policy must transcend party politics. If an agonizing reappraisal is to be made by a change of parties, or if we must, at every change of party control, "pull up by the roots" every basic policy in order to reexamine it, we do have an impossible situation from the point of view of the continuity of policies and of the type of planning that has to be made when we are expending something around two-thirds or three-fifths of the national budget on the long-term security sectors of policy. The machine cannot be reversed without chaos, even though it must be flexible enough to change direction, or take a new tack. Enormous waste is possible through either over insurance or the bad habit of building on existing, though obsolescing programs that should be phased out in favor of new ones.

The contribution of the agencies to the formation of national security policy must transcend jurisdictional and departmental attitudes, and their spokesmen, both in the Council, in the Planning Board, and in the Operations Coordinating Board, which follows up programs, must be kept under continual pressure, both by the President and by their own sense of national responsibility, to achieve this attitude.

However, it is clear that no Department can, of itself, be expected to exercise the necessary self-criticism to make a fair assessment of its programs in relation (a) to other programs, or (b) to be really aware of or frank enough about the shortcomings in its own achievement of programs.

What seems to be lacking is something in the nature of a sort of continuing and expansible "Requirements Committee" which could be called an Advisory Review Board for the Special Assistant (NSA) that could do a comparative evaluation job before the budget ceilings were set. It would have the requisite powers to obtain the necessary supporting data to criticize both the voluminous programs and unscreened financial appendices submitted by the agencies; and the status reports to the Operations Coordination Board that are ordinarily put in on a unilateral basis, and get no real NSC scrutiny at an effective level helpful to Presidential decision.

If it proved to be possible to enlist the part-time services, with periods of concentrated sustained effort, for special evaluations and studies by a half-dozen leading figures, broadly experienced in high governmental responsibilities, preferably through training at the top policy posts in several agencies, these board members would really be insiders to the problems of the five or six major areas concerned. These areas are the broad policy priorities as applied to defense, diplomacy, and foreign programs, fiscal and economic policy, mobilization and procurement programs, psychological and cultural programs associated with the cold war, the basic research needed and technological phasing of programs to the areas of pure and applied science in their application to growth as well as to defense policies. The Review Board should be headed by someone familiar with the entire organizational programs of the Federal structure and with the procedures for achieving staff integration. The Special Security Affairs Assistant to the President, with the help of advisory recommendations for emphasis by such a Board, might present something more simple, selective, and useful than unilateral or ex parte evaluations of the many separate reports to the President and the Council.

It should also have the additional sanction of having its opinions probably (and in practice ordinarily) affect the allocation of budgetary support and other resources to the programs of the interested agencies. It should, therefore, have the power of recommending, through symbolic priority systems or other methods of comparative evaluation involving time-phasing and orders of magnitude, an overall judgment on the importance of major programs. This evaluation should necessarily stress the essential elements of programs that must be given top priorities and the downgrading or phasing out of other aspects of programs which will keep them in balance with the total framework of national security policy.

This evaluating function for allocations by priorities explains why such a group is spoken of as a sort of requirements committee on the analogy with a well tried and highly developed wartime method of reviewing programs to assure both efficiency in the investment of resources, and conformity to policies. If programs cannot be worked out to support policies, policies must be revised. Its members must be sufficiently sympathetic and acquainted with the areas that they are treating to realize the practical problems confronting the Cabinet Secretaries and agency heads. Otherwise they will be treated simply as ignorant meddlers. They must have been high-level operators. They must understand the difficult management component of the struggle to give sound administration to these areas, and yet be able to take the kind of broad overall view which will assist the President in his own superhuman effort to hold all this great apparatus to a single stream of unifying purpose and policy.

It is in this light that a review of the framework and the evaluation of national security policies in relation to budgetary and other resources would afford the necessary and helpful guidance to the Budget Bureau for a task for which it is presently unequipped, namely, for the presentation of a selective frame for the implementation of policies through fiscal support. In the process after policy guidance has been established, the Budget Bureau can furnish a large part of the continuing staff mechanism of scrutiny and support for the Program Review Board (proposed) as can the OCB and the other institutional staff arms of the President, including the National Security Council staff itself.

The great advantage of this approach to extending the range and effectiveness of the National Security Council's staff support is that it could bring in people who are acceptable to both parties in Congress in the light of service to previous administrations and their independent attitude as public servants.

Free from the pressure of departmental duties and controls, these advisers could furnish that long-range view of national security policy that has to take into account, above all, balance and importance for the essentials. They should be able to assist the President first of all in his own formulation, and then in his control and followup of policies, by really comprehensive, critical and simple reporting of the main issues with which the President must be concerned. In this way they might restore to the National Security Council the overall integration and evaluation which has, so far, been sought, not always successfully, by multiplying new agencies or adjunct committees for specific problems.

No mechanism, of course, can do more than assist the President to make decisions in time and in anticipation for the prevention of crises. But it can help to escape the dead hand of merely multiplying administrative mechanisms at levels which tend to delay decisions until crisis action is the only remedy, or to provide a framework in which remedial rather than preventive action becomes, through sheer volume of crises, the principal preoccupation of the Secretary of State.

Immediately after the presidential elections, the incumbent President should invite his elected successor to all Security Council meetings. With no change in party control

the transition is natural and simple because of the Vice President's experience with the Council. But the dangerous interregnum of breaking in a party out of power would require special efforts. It would appear also possible to expand the consultants staff of the NSC to bring in designees of the incoming President for the sort of requirements committee appraisal of programs previously projected to meet NSC policies. An indoctrination source by bringing in such Assistant Secretaries as had not previously served, to learn the ropes as part of a training in office prior to January 20, would also help.

This country could ill afford an interregnum of even a few months after the period of cramp and added strain to which it has necessarily been subjected by the fact that this is the year of presidential elections.

The new Vice President would be a useful person to preside over the proposed Program Review Board. It would be the best way quickly to bring him up to date and to broaden his education for the responsibilities which Presidents must increasingly devolve on the only other official of super-Cabinet rank who naturally presides in the absence of the President both over Cabinet and NSC meetings. The job is one for decisions by one man; but it is of such a complex magnitude today that a wise President will have to find someone, or perhaps several men, to share the framing of the issues on which he alone must decide. If his Vice President has been well selected, both because of his sharing the only national mandate, and because his future, too, depends on the success of the administration, he ought to be as useful as anyone available for chairing this very important advisory Program Review Board, loyally taking a great load off the President. But his effectiveness, like that of the Board, will depend on his own caliber, experience and ability to learn.

The Economic Challenge of the Soviet Union

(By Don Paarlberg [1])

Among the many economic problems which we have confronted in past years a few have been of great importance and high visibility. They dominated a considerable span of years before we finally overcame them, wore them out, or learned to live with them. These dominant problems differed in their nature, their intensity and their duration. In a manner convenient to the historian, they have roughly associated themselves with 10-year chunks of history.

During the thirties, the dominant economic problem was depression and the fear of secular stagnation.

During the forties, preparation for war, the waging of it, and its aftermath were the overriding features of economic life.

The fifties were characterized by efforts to lift the level of material well-being, both at home and abroad.

What will be the dominant economic problem of the sixties? A number of subjects have been nominated for this role:

Efforts to achieve further advances in living levels and a broader sharing of the fruits of technological change.

The curbing of concentrated economic power, and a better harmonizing of group objectives with the public interest.

Cushioning the sometimes harsh adjustments in economic life which flow from the onrush of technology.

An attack on inflation, with something approximating the diligence and resourcefulness that was employed in combating depression three decades earlier.

Efforts to aid the underdeveloped countries, in a manner similar to the recently accomplished rebuilding of wartorn Europe.

There are other economic problems which might be appended to this list.[2] But there is one which in a broad sense includes within it all of the foregoing; that is our response to the economic challenge of the Soviet Union.

Everyone has heard of the challenge issued to the United States by Chairman Khrushchev—his frequently stated goal of first equaling and then exceeding the United States in the output of goods and services. "We will bury you," he has said, and there can be little doubt that he means it.

U.S. and Soviet Economic Comparisons

Much has been said and written comparing Soviet economy with our own.[3]

Any economic comparison is made difficult by the inherent awkwardness of measurement, by the uncertainties which surround Soviet statistics, and by the lack of comparability between the two economies. To chart accurately the size of our own product is itself a difficult statistical operation. How does one add together such unlike things as crude oil and college training? To compute the output of the Soviet economy from the fragmentary and questionable figures available is far more difficult. To compare these two approximate quantities is to run the risk of compounding the errors in both.

Once economic output has been estimated, the calculation of trends in the growth rates inevitably follows. Once trends have been computed, the urge to project them into the future is irresistible.

The projection of trends is one of the most fascinating and hazardous occupations known to man. The first year of my life I gained 20 pounds. If I had gained that much each year, I would now weigh half a ton.

Despite all the difficulties of making comparisons of the two economies, comparisons of some sort must be made. Lengthy hearings have been held during this past year by the Joint Economic Committee of the Congress, and the most expert people in the country have given testimony.[4]

Well-qualified people differ in their estimates of Soviet capabilities. But a composite of the testimony of able persons perhaps would reach the following conclusions.

The gross national product of the United States, the sum total of all goods and services produced, is presently at least twice that of the Soviet Union. But our rate of economic growth, in percentage terms, is much less than theirs. During the last decade or so the best computations show that our economy has been advancing at rate somewhat in excess of 3 percent annually. The consensus of informed estimates is that the Soviet Union has been growing at something like twice that percentage. In absolute amounts, say those who have studied this problem closely, the yearly increment of growth in this country is roughly comparable in volume with that of the Soviet Union, though greatly different in composition. Our own economic output is weighted heavily by consumer goods and services; the Soviet economy is heavily weighted by capital investment and military outlay.

Last year the rate of economic growth in this country, in real terms, was 7 percent, this being larger than usual by virtue of the fact that we were emerging from a recession. In 1960 the American economy is generally expected to advance by an additional like amount, reflecting full recovery. While we are very happy to have them, these favorable figures are related to a particular phase of the business cycle and are not to be interpreted as the long-run prospect. The problem of dealing with the business cycle is related to but different from the problem of promoting long-term sustainable economic growth, with which we are concerned here.

The Importance of Economic Growth

What is the meaning of growth rates in this country and in the Soviet Union? Are differential rates of growth a matter of real significance? Or is this just some sort of numbers game?

The rate of economic growth has great meaning. For one thing, it is from increments in economic growth that a country achieves improvement in the well-being of its citizens. Our people aspire to further advances in the quantity and quality of goods and services available to them; if the economy grows these will be forthcoming. Advances in living levels have to do with better education, improved health, and better housing for larger numbers of our people. Thus, a high, sustainable rate of economic growth is for us a desirable thing, good in itself, apart from any consideration of what goes on in the Soviet Union.

The Soviet Union also wishes to lift the living level of its people, and has recently emphasized this aspect of economic life. Since the average person in the Soviet Union has available only about one-fourth of the goods and services enjoyed by the average American citizen, the drive for improvement is probably greater there than here.

The rate of economic growth is also important in that it is a measure, though not by any means the sole measure, of the growth of military potential. The greater the total output of goods and services, the greater can be the military effort. Our military effort amounts to about 10 percent of a large gross national product; the military effort of the Soviet Union is a much larger percentage of a much smaller product. Our present economy is well capable of supporting such military effort as our needs prescribe. A marked and sustained advance in the Soviet economy would lift the level of that country's military capability and hence is of concern to us.

Finally, there is an element of prestige and leadership involved in having a high economic output, and in having a high rate of economic growth.

One-third of the world presently enjoys free government. One-third is regimented. The remaining third is to some extent uncommitted on this issue. This third, including parts of Asia, Africa, and Latin America, presently underdeveloped, aspires to lift its level of living. Many underdeveloped countries, anxious to advance themselves, may be more inclined to embrace a regimented system if one of its attributes is a rapid rate of economic growth.

To an underdeveloped country, a high level of economic output, such as we have in the United States, is not as impressive as one might think; such a high level is often viewed as simply unattainable. A high rate of economic growth, however, beginning from where they are, is more readily translatable into meaningful terms.

For these obvious reasons, we wish to have a high rate of sound, sustainable economic growth. There may be much that is odd and ludicrous in computations and discussions of economic growth, but our interest in a high growth rate is wholly clear.

If the Soviet Union were to use its increments of economic growth for advances in the well-being of its people, we would, of

---

[1] Special Assistant to the President (Economic Affairs). This paper was originally prepared as an address before the University of Chicago Graduate School of Business.

[2] An interesting panoramic view of the range of candidates for the role of dominant economic problem in the years ahead was put together by the Committee for Economic Development. See "Problems of U.S. Economic Development" (two volumes).

[3] This paper is concerned exclusively with economic comparisons, not military capabilities, though the two are related to a degree.

[4] Background studies and hearings of the Joint Economic Committee are available. No report was issued.

course, be happy. But if it uses them to threaten us militarily, or to subvert the underdeveloped and uncommitted nations, then the matter is a serious one indeed. The significance of economic advances in the Soviet Union depends upon Soviet objectives. The counsel of history is that we consider the Soviet Government as not being exclusively concerned with the living level of its citizens.

MEETING THE SOVIET CHALLENGE

For a long time there was little attention paid to the economic challenge laid down by the Soviet Union.

It is not surprising that this would have been the American reaction. The enterprise system of the United States has made us the most productive country on the face of the globe, and has given us the highest level of living ever enjoyed by any people. It is a deep-rooted American belief that the enterprise system is able to outproduce a regimented economy.

It is true that we have had periods of time, as during World War II, when we temporarily and partially regimented the American economy, and thereby much changed and increased its output of basic items. But our whole history has been such as to cause us to question the idea that a regimented economy could seriously challenge the economic supremacy of this country.

However, the economic challenge of the Soviet Union has reached such proportions that it must be taken into account. This appears from such statistical comparisons as we have. Even if we totally discount the statistical comparison, the economic advance of the Soviet Union is evident in judgments made by visitors to that land, who compare present conditions with the remembered circumstances of former years.

AVOIDING THE WRONG APPROACH

Those who characterize the economic challenge of the Soviet Union as a serious threat may be classified in two broad groups.

First, there are those whose primary interest is in other matters, but who use the rise of the Soviet economy as a new rationale for the promotion of programs they have long held dear. Chief among these are the proponents of pet spending schemes. Their programs have, during the past 30 years, been successively rationalized on the basis of overcoming the depression, winning the war, and expanding social services. Now they are rationalized on the basis of promoting economic growth so as to match the Soviet standard. These pet schemes are hooked onto whatever is the prevailing public concern. They should be discussed on the basis of their merits or demerits, not on the basis of some alleged association with whatever is currently regarded as a problem. These over-rationalized proposals are therefore not discussed here.[5]

Second, there are those who endeavor, from honest motivation, to deal constructively with this problem. These people and their proposals merit consideration.

Whereas formerly the tendency was to play down the economic challenge of the Soviet Union, some people now overplay it. They counsel us to accept the Soviet challenge on whatever terms it is laid down. If the Soviet Union generates a certain rate of economic growth, we are told that we should strive to equal or approach it. If they set up specific objectives, industry by industry, we are told that we should adopt a similar approach. If they issue an economic challenge in any field, it is said that we should automatically accept it and try to outdo them. "Whatever you can do, I can do better."

This form of strategy would have the leaders of the Soviet Union selecting the area of competition, choosing the issues they wish to raise, and naming the field in which we are to contend. Inevitably they would choose such objectives and name such areas of competition as were advantageous to them, as had for them a natural competitive advantage.

To accept a challenge in this form would be like playing cards in a game in which your opponent always names trump.

If we allow the Soviet Union to name the area in which our two nations are to compete, we would in effect make their objectives our own. We would in time take on their image.

The reason for our rivalry is that we don't want to be like they are; if in order to overcome them we become like them, then our cause is lost as soon as the issue is joined.

The rapid rate of economic growth in the Soviet Union is a matter of concern, and it is a foolish man indeed who would shrug it off. But it would be an even more foolish man who would accept the Soviet objectives and emulate the Soviet technique of regimentation in an effort to beat them at their own game. Such an effort is not likely to win, and if it were, the fruits of victory would have been foregone before the battle began. Far more is at stake than merely to see which country can post the largest statistic, measuring the annual rate of growth.

There are various ways of trying to register the larger percentage increase in the rate of growth. We could lengthen the workweek, recruit millions of women and old people for the labor force, reassign half of our clerks and waitresses to other duties, squeeze down the level of consumption, dispense with certain of our frills, and forcibly extract savings from the people to spend on capital investment. This is what the Soviet Union does. But if we were to imitate them, we would lose our character as a free and independent people.

The rapid growth rate achieved by the Soviet system with its regimented system is accomplished by the suppression of individual rights, a technique made easier by the fact that their people have never known freedom to the degree we have. They went from autocracy under the czars to regimentation under the commissars.

Our people have a heritage of freedom. Individual rights in this country will not easily be relinquished. The point of the matter is that any attempt at central direction of this country's economy will encounter political, economic, and sociological obstacles unknown to the Soviet Union. We cannot succeed with their system.

This kind of argument is being made: By central direction of its economy, the United States vastly increased its output during World War II. Now, it is said, we are faced with a similar challenge. We should, it is maintained, prune away, by Government action, some of the frivolities of our free economy, adopt a program of austerity, and by some form of central direction channel a greater share of our resources to capital investment.[6]

Let us examine this argument carefully; there is a persuasive sound to it.

The United States temporarily adopted central direction of its economy during the two great wars, firm in the belief that freedoms temporarily surrendered would be taken up again at the close of the war. The first war lasted 2½ years; the second one lasted 4½ years. The desire for freedom was kept alive during these relatively short periods; when the wars were over we again took up our freedom, only slightly impaired by its temporary and partial eclipse.

What is the probable duration of the economic rivalry between the United States and the Soviet Union? This may be a rivalry whose duration is to be measured in decades or generations rather than in years. No man can say how long it will be; no man would predict that it will be brief.

Could we put freedom aside for decades, and then reinstate it? If a whole generation were deprived of freedom or had its freedom substantially impaired, would freedom be sufficiently cherished so that we would return to it? Would we remember the rewards of freedom? Would the desire for freedom be strong enough to shatter a pattern of regimentation, laid down and congealed over a period of decades? Would looking to Central Government become so habituated that local government and indeed the capacity for local government would wither and die? To put these questions to the test would place in jeopardy our most precious heritage. It would demonstrate that we hold in low esteem the capabilities and the merits of our free system.

We need to be reminded that economic freedom, extended to all the people, is a relatively new concept in the world's history. It has emerged only in recent centuries, only in parts of the world, and only at immense cost. It is not the kind of system which can be put in escrow. It must be practiced if it is to be kept alive. This system, which has rewarded us beyond our brightest dreams, deserves better than that we should voluntarily impair it through fear of a still-distant competitor.

While we should recognize and respect the economic capabilities of the Soviet Union, we should not underestimate our own capabilities and our own strength.[7]

Put into the terms of a baseball game, the situation is somewhat as follows: Early in the game, we are ahead four to two. In the next inning, each team adds a run. For us this additional run was a 25-percent addition to our score; for our opponents it was a 50-percent increase. Some clever fellow might calculate that if the visitors kept increasing their score by 50 percent every inning, while we increased ours by only 25 percent, then in time they would be ahead. No sensible manager would basically change his strategy on the basis of such a computation. Least of all would he adopt the strategy of the opposing team. He would follow the best strategy he could, and make as many runs as possible. He would not underestimate the strength or the threat of his opponent, but neither would he underestimate his own strength.

POLICIES FOR GENUINE ECONOMIC GROWTH

To promote the right kind of solid growth is a shared responsibility, a responsibility which rests upon private persons and local and State governments as well as the Federal Government.

The Federal Government cannot long force a high rate of economic growth upon us unless basically the people want it. And if we want it, which we should, there are many ways to bring it about besides making it the sole responsibility of the Federal Government. These include:

The business community can enhance economic growth by adopting new techniques, by more competitive pricing and by a more open stance with respect to the entry of new firms.

Labor can promote economic growth by accepting the consequences of technological change and by accepting the responsibilities as well as the benefits of size and power.

Local governments can promote economic growth by providing adequate education and community services.

[5] For a full discussion of this controversy, see Max Ways, "A New Mask for Big Government," Fortune, April 1960.

[6] For an exposition of this argument, see Leon H. Keyserling, "Is Inflation the Problem?" New Republic, Feb. 9, 1959.

[7] Presently more than twice those of the Soviet Union.

State governments can help equalize educational opportunities, provide better roads, and better social services.

The Federal Government can help provide a climate within which enterprise and economic growth can flourish. It can round out and supplement the efforts of State and local governments in the development of human and natural resources, being careful in the process not to preempt, substitute for, or discourage local and State efforts. It can pursue sound fiscal and monetary policies. It can develop realistic price and production-control policies in agriculture rather than perpetuate nonsensical and costly distortions. But the Federal Government cannot, singlehanded, take responsibility for producing a specified rate of economic growth.[8]

Our capabilities have made us the most productive and most powerful Nation in the world. They have given us the highest level of living ever achieved by any nation at any time in history. They have given us a measure of individual freedom unmatched anywhere on the globe. We should be heartened by this tremendous accomplishment.

Great though our performance is, we should not be satisfied with it. The key to improving the performance of the American economic system is to be found in the preservation of the initiative, vitality, energy, and resourcefulness of our people. We can improve our economic system through the development of our human and material resources, through better and broader education, more research, inducement for saving and investment, better use of the incentive system, less indulgence of special interests, and responsible fiscal and monetary policies. Enhanced economic performance comes from these solid sources, not from politically motivated spending in behalf of ever-greater centralization of governmental power and authority, and certainly—most certainly—not from the adoption of techniques alien to our system.

MORE THAN AN ECONOMIC CHALLENGE

This final and major point: We would be terribly wrong if we accepted the Soviet view that the contest between us is solely an economic one.

Theirs is a philosophy of dialectical materialism. They count material goods to be of overwhelming importance. In fact, history is explained in terms of one discipline only, economics. Human rights are considered wholly subordinate, God is said not to exist, and human life itself is considered a luxury indulged by the state.

Our country, on the other hand, was founded on belief in the sovereignty of God and the dignity and rights of man. The marvelous economic productivity of our system is essentially a byproduct of these strong beliefs. If we should now forget the central theme of our country, and be persuaded to defend its byproduct rather than its substance, we could be terribly and tragically wrong. It is time to reexamine fundamentals.

What are the major attributes of the American system? What are the things to which the American people truly aspire? Despite our occasional preoccupation with other matters, respect for the individual, for his fulfillment, for his capabilities, his rights and aspirations, for his freedom and responsibility, for his efforts to achieve an understanding with his God, these are the distinguishing features of the American system.

In these matters we excel the Soviet Union by so wide a margin as to be completely unchallenged. Freedom is meaningful not only in the United States, but in any country in the world. We have so long enjoyed this great blessing that we have come to take it for granted. But in many countries of the world it is not taken for granted; it is greatly desired and much sought. Freedom is still the most revolutionary concept on the face of the earth.

Freedom, indeed, is our trump; we ought to recognize that we have a strong hand and bid so that we can name trump.

We should strive constantly to improve the performance of our economic system, but we should do this within the framework and not to the detriment of our free institutions. We should do it without depriving the individual of his rights or of his responsibility. This is not to be accomplished simply by appropriating more money, launching more bureaucratic schemes, or trying to match the Soviet Union in competitive areas of its choice. Nor will it be done by taking on the image of the evil we would like to overcome. It will be done by cultivating the creative energy of people, which our system is uniquely capable of doing.

In the last analysis, the rivalry between the Soviet system and our own is not merely economic, it is also ideological and spiritual. If we remember that, we can win.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. JUDD. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study papers Nos. 18 and 14, "Disarmament: Problems and Prospects," by Congressman CRAIG HOSMER, member of the Joint Atomic Energy Committee, and Arthur Peterson, of the University of Wisconsin; and "The Impact of Inflation on America's Balance of International Payments," by Dr. Rita E. Hauser, author and lawyer:

DISARMAMENT: PROBLEMS AND PROSPECTS

(By CRAIG HOSMER, Congressman from California, and Arthur Peterson, University of Wisconsin)

The problem of regulation, control, and reduction of military power took its place at the forefront of U.S. foreign policy following World War II. American leaders clearly foresaw the consequences in the development of nuclear energy without international control and inspection. A distinguished group of American scientific, legal, and industrial leaders, in consultation with U.S. congressional committees on atomic energy, developed a series of comprehensive proposals for international development and control of nuclear energy for peaceful uses. These proposals contemplated the establishment of an International Atomic Development Authority whose functions would have included:

1. Control or ownership of all atomic energy activities potentially dangerous to world security.

2. Control, inspection, and licensing of all other atomic activities.

3. Fostering of the beneficial uses of atomic energy.

4. Research and development activities enabling the Authority to comprehend and detect any misuse of atomic energy.

5. Power to control nuclear raw materials and primary nuclear production plants.

"Immediate, swift, and sure punishment" was to be assured violators through the organization of an inspection and enforcement team of international civil servants.

Under this proposal the manufacture of atomic weapons would have ceased, all existing weapons would have been destroyed as weapons, and the useful nuclear material transferred to the international agency for peaceful purposes.

This offer, at a time when the United States alone possessed the atomic bomb, could have meant the removal of the nuclear threat at the very beginning of the nuclear age. Unfortunately, the offer was rejected by the Soviet Union.

The failure to get the Soviet Government to negotiate seriously on the overriding problem of atomic controls in the years immediately following World War II inhibited any real efforts in the area of conventional armaments as well. The Soviet Union maintained its conventional military forces at a high level. The United States, on the other hand, reduced its forces from a World War II peak of 12,124,000 to a total force level of 1,459,000 by May 1950.

Then in June 1950 the Communist aggression against the Republic of Korea was launched. Unilateral conventional arms reduction by the United States had been answered by the Communist world with the aggression against Korea. Korea thus became a grave reminder that would-be aggressors are often tempted by thoughts of what they assume will be sudden and easy conquests.

To many it appeared that the Soviet answers, in word and deed, to all serious disarmament efforts had rendered any further negotiations in this area futile. And yet the phenomenal growth of firepower capability and the ever-increasing efficiency of the means of delivering this firepower upon a target did give rise to the hope that even the Soviet leaders would be forced to give more serious thought to a reasonable system of arms control. Upon this hope was based our continuing efforts in the disarmament field.

In 1955 President Eisenhower, concerned with the increasingly difficult problems time and technology have raised for arms control, called for a thorough analysis of the problems, requirements, and methods involved in achieving an international arms limitation system fitted to the existing situation.

After long and intensive study the newly appointed White House Disarmament Staff recommended a set of principles to serve as a guideline for U.S. disarmament policy. These principles were:

1. The United States should not accept an agreement for arms limitation or control unless provision is made for effective inspection of each phase of the agreement.

2. The United States should never agree to make any reductions or accept any controls in regard to its own armaments unless other signatory powers agree to carry out comparable reductions or controls in regard to their own armaments.

3. In the existing state of scientific knowledge, there could be no safe agreement to eliminate nuclear weapons. It is not possible by any known scientific or other means to account for the total previous production of nuclear weapons material. The margin of error in existing methods is sufficient to allow for clandestine fabrication or sequestering of enough nuclear weapons to constitute a devastating power advantage to the possessor.

4. The problem of controlling nuclear weapons would be complicated enormously, if not made impossible, once the capability to produce such weapons spread to many additional countries.

5. Widespread fear of nuclear surprise attack exacerbated international tensions and

was a principal motive for a continuing and accelerating competitive arms buildup.

6. The United States should never cease searching for a sound agreement and should always be willing to enter serious discussions in pursuit of such an agreement.

7. Because of the development of missiles of intercontinental range and the proliferation of the means of nuclear production, the need for a solution to the armaments problem was increasingly urgent.

Based upon this set of principles the present administration has at every opportunity advanced specific proposals designed (1) to help prevent war by relaxing tensions and fears created by armaments and (2) to provide for a balanced and coordinated progressive program which would avoid any aggression-inducing disequilibrium of power.

Among the specific plans advanced was President Eisenhower's proposal in 1955 of "confidence through disclosure" or what became known as the "open skies" plan. The heart of this plan was unrestricted but monitored reciprocal aerial inspection by visual, photographic and electronic means. Mr. Molotov, for the Soviet Union, rejected the President's plan.

The years 1956–60 have seen the United States and her allies continue to advance concrete bases of discussion for disarmament negotiations. These specific proposals have generally included as interdependent, beginning steps:

1. Cessation of production of fissionable materials for weapons purposes.
2. Cessation of testing of nuclear weapons.
3. Reduction of existing nuclear stockpiles.
4. Proposals for specific force and armaments levels.
5. Inspection safeguards against surprise attack.
6. Agreement not to use atomic weapons except in situations of self-defense.
7. Measures to control the outer space missiles.
8. Development of a system to regulate the import and export of armaments.
9. The creation of an international control organization.

At times during these years it has appeared that the differences between the Western Powers and the Soviet Union on various of the disarmament proposals have narrowed. These periods of seeming progress, however, have ultimately all proved illusory. The record is indeed disappointing from the standpoint of the Soviet response to the Western intention and hope that international accord on the limitation of armaments can be reached. And yet we must not overlook the fact that during the past few years the Allies have welded into one unified and practical policy their individual proposals for arms control. Never before in history have so many nations of such great military power joined to make such far-reaching proposals.

But it also must be remembered that the drive for disarmament, no less than the armaments race itself, is a reflection of the intricate power relationships among the major nations of the world. And though the control of armaments is an indispensable step in a general settlement of international conflict, it cannot be the first step nor can it be conceived apart from the other weapons used in the waging of the peace.

It must be established at the outset that men do not fight because they have arms. Rather they have arms because they find it necessary to fight.

In the past disarmament efforts have too often been based upon the assumption that if men would give up their arms all fighting would be impossible. History clearly demonstrates, however, that if we do take away their arms men will then either fight with their bare fists or find new weapons with which to fight.

Reducing the quantity and quality of weapons available at any particular time thus is no sure guarantee that war will not come. And yet disarmament efforts nevertheless can contribute much to the improvement of the political situation by lessening political tensions and by helping to create some confidence in the stated purposes of the respective nations. Moreover, weapons-control efforts in our time could well determine the very nature of a future war.

For these reasons the decade ahead must see intensified efforts to achieve an international arms agreement. Our approach must be geared to the realities of the nuclear age and must include periodic reevaluations in the light of changing political and military conditions brought about by the vast growth of technical and scientific knowledge. At all times we must proceed on the premise that any disequilibrium in total military power vis-a-vis the Soviet Union might prove fatal to the free world.

The task of remaining strong enough to deter aggression while striving to reduce, stage by stage, man's ability to destroy himself is obviously one of utmost complexity.

But we have no other choice than to continue on our pathways to peace. For as President Eisenhower said in his second inaugural address:

"We know clearly what we seek and why.

"We seek peace, knowing—as all ages of man have known—that peace is the climate of freedom. And now, as in no other age, we seek it because we have been warned by the power of modern weapons that peace may be the only climate possible for human life itself."

The Impact of Inflation on America's Balance of International Payments

(By Rita E. Hauser, author and lawyer)

Few economists will disagree with the premise that continued deficit spending will, in the long run, produce an inflationary situation domestically which, in turn, yields higher prices for export as well as other goods.[1] Nor will many economists take issue with the statement that a higher price level for export goods will, in a competitive world market, greatly reduce the salability of these products. This paper is concerned with the extent to which the world market for most American export items has become more competitive in the last few years, and with the impact of higher American prices (or lesser ability to compete in world trade) on our balance of international payments and on the solidity of the dollar as the major world currency.

I. Increased world competition

The first 10 years of the post World War II era were marked by one dominant economic phenomenon: the absolute supremacy of the dollar in world trade. The formerly great mercantile competitors of the United States—Western Europe and Japan—found their economies in 1945 either in total shambles or nearly so, with production at a standstill and with capital markets destroyed. Because a healthy world trading situation was necessary not only for the well-being of America but for continued world peace, the United States early adopted an unprecedented economic policy destined to facilitate the recovery of Western Europe and Japan. The tale is so familiar that one need only cite the organizations and programs created to achieve recovery and the picture immediately comes into focus: the Marshall plan and its counterpart, the Organization for European Economic Cooperation (OEEC), the International Cooperation Administration and its predecessor bodies, the General Agreement on Tariffs and Trade (GATT), the point 4 program, the Development Loan Fund—these are but some of many.

These various programs were markedly successful—much to the surprise of many an American who, suddenly, in 1958 found that his dollar bought less and less abroad as the dollar gap slowly closed or that his once secure export market was lost to the West Germans, French or Japanese. Indeed, by 1958 the former needy nations were not only able to end most restrictions on dollar-area products as their stock of dollars and gold reached substantial proportions, but they also witnessed an enormous spurt of economic growth that surpassed our own. Concomitant with this growth were far-reaching measures taken to prevent the return of inflation in order to ensure continued expansion both at home and abroad. And further, rather bold measures to promote increased expansion were inaugurated in Western Europe in January 1959 with the advent of the European Common Market which, in itself, poses the most serious economic challenge American business has faced in recent years.

The European Common Market, or European Economic Community as it is formally named, grew out of various movements to achieve a politically strong, united Western Europe, or as some people have termed it "the United States of Europe"; its immediate predecessor is the European Coal and Steel Community (Schuman plan) which makes one the market in coal and steel of West Germany, France, Belgium, Italy, Holland, and Luxembourg—the member nations.

In a strict economic sense, the immediate purpose of the European Common Market is to obviate all impediments to trade among the Six by the elimination of tariffs, quotas and other restrictive practices. When this purpose is achieved, the goods produced in each member State will move freely in a market much greater in size than the territory of any member—the total area of the Six or the heartland of Western Europe. As a consequence, the goods of France, for example, will sell more cheaply in Italy because the current Italian tariff now added to the base price will be eliminated. Similarly, many more French goods will be sold in Italy because all quotas will be removed. In effect, the Six hope to create a trading area similar to that existing among our 50 States as a result of the constitutional prohibition on any State from affixing export or import duties. Steps have already been taken by the Six to achieve this complete trade freedom, for in 1959 an across-the-board reduction in tariffs was effectuated as well as the conversion of all bilateral import quotas into global quotas available without discrimination as to any member. Further reductions are expected shortly.

The immediate and natural effect of the operation of the free trade provisions of the European Common Market is a discrimination against American goods entering its territory. While tariffs and quotas will be dropped on Italian or German goods, they will still remain on American goods entering the Common Market area. Indeed, the very feature of the Common Market that distin-

[1] This is true even if the Government exercises the utmost prudence in the management of its debt and borrows in the least inflationary manner, e.g., through the sale of Government securities with supporting revenue derived from higher taxes. Sooner or later, and the time depends on the general state of activity of the economy, the Government's continued competition with private enterprise in the money market will, by the lessening of available capital for private investment purposes, produce an upward price cycle. And needless to say, the amount of Government securities that can be issued at reasonable rates of interest is limited as is the demand for them; at some point, then, resort to the easier, but more inflationary avenue of created bank reserves will occur.

guishes it from the Free Trade Area sponsored by Britain is that a uniform tariff wall vis-a-vis the outside world must be maintained; Belgium and West Germany both were thus forced to raise the tariff on many of their goods in order to meet the higher common level set out in the Common Market Treaty. As a consequence, many American goods greet the Western European consumer with a higher price tag on it than its counterpart Common Market product. This higher price tag is due both to the initial fact that the cost of producing an item in the United States is greater than the cost incurred in producing a similar item abroad, mainly because of higher American wage levels, and to the added cost imposed in the form of a tariff when an American good enters the European market.

This natural trade discrimination hits hardest at the American manufacturing community whose goods, in general, face high duties in Western Europe (this as distinct from exports of food and raw materials which now largely enter duty free or at low duties). These same manufactured items also bear the highest costs of production among American export items, and to add further to the competitive situation, the production of these items constitutes Western Europe's economic forte.

While it is true that at present regional markets in areas less economically developed than Western Europe would not pose as stiff a competitive situation at least for manufactured goods, the tendency to group regionally into one trading unit of fairly large size is most prevalent in the more highly industrialized nations. If, for example, the free trade area comes into being, its members, although not bound to a common external tariff, will afford each other mutual benefits by virtue of a reduction, if not a total elimination, of tariffs and quotas inter se. This, again, places American goods at a natural competitive disadvantage. Moreover, it should be noted that the Common Market Treaty calls for the eventual coordination of labor, fiscal, investment and antimonopolistic policies. If and when this total economic unity comes about, presumably reinforced by uniform commercial laws, then the price of these various factors of production will decrease as their supply is more readily assured by the elimination of artificial impediments to their mobility. And with a declining cost for these factors, the competitive situation will shift even further in favor of America's trading partners. As is now becoming clear, disfavorable terms of trade will reduce America's trading competitiveness not only within the area of the regional markets but elsewhere in the free world. West Germany, for example, has now replaced America as the leading exporter of certain manufactured goods in both the Middle East and in Brazil, just as Japan is duplicating this pattern throughout Asia.

It can, then, readily be seen that the free trading world in 1960 is infinitely more competitive for American business than it was but a few short years ago—and the trend will continue. This hard, sober fact of economic life has recently been appreciated by the administration. Under Secretary of State Dillon, at a meeting this year of the OEEC, offered suggestions to expand the scope of operation of this body and to permit a limited affiliation or participation by the United States. The latter measure was intended to prevent the application of any possible discriminatory measures against American goods and to erode the natural discriminatory effects flowing from the operation of the regional markets. Dillon called for a greater reduction of current tariffs and quotas for all trading nations. In effect, the administration is working toward the promotion of greater free trade on a worldwide basis.[2]

Since world competition has so sharply developed in recent years, it is obvious that any further increase in the cost of production of American export items brought about by a general rise in the domestic price level (inflation) will add further to America's trading disadvantage.

II. THE IMPACT OF INCREASED PRICES ON AMERICA'S BALANCE OF INTERNATIONAL PAYMENTS

Because America is both a substantial importer of foreign products and an exporter of dollars through investments, tourist spending, defense and other Government expenditures, a large number of dollars flows out of the United States each year. If income from American investments abroad and foreign spending here, as well as from American exports to other nations, equalled the outflow, America's total position would be that of equality in its balance of international payments. As a matter of statistical fact, however, at no time, save for 1957, did America's balance of international payments show an equal position; to the contrary, we ran a deficit of slightly over $1 billion a year from 1950 to 1956.[3] This deficit was considered salutary because it was due, in large part, to our defense spending and economic assistance abroad and was not correlated to any adverse trading situation. This small deficit was but a way of aiding our trading partners to build up needed dollar reserves; America's payment of this deficit barely reflected itself in any gold loss since our creditors were quite contented, if not anxious, to take dollars as payment.

As of 1958, however, America's balance of international payments showed a marked increase on the deficit side. The balance of payments for that year looked as follows:

U.S. balance of international payments, 1958

[Billions of dollars]

PAYMENTS OF THE UNITED STATES	
Purchase of goods and services	16.7
Income on foreign investments in United States	.6
Unilateral transfers	2.3
Private capital outflow	2.9
Government capital outflow	1.0
Military expenditures	3.4
Total	26.9
RECEIPTS OF THE UNITED STATES	
Sales of U.S. goods and services	20.2
Income on U.S. investments abroad	2.9
Errors and omissions	.4
Long-term capital inflow	----
Total	23.5
Deficit	3.4
Settlement of the deficit was made by:	
1. Transfer of gold to foreigners	2.3
2. Foreign acquisition of short-term dollar assets	1.1

Source: Committee for Economic Development, 1960.

[2] The United Nations Economic Commission for Europe, in its last annual report issued in April 1960 urged Western European nations to open their doors to American imports to prevent a worsening of America's negative balance of trade. Concern was reported over the constant drain of American monetary reserves which will, in turn, produce a loss of confidence and declining liquidity for the dollar.

[3] In 1957 we had a small surplus chiefly because of the Suez crisis when Western Europe turned to the United States for certain basic products, such as coal. Nineteen hundred and fifty-seven, then, represents an abnormal year not at all representative of the general pattern of post-1950 trade.

The source of this deficit can be readily seen by glancing at the following table:

[In billions of dollars]

	Average			
	1951–53	1954–56	1958	1959
Net U.S. receipts for goods and services	2.6	3.0	2.8	0.5
Net U.S. payments for grants and investments	3.8	4.2	6.2	4.6
Deficit	1.2	1.2	3.4	4.1

[1] Estimated figures.

As the table shows, while American grants and investments abroad increased in 1958, to the contrary the rest of the world did not increase its purchases of goods and services from us. Indeed, in 1959, as compared with 1951–56, it reduced its purchases from America. Thus, America continued to make greater payments to the rest of the world while its payments to us decreased—hence an increased deficit over earlier years.

In 1958, our total external deficit equaled $3.4 billion; in 1959, it grew to a record of $3.7 billion. As illustrated by the charts, America's increased deficit was due largely to a decline in American exports abroad. This decline, according to several recent studies, may be attributed to the following causes:

1. The recession of 1957–58 cut capital expenditures in Europe as well as here to a far greater extent than consumer spending. Thus, while America maintained its general level of imports from abroad, which consist primarily of consumer goods, Europe reduced its imports from the United States since capital goods make up a good share of America's exports. The recession also caused a decline in the earning power of raw material producing countries, such as the Latin American nations, which in turn caused a drop in their imports from the United States.

2. American investments abroad have generally been more directed to the purchase of foreign securities than to the direct establishment of a subsidiary company. Indirect or portfolio investment is not likely to result in an increase in American exports, whereas the establishment of an American subsidiary abroad does produce exports since a subsidiary generally "purchases" equipment and other goods from the parent and other American companies. In 1958, indirect investment in Europe alone jumped to $1.4 billion a year from the prior $400 million annual figure for 1954–56.

3. American competitiveness in certain items has fallen generally, resulting in their replacement by local products or products of other exporting nations. A recent Department of Commerce study bears this out. It showed that if in 1958 the United States' share of world markets for the export of manufactured goods had been as large as in 1954–56, America would have exported some $500 million more in 1958 than it did. Moreover, if one traces the direction of the international flow of dollars, it clearly appears that in 1958–59 a large part of the dollars received by Asian, African, and Latin American nations have not been spent or deposited in the United States; rather, the dollars appear to have moved primarily to Western Europe from which these nations are now purchasing a large amount of their imported goods and services.

In sum, then, it is clear that the recent marked increase in Americas external deficit is due primarily to a fall in exports. While a part of this drop had unusual causes engendered by the recession of 1957–58, it seems evident that even absent these circumstances the deficit would still have shown a marked rise. This is borne out by

the fact that America's exports in 1959 exceeded its imports only by some $900 million, whereas in earlier years the excess was running more than $6 billion. During this same period, American imports remained at a relatively stable level, so that the narrowing of the excess is largely attributable to a decline in exports.

A continued large-size deficit reflects itself ultimately in a loss of gold for America. In 1958 alone we exported over $2 billion in gold to make up part of our deficit of that year. When America's deficit was small, the rest of the world was willing to incur dollar liabilities to fill the narrow gap since most nations were anxious to build up their dollar reserves. As the deficit increases, these nations will want to balance their dollar and gold holdings and will be inclined to take less dollars and more gold. Moreover, this shift to gold is accentuated by a growing loss of confidence in America's continued willingness to convert all dollars into gold, and indirectly into foreign currency, without restrictions and at a fixed price. As confidence fails, more foreign dollar holders convert to gold or other currencies, such as the deutschemark or the Swiss franc, which they now feel are safer, and therefore stronger currencies. Thus, were America to permit a serious increase in its external deficit, the dollar would be gravely undermined and so too the effective operation of the existing international gold exchange standard. This standard is necessary for an organized international payments system, and at present it rests primarily on the continued strength and stability of the dollar which is the world's trading currency. Should the dollar and the gold exchange standard be undermined, there undoubtedly would be grave political consequence for the free world.

If these rather drastic results are to be avoided, the United States must decrease its current international deficit, or at the least, prevent any further increase. This, of course, can be achieved in many ways, and it is not the purpose of this paper to discuss the policy implications of the various alternatives. But for the sake of analysis, the author presumes that current levels of Government spending for defense and economic assistance abroad will be maintained. With this assumption in mind, it is obvious that a reduction of the deficit will come either from a diminution on the payments side (reduced imports or investments and tourist spending abroad) or by an increase on the receipts side of the Balance of International Payments (increased American exports or greater investment and tourist spending by foreigners in America). It should be noted, however, that any reduction on the payments side will have a counterpart effect, for the reduction translates itself in reduced income for other nations which, in turn, obliges these nations to diminish their purchases of American goods and their investments in American companies. The end result of this pull-in is a general reduction in world trade in which no nation benefits as each attempts, in the words of Joan Robinson, to beggar-his-neighbor. This was the situation which existed between the two World Wars, and few would wish to see the return of this period.

Efforts to reduce the deficit and thereby to avoid the erosion of the dollar, should, then, be made on the receipts side of the international ledger. This means, essentially, that America must increase its exports abroad. And only by maintaining, rather than diminishing American economic assistance to other nations, especially to the less-developed countries, will the ability to expand American exports without undue harm to our trading partners come about. Continued economic assistance, if properly used, should cause the economic expansion of the less-developed nations and lead eventually to their greater ability to both import and export—thereby bringing about higher levels of world trade.

How, then, can American exports be increased? Part of the task is, as the ad man would say, a "harder sell," that is, a more aggressive attitude on the part of American exporters who must, as the European has learned, acquire language and other skills in order to compete effectively. The President recently recognized this need to sell more, and announced a new program to stimulate exports by expanding the activities of the Commerce, Agricultural, and State Departments and by establishing overseas trade centers in order to better assist American firms selling abroad. But, fundamentally, American exports will compete well abroad only if their prices are rigorously held down. The first and major line of defense against a continued rise in America's external deficit, pregnant as it is with serious political dangers to the free world, is a domestic anti-inflationary policy. The maintenance of production costs and prices is the essential ingredient in any effective export program for American business. This, as well, is indispensable if the erosion of the dollar is to be prevented.

By a full return to our opening premise, we can now conclude that continued deficit spending, which results ultimately in an inflationary situation, will undermine the dollar as the world's major currency. This will, in turn, destroy the international gold exchange standard the maintenance of which is essential for the continuance of free trade, economic prosperity and, in the final analysis, the political integrity of the free world.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mrs. BOLTON. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study paper No. 16: "Some Psychological Aspects of Soviet Propaganda," by Prof. Malcolm Smith:

SOME PSYCHOLOGICAL ASPECTS OF SOVIET PROPAGANDA

(By Malcolm Smith, office of Senator THOMAS H. KUCHEL, formerly on faculty of Leland Stanford University)

One must have a great deal of temerity to undertake to write about a topic of such vast dimensions within a few pages. In order to get into this topic as quickly as possible, let me state by way of preface a few postulates about the topic, which should serve to delineate the principal areas of discussion with which we are concerned.

First, we are dealing here primarily with the techniques used by the Soviet Union and the Communist bloc countries to influence the minds of men throughout the free world. While important, and highly desirable, we cannot direct our attention to the use of propaganda within the territories occupied by the Soviet Union and Communist China. Our major interest is directed to the use of propaganda by the Sino-Soviet bloc throughout the free world, and the as yet uncommitted nations of Asia, Africa, and Latin America.

Secondly, the author has approached this subject with certain preconceptions about communism, and the use made of communism by the Soviet Union in particular, as a tool for the achievement of certain ends. There are, as lawyer friends are wont to say, points about which reasonable minds may differ. Thus there are several leading scholars in America whose special field of study has been the Soviet Union, who still maintain that Soviet aggression and the use of Communist parties throughout the world are merely means of insuring the Soviet homeland against aggression.

The invasion of Finland in 1940, the annexation of the Baltic States, Latvia, Lithuania, and Estonia in 1940, the partitioning of Poland in 1939, the postwar occupation of East Germany, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania—the satellites—Tannu Tuva in 1944, Sakhalin Island, and Kurile Island—are justified in terms of historic Russian interests, essentially defensive in nature. Even the bloody suppression of the Hungarian revolt in 1956, and the earlier uprising in East Germany in 1953, are rationalized by this school of thought as being defensive moves only. Let me hasten to state that the author totally rejects this particular interpretation of Soviet foreign policy. No doubt, many of those who still adhere to this convenient view of Soviet policy, do so out of honest conviction. At least I feel more secure in holding this belief about some high level Foreign Service officers and ICA officials (all on active duty) who have expressed this interpretation of Soviet actions privately.

Third, for our purposes, it may be well to restate what are probably very simplified observations about communism, generally understood, I trust, by most Americans. Nonetheless, a fairly short restatement at this juncture may be helpful. Within this third point, I will discuss in ever so summary a fashion, communism in terms of doctrine and deeds, its growth and present physical resources.

Communism is both a theory of history and a revolutionary movement, whose purpose is the overthrow and replacement of the present world economic and political structure.

This theory, originally formulated by Karl Marx (who borrowed extensively from others, notably Hegel), claims to be scientific. Because it is "scientific" it is an "infallible" guide to the future. In the words of Friedrich Engels, Marx's longtime collaborator, this theory was "destined to do for history what Darwin's theory has done for biology."

Marx was by no means the first Communist or advocate of economic change. Many reform movements appeared in Europe in the early 19th century. Some of the movements led to the establishment of the "utopian communities," in Europe and America—societies in which all property was owned communally. Other movements (some of which borrowed ideas from Marx) became modern Socialist Parties—Christian Socialists, Social Democrats, Labor Parties, and so forth.

The majority of these parties diverted from the action program of their more militant cousins, at least insofar as total overthrow of existing institutions was concerned. Marx, Lenin, Stalin, and other Communist theoreticians demand a total overthrow of the existing economic and political system everywhere. Violence, the use of terror; these are the means to achieve the end of revolution. Lenin's comment in 1918 following the Treaty of Brest-Litovsk, that now there would be time for consolidation by terror, indeed a necessary adjunct in Lenin's view; complete control of the machinery of the state.

The relation of action to theory among Communists was begun early in the second

quarter of the 19th century when a secret revolutionary group with branches in London, Paris, and Brussels met to draft a program for revolutionary action. The resulting Communist manifesto has been the basis for Communist action groups ever since. Written by Marx and Engels, the document contained two basic theories: The labor theory of value, and the economic interpretation of history. The scientific theory cannot detain us long, except as it relates to the later uses made of it.

According to the Marxian theory, the political, social, and cultural characteristics of any period in history are nothing more than a reflection of the existing economic system—the manner in which goods are produced and exchanged. Thus, what a society does depends upon who owns the property in that society, which came to mean the means of production.

History then is simply a record of endless struggle between different economic classes, with one economic class replacing another. History does support, or at least can easily be made to support this facet of the Marxian doctrine in a general way. For example, no great ingenuity is required to show that in the Middle Ages the chief source of wealth was certainly land; and it was obvious that the great land owning aristocracy was the ruling class. Nor is any great ingenuity required to show that political, social, and religious customs and ideas of that time were suited to maintaining the political and economic ascendancy of the aristocracy. Likewise, it is fairly obvious that during the last three centuries land has gradually been replaced by capital as the chief source of wealth; and the history of the time may easily be regarded as a struggle between landowners and capital owners, as a result of which the latter have replaced the former as the ruling class and have substituted, in their interest, a new set of institutions and ideas—representative government, individual liberty, popular sovereignty, free competition—for the old.

Marx of course went on to predict that the final struggle in the evolution of civilized society would be the struggle between capitalism and the new proletariat societies. While this struggle has been, and will be, a violent struggle, it will ultimately free "society at large from all exploitation, oppression, class distinctions, and class struggles."

Marx maintained that the capitalist regime would by its own nature destroy itself. Its nature is to be ruthlessly competitive, so that in any industrial society the tendency is for wealth to be more highly concentrated in the hands of a few, while the mass of the people tend to fall into the condition of wage slaves, or so runs the Marxian argument. When this process reaches a certain point, the system breaks down. Moreover, when the system ceases to work the people will necessarily take control, and since it is their interest to do so, they will establish a classless society based upon the common ownership of the means of production, and a more equitable distribution of the product. This was the social revolution Marx predicted.

Of course there was one condition central to the achievement of the ultimate utopia. In order to insure a rational transition from the "socialist" period to full blown communism there would be a temporary dictatorship of the proletariat. A one-party, closed society, would be necessary, so Marx thought, in order to effect the consolidation of the state, and to prevent counterrevolutionary activity.

Of course Marx's prediction went astray at the outset. The revolution did not come in a highly industrialized society like pre-World War I Germany—a nation that had one of the largest, most articulate Marxist Parties in the Reichstag. These same Marxists were persuaded to vote for the German naval and military appropriations increases in 1913, on the ground that they were going to have the opportunity of fulfilling an old prediction of Karl Marx—they would help to overthrow the czarist government and free the Slavs.

But the revolution occurred in Russia, that is to say, not the most highly industrialized society but the least highly industrialized society. The social revolution clearly occurred before its time in Russia. Whether providence, or dialectic materialism, or military defeat, or whatever it is that regulates such social changes, certainly performed a strange feat in bringing the revolution to this agrarian society before it brought it to more highly industrialized countries, like England, Germany or France. But the cataclysmic event of the Russian revolution doesn't do anything to verify the predictions of Marx; what it does indicate is that in a country in which the people were accustomed to being ruled by a dictatorship, a country moreover in which the prevailing form of dictatorship was especially corrupt and incompetent, it was very easy to establish a dictatorship of a different sort.

But there is a more fundamental basis for questioning Marxian doctrine than the Russian accident. One is that it is extremely difficult to predict the future on the basis of past experience; or rather it is extremely easy to find in the past support for diverse predictions of the future. The other difficulty is to understand why a persistent economic class conflict in the past justifies us in predicting a classless society in the future.

This prediction, based upon the "objective realities of the past" as the Marxists might say, takes an idealistic view of the future. During the last 2,000 years, from Jesus' tortured march to Calvary, to the present day, all the saints and sages of the world, deploring greed and strife, poverty and injustice, have looked forward to the time when a more just society would be established. They have many times predicted the coming of a classless society in which everyone would have enough; but the course of events has never yet verified their hopes. In fact, Marx's interpretation of the past, if projected into the future, seems to refute his own prediction.

For Marx's interpretation of the past is explicit and realistic; his forecast of the future is vague and idealistic—utopian. It may be a tautology and a dubious denial. Marx finds that in the past the effective force that has determined a social change is the economic class conflict.

He goes to great pains to point out that this economic class conflict explains the rise of the present capitalist societies. He shows, or at least his disciples claim to show, how this economic class conflict is working to undermine our capitalistic society. From this historic experience, it would seem to follow that there will be in the future what there was in the past—a never-ending class conflict, an endless replacement of one dominant class by another, an endless transformation of institutions and ideas in accordance with the changes effected by the class conflict. But this precisely is not what Marx predicts. What he predicts is the end of the economic class conflict, the establishment of a classless society. What happens after the revolution has established a classless society? Here we are left to our own devices. For after having developed a law of history to interpret the past and predict the future, Marx apparently abandons the law at a fixed determinate point in history. The profound conviction of Communists that the proletariat is destined to establish a classless society on the ruins of the present capitalist regime is not justified by Marxian philosophy: if you interpret Marx in terms of mechanistic determinism, this profound Communist conviction is a pure delusion; on the other hand, if you interpret Marx in terms of free will, this conviction is no more than a splendid hope.

But consider the methods the Communists have chosen as the path to a better world. Using the experience of the second Russian Revolution in 1917, the Communists claim that nothing really worthwhile can be done until conditions are ripe for the application of a revolutionary technique. And that technique, as we well know, is to seize control of the government, forcibly expropriate the bourgeois class, and ruthlessly suppress the expression of all opinion that a dictatorial government judges to be hostile to the welfare of the community. Now this is the central fact of Communist doctrine: the use of force to obtain power and ruthless repression as the means of sustaining it. The resort to force as a means of persuasion, as a means of obtaining consent, this has been the nature of the Marxist theory in practice. Marxist-Leninist doctrine calls, ultimately, for the "withering away of the state", in theory the disappearance of the vast administrative machinery and the institutional devices for controlling the people. The Communists have been willing to justify the most incredible tyranny as the necessary road to utopia. Yet the tyranny of the Soviet Union, especially during the despotic rule of Stalin (and here we have only to read Khrushchev's speech in denunciation of Stalin to the 20th Party Congress to know just how much Stalin had tyrannized over them all) not only has not withered away, but has developed a super state "the mightiest and strongest state power which ever has existed" (Stalin's words).

It is very difficult for the Western democracies, whose essential test of civilized society is the extent to which law and public authority rest on free discussion and voluntary consent, to comprehend how this massive tyranny, justified on a specious philosophy, dependent upon the "big lie," violence and terror to sustain it, can continue to challenge the West in every area of the globe.

The answer lies, I believe, in this: Communism is theory of history (however false); it is a worldwide revolutionary movement; and it is the power resources and strategy in world affairs of the Soviet Union, Red China, and their allies and satellites. And, in the fact that Soviet officials are not inhibited by the use of any method best calculated to achieve a given end. If Paul Joseph Goebbels could say: "Propaganda built the Third Reich," we can say with even greater force: "Propaganda built the present complex of Sino-Soviet power." Not propaganda alone, of course. Behind the propaganda techniques are the solid achievements of transforming their economy into a highly industrialized society in a relatively brief period of time. The transformation, however, has come only at the cost of millions of human lives, deemed expendable in the interests of a presumed better life for the survivors. Yet, even the reconstruction of society has been dependent upon the skillful use made of every minor, as well as major success in any field, and the willingness of Soviet officialdom to exploit occupied territories until brought under total control.

In support of Soviet objectives, the U.S.S.R. has been able to profit immensely from the organization of Communist parties in 26 countries, including about 20 free countries with a membership of 6 million people of which 3½ million are in "5 mass parties (France and Italy are 2 examples among NATO countries), 2 million in the 20 or so "sturdy little parties," and half a million scattered in very small groups. Each of these organizations includes hard-core professional revolutionaries—paid agitators—trained in special schools which may be fairly elementary or very advanced institutes, technical schools and universities.

Their size is no determinant of their significance and ability to take advantage of every crisis, indeed to foment the crisis first. These cadres will vary in size, depending upon the Kremlin's current foreign policy commitments. But they are always in a position to use the facilities of auxiliary organizations, either existing or created to meet a current need.

One of the most exportable items of propaganda used by these organizations to convince underdeveloped countries that history is on the Communist side is the economic growth record within the Soviet Union.

It is this record, coupled with the development of a new capability in rocketry and thermonuclear weapons that has awed the rest of the world. And if the rest of the world were not fully aware of these developments, the Soviet's affiliates overseas have made certain that every last propaganda advantage was wrung from each new development, Sputnik I being a characteristic example.

The Soviet message is simple. To the people of Africa, struggling to form new governments for their new states, to the backward countries of Southeast Asia where famine, death, pestilence and disease are life's boon companions, to the have-nots in every country of the world, the Soviets offer new hope. "Look what we have done in 40 years. If we can do it, so can you." And the price they ask isn't much, or so the would-be beneficiaries are led to believe. "Let us show how to organize your state, to produce a new abundance. Join us, and we will lead you into a new world of peace, abundance, and happiness." Communist China, which managed to drive the United Nations back in their first major aggression, is not overlooked, as part of the evidence of what a "temporary dictatorship" and reorganization of society can do.

It is the strategy of the Soviets and the Chinese Communists to concentrate first on the weak and then to encircle us, the strong, by penetrations in Asia, Africa, Latin America. A central part of this strategy is to deprive us of bases, essential raw materials, and any and all military allies in these areas, as well as in Western Europe.

Let's take a characteristic technique which serves the interest of Soviet propaganda in a very effective way: Importation of students from non-Communist bloc countries to be educated in the Soviet bloc.

Approximately 3,000 students from free world nations—mostly from the underdeveloped areas of the Near East, Asia, Africa, and Latin America—and 19,000 from bloc countries attended Soviet and East European satellite institutes of higher learning during the 1958–59 academic year. Some 15,000 of these were studying in the U.S.S.R., which despite increasing attention to student exchanges is still far behind the United States in this field. There were 46,500 foreign students in the United States in 1958–59. Czechoslovakia and East Germany each had some 2,000 foreign students resident last year. Students in Czechoslovakia are divided about equally between those from the bloc and from underdeveloped areas.

Nonbloc foreign students are recruited in three ways: Through scholarship and educational aid offers from the bloc to underdeveloped countries, through mutual exchange agreements between bloc countries and Western nations, and through scholarships offered by the bloc countries to proteges of nonbloc Communist Parties.

The bloc is gradually increasing its mutual exchange programs with Western countries, but the number of students involved is still small—little more than 100 this year. The U.S.S.R. has exchange agreements with the United States, Britain, France, West Germany, and Norway. Poland has exchange agreements with the United States, Britain, and France.

Scholarships and educational aid for proteges of Communist Parties outside the bloc are not reciprocal and in many cases are made without the consent of the student's home government.

Many of the Africans now studying in bloc schools were recruited while at school in Cairo and are "illegal." Such students, as well as a number from Latin America, are chosen initially for their sympathy toward communism and are heavily indoctrinated during their stay in the bloc.

The main type of foreign student program—unilateral offers by bloc countries of scholarships and other types of educational aid—is directed primarily toward the underdeveloped nations of the Near East, Asia, and Africa. Scholarship offers are made through the U.N. and its specialized agencies, such as the World Health Organization and UNESCO, and are also offered directly on a country-to-country basis.

The U.S.S.R., for example, has offered 15 medical scholarships to Nepal and 21 scholarships to Egypt for study in the arts. Such scholarships are for 5 to 6 years of study and cover tuition, free medical care, and free trips during vacations. They include 1 year of intensive language training and, in the case of Soviet scholarships, a year of remedial education if the student fails to meet academic standards. The U.S.S.R. also provides transportation from and to the student's homeland at the beginning and end of his schooling.

Satellite scholarships also are generous, although only a few provide transportation expenses. Soviet stipends granted to nonbloc students are at least double those of Soviet students.

The Soviet Union has also offered some 550 "accommodation" scholarships, mainly to underdeveloped areas. These are reserved places for 3 months to 5 years in higher educational institutions for students whose expenses are borne by their homelands. Few such scholarships are available in the satellites, although there is evidence that Poland may be adding some to its program.

After a full academic year of language training, the students enter their specialized courses of study, the most popular being engineering, the humanities, and agriculture. Fields of major study for exchange students are stipulated in the official agreement, as are those for "accommodation" offers. Some of the unilateral scholarships are made for specialized fields, as in the case of the 15 medical scholarships offered to Nepal. In others the decision as to the field of study may be made by the student's homeland on the basis of its needs.

Living accommodations for foreign students in the Soviet Union are equal to those of the local students.

Foreign students in the U.S.S.R. usually eat with their Soviet fellows. Where there are unusually large numbers of one nationality, a separate canteen may be established and some effort made to serve foods characteristic of the student's homeland.

Social life among the students often reflects the political atmosphere existing between their homelands.

One avowed aim of the program is to inculcate foreign students with Communist doctrine. Typical is the statement of Dr. Ludek Holubeck, chairman of the Division for Relations With Foreign Countries of the Czech Ministry of Education and Culture, who wrote in an education monthly last January that the foreign student program of the universities must support the political and educational activities of the Communist Party and state administration. "We will increase our political and ideological demands in the evaluation of every foreign operation," he said, "so that anything we organize shall by its contents and methods have a distinct socialist character."

Holubeck charged a special institute at Charles University in Prague—set up to deal with the training of foreign students—with "evaluating the methods of instruction, political work, and ways and means of influencing the culture and social life of the students in Czechoslovakia. We want foreign students to return to their countries as dedicated adherents of socialist ideas," he stated.

This training has not been universally successful in creating the desired effect on nonbloc students, for there is evidence that "socialist reality" is sometimes educational in ways Moscow never intended.

An additional problem for the bloc in sponsoring the training of students from underdeveloped areas through government-to-government programs is the instability of the national governments involved. While foreign Communist Party proteges are not affected by changes in the government at home, the 3- to 6-year programs of the government-sponsored legal students bridge potential changes in national attitudes such as have taken place in the U.A.R.

Despite these difficulties, however, there is no evidence that Moscow is sufficiently dissatisfied with results to drop its educational aid programs. There have been some successes.

Bloc offers are gaining in respectability—the son of Nepal's former foreign minister is studying in Prague at the present time—although where offers of stipends and other assistance from the bloc and from the West are equally advantageous, the West is still overwhelmingly preferred. Acceptances of Soviet scholarships in 1958, however, were double those accepted in 1957.

The Soviet Union is directing special attention to Africa. It has recently established diplomatic relations with Tunisia and offered aid and favorable trade agreements. Diplomatic representations were established in both Morocco and Libya shortly after these countries attained their independence. The Soviets have been active with the Communist Parties in these areas, especially in Libya where they have concentrated not only on Libyan Communists, but also on the Italian Communist group. And the Chinese Communists have extended official recognition and offered arms and financial aid to the provisional Algerian Government in exile.

In Ethiopia, a permanent cultural exhibition in Addis Ababa disseminates Communist propaganda, offers courses in Russian language, and generally seeks to indoctrinate its visitors—mainly young Ethiopians and students from east Africa. A strong indication of the active Soviet interest in Africa and the heavy selling job being done by the U.S.S.R., are the offers of "aid without strings" to this ancient land. An aid agreement of $100 million was signed between the Soviets and Emperor Haile Selassie last year, and an oil refinery and technical school staffed by Soviet representatives are planned. This month, a Soviet industrial exhibition will be held in Addis Ababa with high Soviet officials in attendance.

In west Africa, the Soviets are planning to construct a polytechnical institute in Guinea, which will accommodate from 1,500 to 2,500 Guinean students. Soviet personnel will comprise the staff. This is a very effective means for influencing long-term economic planning and planting intelligence experts to work with the local Communist Party apparatus.

We may soon expect dramatic moves in our own backyard. For years, the Soviets maintained the largest Embassy staff of any nation in their Mexican Embassy. The Mexican Communist Party has long served as an agency for exploiting the differences in wealth between the United States and Mexico. Every source of friction is kept alive by a continuous barrage of charges, lies, distortions of would-be facts, half-truths, and the

theme of "you are poor because you have been been robbed" repeated in a fashion reminiscent of Hitler's classic charges that Germany was not defeated in World War I, but was the victim of traitors, treason, and the "stab in the back".

But in Cuba, the revolutionary fervor that led to Fidel Castro's victory over Batista, has been directed at fever pitch against the United States. The recent sugar agreement between Cuba and the U.S.S.R. was only the beginning. Khrushchev plans a state visit to Cuba, and no one can be certain what consequences will flow from this visit. In all likelihood, there will be a stepped-up program of infiltration by Soviet agents in Latin America, the Caribbean, and Central America. We may expect a more extensive, centrally coordinated drive against American control of the Panama Canal, a demand that we evacuate the Guantanamo Naval Base in Cuba, as well as demands that we evacuate Air Force and naval installations in Puerto Rico and the Virgin Islands. These demands will be conducted by the native populations, and flames of nationalism will be fanned by the agent provocateur. The distinguished Brazilian sociologist, Gilberto Freres, in his brilliant analysis of Brazilian society a few years ago in "Casa Grande and Senzales" ("The Masters and the Slaves") suggests some of the soft spots Communist propaganda may be expected to concentrate on. The ethnic, racial, and cultural groups which comprise the Brazilian population will hear and see distorted scenes of racial discrimination in the United States. To the Amerindian Indian of Brazil, the poor, illiterate Indians of Peru, Bolivia, Paraguay, and Colombia whose marginal existence is barely at subsistence level, this "colossus of the north" is little known, and even less understood.

But the Soviet inspired Communist propaganda comes in simple messages so all may understand through the eye and the ear.

Throughout the free world, to every level of society, to the intellectual, the working man, the white-collar worker, the young and the old, the Communists broadcast the arguments for communism from within the Soviet Union, their European satellites and Communist China. Millions of words are spewed out in scores of languages, each broadcast designed to exploit local conditions to the recipient country.

Moscow is highly selective in disseminating propaganda. An infinite variety of types and roles are played by the U.S.S.R. particularly in broadcasts, for external consumption. If it is the Middle East, one propaganda play for a particular audience may be used. If it is to Western Europe, quite another line may be stressed, such as the attempt to arouse French fears of West German rearmament. Or then again, it may be broadcast only to the peoples of the Soviet Union or to the Soviet Union and the satellites.

Then there is the use of literature, particularly technical and scientific publications, which are published in very inexpensive paperback editions, easy to read and yet technically accurate. The importance of these materials to the U.S.S.R. results from the fact, that directly or indirectly, they stress the growing competence of the Soviet Union in the fields of science, engineering, technology, and the Soviet-asserted lead in explorations of outer-space.

It is difficult to compete with these publications because the Soviet Union and Red China not only can produce them at minimal cost, but cost to them is not an object of concern. They are determined to achieve a given end, and their energies can be directed toward that end without the limitations a free, democratic society must inevitably encounter.

The Internal Security Subcommittee of the U.S. Senate recently published an English translation of Mme. Suzanne Labin's paper, "The Technique of Soviet Propaganda." The author, a graduate of the Sorbonne, a journalist who has published four books, one of which, "Must We Grant Freedom to the Enemies of Freedom," won the French literary award, the Prize of Freedom for this book "which best defends the principles of liberty." Senator EASTLAND'S subcommittee has performed an invaluable service in making Mme. Labin's paper available, and especially if it can have the widest possible distribution.

Mme. Labin uses the name "auxiliaries" to identify people who serve the ends of Communist propaganda by echoing Soviet positions in international affairs. Thus, on page 5 of the committee's translation, the author has indicated some of the variant positions taken by "auxiliaries" in international politics. ("For some, the labels of 'crypto-Communist' or 'fellow traveler' are too mild, for others too strong. In this paper (Mme. Labin's), the more neutral term 'auxiliaries' will be used.")

"The assertion that Soviet propaganda uses auxiliaries as various as they are concealed makes it essential to be able to recognize them despite their concealment and their multiformity. Two traits constitute their distinctive mark: on the one hand, the auxiliary always supports all the positions supported by the Soviets in international affairs and changes them the very moment the Soviets do; on the other hand, toward the Soviet and Western regimes he adopts an attitude which systematically tends to blacken the latter and whitewash the former."

A partial catalog of these positions as prepared by Mme. Labin "with no claim to exhaustiveness" follows:

Against building Europe and especially a European army.

For withdrawal of American troops from Europe.

Against NATO and SEATO.

For the right of veto at the U.N.

For abandonment of Berlin and disengagement in Germany.

Against the Federal Germany of Bonn and the "revengemonger" Adenauer.

For recognition of the Hankow and Peiping governments.

For cessation of nuclear tests and disarmament without further control arrangements.

Against installing missile-launching platforms directed toward the U.S.S.R. in Western Europe, but not against launching platforms directed toward Europe in the U.S.S.R.

Against the "feudal and corrupt dictators" Chiang Kai-shek, Ngo Din Diem, and Syngman Rhee, but for the anti-American dictators of Latin America, Peron and Vargas.

For surrendering Quemoy and Matsu to Peiping.

Against the Franco-British action at Suez, but for the anti-Franco-British action at Baghdad.

Against Israel and for Arab nationalism, against France and for the FLN, against Britain and for the Mau-Mau, but in Moslem Kashmir for India against Pakistan.

For a summit conference at any price.

For "cultural exchanges" but without demanding that book censorship and radio jamming stop in the U.S.S.R.

For total independence of the peoples of Asia and Africa from the West, but for total dependence of Eastern European satellites on the U.S.S.R.

Against free elections under international control in Germany, but for "elections" in Vietnam under the established governments, one of which is Communist.

Against "dollar imperialism" all over the world, but for "ruble aid" to underdeveloped countries.

Against American bases in Europe and Asia, but for freedom of Soviet bases (Communist Parties) in every country.

"It is quite clear that an independent mind can very well come (rightly or wrongly) to the same conclusions as the Soviets on one or another of these points, but it is impossible to be in systematic and synchronized agreement with all the positions of the Kremlin. It is by this kind of agreement that the auxiliary can be recognized."

Most of Madame Labin's "auxiliaries" work through front organizations, some well known, some not so well known. Some of these function on a worldwide scale, others spring into being for a short time like the "committee to save the Rosenbergs" and to achieve a limited, immediate objective.

While never having tolerated free trade unions in the Soviet Union, the U.S.S.R. has nonetheless sought through the World Federation of Trade Unions to control the trade unions of the free world. Here they have succeeded in controlling some of the largest of the trade unions, for example in France, Italy, Japan, Indonesia, and several other countries. But their claims to have 92 million members through the world are generally discounted by intelligence experts. Nonetheless, they will have many millions of members and this threat to free labor cannot be overlooked.

Another area of intensive cultivation by the Soviet Union is the World Federation of Democratic Youth, a major Communist front which has claimed a membership ranging upward from 86 million in 96 countries. We have already noted the use of scholarships, grants, and courses available within the U.S.S.R. to selected students. The WFDY, working closely with another front in this student field, is the International Union of Students, which produces 2 major publications in 11 languages, together with hundreds of pamphlets, and a weekly radio broadcast in 7 languages from Budapest.

There is the Women's International Democratic Federation to reach audiences of women throughout the world with the theme that the living conditions of women and children, particularly in underdeveloped areas, are far behind those in Russia. This organization has claimed a membership of over 200 million.

A number of other front organizations have been developed to reach and influence particular professional audiences. These include the World Federation of Teachers Unions, the International Association of Democratic Lawyers, the International Organization of Journalists, the International Medical Association for the Study of Living Conditions and Health, and the International Federation of Resistance Fighters. Add to this the phony "peace committees" in 47 countries, and one begins to have some idea of the use of organizational devices operating in behalf of Soviet objectives.

Increasingly, the Soviet Union has begun to concentrate on the trade policy as a means of disrupting the economies of largely one-crop, or one-product nations. Tin in Malaya, cotton in Egypt, coffee in Brazil, and copper in Chile, are examples of commodities which are vulnerable to disruptive trade practices. In this respect, the Soviet Union, with much greater sophistication, is following in the footsteps of Hitler's Germany. The German tactic was to offer to buy all of a nation's principal export commodity—Rumanian wheat for example—at roughly twice the world market price. Hitler's finance minister would arrange a barter-cash deal, but payment was usually delayed. Once the wheat was in German storage bins, payment would either not be made at all, or only token payments would be made. The next year the Germans would come back to Rumania and demand all the export wheat available, at any price the Germans were willing to pay—aspirin tablets, bicycles, sewing machines—but at a rate about one-half the world market price. If the Rumanians protested that they hadn't even been paid for

last year's crop, they were bluntly told that their year's crop was all still in storage, and available to be dumped on the world market at one-fourth the world price. Confronted with a Hobson's choice, the Rumanians capitulated. This is the kind of tactic which Khrushchev may have had in mind when he said "we'll bury you—in the field of trade, that is."

And a new dimension to the use of trade policy as a propaganda device has emerged with the serious bid by the Soviets to become the world's leading maritime power. There are two phases of this development: (1) Construction of a modern, powerful navy relying on submarines, cruisers, destroyers and auxiliary craft to penetrate the ocean seaways and support Soviet maritime power; (2) development of a large, modern, fast and, in the future, nuclear powered merchant marine to carry on Soviet trade in ships manned by personnel from the U.S.S.R.

The National Academy of Sciences recently prepared a special report on the U.S. merchant marine in comparison with the U.S.S.R., under the chairmanship of Admiral Radford. The substance of this report is frightening, and indicates how important an immediate change of policy with regard to our own merchant marine is, if we hope to have any merchant ships flying the U.S. flag at all in another 10 years. At the very time the Soviets are launching an aggressive, all-out drive to control the seas, our merchant shipping is declining, with 70 percent of our ships flying "flags of convenience" and manned by foreign crews. While still available for defense, it is doubtful how useful these ships would be. Our nuclear powered *Savannah* will help to offset some of the propaganda gains made by Soviet ships beginning to appear in the major parts of the world, but we will have a hard time competing after 1963 unless the recommendations of Admiral Radford's distinguished panel can be implemented beginning now.

We, with the greatest technology and productive capacity the world has ever seen, have tended to let the Communist bloc countries seize the initiative in areas of the world where we ought to be conducting an offensive for freedom unparalleled in human history. As one example, on March 8, 1955, Stewart Alsop reported in the New York Herald Tribune that the United States would launch the world's first artificial earth satellite in 2 years. His description was most accurate. Unfortunately, the Russians knew our plans and simply determined to score a propaganda victory throughout the world by launching a larger satellite first. Our immediate response was to overreact to this Russian coup. We simply did not equate a scientific development of our own with the impression it would have on other men's minds.

We must not underestimate the appeal of Soviet propaganda to the new nations in Asia and Africa. Their agents are dedicated, they think conceptually, and they never neglect their main objective: ultimate world control, by force if need be, by infiltration, subversion, and treachery if possible. It is difficult at best to explain the complicated devices of a free nation. We are not at liberty to fashion our every move in international affairs to conquer the world. We have never sought to do so. But we can perhaps develop an offensive policy to strengthen and enlarge the free world, to challenge communism everywhere—in the East, in Latin America, in Africa, in Asia. This suggests a new look at our "informational services," at our whole scheme of values in relation to the U.S.S.R. But we will not stop Communist aggression by waiting until they move, before we sluggishly respond.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mrs. ST. GEORGE. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD, study paper No. 17, "Civil Defense Policies," by Dr. Donald A. Melnick, Scientific Planning Associates:

CIVIL DEFENSE POLICIES

(By Donald A. Melnick, operations analyst, Scientific Planning Associates)

A. INTRODUCTION

1. Previous impressions

When I began writing this paper I had the impression that there was something lacking in the civil defense program. From the little I had known about questions of fallout and nuclear attack it seemed as if the measures that had been taken were surprisingly short of what was necessary. I had read articles which indicated that scores of millions of the American people would be killed in a nuclear attack and that most of these lives could be saved with an adequate civil defense program. I had heard that fallout was a very serious problem for unprotected people but that a minimum amount of protection would save most of the people exposed to fallout who had not been killed as a result of blast and the thermal effects of nuclear weapons. I had also noted that virtually no fallout shelters were being built by either private people, industries, school systems or other branches of local and State governments, but I did not know about the complete failure of the Federal Government to do the same. Because I had received so little information through advertising media and brochures on the civil defense problem, I assumed that the Federal Government had decided that it was not a very great threat or else that nothing could be done about it.

When I decided to study this problem further, I assumed that I would quickly find out that I had misunderstood the problem. Somehow I felt that I would find out that I had miscalculated one of the aspects of the problem—possibly, that either the potential danger was much smaller than I had crudely estimated, or this danger was adequately taken care of by other measures.

However, in performing this study I soon discovered that my initial impressions were not only quite correct but that they understated the problem somewhat. Actually, there is marked agreement that our civil defense program is an important part of our total military posture; there is marked agreement that there is potential threat to the American people in case of nuclear attack in terms of scores of millions of people; there is marked agreement that quite inexpensive civil defense measures in terms of dollars per capita would potentially save a considerable number of lives; and furthermore, that in spite of the necessity for all these measures only an infinitesimal proportion of what must be done is being done.

Although the title of this paper is "Civil Defense Policies," the study is almost completely limited to the shelter and evacuation programs. Although there are other aspects to civilian defense, it is quite apparent that it is in these programs that the greatest needs lie. When the term "civil defense" is used in the text it usually refers exclusively or primarily to the shelter and evacuation programs.

2. Reasons for civil defense

There are three principal reasons for civil defense measures—i.e., evacuation and shelter measures.

1. They increase the margin of deterrence.
2. They make our diplomatic maneuvering more believable.
3. They save human lives.

It interesting to note that because of the first two reasons civil defense decreases the probability of nuclear war. It thereby saves more lives than it would in the event of war.

Deterrent Margin

There is much talk today of deterrence. There is fairly wide agreement that we owe whatever immunity from nuclear war that we presently have to the fact that in the event of nuclear attack our side will be able to destroy more of the enemy's forces than the enemy can destroy of our forces.

In the event of nuclear war a significant factor in our military strength would be the number of civilians surviving the initial attacks. Although it is probably true that the war will not be long enough for the marshaling of weapons production as in World War II, there are many other ways wherein civilian survival contributes to defense. Since there probably will not be time for a military draft, before the attack, the Armed Forces will have to be augmented from civilian and Reserve ranks after the attack. A civil population will be necessary for various functions to aid the Armed Forces, such as communications, transportation, and food preparation, not to speak of military morale. Besides, it is estimated that there would be sufficient capital remaining to provide significant maintenance functions for military equipment. This item alone is an important part of the total defense picture.

Believability of Our Diplomacy

Probably the most important contribution of civil defense is to make our worldwide diplomacy more believable. Primarily, we are able to maintain the status quo against Soviet attacks by the ultimate threat that we are willing to resort to nuclear war if necessary. This necessity could arise in any number of ways. Probably the most likely situation, however, is the Munich-type situation. This could easily happen, for example, over Berlin. The Soviet leaders could announce that they are closing down Western access to Berlin and that if any attempt were made on our part to reopen this access, they would strike with nuclear weapons against the homeland of the United States. The only thing keeping them from making such a threat is their calculation that we would resist such an ultimatum.

Without civil defense measures, as many as 50 percent of the American population would be killed by a blast and fallout. In the latter part of this decade, close to 90 percent would be killed. It seems very likely that the Soviet leaders might miscalculate and decide that the American people would accept diplomatic defeat rather than to sustain such a high proportion of casualties.

It is quite apparent then that an appreciable reduction in the number of casualties from a nuclear attack would have the effect of reducing the chances for Soviet leaders to make such a miscalculation. As a direct result then, this reduction of casualties would decrease the chances of a nuclear war being started in this way.

Thus, by increasing our deterrent margin and our diplomatic believability, civil defense makes nuclear war less likely.

President Eisenhower was quite aware of this when he said:

"An effective civil defense is an important deterrent against attack on our country and

thus helps preserve peace. In the event of an attack upon us, civil defense at once becomes one of our immediate reactions imperatively required for our Nation's survival." [1]

Saving Human Life

It is probably true that a civil defense program tends to save human lives primarily because it would decrease the probability of nuclear war. However, this program could very easily be justified on the sole basis that it would tend to save human lives in the unfortunate eventuality that a nuclear war actually did occur. Even the most optimistic admit that there is a small probability of nuclear war. Of course, some pessimists, aware of the tremendous danger of accidental war, estimate the probability of nuclear war in the next 10 years as high as 60 percent to 80 percent. Such accidents could be an irrational blunder on the part of Red China, or a technical accident such as might occur if a commander on either side went beserk and ordered the firing of a substantial number of weapons. It seems quite conservative to estimate the probability of nuclear war at 10 percent. A typical per capita investment for an adequate defense and evacuation program is $100 per person. Accepting the calculation that this may result in the saving of some 45 percent of the population who would otherwise be killed, the cost per life saved runs to only about $220. Even with the assumption of only a 10-percent risk of nuclear war, this appears to be a reasonable investment in human lives.

3. Practicability

A considerable amount of resistance to civil defense measures seems to lie in the fatalistic attitude that virtually everything and everybody would be destroyed in the case of a nuclear attack and that therefore civil defense measures are like flapping in the breeze. This is an extremely pessimistic point of view. Actually, in the case of an attack made at the present time, civilian casualties could be reduced to as little as 6 percent by the use of adequate shelter and evacuation measures. Such a small level of casualties could be achieved even in the latter part of this decade when perhaps 90 percent of the population would be killed if no civil defense measures were taken. Beside the human survivors there will be enough of other things left to make life worth living. It is estimated [2] that a sufficient quantity of capital would survive the attack so that in the first year after reorganization a per capita gross national product as high as in 1929 or 1940 is possible. There is obviously no rational justification for the fatalistic approach.

B. THE PROBLEM

A thermonuclear weapon will cause a considerable number of human casualties by the effects within the first few seconds after the blast. These casualties are caused primarily by the blast and thermal effects but partially by immediate radiation effects. While it is true that human beings are not easily damaged by the blast, the structures surrounding them are quite vulnerable. The blast effects are the same effects as are caused by any explosion; that is, a shock wave of air goes out from the explosion and it knocks down buildings, trees, and other structures in the vicinity. For example, a 1-megaton nuclear weapon will destroy brick apartment houses up to about 3 miles from the blast point. A 10-megaton weapon will destroy these buildings up to 7 miles. Obviously, most of the inhabitants of these brick apartment houses would be killed in the collapse of the structures.[3] For wood frame buildings the figures are 4 and 9 miles, respectively.[4]

The damage to persons in the open at the time of a nuclear explosion is primarily caused by the thermal effects. The nuclear blast resembles a tremendous ball of fire, literally "brighter than 1,000 suns". The clothes and the skin of a person that is not shaded from the ball of fire are burned. However; since it is expected that most people will seek shelter in the event of a nuclear explosion, this is probably not an important factor in causing death. The other effect of the blast is to set afire easily kindled material, such as curtains and trash. This in turn sets the surrounding buildings afire. These easily kindled materials are ignited as far as 9 miles from a 1-megaton burst and 25 miles from a 10-megaton burst.

There is a considerable amount of radiation which emanates from the bomb in the first few seconds, and this is quite lethal to humans. The lethal distance is only 1.5 or 2 miles for the 1-megaton and a 10-megaton burst, respectively. It will be noted that the distance for blast damage of structures is much larger than this, and therefore the damage by initial radiation is not important since it is expected that anybody who could be killed by this initial radiation would also be killed by the collapse of the structures surrounding him due to blast.

There is no question that if the enemy chooses to attack the civilian population a considerable number of deaths will be caused by these immediate effects of blast and thermal and initial radiation. However, since these reach out to 9 or possibly 25 miles from the biggest bombs that are presently available, they still affect a relatively small proportion of the country's population.

A problem of much more far-reaching importance is the so-called fallout. If a bomb is exploded close to the earth, a tremendous amount of earth is actually sucked up into the fireball and irradiated by the nuclear reaction within the burst. As a result, a considerable number of radioactive products result from the explosion. These are propelled into the atmosphere, are carried by the wind, and may later fall to the ground hundreds of miles from the point of explosion. As a result, people in areas very far from potential targets may be subjected to lethal doses of radiation from this fallout. At the end of 2 days a proportion approximating 50 percent of the land area of the United States would be covered by potentially lethal doses of fallout.[5] Therefore, the major proportion of the population would escape the immediate effects of the nuclear weapon only to die later, in the absence of a shelter, of the fallout effect.

Most of the casualties to the civilian population would occur from this fallout. Fortunately, however, fallout is by far the easiest to protect oneself against. It is quite expensive to build a shelter against blast, but if one escapes the blast effect, a rather simple shelter will go quite far toward protecting against all but the most concentrated fallout.

For the immediate future, fallout shelters are of the greatest importance. However, with the development of larger nuclear warheads and better means of delivery a large proportion of the population would be killed by the effects of blast, if no measures are taken. Therefore, in a few years blast shelters will be important.

C. THE CIVIL DEFENSE PROGRAM

Under the terms of Public Law 920 of the 81st Congress, Congress established the Federal Civil Defense Agency as an independent agency. Under the terms of this bill the responsibility for civil defense was vested primarily in the several States and their political subdivisions. The Federal Government was given the responsibility of providing coordination and guidance to the States. In considering this law the Senate Armed Services Committee declared that civil defense "is a problem of survival to be solved by the individual, the community and the State under the guidance and coordination of the Federal Government." [6]

In 1958 the FCDA was combined with the Office of Defense Mobilization to form the Office of Civil and Defense Mobilization.

In order to strengthen the civil defense program the National Plan for Civil Defense and Defense Mobilization was promulgated by the President in 1958. In this plan the responsibilities were shifted somewhat. Whereas in Public Law 920 the responsibility for civil defense was vested primarily in the States and subdivisions, in the national plan the Federal Government was given the primary responsibility for the direction and coordination of the total national effort. The State governments still retained the responsibility for the direction and coordination within the State.

In connection with this national plan the President directed the declaration of the national policy on shelters in July 1959. This national policy on shelters contained six points. The administration would provide (1) information and education programs to acquaint the people with the fallout hazard; (2) a survey of existing structures to assemble definite information on the capabilities of these structures to provide fallout shelters; (3) a research program to show how fallout shelters may be incorporated in existing as well as new buildings; (4) the construction of prototype shelters. An important role of the administration was contained in items 5 and 6. In these, the administration declared its policy to incorporate fallout shelters in new as well as existing Federal buildings. The purpose was to provide Federal example to stimulate State, local government and private investment for fallout shelters. In this national policy on shelters it was stated: "There will be no massive federally financed shelter construction program."

In spite of the President's intention to provide Federal example under point 6 of the policy, the Congress turned down the General Services Administration's request for additional funds for incorporating fallout shelters in all existing Federal buildings. GSA requested $2 million in fiscal 1960 to provide fallout shelters in existing Federal buildings in order to set an example for both Government and industry. This request was denied by Congress in its entirety.

An insignificant number of shelters have been built by private individuals in their homes or by private parties in large buildings. A considerable amount of public apathy may be partially traced to the fact that the information and education program which is supposed to have inspired them to build fallout shelters has been nearly completely ineffective. The education program has consisted primarily of radio and television time. OCDM's budget for radio and TV for 2 years has been $871,400. Recognizing the urgency of the program, networks and local stations have donated time amounting to $57 million. Therefore, for every dollar of OCDM money, $65 worth of time was made available. In spite of this multiplication feature the public has not received enough information to make any impression, to acquaint them with the nature of the problem or its urgency, or to stir them to appreciable action.

Although the local civil defense program is not a part of the study, the writer received the impression that there is a marked lack of coordination and that local civil defense is completely spotty. The stockpiling of medical supplies and of strategic materials has gone ahead. It can be reported that the stockpiling of strategic materials has been practically completed and the stockpiling of medical supplies has made considerable progress.

D. DISCUSSION AND RECOMMENDATION

The achievement of an adequate civil defense program has as a prerequisite the congressional realization of the basic importance of such a program in the national defense picture. With this realization, the Federal responsibility should be increased, an adequate shelter program should be instituted, starting with a minimal shelter program, and a thoroughgoing attempt should be made to educate the public on the civil defense problem.

1. Federal responsibility

The present division of responsibility between the Federal Government on the one hand and State and local governments and private individuals on the other must be reinvestigated. Aside from the lack of congressional cooperation, the delegation of the principal burden to the State and local governments and to private individuals seems to be a major difficulty of the civil defense program. This delegation apparently arises from two factors. The first is that local government has an intrinsic role in civil defense. There are certain advantages in delegating the civil defense program to State and local governments. In the event of an attack the carrying out of the programs will have to be performed by the local authorities. Decisions will have to be made locally because the situation will vary from locality to locality. Besides, civil defense after an attack dovetails with the problem of reestablishing civil authority.

The second reason for the delegation to State and local governments, and furthermore to individuals, is historical. During the Second World War, and for that matter, in the early fifties, when the FCDA was first established, the number of civilian casualties expected in the case of attack would have been a small percentage of the entire civil population. In those times, therefore, it was partly a private or local matter as to whether steps should be taken to shelter the individual. That is, it made very little difference to a person in New York City whether a person in Dubuque protected himself against the enemy attack. This was of importance primarily to the person in Dubuque. However, in the sixties, the situation has changed very radically. The percentage of casualties which can be expected in the absence of civil defense measures is of the order of half or more of the population. As is pointed out earlier, the proportion of civil casualties expected is an important consideration in determining our total defense and diplomatic posture. Therefore, it is of grave importance now to citizens from New York as to whether his fellow citizens from Iowa are willing to take measures to protect themselves.

As pointed out in the first section, the ability of the country as a whole to survive a nuclear attack is an important factor in making a nuclear war less likely. There is no question then that this is a matter of national concern. If it were possible to delegate these powers to the individual or to the State and achieve satisfactory results, then there certainly would be no objection to the Federal Government's making the delegation. However, satisfactory results have not been obtained, and there is absolutely no reason to expect them in the future. And we should not consider that we have achieved satisfactory results until shelter has been provided for close to 100 percent of the population.

The writer has a strong tendency to feel that where possible it is a good policy to leave programs to State and local authorities, or to private initiative. However, there seems to be little justification for such a policy in this case.

Starting from a matter of principle, the national defense is traditionally a Federal concern. Any delegation then would be an exception to this principle. The wisdom of this principle is well illustrated in the infinitesimal success of the shelter program. It is not realistic to expect private citizens to evaluate the military, scientific, and geopolitical considerations necessary to decide whether to build a shelter or not. This is clearly a job for experts. As a practical matter, it seems psychologically impossible for people to take personal measures to prepare for war. In doing this they must admit to themselves in a direct way the possibility of their being subjected to the horrors of war. It is much easier for them to participate in impersonal decisions about war such as buying guns and airplanes.

In short, leaving the decision to build a shelter to a private individual makes as much sense as asking him whether to build an aircraft carrier or not. Achieving a shelter program by Federal example may seem like a good idea in a bargain-basement sense. It actually makes as much sense as trying to achieve a nationwide Nike defense system by building merely a Federal example system for Washington, D.C., or as trying to buy SAC bombers by taking up a private collection.

There must be a realization that civil defense is an intrinsic part of the total defense picture. Therefore, the Federal Government should assume the primary responsibility for the execution of the civil defense program. The OCDM should be given the authority concomitant with the responsibility. It should have the power to order its goals accomplished where necessary. For example, it should have the power to order the practice evacuation mentioned later. As part of that increased responsibility, the Federal Government must become the primary source of funds. These should be used for fully supporting or matching funds for its programs. Since it is important for the local governments, who in the event of emergency must exercise the civil defense authority, to have experience at exercising the authority, the OCDM should leave as much authority to them as possible. However, this should only be done where it does not interfere with the accomplishment of the OCDM's programs.

2. Shelter program

(a) Future Goal

The Federal Government should begin a program slated to achieve, later in this decade, an extensive system of blast shelters to house about 50 percent of the population and an adequate system of fallout shelters for the remainder of the population. It is estimated [7] that such a program could decrease the percentage of casualties from the 90 percent that would occur if no protective measures were taken to 45 percent in case of short warning. In case of several hours' warning this could be decreased somewhat more. This program is very expensive, costing perhaps $700 per person. However, a program of this magnitude is absolutely essential for the success of the entire defense program of the United States. It is inconceivable that an enemy would believe us prepared to engage in nuclear war if he knew that 90 percent of our population would be destroyed in such a conflict.

[7] Rand Corp., op. cit., p. 11.

(b) Immediate Minimal Shelter

Meanwhile, a minimum-cost makeshift program of fallout shelters must be instituted. It would be possible to provide fallout shelters for virtually 100 percent of the population on a minimum basis.

For the next few years, it seems reasonable to give up two unrealistic hopes. The first is that private individuals, or local governments, will build enough shelters to protect most of the population. The second is that the Federal Government will appropriate enough money for really adequate shelters. Therefore, a low-cost, minimum shelter program ought to be started immediately that is completely federally financed. The primary idea of this minimum shelter would be to save lives, rather than to make people comfortable while they are being protected. The shelter OCDM suggests for a private family is quite lavish.[8] It provides a bed for each person and an area of 10 square feet per person, and suggested supplies for 14 days.

For a minimal shelter, these features are quite extravagant. A shelter could be built quite inexpensively by (1) putting it in the basements of buildings already in existence, such as schools and churches and other buildings; (2) by having the material ready for shielding the ceiling, but not installed; (3) by providing only enough food for 2 days and providing a rather uninteresting diet for 10 cents daily per person; (4) by being satisfied with shielding to cut down the radiation to only one one-hundredth rather than the one two-hundredths which is contemplated by OCDM; (5) by providing a very uncomfortable 5 square feet per person.

These contemplated shelters would be put in the basement of schools, churches, and other public buildings. The reason for using schools and churches is that these are well distributed in all areas of the country; no residence is very far from a school or church. Besides, at least for schools, people are very likely to know the location of the nearest one to their houses.

A normal basement with an unprotected ceiling cuts the radiation exposure to fallout to less than one-seventh of that received by an unsheltered person. A layer of 25 pounds per square foot (which amounts to a layer of 3.3 inches of earth or 2.2 inches of cement block) has the effect of cutting the radiation to one-half.[9] A layer of 100 pounds per square foot would cut the radiation even further, to one-sixteenth.

Ideally, a protective layer would be added to the ceiling during peacetime. However, in addition to the fallout protection, the school or other building would meanwhile have to be used for normal purposes. Therefore, it would have to be reinforced to take both the shielding of, say, 100 pounds per square foot plus the normal load, which is usually rated at 100 pounds per square foot. This reinforcement would involve some expense. The proposed makeshift shelter contemplates adding the shielding after the warning, and, if necessary, even after the burst has actually taken place.

Sandbags would be stockpiled in the basement, together with inexpensive racks. Hooks would be provided in the ceiling. These would be the only things installed before the attack.

The sandbag would be hung from the ceiling on these inexpensive racks. It is probably optimal to provide two or three layers of racks. In this way, a thin layer of sand-

[8] Office of Civil and Defense Mobilization, "The Family Fallout Shelter," MP-15 (June 1959).

[9] U.S. Atomic Energy Commission, "The Effects of Nuclear Weapons," June 1957, p. 402.

bags, say, about 25 pounds per square foot (averaging 4 inches thick), could be put in in a very short time. Then with this somewhat better protection of the first layer, a thicker layer or layers could be added later. Of course, if there are any windows in the basement, these should be covered immediately with sandbags.

Since the first floor is probably reinforced to support a load of 100 pounds per square foot, such a weight of shielding could now be added to the basement ceiling since the first floor would not be in use. This layer of sandbags would average about 16 inches thick, and would cut the radiation to one-sixteenth. The effect of the sandbags and the protection of the earth surrounding the basement should be to reduce the dosage to approximately one-hundredth of the dose which would be received by an unsheltered person. The shelters suggested by the OCDM reduce the radiation to one two-hundredths [10] of the dose received by an unsheltered person. Actually, the area of the country where a person exposed to one two-hundredths would survive and a person exposed to one one-hundredth would die, is almost negligible.[11]

A minimum amount of space would be provided for each occupant—perhaps only 5 square feet per person. This is the crowding that was accomplished in overnight shelters in Europe. This is somewhat uncomfortable and would require sleeping in shifts.

Minimal food supplies for 2 days would be supplied. One pound of flavored sugar, plus 75 grams of an inexpensive source of protein would be provided per person per day, giving about 2,000 calories per day. This would cost only about 10 cents per person per day, but would be an adequate daily ration.

One cheap transistor radio would be provided for the entire shelter and an outside aerial would have to be installed during peacetime to pick up Conelrad stations. Since this is a minimal shelter, an insignificant amount of medical supplies would have to be furnished. It seems more important to prevent people from exposure to radiation rather than to repair the damage after it has been done. Reading material could be easily supplied in the form of old magazines.

It is necessary to provide a small amount of light. In order to cut down the necessity for replacing aging batteries during peacetime, flashlight batteries would not be provided, but a few candles and matches would be included. About 10 candles per 100 persons should be adequate.

Reading material could be supplied in the form of old magazines. In addition to the regular reading material, instructions would be provided which concern the operation of the shelter. This would include information on fallout, the theory of a shelter, rules for the government of the shelter, and finally, a shopping list to be used after the food runs out in 2 days.

After the 2 days' worth of supplies is exhausted either evacuation to a safer area will be made, or an expedition will be sent out for supplies. The evacuation will be made if there is a nearby area relatively free of fallout. If there is no evacuation, members of a supplies expedition would be chosen by lot from among the more vigorous occupants. They would, of course, be instructed to run at top speed and to have the list of supplies carefully in mind before they leave the shelter. By this time, the fallout that they would receive would be only 1 percent of the first hour intensity.

One small pick would be provided in each shelter, and a stockpile of bags. With the pick the people could chop through the basement wall and dig a tunnel in the earth with their hands. They could fill the bags with dirt. They could use these bags of dirt for filling the overhead racks if they are not already filled, and also for building vertical partitions in the basement. Vertical partitions will cut down the radiation coming obliquely through the ceiling.

It would be too expensive to provide blankets. It is expected that few people would bring sufficient clothing and blankets for comfort during the winter months. However, they could probably manage to be reasonably comfortable by using each other for warmth, if necessary.

By means of such a crude shelter, the radiation which a person would receive would be markedly less than that received by an unsheltered person. If the entire ceiling shielding had been put up before the arrival of the fallout, persons in the shelter would receive only one one-hundredths of the unshetered dose. If the ceiling shielding is not put up until after a nearby burst, the occupants would receive approximately another one one-hundredths of the cumulative dose received by an unsheltered person. The dosage received by those going outside after 2 days to procure supplies is fairly insignificant.

The writer's estimate indicates that shelter could be provided for no more than 50 cents per person. In some cases the cost would be somewhat less, because of the protection inherent in the structure of the building in which the shelter is located. For example, the basement of a heavily constructed apartment building, with concrete floors, gives so much natural protection tha it is possible to do entirely without the sandbag ceiling protection provided for other shelters.

It is apparent then that fallout shelters can be provided for the most vulnerable 80 percent of the population, for a total cost of less than $70 million. This program must be instituted at once.

3. Evacuation

Very little mention has been made in this report of evacuation, since the evacuation program, though leaving much to be desired, is considerably more successful than the shelter program. However, it is quite essential that the American people be acquainted with the evacuation procedure so that an evacuation would be more effective if it were necessary. An immediate nationwide evacuation test should be ordered. The rules should be carefully publicized in advance, and the evacuation called for a time which is not specifically announced in advance, preferably during the rush hours on a weekday. In spite of doubts to the contrary, this writer is convinced that a city like Washington could evacuate more than 200,000 people per hour if an evacuation were carefully practiced.

4. Education

The present education program is so insignificant in its scope that it is probably contributing to public apathy. Since the average citizen hears so little of civil defense needs, he probably says to himself, "The danger must not be nearly so great as some of my pessimistic friends seem to think; otherwise the Government would make some strong efforts to alert me to these dangers." The education program ought to be enlarged whether or not the Government institutes the minimal shelter program outlined above. However, if the program is not instituted the educational program ought to be increased manyfold. As mentioned before, OCDM spent less than $1 million on TV and radio time in the last 2 years, although the stations and networks contributed some $57 million of time. The writer has found from questioning many alert citizens that even this larger amount of time made virtually no impression on the public. It is time for the education program to stop being a poor relation, having virtually no funds of its own and depending primarily on handouts from the stations and networks. Sufficient funds should be appropriated for a fivefold increase in the use of the radio-TV medium. Assuming the contribution from the stations remains constant, this would require $228 million per 2 years, or $114 million per year.

In addition, short, digest-style articles should appear frequently in magazines, either as paid or unpaid advertisements, and newspaper length articles should be inserted in newspapers. Most of the booklets presently in use are too long to be read by the general public. Short, readable booklets, each on a small aspect of civil defense, must be written and sent frequently to all households.

It is time for the Federal Government to play a commanding role in this important aspect of national defense. The recommended steps, small but vital, should be taken immediately lest it be said of the American people, "For want of a nail, the battle was lost."

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. JACKSON. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the CONGRESSIONAL RECORD study papers Nos. 19 and 20, "Soviet Subversive Forces," by Ralph de Toledano, author, lecturer, and syndicated columnist; and "Soviet Strategy and Free World Defense," by Prof. Gerhart Niemeyer, Notre Dame:

SOVIET SUBVERSIVE FORCES

(By Ralph de Toledano, author, lecturer, and syndicated columnist)

If the missile age seems to have eliminated the problem of Communist subversion, a quick look at the turmoil in the "new democracies" of Asia and Africa—and a closer look at the United States—will demonstrate the fallacy of this belief. All the revolutionary technology of the nuclear era has not made obsolescent what to some may appear like horse-and-buggy concepts of civil war and civil disturbance. The recent riots in Japan, financed and directed by trained Soviet operatives, are proof enough that the Soviet Union and Peiping still make full use of them.

The awesome destructiveness of present-day arsenals have, in fact, made Communist subversion one of the main weapons of the Soviet system. Our armies and navies, our air forces—these are vitally necessary in the elaborate process of stalemate which has become the function of Western and Soviet armed might. The use of deterrent power, as a means of holding within bounds the adventurism of Premiers Khrushchev and Mao Tse-tung, must be a basic element in the strategy of the West. But this Nation is lost if it does not understand, assimilate,

and on occasion employ the methodology of applied subversion.

Americans do not understand this methodology—and in fact they resent those who devote their attention to the problem. During the U–2 episode, there were many who felt it somehow beneath America's dignity to take necessary countermeasures when faced by a closed society with a vast espionage and subversive network at its disposal. When the State Department, employing its usual understatement, noted that there were 30,000 trained Soviet agents at loose in the world, incredulity blossomed on some faces. (In fact, there are some 5,000 professional Communist agents in the United States alone.)

But to anyone whose reading of history extends beyond elementary school texts, civil war and subversion as we know them have been endemic since the overthrow of England's Charles I. Communist revolutionists did not invent the techniques so successful today. Cromwell's seizure of power and the French Revolution, by their controlled interaction of troops and mobs, were brothers under the slogans of Lenin's seizure of the Constituent Assembly. The 18th and 19th centuries were marked by a series of internal upheavals linked by a worldwide Weltanschauung which in 1919 concretized itself in the Communist International. Today, civil war is all about us in a thousand manifestations of subversion and conspiracy, of stupid aquiescence and cynical resignation. It is the toy of millionaires and the self-abuse of intellectuals.

The H-bomb and the ICBM are, in the active sense, significant and commanding only insofar as they are not used. The arsenal of nuclear weapons serves a phychological rather than a military function. For the Soviets, it is designed to destroy the will to resist in the free world, to make American power put its head on the block and ask for a coup de grace which the Soviets cannot deliver.

Nuclear weapons serve to stir the Gargantuan mind and picayune understanding of a Bertrand Russell, who urges us to disarm unilaterally and to accept Communist domination rather than what he chooses to call the end of the human race—and millions of people throughout the world, of lesser comprehension, follow him. They encourage the outbursts of a Cyrus Eaton who rattles his dollars and rushes to Paris to kiss Premier Khrushchev's ring. Otherwise sane individuals support the insanity of the Committee for a Sane Nuclear Policy—and at every turn joggle the arm of our Government as it attempts to face Soviet propaganda on equal terms.

This is the basic fact: Communist strategists know what we do not: that the secret weapon of any state when confronted by internal subversion and disturbance is the will to resist.

It is a prime axiom that no revolution in modern history has succeeded without a concomitant destruction of the will to resist in legitimate government. There is much talk of belly communism—as if hunger were the only source of revolutionary discontent—which derives from a complete falsification of history and facts. The semianarchy in Tokyo has little relationship to economic motives, and it has persisted because the government in office refused to take stern measures against it. The French Revolution, going back to history, is another excellent example.

Generations of schoolchildren, since the days of William Wordsworth, have held the passionate belief that hunger and oppression led the mobs which guillotined Louis XVI and Marie Antoinette. But the meticulous and inspired reporting of Alexis de Tocqueville (in "La Révolution et l'Ancien Régime"), ignored by the popularizers, shows conclusively that (1) the power of the monarchy was undermined first by the nobles and a rising middle class, and (2) that France was going through a period of great prosperity when sansculottism swept in, and the Bastille (presumably crowded with political prisoners) was literally empty and had been for some time when its walls were "stormed." These points, incidentally, are supported by the eyewitness accounts of Arthur Young and the British historian Lecky.

We forget that Lenin himself described the Kerensky regime which preceded his as the "freest government in the world"—whereas desperate heroism, hunger, ideological fervor, and the desire for freedom could not prevail in Hungary as long as the government's will resisted. The successful revolutionary assault, therefore, is not on the government but on the national will. Fidel Castro won few, if any battles, but he triumphed when the Batista dictatorship lost its nerve.

The immediate function of any Communist Party, therefore, is not in the violent overthrow of the government—in the limited legal sense demanded by the Supreme Court—but in the sapping of allegiances, the dissemination of confusion, the instillment of fear, the poisoning of faith in our institutions, in ourselves, in our God. Its aim is to halt the civil peristalsis. The Communist Party is a paramilitary force, true, but its ammunition is far subtler than bullets and hand grenades.

With this in mind, it becomes important to consider first the nature of the Communist who makes up this paramilitary force. For the sake of precision, let me refer to him as the Bolshevik. The Bolshevik is not a "liberal in a hurry." He is a Marxist only to this extent—that he accepts a general theory of the organization of the state. "Scientific socialism," the totality of a regimented world structure, certain outward patterns and certain semantic stridencies—all these he has incorporated into his thinking.

But the ancestors of Bolshevism are not Karl Marx and Friedrich Engels. They are two men, one hardly known to the West, Bakunin and Nechaev—two faces merged into the Janus like configuration of Leninism and Stalinism. There is no facet of the Communist world revolution which does not reflect the baleful light of these two Messianic Russians—one self-deluded, the other so obsessively evil that he served as a model for Dostoevski's "The Possessed." The Bolshevik practitioners, piling faggots on the world's trouble spots, may think that they were suckled on the Communist Manifesto, but they drew their milk from a forgotten little pamphlet, 2,500 words in all. It is called "Catechism of a Revolutionist"; it was written by Bakunin and Nechaev; this is how it begins:

"The revolutionist is a doomed man. He has no personal interests, no affairs, sentiments, attachments, property, not even a name of his own. Everything in him is absorbed by one exclusive interest, one thought, one passion—the revolution."

The Byronic concept of the revolutionist—or its more intellectualized counterpart in a man like André Malraux—is cast aside. So too is the doctrinaire conformity of the orthodox Marxist. Morals, the accoutrements of culture, the softening decencies of everyday association no longer exist. The revolutionist of the Bakunin-Nechaev school—and therefore the Leninist school—makes a pact with the revolution which prepares him for torture or death (or, far more bitter, ridicule). His enemy is established society, a society he categorizes neatly. Some members of the world as we know it are to be condemned to death and ruthlessly liquidated. Those of the ruling class who contribute to the revolutionary spirit by their acts of brutality are to be encouraged and preserved—which may account for the recent secret rapprochement between General Trujillo and Fidel Castro. They will goad the "inert mass" into unreasoning violence. And, the "Catechism" adds:

"One may conspire with the liberals in accordance with their programs, making believe that one follows them blindly, and at the same time one should take hold of them, get possession of all their secrets, compromise them to the utmost * * * use them as instruments for stirring up disturbances in the state."

The Bakuninist-Nechaevist has a basic contempt for the "doctrinaires" who spend their time "talking idly in groups and on paper." The contempt we have seen in the utterances of Joseph Stalin—and latterly in those of Nikita Khrushchev—which utterly disregard the Marxist dialectic. "Catechism of the revolutionist argues that these "Talmudic" debaters of revolution—the anti-Semitism was not unintentional—are to be tugged into the area of force and violence which will destroy most of them but serve as "real revolutionary training" for a hard core which will break loose and join the true faith. Agents in what Harold Laski called the "organization of catastrophe" and makers of despair, these revolutionists are urged to seek out the "bold world of bandits" and to combine with it. Have we forgotten that Stalin, the master technician of subversion, robbed banks?

Here then is the iron law which binds the Bolshevik, reiterated many decades later by J. Peters in his "Manual of Organization," a Communist vade mecum, summed up poetically by Bertold Brecht in that chillingly luminous line, "Sink into the mud, embrace the butcher, but change the world," and chanted in tender ditty by German Communists as the Weimar Republic sank into its own morasses: "Grease the guillotine with the fat of tyrants, blood, blood, blood must flow."

If we are to understand what faces the free world, we must first come to grips with this Leninist concept of the revolutionary. Not every conspirator or subversive is cut from the same heroic pattern or shares the same determination. There are time servers and bureaucrats in plenty, all helping to make up the corpus of international communism. There are weak men and scoundrels and men of soul who defect to freedom. But the weak and the dishonest do not command the paramilitary forces of communism—they are merely a part of them. If military victory were a simple function of unanimous courage, what wars would be won?

We once thought of the Communist as an unkempt type futilely debating in a Union Square cafeteria. It would be an equally serious mistake to accept the stereotype of the steely eye and the commissar manner. Alger Hiss was, and is, one of the prototypes of the Bolshevik. Yet on the surface and in ordinary discourse, he was a man of somewhat mincing step and manner and, behind the charm, a crashing bore. Richard Sorge, perhaps the most effective espionage agent turned out by the Red Army's Fourth Bureau, was hard drinking and hard lusting, yet he plundered the secrets of the very Nazis and Japanese whose whisky he drank and whose wives he seduced. The leaders of the American Communist Party seem flabby, even a little fey—yet the incidence of combat decorations among them is startlingly high.

It is from this diversity that communism fills its table of organization. Each comrade has his rank and his assigned role. Each comrade delivers himself to a military discipline. Thousands of intellectuals, to the lecture platform born, in 1948 accepted party orders to join the campaign of industrial concentration, a process of colonization and infiltration of the Nation's key plants and factories.

"Plant you now, dig you later," the Communist Party said. One man held in reserve until the calibrated moment can do more damage than a dozen rioting mobs, just as a single sniper can immobilize a company of troops.

A strategic minority can achieve much with little—on somewhat the same principle. Neither theory is original with the Communists, nor is it exclusively theirs. Walter Reuther, with less than a hundred men, employed the theory of the strategic minority in the 1930's. With this fulcrum he broke management resistance to the UAW and launched a powerful mass union.

Size, therefore, is secondary in Communist organization. When the revolutionary situation comes about, sergeants become colonels as new recruits are trained by the Bolshevik cadres. For those who find the size of today's Communist Party a cause for encouragement, let it be recalled that Lenin disapproved of mass membership in the precombat stages, and that he developed the technique of the continuing purge to keep the party vigorous. Organization must fit the situation, and in the CPUSA that organization is triangular.

There are, then, three Communist Parties in this country, directed by parallel chains of command from Moscow, the Soviet Embassy, and a highly mobile field headquarters. These three parties are: The so-called open party, the underground party, and the reserve or sleeper apparatus. (I have not listed any of the dozen apparatuses, working in tandem, which carry out the Soviet Union's espionage missions. These fall into the category of military intelligence and are directed by the Red army, the secret police, the Comintern, or the torture brigades known as Smersh.)

Of these three parties, the "open party" is the least important. It is made up of the expendables, the old hacks, the swing men of the front groups, the shouters and debaters. It has a double mission: To draw fire and to bring in the recruits. Its membership is estimated at 7,000 to 10,000.

The underground party is organized on Bakuninist lines, concretized by one B. Vassiliev in 1931, under the title "Organizational Problems in Underground Revolutionary Work." This Communist outline runs to five pages. It merits serious study. Vassiliev directed:

"In proportion as the legal apparatus of the party is liquidated, the directing functions will inevitably require a regrouping of party forces and the reorganization of the party apparatus. This reconstruction of the work will pass more and more to the illegal apparatus."

This has been going on, carefully and methodically, since the inception of the cold war. The underground party has been split up into several thousand fragments, the base being a cell of no more than 10, but usually 5, members. Maximum security is maintained in liaison between cell, section, district, and national leaders. There is frequent use of couriers—telephones are banned—with the time-honored use of "cut-outs" to evade discovery. The party's financial structure has been overhauled to make the millions of dollars previously invested in legitimate enterprises more easily available. Caches of money—one of about half-a-million dollars—are kept.

Each member of the underground party operates like a soldier behind enemy lines. The more important comrades are provided with a false identity, false social security cards, and a false driver's license. For the top echelons, party doctors are available to change the color of hair, shape of eyebrows, size of nose. In Vassiliev's detailed instructions, it was mandatory "(a) to find a building for storing party archives; (b) to organize an illegal printing plant in which it would be possible to print the party organ in case of suppression and closing of the legal party papers and journals; (c) to form an apparatus for distributing illegal party literature; (d) to prepare a definite group of leading party activists to pass into illegality; (e) to prepare addresses and houses for illegal correspondence, for secret sessions of the leading party organs and also for housing the illegal party activists and for conferences between them and the workers who continue to be on a legal footing; (f) to prepare a minimum number of workers who understand the elementary rules of the technique of underground work."

Every one of these organizational plans is now operational. Combat veterans in the party have been organized into hard-hitting flying squads for use in riot work. Beyond this, the Communists have set up a Red equivalent of the underground railroads which existed prior to the War Between the States. The policy of "industrial concentration" has put more than 75 percent of the underground party's mobile effectives into plants and factories where they can mold trade-union policy now and sabotage by slowdowns and flash strikes in times of international crisis. Today, they have successfully infiltrated the largest local in the United Auto Workers union, and have begun the slow recapture of other unions. Less muscular troops have been carefully planted in everything from parent-teacher organizations to the grassroots echelons of legitimate political parties—and this includes the Republican Party. For the first time in a decade, spheres of influence have been reestablished in the Congress of the United States.

The third grouping of Communists is the most dangerous and the most potent. I refer to the "reserve" or "sleeper" apparatus. It is made up of people who have never joined a Communist front or identified themselves with a secret party cell. Record of the membership is kept in Moscow, and an approach to one of them may not be made for months or years. The member of the reserve remains on tap for one great assignment which exposes him, or for the small, subtle undermining of the will to resist of the nation.

There is another function of the sleeper apparatus, effective but beyond the reach of counterintelligence. It operated silently during the Hiss case when—from the bars of Wall Street clubs to the comfortable reaches of Park Avenue—its poison dripped down every day and in every way, never defending treason but always besmirching those who exposed it. Editors and editorial writers on great newspapers, commentators, artists, and entertainers—those responsible for the propaganda fallout which deforms the minds and thoughts of people in these terrible times—are included in the sleeper—part of the three-way drive to destroy America.

This is the paramilitary organism which threatens us. Seizure of power is its ultimate goal, but not by any frontal attack. The civil war to which it is directed has been going on for years; and, despite our smug complacencies, its victories have been considerable and steady. Let me enumerate:

1. In the past 4 years, anti-Communists in this country have been systematically discredited and destroyed. With wise looks and smart sayings, those with specialized knowledge have been driven out of the marketplace of ideas. By innuendo, they find themselves deprived of standing in the intellectual community. They are accused of being hysterical, of seeing Communists under beds, of having lost a sense of proportion. And in time, they are elbowed out of the scholarly projects, the entertainment field, the bookstores. Foundations, which control so much of the Nation's intellectual life, shun them.

This is not accident. It is all planned—the work of the sleeper, but never sleeping, apparatus—and in most cases those who carry out the plan do not know that they are being manipulated.

2. Communists and pro-Communists who were painstakingly forced out of positions of influence in the mass media and the field of communications are returning. They are back on the networks, in Hollywood, in the publishing houses. They are strong enough to keep the paperbook field relatively clean of anti-Communist material. They are back in the teaching profession. Even convicted traitors—like Alger Hiss—are now being renovated by such publications as the Saturday Review.

3. At every point of vulnerability, campaigns are being mounted and are meeting with increasing success: Stop nuclear testing, with or without adequate safeguards; recognize Red China, however it may open the way for Communist domination of the critically important oversea Chinese. Lower barriers on trade with Iron Curtain countries, even if it means stengthening their war potential. Curb the FBI, whatever the cost to internal security. Abolish congressional investigation of subversion. Rip away all forms of Government secrecy, legitimate or not, in the name of press freedom. And most of all, let's not be beastly to the Russians; turn the other cheek.

4. Coincident with these campaigns, voices urge the superiority of the Soviet system—its science, its education, its armaments, even its creaking productive capacity. At every hand so-called experts loudly deplore presumed American inadequacies—till the average citizen believes that this Nation is hopelessly weak and unable to withstand the Communist onslaught. In this context, Bertrand Russell's plea that we surrender begins to make sense.

This is not to imply that every man who raises his voice in behalf of these causes is broadcasting on a Moscow wavelength. No one asks for a nation of tub thumpers. But the fact remains that the agitation over issues which should find unanimity—at least in principle—among the American people lends credence to those who say we cannot stand up to the Soviet subversive and psychological war.

Irresponsible and purely partisan attacks on the President and on the American posture are as much a manifestation of the civil war as the drilling squads of underground party activists. Those squads exist, trained in the use of baseball bats, pickets, sticks, hatpins, and the rest of the close-order drill of riot duty. But they are used seldom—Tokyo is one example, the Peekskill riots over Paul Robeson another. When the order comes to put them into the field, the will to resist has been crushed, the true battle is over, and they become the end phase of a long struggle. The Bastille is already empty.

Civil war and the violent seizure of power are easy to understand. The will to resist is intangible. Once destroyed it may never be recreated. Not all the nuclear weapons, not all the brilliant strategic plans, not all the genius of production and logistics can prevail—once that will is gone.

This is what the Communists understand.

This is what they mean by civil war, by internal subversion.

Karl Marx once wrote: "Neither a nation nor a woman can be forgiven for the unguarded hour in which a chance comer has seized the opportunity for an act of rape." Can there be less forgiveness for those who watch the rapist at work?

Soviet Strategy and Free World Defense

(By Gerhart Niemeyer, University of Notre Dame)

BASIC COMMUNIST ASSUMPTIONS

It is often said that the Communist objective is world conquest. This is true, but in a more fundamental sense than is usually

implied. Communists are not people who simply decided one day to conquer the world, and presumably could just as easily drop this objective if it does not attract them any longer. What is called the basic Communist objective is part and parcel of the entire world view in which the Communists see man, society, and history.

Communists believe that the world, as a result of inescapable social and historical laws, is embroiled in an all-pervading and irreconcilable struggle between two hostile "camps": one consisting of the forces of the future age of socialism, the other of the forces of the present age of capitalism. This struggle, rooted in the hostility between social classes, will go on for a protracted period of unknown duration, but will surely end with the total victory of the forces of the future over those of the present. Of those forces the Communists pretend to be the leaders, and the Soviet Union the foremost instrument of power.

Communists therefore assume that in view of this all-pervading struggle, men are not now united by anything like common truth, common morality, or common good. Society is essentially a battlefield, the only laws being those of the class struggle. Thus, for Communists, struggle is a condition into which they were born and which they expect to continue for an indefinite time to come. Only a total victory of the Communist forces—a victory of which they do not have the slightest doubt—can put an end to this struggle. As a result of a Communist total victory, mankind supposedly would be redeemed from all the ancient curses of human existence, particularly war, oppressive power, and want. Communists believe that their victory is assured by the laws of history, and that it is the only hope for mankind.

The so-called objective of world conquest is therefore not simply a chosen goal of communism, but the logic of the entire world situation as seen by dialectical materialism. Before Communists could abandon that goal, they would have to give up their world view, a process which is rarely a success in an individual person and well-nigh impossible in a society in which that world view is authoritatively maintained.

BASIC PRINCIPLES OF COMMUNIST STRATEGY

Communists, assuming themselves to be engaged in a lifelong struggle with a definite and hopeful end in view, think above all in terms of strategy. The most fundamental assumption of Communist strategy is that the party is carrying on a power struggle from a position of weakness. The forces of the present age—that is, the forces contending for capitalist society—are supposedly far stronger than those of the future, Socialist, age. This is true even when and where Communists have seized the power of government. Communist strategy has from the beginning focused on the problem of how to destroy the power of a vastly stronger class enemy.

The main principles of this strategy were first conceived by Lenin, further articulated by Stalin, and later expressed in the most consistent form by Mao Tse Tung. Starting from the concept of a small, compact, tightly disciplined party which always would be in the minority, it operates along three lines: (a) The power momentum of large masses led and manipulated by the Communist Party; (b) the dissolution of the bonds of public order among the Communists' enemies; and (c) the multiplier effect of organizational key positions.

Unlike the strategic concepts developed by Blanqui and Tkachev, Lenin always insisted that Communists could not succeeed unless they managed to move and control large masses. They count on being able to mobilize a considerable part of the masses under Communist leadership, although under non-Communist slogans and appeals (e.g., land for the peasants, nationalism, democracy). Other masses they seek to neutralize, that is, to move to indifference with respect to the struggle, thus denying their support to the enemy. These principles are formulated in the concept of "alliances" and "neutralization" which first emerge in Lenin's "Two Tactics."

The Communist concept of "revolutionary situation" focuses on the kind of general crisis which would loosen the bonds of allegiance, loyalty, and order to such an extent that a minority can prevail against an enemy of otherwise superior strength. "Only when the 'lower classes' do not want the old way and when the 'upper classes' cannot continue in the old way, then only can revolution conquer" (Lenin, "Left-Wing Communism"). In other words, troops, police, public institutions, laws, and funds are all of no avail when two things coincide: Panicky ineptness on the part of the rulers, and lack of confidence and discipline on the part of the masses. A power structure is never stronger than the immaterial bonds holding it together. When the will to rule is gone and the will to obey weakened, power disintegrates.

The multiplier effect of organizational key positions is envisaged in the concept of "transmission belts," organizations existing for ordinary, everyday needs and ends in which relatively small cadres of Communists could wield power over vast parts of society. Without changing the raison d'être of these organizations and their appeal to the membership, the Communists in key positions would use these structures to further the strategic interests of the party.

THE USE OF FORCE

Communists believe that the class struggle can neither be fought nor won except by force. In keeping with their basic assumption that theirs is a position of weakness, however, they have used force sparingly, though systematically. Above all, force is never used apart from political persuasion and organization. A direct frontal attack on enemy positions by force is not in the Communist concept, which is based on the axiom of the adverse ratio of power. The strategy is one of loosening, undermining, infiltrating the enemy's power structure, and force is only one among several factors brought to bear on the loyalties of men to their present society and their present leaders. As Mao Tse Tung put it: "War cannot for a single moment be separated from politics. Any attitude * * * to belittle politics, to isolate war from politics, and to become advocates of 'war is everything,' is erroneous and must be corrected. * * * A gigantic national revolutionary war as ours cannot succeed without universal and thoroughgoing political mobilization" ("The Protracted War").

This principle has clearly guided Soviet practice. The Soviets have seldom sought a direct decision mainly by force. In most cases, they have employed force for its terror (threat) effect. Especially against other nations, the Soviets have preferred to use pressure for which military force provided merely the background. While brandishing a sword, they have nevertheless played on their victims' fears, reason, and moral convictions, and have obtained something like "voluntary" surrender based on such motives as resignation to the inevitable, assent to the values invoked by Communists, and fear of dire consequences.

It should also be remembered that Communist leaders acquire certain habits in the long school of internecine party struggles through which they have to pass before they get to the top. In these struggles, force is invariably used only to cap a victory already won by political means. First the opponent is maneuvered onto the wrong side of a political controversy while the ideological ground is prepared on which he can be made to stumble. By a series of maneuvers, the impression of an irresistible momentum is created, which causes the weight of numbers to shift against him. An open debate is used to force him into an admission of his error. Then, only then, does force enter into the picture. These tactics have only superficially changed since Stalin's death.

One must assume that the habits of these methods condition Communist leaders also in cold war operations, although in international relations, the disposal of an army-in-being introduces an instrument of force which is not available in party conflicts. Khrushchev's performance just before and after the abortive summit conference seemed to be an almost direct application of tactical principles learned in fighting party rivals. He prepared the ideological ground, he thought he had Eisenhower on the wrong side of a controversy, and his only miscalculation was to assume that the world would or could be united in indignation against American aggressiveness.

In general, it would stand to reason that the Soviets would incline not to commit their armed strength to expenditure in a head-on clash, but rather to use it as if it were a bank reserve. In other words, armed power would for them be more useful as an untouchable reserve enabling them to handle vastly more capital of political power than bayonets would yield if engaged directly.

THE STRATEGIC OBJECTIVE

The aim of Soviet strategy has been conceptually formulated by Stalin through the term "overwhelmingly superior strength." This concept should be taken quite literally. It connotes an edge in military, political, and social power which has overwhelming effects on those on whom it is brought to bear. Once "overwhelmingly superior strength" is attained by the Soviet, they would expect to be able to talk other countries into submission, one by one. Their methods in the case of the Baltic Republics are quite instructive as to how they would expect to accomplish this. Stalin also described the strategic objective in terms of converting the present "capitalist encirclement" into "socialist encirclement," which amounts to the same thing as "overwhelmingly superior strength." Since Stalin's death, Khrushchev seems to have come to the conclusion that the "socialist camp" is no longer "encircled," but is not yet strong enough to "encircle" the capitalist world.

CHANGE IN STRATEGY

From 1943 to 1953, the Soviets used a strategy of territorial expansion, pushing into areas which were indifferently held by the West. In response to this strategy, a tremendous strengthening of the Western Powers of resistance occurred. The West rearmed rapidly and effectively and established a series of alliances which led to the deployment of Armed Forces around the periphery of the Soviet orbit. The armed and organized strength of the Western Powers now constitutes the single most effective obstacle to Soviet policy. It is so formidable a power structure that the Soviets, in keeping with their strategic doctrine, are not likely to contemplate a direct attack on it.

Since 1953, they have therefore concentrated on methods of indirect attack against the Western Power position. These methods follow, by and large, the pattern of the strategy they have used in most situations: The mobilization of large masses, simultaneously with the neutralization of other masses; attempts to deprive the ruling elements in the West of both will and capacity to govern, and the ruled elements of the will to abide by established leadership; endeavors to occupy organizational key positions.

The appeal to masses of people has been made chiefly under the slogans of peace and disarmament, which proved quite suitable for this operation in the Russian revolution in 1917. National independence and eco-

nomic development are other mass appeals. The fear of atomic destruction has been the main device by which the Soviets have sought, with considerable success, to promote neutralism, that is, to move both masses of people and national governments to indifference in the struggle.

The will and capacity of the governing elements of the West has been attacked mostly through civil wars, as, e.g., in Greece, Iran, China, the Philippines, Malaya, Vietnam, Algeria, etc. It would stand to reason that the recent riots in Korea, Turkey, and Japan are another phase of the same pattern. Another form of attack against the capacity to rule is the fomentation of international tensions and quarrels in which the Western will-to-power is challenged, as, e.g., in the Near East and Latin America. Each of these attacks aims, in a different sense, at the wills of both ruling and ruled elements, with the objective of producing a process of disintegration resembling what the Communists call a "revolutionary situation."

The occupation of key positions has been the least successful part of Soviet strategy. The Soviet plan for the reunification of Germany by means of a commission composed of East and West German Government representatives is obviously designed to deliver key positions in a unified Germany into Communist hands. So have been their attempts to obtain recognition for Communist China and Communist Germany. Communist infiltration in front organizations as well as governments is, of course, an old method.

THE INDIRECT ATTACK ON WESTERN MILITARY STRENGTH

The armed might of the free world is not any more of an obstacle for the Soviets than was the czarist army in 1917. Insofar as it is strength in being, to be potentially used, it commands utter respect, a respect which no Communist is ever likely to set aside. But Communist strategy is designed to prevent the use of existing armed strength, and, by political means, to disintegrate its very existence.

The indirect attack on Western armed strength would be successful if the Soviet Union could get the key nations in the Western alliance system into one of several moods that would deprive them of the will to contemplate the use of their arms. While these moods would, naturally, vary with the circumstances, they might resemble the following:

(a) The concrete issue at hand is not worth fighting over.

(See France, 1940: "Why fight for Danzig?")

(b) In an atomic age, the use of armed force is immoral.

(c) The enemy is too strong; we cannot win.

(d) Fighting is useless; even if we win, the enemy will prevail in the long run.

(e) We dare not fight, because we have not the right to impose our society on others.

(f) The other side represents the up-and-coming force in history while we, historically speaking, are have-beens.

Once any one, or a combination of such moods would prevail in the governing circles of the key nations, the Soviets could turn to the task of detaching one or several of the minor allies. They would seek to promote any one of the following impressions:

(a) In a showdown, the United States will not come to your help, except when it is too late.

(b) The Western alliance system has already begun to dissolve, sauve qui peut.

(c) Allies are subject to atomic extinction, while neutral nations will be safe in case of war.

If such moods should result in the breaking away of a number of minor allies, the resulting effect of growing isolation could again be used to promote deepening gloom in the key nations and thus to paralyze their will to consider their own armaments as something of potential use.

Another method of indirect attack on free world armed strength is to create the impression that the entire conflict is over, in one way or another. With the cause removed, the possession of masses of armaments in an age of atomic weapons is then likely to be considered a liability rather than an asset. Disarmament would become the preferred policy and might be so eagerly sought that unilateral disarmament and disengagement might appear to some governments the supreme counsel of wisdom.

The impression that the conflict is over could be promoted in one of several ways:

(a) The free world might possibly be persuaded that the changing balance of power has at one moment definitely tipped in favor of the Soviet camp. Such an impression could be promoted by means of spectacular feats of military weaponry, as well as by economic statistics coupled with displays of alleged productive power.

(b) The free world might be convinced that the overwhelming majority of the world's population has definitely embraced the Soviet order, so that the complete communization of the world is only a matter of time.

(c) The impression that the conflict is over could also be created if the United States (or one or several of the other key nations in the free world) should, by establishing an understanding of friendship and agreement with the Kremlin, signify to the world that the days of resistance to the Soviets are past.

IDEOLOGICAL LEVERS

In all these strategies, the Soviets make use of a number of ideological levers with which they hope to pry loose the power structure of the free world. These levers can best be identified in terms of the concepts to which they are attached:

(a) Peaceful coexistence, as formulated by Khrushchev at the XX Party Congress. This includes the ostentatious abandonment of the inevitability of war concept, the doctrine of peaceful competition, the prospect of the peaceful victory of socialism.

(b) Imperialism, or the wickedness of the power of the West. The rule of the West represents supposedly exploitation, greed, selfishness, oppression, and war.

(c) Socialism as the wave of the future. The momentum of history moves against the Western World and favors both socialism and the colonial peoples.

(d) The greater efficiency of the Socialist system. Soviet Russia allegedly has made greater achievements than any capitalist country, as attested by its supposedly higher rate of economic growth and more advanced military weapons.

(e) Disarmament, as the key to enduring peace. Permanent peace between nations is possible and depends only on a universal disarmament pact.

STRATEGIC FOREIGN POLICIES

In order to be able to influence and manipulate world events with the help of these ideological levers, the Soviet Union seeks to create, through its foreign policies, repeated situations which favor the application of ideological leverage. The method can best be characterized as push-and-pull, a violent rocking movement from peace to war, tension to relaxation, accusation to conciliation, with the intent of loosening the fabric of the Western order on which the armed strength of the West depends.

This is achieved by repeated international crises, none of which is an end in itself. The crises, which might of course yield some kind of windfall gain for the Soviets, have the main purpose of shaking the confidence of the West in itself, deepening its sense of guilt, increasing its fear of war, and quickening its desire of final agreement with the Soviets. Each crisis would be followed by offers of settlement, agreement, and relaxation of tensions. The objectives, which in each case (including Berlin) are tactical rather than strategic, could be any of the following:

(a) To maneuver the West into repeated situations where it becomes persuaded that it is defending an unjustifiable cause (e.g., Berlin looked upon as an abnormal situation).

(b) To increase, for a period, and over some concrete issue, the fear of total atomic war, and to put governments under the strain of having to face the ultimate decision. The repetition of such moments could lead to nervous exhaustion.

(c) To repeat the basic moral charges of "imperialism," "militarism," "warmongering," "Wall Street wire pulling," "exploitation," and "colonialism" against the West.

(d) To display publicly the Soviet "will to peace," to insist on the practicality of peaceful coexistence and disarmament.

(e) To move the West nearer to an overall settlement with the U.S.S.R., implying "peaceful acceptance" of the Soviet empire and its interests.

The strategy of Soviet foreign policy consists in the plan to bring about, by a series of such tactical engagements, the gradual self-demobilization of the anti-Communist bloc.

SOME REQUIREMENTS OF WESTERN STRATEGY

At this point, only a few scattered conclusions will be drawn from the above analysis of Soviet strategy.

One conclusion is obviously that Western military policy should not be designed in purely military terms. Given the strategic outlook of the two main antagonists, an about atomic war is not likely. Defense arrangements are rather likely to have considerable significance in the context of political warfare. A good case can be made for the thesis that the pattern of Soviet military policy has been designed as much for maximum political rather than purely military effect. We could not, of course, imitate the Soviet Union in this, since our political objectives are quite different from those of the Kremlin. But we would do well to realize that a most important, if not at present the most important, utility of our military preparations is their effect in countering the enemy's indirect (political) attack against the political foundations of our defensive strength. In other words, we have to learn something that is quite alien to our way of conducting our national affairs: the strategy and tactics of a special kind of limited war, the cold war.

Defensive cold war strategies include plans to keep our military capability from falling below the balance point, to guard and maintain our fighting will, and to cultivate the solidarity of the free world alliance system.

Offensive cold war strategies would aim at a reduction of Soviet power, at the recuperation of territories and peoples which have fallen under Communist rule, and eventually, at the ousting of communism from all centers of public power.

As we guard our military capability from falling below par, we should remember that political reputation for superior power is, both in Soviet eyes and in the logic of cold war operations, more important than the actual test of capabilities in open warfare. It would therefore seem highly advisable not to underestimate the effect of spectacular achievements suited to keep up the world's respect for our technological prowess.

As this would surely imply a continued arms race, a word may be in order about the contribution of arms races to the outbreak of wars. In both World Wars, arms races

played an important role in the timing of hostilities. Significantly, in both cases the armaments of the two sides were not balanced when hostilities broke out. One side still had a considerable advantage, with the prospect that the balance would be restored 2 or 3 years later. The fact that both of these wars broke out before the balance was achieved suggests the possibility that they would have been avoided had a balance of armed strength been maintained. At any rate, neither war supplies evidence that a continued, even though actively competitive balance in armaments must issue in open hostilities.

A far more difficult task is the guarding of our defensive will against deterioration. Under the present conditions of public opinion, it would seem a rather hopeless task to try to get ourselves into a mood where we will bravely face atomic destruction in order to defend ourselves against the Soviet Union. The public has been too deeply saturated with the fear of indescribable horrors which the use of atomic weapons of mass destruction would bring about. Hence our continued fighting will depends decisively on the development of both clean and tactical atomic weapons. It is not so much the desirability of "limited wars" which should prompt us to develop such weapons with utmost speed, but rather the need to regain our own willingness to use modern weaponry at all. The destructive power of fission and fusion exists in our age. The problem is to get it under our control, instead of allowing it to master our will.

Apart from this, our defensive will must be guarded by a continued effort to recognize the Soviet threat for what it is, and to beware of all temptations to enter into a summit agreement that would in fact amount to a "peaceful acceptance" of the Soviet Empire.

In maintaining the solidarity of the alliance system, the deployment of our troops is of decisive importance. Our presence has a deep psychological effect. After all, nations closer to Russia than we continue to be our allies mainly on the strength of their confidence that we will fight at their side from the first day, and on the spot where they may be attacked.

Our willingness to risk a fight may need periodical demonstrations. The action in Lebanon was such a demonstration, and had a powerful effect. Reversely, our inaction in the case of Hungary has done us much harm. What was required was not necessarily a military intervention, but something other than the hands-off attitude we then adopted, because an important part of the allies on whom we can and must count is found behind the Iron Curtain, where the captive peoples act as a deterrent that may well match the atomic bomb in effectiveness.

Offensive cold war strategies can and should not be discussed in a public document. It may, however, be said that some public preparations must be made before we can think of engaging in offensive cold war strategies. First among these is a reversal of the public sense of historical momentum.

The Communist view of history has been allowed a virtual monopoly in the modern world. According to that view, we represent the (already half dead) past and the Communists, together with the colonial peoples, the budding and hopeful future. We must restore to the Western World a sense of historic reality. To this end, we must place the Soviet power itself into the perspective of history and begin publicly to envisage a world that has been delivered from the Soviet threat. We must begin to speak of a future beyond communism, of things as they would be when Communists have been toppled from their dictatorial seats of power, of the development of their social and political legacy toward justice and freedom. We must display public confidence that we shall see this day, and see it without total atomic destruction.

We must also publicly develop a concept of genuine peace. We seem to have left this term to the Soviets as their exclusive possession. At any rate, we have not spelled out, in fairly precise terms, under what kind of conditions peace could be restored. We no longer specify certain political terms in Central Europe as prerequisites of an acceptable order. We also should, for our own use, have a list of priorities of things we should like to accomplish internationally, as opportunities offer themselves. Such a list could begin with items like "free access to Berlin" and culminate in items like "non-Communist governments in all satellite states."

We must publicly counter the impression that has been created by a barrage of false and misleading Soviet economic statistics. The Soviet Union has not accomplished anything that can compare with the accomplishments of Western nations, both in the past and the present. Their claim to efficiency as a social and economic system must not be allowed to stand.

Our chances of winning a limited war fought by political strategies and tactics are excellent. But, first, we must develop the will to win this war. At present we have at best a will to survive.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. MILLER of New York. Mr. Speaker, as part of the Task Force Studies on American Strategy and Strength, I place in the CONGRESSIONAL RECORD, study paper No. 21: "An Examination of Partisanship and Bipartisanship in National Security Matters," by a symposium of political scientists:

AN EXAMINATION OF PARTISANSHIP AND BIPARTISANSHIP IN NATIONAL SECURITY MATTERS

(By a symposium of political scientists: Professors James Atkinson, Karl Cerny, William Y. Elliott, Ivan Hinderaker, Karl Lamb, Stanley Parry, Howard Penniman, and Robert Loevy (secretary))

The problem of opposition criticism tempting the Russians into thinking we are not adequately defended and ready to fight—what might be called the criticism deterrent crisis—is the subject of this paper.

The paper is divided into two parts.

Part I was prepared by Robert Loevy of Johns Hopkins University, who acted as secretary for the symposium.

Part II represents the ideas which flowed out of the discussions and comments, based on Part I.

PART I

Intercontinental ballistic missiles that fly halfway around the world in 30 minutes have rendered as obsolete as the cross bow the American pastime of indulging in great internal disagreements. Gone forever are the happy days when the protective expanses of two great oceans assured the United States a large measure of leeway for internal bickering. Unrestrained freedom of criticism and other political luxuries which could be tolerated during the isolationist period today must be reevaluated to make sure they are not endangering national security.

The psychological deterrent

Irresponsible opposition criticism which casts doubt on the credibility of our military deterrent is one political luxury which could lead to national disaster. The philosophy of deterrence is based on two principles. The first is that the United States must have the military capability to destroy the great majority of Russian military targets and industrial centers should the Soviet Union be foolish enough to start a third world war. The second principle is to make sure Russia knows we have this deterrent capability and that we are ready and willing to use it. This second principle is commonly referred to as the psychological nature of the deterrent or, more simply, the psychological deterrent.

In addition to convincing the Kremlin that attacking the United States would be national suicide, the psychological deterrent serves the function of convincing our allies in Western Europe, the Middle East, and Asia that we are able to defend them from Communist aggression. If these allies should ever come to doubt our ability in this sphere, our vast system of collective security alliances, such as NATO and SEATO, would be in serious danger of disintegrating, thereby leaving the United States to face Russia alone.

The psychological deterrent must also be maintained so that the uncommitted nations of the world do not begin thinking Russia is going to be the eventual victor in the cold war. Such an illusion of U.S. weakness might tempt these nations "to jump on the band wagon" and prematurely join the Communist bloc.

Past failures of the psychological deterrent

History abounds with examples of nations who failed to maintain the psychological side of their deterrent and as a result found themselves in the middle of a shooting war. In 1914, when a crisis developed between Austro-Hungary and Serbia, Russia failed to make crystal clear its intention to come to the aid of Serbia. This failure of Russia's psychological deterrent led Austro-Hungary to expect that Russia would back down if Austro-Hungarian troops were rushed into the crisis area. But Russia did not back down, and the way to World War I was paved through a needless miscalculation.

The successful Japanese attack on Pearl Harbor in 1941 could have been avoided if the United States had let Japan know of the advanced state of her air-defense radar. Japanese admirals stated after the war they would never have struck at Pearl Harbor if they had known detection would be so easy. It is one of the grim ironies of American history that our radar picked up the incoming swarms of Japanese dive bombers but no one paid any attention to it.

The Korean war was another conflict which the United States could have avoided if full use had been made of the psychological deterrent. In outlining in 1950 the perimeter which America would defend in the Far East, Dean Acheson, then Secretary of State, made the mistake of excluding Korea. The Communists calculated from this that the United States would not intervene if they attacked South Korea. The end result was 100,000 American casualties and billions of American dollars spent to rectify an unnecessary Soviet miscalculation.

Damaging effects of criticism

These historical examples illustrate clearly that it does no good to have deterrent capability if you do not also take concrete steps to see that the enemy knows you have this capability. A serious problem arises here for democracy in terms of freedom of criticism. When the party-out-of-power criticizes administration defense policy in

order to agitate public opinion, it gives the impression that our defense capability is not adequate. Such criticism, especially when it is unwarranted or untrue, has the effect of damaging our psychological deterrent and tempting the Russians to begin a nuclear war.

Opposition criticism is particularly destructive when it attacks the administration defense program on a piecemeal basis, pointing out shortcomings in one field without pointing out our advantages in other fields which compensate for these shortcomings. Thus critics dwell on the small size of our ground forces, creating an impression that the United States would come out second best in a limited war on the ground. What they fail to note is that the superior mobility of our war machine—in terms of landing craft, troop planes, and helicopters—is sufficient to make up for the relatively small number of actual combat soldiers. Also the troops of our Western European and Asian allies should be added to ours when making any comparison with Soviet Russia.

In the defense debate in the spring of 1960, opposition critics way overemphasized a leaked statement repeated by newspaper columnist Joseph Alsop that "150 Russian ICBMs could wipe out every American missile base and SAC base, thus destroying the U.S. deterrent." The article failed to add, however, that even if the Soviets had such capability, they would still have to take care of nuclear bombers launched from aircraft carriers and nuclear missiles launched from soon-to-be-operational Polaris submarines.

The problem of unity

The destructive nature of irresponsible opposition criticism is not limited to the military field. It also can destroy the national unity and firmness which the United States needs to maintain on the diplomatic front. Russia would never attack a United States whose people, politicians, and allies were firmly united. But the Soviets would be sorely tempted to attack if the United States erroneously gave the impression that her people are disunited, vacillating, and would be undecided on just how to meet such an attack. Here again recent history provides several examples of when American strength and unity were questioned at exactly the wrong time.

On election eve in 1956 the Suez crisis in the Middle East demanded national unity at home as well as firm diplomacy abroad. At that time Adlai Stevenson launched a violent attack on the Eisenhower program and called for a return to the policies of the previous administration. Mr. Stevenson charged that Eisenhower-Dulles policies had collapsed. He charged that the West was divided and predicted that the President, if he won, would not live through his next term. Naturally, this caused alarm in Europe and hindered unity within the Western Alliance.

About a year ago Dean Acheson was the principal author of a pamphlet which painted a picture of disunity within the free world and claimed that our position in the world and our alliances were dissolving "as just a hundred years ago men watched the Union dissolve." The release of this pamphlet was timed to coincide with the week that the NATO ministers were meeting in Washington to reaffirm unity and solidarity. The Berlin crisis had begun, and it was necessary to our diplomacy to present Khrushchev with the picture of a united NATO. And yet Acheson turned his efforts to propagandize the line of disunity.

This statement by Acheson was described by the Washington Star as "a massive exercise in irresponsible nonsense" and brought the following comment from Mr. Arthur Krock of the New York Times:

"Since the council includes former President Truman, Adlai E. Stevenson, and a few Democratic Governors and Senators, this bitter attack on the administration's foreign policy that it authorized, for publication in the week the Ministers were gathering, might have had that deplorable consequence in the midst of the Berlin crisis. * * * Yet not only was it authorized for release, and at this time, by the distinguished council. It is the product, specifically, of the group which is the voice of the council in foreign policy matters, and the editor and principal author of this group's pamphlets is Dean G. Acheson, former Secretary of State."

The problem of leaks

Not only does overzealous criticism give our enemies erroneous estimates of our strength and wreck Western unity, but it sometimes results in critical security information being leaked to Russian intelligence. The best example of an improvident leak by a Congressman occurred during World War II. Through the incredible good fortune of breaking the Japanese naval code, the U.S. commanders were able to read every order transmitted from Tokyo. This advance information had much to do with preparing the way for the United States' great victory in the Battle of Midway. But some incautious member of a congressional committee or its staff leaked the information to a reporter, and 30 minutes after the next edition of his newspaper hit the street Japan changed her naval code and all further advantage was lost.

Leaks force out more information

After the irresponsible opposition has spilled the beans and leaked security information to the public and the enemy, the administration is forced to move in and clean up the mess. In doing so it often has to release more security information or clarify that which was previously leaked. This is done so the administration can set the record straight and adequately defend itself. In the process Russian intelligence agents pick up much useful information they might otherwise not have obtained.

An example of this occurred in the spring of 1960 when the administration was under attack for having too few ICBM's in relation to Russia. To defend itself, the Defense Department was forced to release classified information gained by our intelligence agents concerning the current state of Soviet rocket forces. This information revealed that the Russians were burying their missiles in well-protected underground launching pads instead of leaving them in a vulnerable position on surface launching pads. As a result of this expensive burying, Russia had fewer missiles than the opposition had irresponsibly claimed. In the process of revealing this, however, the administration had to reveal secret information that should best have remained classified.

Opposition criticism often puts the administration in a seemingly bad position because patriotic public officials refuse to release critical security information in order to defend their policies. Certainly no American administrator would want to give away key national defense secrets simply to maintain himself politically. The bind is particularly hard on the party in power because in many cases you have to know what the security information is in order to understand why it was classified.

The U–2 affair

The recent capture of one of our U–2 intelligence planes by the Russians illustrates this point. During the defense debate in the spring of 1960, the Eisenhower administration could have defended its military policies very adequately on the basis of information gathered by the U–2 in its high level flights over the Soviet Union. To do so, however, would have exposed to the Russians and to the world an aerial surveillance program about which we had to maintain rigid secrecy. The Eisenhower administration thus had to take it on the chin from its critics, unable to defend itself without endangering the entire U.S. intelligence effort.

Problem based in U.S. politics

Any attempt to solve the problem of irresponsible criticism and the psychological deterrent runs into trouble because freedom of speech and freedom of criticism are at the very backbone of the American governmental system. The way we get things done in this country is to use free discussion to mobilize public opinion and thus produce a popular mandate on a particular governmental action. American politics—and this includes the Presidency, the Congress, and State and local government—has been rightfully described as a "gab shop." This dependence on the revelation of information is one of the great strengths of the American political system. At the same time it is the single greatest threat to the credibility of our psychological deterrent.

Most American politicians have a tendency to way overstate political arguments in order to agitate public opinion and thus get Goverment action. This is known as the consensus-building process. Every Congressman is aware that often you have to scare the people with terrorizing overstatements in order to get the consensus going. The endless leaks of secret information are thus not really evidence of blabbermouthed irresponsibility but attempts by the opposition to force an issue to decision or outflank an opposing point of view. Steeped in our traditions and customs, it is these consensus building distortions that do the greatest damage to the psychological deterrent.

Distortions from the compromise system

The U.S. political system is also firmly based on compromise. This has created a tendency for American politicians to overstate their arguments so that the compromise consensus reached is close to the politician's original position. Here again statements and press releases become distorted and shed doubt on the credibility of the deterrent.

The need for security puts a horrible strain on the politician brought up under the American tradition of seeking publicity whenever and wherever possible. Unfortunately, the most critical security information is also that which will get the best press run throughout the news media of the country. The temptation is often too great to bear. Congress and other American legislative bodies simply are not the sort of organizations that lend themselves to keeping secrets and maintaining tight security.

Political campaigns create worst abuses

The worst offenders along this line are not Congressmen working hard in Washington but members of the opposition party campaigning for political office, especially Senators campaigning for a presidential nomination. The greatest abuses appear in quiet campaigns where the various candidates are searching for jarring announcements with which to draw attention to themselves. In extreme cases, Congressmen who support the administration on the House and Senate floor become critical and indulge in gross overstatements when they hit the campaign trail.

Another group often found guilty of distorting defense and diplomatic criticisms is the opposition party's advisory committee. The party rank and file as well as the party's congressional and senatorial delegations have little control over this independent group's irresponsible statements and is often embarrassed by them. Other offenders are military men and defense products manufacturers who endeavor to increase military appropriations by frightening the country with

overdone announcements on the weak state of our defense.

A rare problem but one that does have to be handled from time to time is the occasional Congressman or politician who deliberately fosters a reputation for vindictiveness and has an utterly ruthless disregard for the restrictions of security and the psychological deterrent. Fear, especially the hopeless fear of inappropriate and unreasoning reprisal, is their means to power. These people purposely cultivate the impression they will stop at nothing—even when it means ruining the faith of the American people in their leaders and wrecking Western unity.

Although security leaks by Congressmen hurt the defense effort and help Russian intelligence agents, it is questionable whether rash overstatements by campaigning politicians give the Kremlin any useful information. Soviet intelligence probably compensates for overstatement in American political campaigns just as most intelligent voters do. There is real danger from these overstatements, however, because of the impression they create on world opinion.

Campaign statements do not stop at the American border but are picked up by the various news agencies and sent all over the world. Foreign readers do not understand the U.S. tradition of overstatement in politics, take the distortions seriously, and begin thinking our defenses really are inadequate. This does severe damage to the confidence of our allies in our ability to defend them. It also injures the impression of military strength the United States must maintain among the uncommitted nations.

Also the foreign press, a portion of it biased and state-controlled, does not have the United States reporting tradition of balancing distorted opposition attacks with the administration's defense. Anti-American foreign news media are quick to pick up congressional overstatements, distort them still further, and use them to create the illusion that the United States cannot protect itself. Russian propaganda agencies are particularly adept at picking up overstatements on military deficiencies and sending them all over the world.

Divisive nature of criticism

The greatest danger from irresponsible statements during political campaigns is that they divide the American people on the defense issue and rob them of the self-confidence and unity they need to compete with a totalitarian enemy. The Russians have an active policy of trying to split U.S. public opinion at home and the Western Alliance abroad. Their psychological attack is designed to play on our nerves and tempt some fainthearted Americans into advocating appeasement. The opposition plays into Russia's hands when it uses unwarranted criticisms that help foster such a split.

The Communist shelling of Quemoy and Matsu during 1958 was a direct maneuver on the part of the Kremlin hierarchy to divide Western public opinion, both within the United States and within NATO. The opposition played into Russia's hands at this time by calling for the administration to abandon protection of the offshore island defenses of Formosa. An opposition politician, trying to win votes for his party's 1958 congressional candidates, advocated the United States "get out and stay out" of these islands and press for Nationalist Chinese evacuation as well. The false impression of American disunity thus created was probably viewed with elation by Moscow.

In June of 1960 the Soviets attempted to use the U–2 spy plane affair to discredit the United States in the eyes of her allies and the uncommitted nations. Fortunately the initial reaction of the opposition party was to rally to the support of the Government. An opposition Congressman, Representative CANNON of Missouri, rose on the floor of the House and explained that the opposition-controlled Committee on Appropriations had known about the U–2 flights and approved of them. He also complimented the administration for maintaining an excellent intelligence operation and closed with a statement that the entire affair proved the ability of the United States to present a united front against an authoritarian dictatorship.

Problem faced only in democracies

If, as shown above, distortions and overstatements during political campaigns are at the very heart of the American democratic process, then any attempt to restrain opposition criticism that harms the psychological deterrent will go to the very roots of our political institutions. This is a problem that could only occur in a free society. Russia is a totalitarian dictatorship and can use her entire press and Government to convince the world of Soviet military strength.

PART II

This section of the paper presents the general views and comments growing out of discussions by the political scientists on the symposium.

The high degree of danger

Opinion was expressed in the panels of political scientists which discussed this problem that the dangers arising from the criticism-deterrent crisis are very real. The danger is based on the assumption that the leaders of the Kremlin do not understand American democratic procedures and are unable to read the lesson of American history—that the American people stand united in times of a clear external threat. This assumption that the Russians do not really understand us is proven by the recent behavior of Premier Khrushchev.

Permanence of the problem

The panels also felt that the criticism-deterrent crisis is going to be with the United States for many years to come. It will be worth our while to do some thinking about creating permanent institutions designed to lessen the danger of irresponsible political distortions to national unity.

Congress at the middle levels of power

Many political scientists argue that the present international crisis and the resultant need for security is reducing Congress to the middle levels of power. Most of the major policy decisions, they contend, are now made by military experts in the Pentagon simply because security requirements will not permit the matter to be discussed by the Senate and the House. This is a trend which should not be permitted to continue. Any solution to the criticism-deterrent problem must provide for security but at the same time not eliminate Congress from its important job of overseeing all general policy formation.

The crisis of conscience

The criticism-deterrent problem leads to a crisis of conscience among responsible critics of the administration. These people often feel it is their patriotic duty to speak out on certain aspects of our defense or diplomatic program about which they are genuinely concerned, but security requirements forbid them from doing so. Many of our most responsible military and political leaders are pulled apart by this crisis of conscience. An adequate solution to the problem must provide a way for these people to present their criticisms to the President and the Congress without violating security or hurting the credibility of our deterrent.

Any solution to the criticism-deterrent problem will naturally involve giving up some freedoms, but any freedoms given up should be given up knowingly. Continued crises such as the present one have the hidden danger of making the American people accustomed to giving up freedoms, resulting in a slow strangulation of all freedoms that may not be noticed. Thus in any instance where freedom of criticism is to be limited, an apparatus must be provided for constant review of the freedoms given up and the continuing need for doing so.

It is also necessary that any group vested with the power to try to make opposition criticism more responsible must be solidly based in the civilian rather than the military wing of the Government. It should contain members of those groups being acted upon—including Members of Congress and members of the party out of power.

The problem of accountability

Perhaps the greatest danger to democracy in making opposition criticism more responsible is that it could cut down the accountability of the party in power to the people. One of the basic principles of American Government is that the press and opposition party will serve as watchdogs and be the first to ring the alarm bell when the people holding high political office step out of line. Any solution to the criticism-deterrent problem must provide strong institutional safeguards for keeping the executive department accountable to both the Congress and the people.

The danger of drift

The problem goes much deeper than simply controlling distorted criticisms. No one in our Government is in a position to take time out and make overall policy. The end result is that decisions and the opposition criticisms of them are isolated and made on a piecemeal basis.

This hit-or-miss relationship based on handling crises as they come up has resulted in a gross mismanagement of American public opinion. Often public opinion has been built up on oversimplified issues that are not relevant. In other cases good programs are neglected because public opinion is not built up in time. This phenomenon represents the failure of both the administration and the opposition to center public attention on the right issues at the right time. The inevitable conclusion is that we must change the way we make and criticize decisions as a first step in solving the criticism-deterrent problem.

Executive-congressional relationships

The criticism-deterrent problem is also rooted in the relationship between the President and Congress. The separation of powers theory which led to the creation of an independent executive and independent legislative has partially failed. Designed by the Founding Fathers to protect freedom by having the two segments of Government check on each other, the separation of powers has served in practice only to produce discord and inefficiency in foreign and military affairs.

One problem is that military matters can become involved in executive-congressional fights and get blown out of all proportion to their real importance. Often a military question will be seized upon by dissident Congressmen and used to show the President "who really makes policy in this country." The end result is a highly publicized argument conducted in the military sphere but where military matters are not the real issue.

Separation of powers leads to mutual suspicion between the President and the Congress as to just who should be doing what in the military field. To keep an eye on the Executive, the Congress often goes messing into the minute details of military policy with which it should not be involved. At other times, Congressmen have the feeling that the President is hiding something from them and, in order to protect their

jurisdiction, try to force critical security information out of the President.

On the other hand, separation of powers causes the President to become wary of congressional cussedness where military matters are concerned and try to bypass the Congress if possible. President Franklin D. Roosevelt engineered such a bypass in the famous destroyers-for-bases deal with Great Britain early in World War II. Congress had previously demonstrated its jurisdictional jealousy by passing a law forbidding the President to sell military material to a foreign power without first getting congressional approval. Roosevelt ran an end run around Congress simply by making the destroyer deal a trade for bases rather than a straight sale of military material.

Congressional-Executive relations in the military field also break down because of the natural distrust between the politician and the professional policymaker. Defense policy specialists are often regarded with suspicion by the average Congressman. We can conclude, therefore, that any solution of the criticism-deterrent problem must make some provisions for improving Presidential-congressional relationships where military and foreign policy matters are concerned.

Possible solution I: Increased party responsibility

Millions of words have been written by political scientists on methods for increasing party responsibility, none of them optimistic. In the United States, where party labels and platforms mean little, Congressmen can easily bolt their party and still survive politically. The parties even fail to use what sanctions they do have—denial of committee chairmanships and other seniority privileges—to bring intransigent Members into line. Under our system of geographical representation, Congressmen are beholden only to a narrow section of the population back home rather than national party officials.

Sentiment was expressed in this symposium that increasing party responsibility holds little or no promise of solving the criticism-deterrent question. There is also the problem that both parties contain two wings—liberal and conservative—and it would have to be decided which wing the majority of the party is going to be responsible to.

Possible solution II: Bipartisanship

The idea that enmity and conflict between the two parties should cease when we get to the critical areas of military problems and foreign affairs is an old one in U.S. politics. From time to time, Secretaries of State, like Hay and Root, made a practice of conferring with leading Senators from the opposition party in advance of treaty negotiations. The contemporary development of bipartisan collaboration, however, dates from 1943 when Franklin D. Roosevelt sought Republican cooperation in putting over the United Nations. As much as anything, this was the result of the Roosevelt administration not wishing to experience a repeat performance of what happened between Woodrow Wilson and a Republican Congress when the League of Nations came up for ratification.

Members of both parties in both Houses of Congress were brought in on the negotiations for the United Nations at the very beginning. Bipartisanship reached its highest level when President Truman sent Republican Senators Vandenberg and Connally as American delegates to the San Francisco convention which drew up the charter. After that time the practice of consultation and collaboration became rather common—Greek-Turkish aid, European Recovery Program, North Atlantic Pact, for example—but by no means customary. Policies regarding German and Japanese occupation, Palestine, and China were entirely Executive in nature.

Bipartisanship is thus a tool which is available but not always used. Its success depends on the existence in the opposition party of a party specialist who is well versed in the particular area concerned and who is able to lead most of his fellow party members his way. Senators Vandenberg and Connally played such a role during the Truman era. As these two men went, so did the rest of the Republican Party, and bipartisanship became an efficient and workable technique.

But bipartisanship has a full share of liabilities. It can be irksome, time-consuming, tiring, and limited by the jealousies, hatreds, and status requirements which infect all human personalities. It works only when the two parties are in basic agreement on the issues concerned and can only be applied to overall policies rather than to detail work. No one put the case more strongly than Senator Vandenberg in defining the limits of bipartisan consultation:

"When and where it is possible, in clearly channeled and clearly identified projects, for the Legislature, the Executive, and the two major parties to proceed from the beginning to the end of a specific adventure, so that all are consulted in respect to all phases of the undertaking, I think it is a tremendously useful thing. * * *

"But to think that that can be done as an every-day practice in regard to all of the multiple problems of international import which now descend upon the State Department every day, in my opinion is totally out of the question."

Certainly the problem of curbing criticism that harms the psychological deterrent comes under the heading of over-all policy rather than day-to-day business. As a result, any solution of the criticism-deterrence problem should provide for bipartisan cooperation and consultation.

Possible solution III: Intraparty cooperation

Even when bipartisanship is unworkable, Executive-congressional relations can often be smothered by having the President work closely with the members of his own party in the Senate and the House. This technique is effective because, like bipartisanship, it lessens the suspicions and antagonisms inherent in the separation of powers principle. Here again the party specialist acts as an intermediary whom the rest of the party's Congressmen trust to do their thinking for them in certain critical areas. Any solution to the criticism-deterrent problem should provide for improved intraparty congressional-Executive relations as well as bipartisanship.

Possible solution IV: Increased personal responsibility

Much of the irresponsible criticism that damages the psychological deterrent could be curbed simply by appealing to the personal responsibility of Congressmen. An effort should be made to see that all Members of the House and Senate are fully informed on how unwise criticisms could lead to Russian miscalculations or wreck Western unity. Congressmen should be made aware that, whether they like it or not, their campaign statements and distorted criticisms are part of general American propaganda and have all the effects of good or bad propaganda. Congressmen are all good Americans, and the simple act of pointing out the danger to them will probably curb 90 percent of the abuse.

In the field of security requirements and leaking, Congress has proved many times in the past that it can keep secrets and keep them well. During World War II the House Appropriations Committee guarded its private secret that billions of dollars were being spent to develop the atomic bomb. Recently, it was revealed that the same committee knew of the existence of the U–2 flights for more than 4 years and never leaked so much as a hint about it. Thus, it is very clear that Congress can and will keep secrets if the reasons for classification are made crystal clear.

Possible solution V: Counterappeal to public opinion

Should even the appeal to personal responsibility fail, the administration still has one sanction available for encouraging Congressmen to curb distorted criticisms. This is the counterappeal to public opinion in which members of the opposition are chided for letting out security information and making divisive statements that help the enemy. The severe public and press reaction to opposition statements designed to sabotage NATO the day before its 1959 meeting probably did much to tone down the future irresponsible criticisms of this sort.

Many political scientists feel that irresponsible opposition criticism is not so much to blame for national disunity as is the failure of the party in power to make full use of the counterappeal to public opinion. They claim the Republicans have failed to adequately defend themselves and the country against the neutralist-defeatist position of many administration critics. Rather than trying to silence opposition criticism, these political scientists think the administration should take concrete steps to see that all irresponsible attacks are soundly countered and that the positive side of the psychological deterrent is strongly maintained on the propaganda front. In other words, there should be an offensive operation where national unity is concerned rather than just a defense.

It appears logical at this point that four of the five possible solutions outlined above—bipartisanship, improved intra-party Executive-congressional relations, increased personal responsibility, and the counter-appeal to public opinion—should be included in any proposed solution to the criticism-deterrent problem.

Concrete Proposal I

This symposium felt generally that the Republican Congressional Policy Committee take upon itself the responsibility of seeing that the psychological deterrent is positively defended whenever possible. It should attempt to do the following things:

1. See that irresponsible charges made by opposition political campaigners which harm national unity and question our defense capability are quickly and firmly answered. In particularly important areas, the committee should appeal to the publicity powers of the President for countering irresponsible criticisms.

2. Endeavor to arouse public opinion against opposition party members who leak critical defense information to further their political ends. It should also arouse opinion against those who spread disunity and defeatism at a time when unity of purpose is called for.

3. Follow a general positive policy of strengthening the psychological deterrent and maintaining national unity. Thus the committee need not wait for opposition criticism before taking action in this field.

Defense of Proposal I

Conscious maintenance of the psychological deterrent and national unity by the Republican congressional policy committee fits in with the idea that the best defense against irresponsible opposition criticism is a counterblast of your own. This solution also has the advantage that it fits in with the American tradition of the two opposing political parties taking concrete stands on the issues and letting the voters have their choice.

It was pointed out that no Congressman can command the newspaper space or position that is given to the statements of opposition party leaders. Also individual

Congressmen are not clearly identified in the public mind as party spokesmen. For this reason it is argued that the policy committee of the party in the White House should appeal to the publicity powers of the President so that the policy committee's answer will have the same strength and publicity value as the opposition charge.

It was argued that what the American people want is not to have the Democrats silenced but to be reassured that their leadership has the courage required in today's international situation. They are looking for a reaffirmation that all Russians are not 10 feet tall. This is not to say that they want soothing sirup, but that they want to be told this tremendous society we have is worth while and worth fighting for. The policy committee would take upon itself the job of providing this assurance and rededication to purpose.

It was also argued that the question is broader than simply maintaining the psychological deterrent. It is felt the U.S. Government should realize it is fighting psychological warfare in the most general sense. The concept of just a deterrent gives the idea of a defensive posture when we need to convey the idea that we are taking the offensive as well. The policy committee can help foster and clarify such an offensive attitude.

The discussants noted that our Government must remain responsible in its foreign policy and should never go so far as to stir up international chaos the way Soviet foreign policy is designed to do.

Concrete Proposal II

It is proposed for the future that a joint session of the four congressional policy committees meet with the President (or his representative) to formulate strategy on how the criticism-deterrent issue can best be handled. Such a joint session would have the following duties:

1. Encourage political campaigners not to overstate their criticisms of the defense situation or make distorted statements that would tend to damage Western unity. Foreign policy and defense matters were, by mutual consent, left entirely out of the presidential campaign of 1948.

2. Publicize around Congress the danger of questioning the credibility of our psychological deterrent. Point out clearly to the average Congressman that he is part of the U.S. propaganda machine and should endeavor to strengthen the psychological deterrent whenever possible.

3. Constantly review any irresponsible criticisms being curbed to make sure they are curbed knowingly and that we give up no more freedoms than absolutely necessary.

4. Find ways for military men and Congressmen suffering a crisis of conscience to make their views known to the President, the people, and the rest of Congress without hurting the psychological deterrent.

5. Serve as a permanent organization for producing joint Presidential-congressional national policy when sudden policy crises arise.

6. Serve as a body cutting across several committees that gets above the present piecemeal nature of defense and foreign policy planning. Abundance of time and detachment from detail would permit the joint session to take an overall view and come up with continuous policies to replace the present stopgap measures.

7. Rule on what security information can be leaked. The committee could serve as a clearinghouse for declassification through which all security information Congressmen want to release would have to pass. A code of ethics in this field could be worked out as a general guide for the joint session.

8. See that party specialists from both parties have been informed on all security matters and are kept on the inside of Government policies in the military and foreign affairs fields. In this way the rank-and-file Members of Congress would be assured that trusted members of their party know what is going on and the administration is not "pulling a fast one" on the Congress.

Procedures for Proposal II

Ideally, the joint session of policy committees would meet personally with the President, but since the Chief Executive is already overworked, some provision should be made for having a qualified member of the administration in a policy position take his place.

Both the Republican House and Senate policy committees will be members of the joint session along with their Democratic counterparts. Both the liberal and the conservative wings of both parties should be represented. Also, all party specialists in military and foreign affairs should be asked to serve.

The joint session would meet periodically to discuss overall policies and advise the President. Provision should be made for having it called into crisis session by either the President or the chairman of any two of the four policy committees.

All conferences would be in executive session, although results would be reported to the entire Congress and the people.

Defense of Proposal II

Although the contemporary need for security puts Congress at the middle levels of power, under the joint-session system specialists are kept in the know and at the top levels of power. These watchdog party specialists are an additional means of keeping the Executive accountable.

The joint session will satisfy the plea for a group in our Government to make overall policies instead of operating defense and foreign affairs on a hit-or-miss basis. Thus, joint policy committees will have a positive role of building public opinion on needed policy issues instead of a merely negative role of checking for security leaks.

Since the joint session will contain both the President and Congress, it will face the problem of military and foreign policy matters getting involved in Executive-congressional relationships.

Such a meeting of representatives of the two most powerful branches of our Government should serve to reduce suspicions, get Congress out of messing with detail, and reduce the tendency of the President to try and bypass Congress. It also should help to reduce the natural distrust between the politician and the administration policymaker.

It was observed, however, that the joint session will be stillborn unless its membership includes the real inner circle of leadership in the House and Senate. It must include people (such as the Senate majority leader) who can get a large majority of their party to support the decisions of the joint session.

The joint session will represent the liberal and conservative wings of each party, provide for bipartisanship, take into account the role of the party specialist, and strengthen intraparty Executive-congressional relationships. All these requirements were set up as necessary to smooth dealings between the President and Congress.

Attempts by the joint session to make criticism more responsible will mean much more since they will come from a bipartisan committee rather than a partisan administration. A group representing both parties can apply moral pressure and requests for increased personal responsibility of Congressmen which could never be applied by the President himself.

The need for unity

The great strength of the joint session is that it is a concrete step toward the national unity which is so badly needed in combating a totalitarian dictatorship like the Soviet Union. Previously, the American people have been able to wait for some dramatic event—the sinking of the battleship *Maine*, unrestricted German submarine warfare, the bombing of Pearl Harbor—to create the unity necessary for national survival in a time of crisis. But the time-space age will not allow the time to wait for a dramatic event to bring the Nation together with one purpose. We must have unity now, and the joint session is an institutional step in that direction.

Minority Views on Social Security Amendments of 1954

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in a further effort to understand how far we have come from the original concept of the social security program, I would like to call your attention to some of the statements made in the minority views to the report on Social Security Amendments of 1954. The report was signed by my good friends, NOAH M. MASON and JAMES B. UTT, and points up the drastic departure from the original plan and the threat such departure, which has been compounded every 2 years since, poses to our free enterprise system.

DISSENTING VIEWS ON H.R. 9366

The committee has the grave responsibility of framing social security legislation which will improve and maintain the system on a sound basis, compatible with its purpose and with our system of free enterprise.

Some of the hastily adopted amendments contained in H.R. 9366 are highly questionable and probably would not have been adopted upon mature consideration. The most important of these amendments expanding the social-security tax base from $3,600 to $4,200, are fundamentally wrong and have far-reaching implications. The inflated wage base proposals were adopted with a strong dissenting vote and mark a departure from the basic purpose and justification of social security—that of affording a basic floor of protection—and would directly impair both the ability and incentives of the individual to achieve security through the normal processes of free enterprise.

Private arrangements for security, in contrast with the sterile taxing and spending processes of social security, are an integral part of free enterprise and provide the funds for capital investment upon which our economic system is based. Private thrift and insurance purchases also provide a flexibility of protection adaptable to the particular needs of the particular family. This flexibility is impossible under social security. Furthermore, security privately achieved by voluntary action, as contrasted with unnecessary inflated compulsory social security, is compatible with our traditions and our way of life.

Thus, even though social security were in fact bought and paid for by the individual and his equities, typical of free enterprise, were preserved, it would violate our basic principles to extend its taxes and benefits beyond the levels required to meet its pur-

pose of providing a minimum floor of protection against destitution.

The bill's provisions extending the system's taxes and benefits to earnings in excess of the present $3,600-per-year limit, manifestly raise the fundamental issue of whether we shall progressively depart from the original purpose of the system. The proposal assumes that the $4,200 man requires more compulsory, publicly provided protection than does the $3,600 man. The next step, already proposed and urged, is that of providing still greater Government protection for the $6,000 man than is provided for the $4,200 man. There is no stopping point when one accepts the philosophy of more and more compulsory reliance upon the State, with the corollary of less and less reliance by the individual upon his private voluntary arrangements.

These amendments are indefensible in our opinion. The proposed superbenefits for the high-income man are incompatible with the purpose of the system. Burdening other social security taxpayers with their payment shocks one's sense of equity.

The powerful drive for expanding the wage base and providing higher and higher benefits, and the lack of public understanding of the consequences of this action, place the committee and the Congress in a most difficult position—particularly in an election year.

But the inescapable fact is that younger people, including those not yet of voting age, and millions yet unborn, must largely support benefits for persons who retire in the next two or three decades. This situation places a special trusteeship on this committee and on the Congress. For not only the purpose of social security, but the welfare of our young people and their children, strictly limits the social security benefits which can be provided for the aged through taxation of the young. We must halt the constant increases in present and future benefits, and in the taxes required to support those benefits.

It is far from certain that the present tax schedule will support the presently scheduled benefits, and still less certain that the proposed increased taxes would support the increased benefits.

It is manifest, in any event, that the proposed wage base extension would provide an unwarranted increase in benefits of persons with high earnings, who least need social security protection. It is also manifest that the unwarranted increase in benefits—and for younger people the lifetime burden of the additional social security taxes—would adversely affect individuals and our economy and would be contrary to the general welfare.

FURTHER DISSENTING VIEWS OF MR. UTT

In addition to the foregoing minority report, I wish to state it is my fearful belief that the social security tax is fast shaping up to become a secondary graduated income tax upon wages and salaries, a tax which, when its full impact is felt, will shake our social security system to its very foundation.

Fourteenth Anniversary of the Founding of the Italian Republic

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. GIAIMO. Mr. Speaker, on June 10, the Italian people observed the 14th anniversary of the founding of the Italian Republic. I am pleased and proud to bring this anniversary date to the attention of this House and to extend congratulations and best wishes to a nation of friends which has contributed so much to our culture and the culture of the entire world throughout the ages.

It was in 1948 that Italy, for the first time in the exercise of popular sovereignty, gave herself a fundamental law in adopting its republican Constitution. Italy's adoption of its Constitution, and its establishment of a republican form of government 2 years earlier, gave notice to all peoples that it was her intention to become associated with the free nations of the world.

The founding of the Italian Republic was a great landmark in the history of Italy. After the downfall of Fascist dictatorship came a political vacuum, and the Government that existed was in disrepute. It was in June 1946 that the Italian people became masters of their own destiny and chose between retaining their old monarchial form of government, or of adopting a republican form of government.

Over 22 million Italians expressed themselves at the polls on June 2 and 3, 1946, with 10 million in favor of retaining the monarchy, and over 12 million favoring a republic. On June 10, 1946, Italy became a Republic.

A year and a half later, its Constitution was adopted, and Italy began on the road of democratic progress. It is one of the largest and most progressive republics in the world, and I believe that the many advances Italy has made since the war in all fields of human endeavor has been largely due to its new form of government.

Despite the tremendous advances Italy has made in the short time since World War II, there is still much to be done. But there is no doubt in my mind that under its Constitution, with the freedoms it guarantees to the people, and with the encouragement and help of Italy's friends throughout the world, Italy will continue to grow and prosper.

The United States has close ties with Italy, and despite the intervening actions of hostile Italian Governments, it has always had a high regard for the people of Italy. Italian immigrants have contributed greatly to the growth of our own United States in helping to build this new nation. It was particularly fitting, therefore, for us to contribute toward Italy's recovery after the Second World Conflict, not only in recognition of the contribution of Italian immigrants to our own growth, but also in a reaffirmation of our friendship and of our faith in the future of the Italian Republic.

United States aid, through the Marshall plan, mutual security, the United Nations, and so many other programs, helped express the American people's friendship for a noble people who had suffered much.

On this 14th anniversary of the founding of the Italian Republic, we can be proud that we were able to extend a helping hand to the Italian people with whom we in America have such close and common ties. We can rejoice in Italy's splendid recovery and its continuing progress, and be happy to have played a small part in assisting this progress.

We can be confident, too, in knowing that the people of Italy have achieved a maturity in government and in governing themselves, and that Italy will continue to play a vital role in the promotion of freedom and peace throughout the world.

Expense Payments From the Contingent Fund of the House of Representatives

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. MACK. Mr. Speaker, I have today introduced H.R. 12707 for the purpose of assuring an independent audit by the General Accounting Office of expense payments from the contingent fund of the House of Representatives.

In proposing this legislation, I am in no sense passing on the purported disclosures made in recent newspaper and magazine articles about committee expenditures from this fund.

I have the utmost confidence in the integrity of Members of this House. Furthermore, I believe we owe it to ourselves to provide for an independent audit of our expense funds as a means of assuring that our activities are reported accurately so the innocent would not suffer with the guilty.

I do not believe we are getting the complete picture from newspaper and magazine stories which are designed to make news but which reflect on the propriety and honesty of Members of Congress. While I fully respect the rights of newsmen to report the news, and even to draw reasonable inferences from the information they are able to gather, I do not believe that such disclosures are the most accurate way of getting at the facts. Too often have disclosures of this type resulted from hasty perusal of incomplete records. When this happens I do not believe Members of Congress are accorded the same fair treatment we afford to witnesses before our investigating committees. It would be much better, in my opinion, to provide for regular and thorough study of all payment vouchers by the one agency equipped to do the job, the General Accounting Office.

More than our own reputations is at stake. We have imposed a heavy burden of taxation on the people of this country. They have a right to know how their money is spent. We demand an accounting from the executive agencies of the Government. There is no logical reason why the legislative branch should not also be held to account for its expenditures, down to the last cent.

It is unfair to burden any committee of the House with this responsibility. A committee of our colleagues has a natural reluctance to cross-examine any Member as to the details of his expense account. Fortunately, the Congress long

ago established an agency to scrutinize the accounts of all three branches of the Government, executive, legislative and judicial. The General Accounting Office is an arm of Congress. The Comptroller General of the United States, the administrative head of GAO, is appointed by the President, with the advice and consent of the Senate, for a term of 15 years. So far as I know there has never been any serious question raised as to the independence of the Comptroller General and the GAO. They are as free as human institutions can be of pressures from either the executive or legislative branches. This makes the GAO the ideal agency to scrutinize the expense accounts of House Members and committees.

The U.S. Government Organization Manual for 1959–60, on page 35, describes the GAO as follows:

The purpose of the General Accounting Office, an agency in the legislative branch of the Federal Government, is to perform an independent audit of Government financial transactions to provide a basis for the settlement of accounts and to determine how well the agencies are managing their financial affairs; in so doing, exercise the power of disallowance based on the finality of the Comptroller General's settlement of accounts and claims, and report to the Congress in special and annual reports its findings as to financial conditions in the Government. In order to accomplish its purpose, the General Accounting Office has responsibility for: performing an independent Government-wide audit of receipts, expenditures, and use of public funds; prescribing principles, standards, and related requirements for accounting to be observed by the executive agencies, and cooperating with the agencies in carrying out their primary responsibilities for the development of their own accounting systems; settling claims by or against the United States; rendering legal decisions pertaining to governmental fiscal matters; performing investigations relating to the receipt, disbursement, and application of public funds; reporting to the Congress the results of its activities including recommendations to further the effectiveness of governmental operations; and for other related functions.

Mr. Speaker, the manual, on page 36, contains this additional statement:

The financial transactions of the executive, legislative, and judicial agencies, including but not limited to the accounts of accountable officers, are audited by the General Accounting Office in accordance with such principles and procedures and under such rules and regulations as may be prescribed by the Comptroller General of the United States.

Mr. Speaker, the foregoing statement would appear to indicate that congressional accounts already come under the purview of the GAO. And so they do, except for the contingent funds. More than 70 years ago, in 1888, the Congress passed a law making the administration committees of the House and the other body responsible for final audit of payments from the contingent funds.

The bill that I have introduced today would amend the 1888 law to remove this barrier to GAO audit of the contingent fund of the House of Representatives. I purposely refrained from broadening my proposal to include the other fund because I feel that the initiative for that should come from the other body.

My bill is confined to removing the provisions of the 1888 law, and a similar 1911 statute, that inhibit the GAO from performing its otherwise statutory duty with respect to the House contingent fund. It does not specifically authorize the GAO to audit the contingent fund because the House legislative counsel advised me that the GAO already has all the authority it needs, provided the inhibitory statutes are repealed.

OASI Basically Unsound

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, since the very inception of the social security program, a far-seeing minority on the Ways and Means Committee has continued to point out some basic weaknesses in the plan. Before we vote to further increase benefits and add new programs, such as medical care, we should review some of the views stated in previous years. Among these views I would like to include some excerpts from the minority report of Hon. CARL T. CURTIS, then a Member of the House, to the report on Social Security Act amendments for 1949.

MINORITY VIEWS

My dissent from the bill reported out does not stem from opposition to a liberalized social security program; instead it arises from the fact that the bill reported out fails in some major respect to do the very things a liberal and effective social-security program should do.

The old age and survivors insurance program is a grossly unsound and ineffective tool for the social-security purposes it attempts to accomplish. Because it is so unsound and ineffective, I cannot agree that the mere extension of its coverage or a mere numerical revision of its benefit formula, such as the majority of the committee proposes, can bring about significant improvement. Instead, the very fundamentals of the program should be objectively reexamined, and to the extent that such reexamination indicates the need for drastic overhauling of the program, that overhauling should be done, even though it proves necessary to abandon completely those concepts on which the present program rests.

Social security funds are necessarily limited in amount, since they depend upon the amount of economic productivity in the Nation and the possibility of drawing off a portion of this productivity for social-security purposes that is not too large to injure the Nation's economic health. Because of this limitation, it is of the utmost importance that these funds be distributed wisely.

On frequent occasions Congress has voted a very costly program, such as in the field of veterans' legislation or housing. There is an end to such programs. They do expire. There is no end to our social security program. It runs into perpetuity. We bind oncoming generations to pay untold billions of dollars not only 50 years from now, or 100 years from now, but so long as the Government of the United States stands. It is totally unmoral.

Let us permit our children and our grandchildren to decide how much per year they of their generation will pay for social security. We should not bind them by contract to pay untold billions each year, as the present system does. The right of self-government means not only freedom from kings, tyrants, and dictators, but it means freedom from the past.

Imports of Foreign-Made Surplus Military Rifles Into United States as Sporting Guns Is Threatening American Firearms Industry

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. BOLAND. Mr. Speaker, during debate last Friday I had planned to offer an amendment, with the support of my colleague, the gentleman from Massachusetts [Mr. CONTE], and members of the Connecticut delegation in the House, to the mutual security bill in order to halt the importation in the United States of firearms which were manufactured abroad for military purposes and which are now being dumped upon the world market.

Due to the parliamentary situation at the time of the reading of the mutual security bill for amendment, however, it was impossible for me to offer my amendment because I had been advised by the Parliamentarian that it would be subject to a "point of order."

Mr. Speaker, the dumping of these surplus foreign made firearms is occurring in such increasingly large volume and at such ridiculously low prices that it is causing a serious reduction in the skills and investment of American manufacturers of firearms. The result has been a drop in arms research and development and a slowing down or abandonment of the modernization of small arms plants in the United States. If this trend is not halted, American arms manufacturers will obviously be harmed to an extent which gravely impairs their defense mobilization capacity.

In fact, the defense mobilization base of the United States has probably already been impaired by the dumping upon our markets of surplus military firearms. These firearms are virtually being given away and are dramatically reducing sales by American arms manufacturers. The J. Stevens Arms Division of the Savage Arms Corp. is located at Chicopee Falls, Mass., in my congressional district. This American arms manufacturer, producer of the famous sporting Savage .99 rifle, and other manufacturers located in Connecticut, have been feeling the pinch in sales as a result of the importation of foreign made surplus rifles. They are being sold here as sporting rifles at prices with which the American arms industry cannot compete.

These surplus rifles are coming primarily from Italy, England, Sweden, and Germany. There appears to be no end to the supply abroad; and since the United States is the only major market for these guns, the outlook for the American firearms industry is very grave indeed. European governments refuse to permit their people to buy these military rifles.

Mr. Speaker, under the munitions control provisions of the Mutual Security Act, the State Department has the authority to regulate traffic in arms. Licenses are issued by the State Department for both import and export of arms and ammunition. Under the law, the Secretary of State is authorized to issue a license if he finds that the license furthers U.S. foreign policy, world peace, and the national security. To date, the Secretary of State, applying these standards, has concluded that the mass importation of surplus military rifles does not conflict with world peace, our foreign policy or the national security.

On June 29, 1959, six of the leading American firearms manufacturers filed a petition with the Office of Civil and Defense Mobilization, asking for relief against these excessive imports of military surplus. Unfortunately, however, the OCDM decision will not be forthcoming before autumn. Meanwhile, the American arms manufacturers continue to be threatened by the dumping of surplus foreign-made military rifles which are glutting the American market and selling for prices ranging from $14 to $30 in direct competition with American sporting rifles retailing between $80 and $130.

Jet Flight Between Friendship Airport and Paris, France

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. FRIEDEL. Mr. Speaker, last Saturday, June 18, Pan American World Airways introduced a new service to the people of Baltimore which is of great interest and importance to our area. Beginning on this date, Pan American inaugurated round trip, jet service between Friendship Airport and Paris, France, marking the first time any scheduled air carrier has ever connected Baltimore with the European Continent. This service is of the highest value to the greater Baltimore area which relishes the opportunity to avail itself of the splendid jet facilities at Friendship Airport for a speedy, uninterrupted journey to the wonders and beauties of Europe.

We are reminded on this occasion of a similar pioneering feat accomplished in the thirties when the first air service to Bermuda was introduced by the famous old Pan American flying boat—the B314—which made history by its flight from Baltimore to the island of Bermuda. I commend Pan American for its pioneering spirit and its president, Mr. Juan Trippe, himself a native of Maryland, for providing this excellent service.

Mr. Speaker, I was also pleased to note that a most interesting speech was recently made by the gentleman from New York [Mr. ROONEY] regarding Pan American's aid in the Mutual Security Pact by organizing and getting airborne the Afghanistan Airline at the request of our State Department. This is indeed a worthwhile and well managed project.

West Virginia Approaches the Century Mark

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. HECHLER. Mr. Speaker, today marks the 97th birthday of my State of West Virginia.

Back in the days of the Revolutionary War, George Washington remarked:

> Give me a hundred men from West Augusta (later West Virginia) and I will plant my feet on the west bank of the Potomac and defy the world.

The mountaineers of West Virginia have lived up to that tradition.

West Virginia was born in 1863 of determination to meet a challenge—the challenge of preserving the Union. This challenge inspired men to daring deeds.

Courage is not new to the West Virginian. In fact, the entire history of the State is a chronicle of challenge and courage to meet each new difficulty.

There were challenges like that thrown down by Gov. Alexander Spottswood when he struck Golden Horseshoe medals for those hardy and brave enough to conquer the vast wilderness that lay within the mountain slopes. Or the courage of Mary Ingles, who faced incredible hardship to cross the State and rejoin her family after she had been carried off to the wild Ohio country in 1775 by marauding Indians. Or of the 29 delegates who firmly opposed secession when Virginia left the Union and even dared to hold a rump session to pledge their efforts to keep the State in the Union in 1861.

It is from this breed of men that West Virginia was born.

Today my State is faced with new, grave challenges.

A decline in coal mining employment has stripped many towns of their source of all wealth. Ghost towns have sprung up.

There are gnawing physical needs within the land. Children go without bread, and are forced to miss school because they have no shoes.

How can we cope with the serious problem of our older workers who have lost their jobs? We refuse to accept the heartless and inhuman solution of those who tell these older workers to pull up their roots and leave the mountains of their homeland.

But even worse is the problem of the flight of West Virginia's younger people, the source of future strength and vigor in any society, who have left the State for a more promising future elsewhere. My attention was first called to this problem by our own young Governor, Cecil H. Underwood, in an address to the Elks Club at Huntington. Governor Underwood pointed out that when the West Virginia State bonus was paid to veterans of the Korean conflict, 43 percent of the checks were sent to out-of-State addresses. This means that the cream of our younger people have left the State for better opportunities elsewhere.

Between 1950 and 1960, West Virginia was one of the two States in the Union which suffered an absolute decline in population. We lost over 158,000 people in this period—the largest decline among the States. We face this stark fact squarely and without self-pity. We recognize the challenge, just as our mountaineer forefathers recognized the challenges they faced.

Mr. Speaker, these are the challenges of today. Are they greater than the massive challenges of yesterday? They are not. Nor are the people of West Virginia going to surrender and abandon hope in the face of such challenges. For we are not a "dying State," as a desk-bound editor tried to characterize us recently. West Virginia, her men, her minds, and her muscle, have a tremendous potential for the future. Already bright glimmers of hope—like heat lightning flickering across a sultry summer sky with the promise of cooling relief to come—are evident in our State's affairs.

In my own Ohio Valley district, a great and diversified industrialization is gathering momentum, providing new jobs for our people. This golden area, which is just awakening to its real potential, can truly become the "Ruhr of America," and offers the true key to the State's salvation.

Our pleasant mountain areas are beginning to realize their great tourist potential, drawing thousands from the heat and pavements of the eastern seaboard.

West Virginia, 97 years old today, thus faces a confident and expanding future, rising to meet the new challenges as we have in the past.

Supplemental Views to the Report on Social Security Amendments of 1955

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in a further review of the development of the social security system, we find that in 1955 the Committee on Ways and Means reported to the House, without holding hearings and with only a limited number of executive sessions, amendments

designed to increase benefit payments from the trust fund of $2 billion a year, on the average. While most of the minority members of the committee voted to report the bill favorably, they strongly protested the failure to hold hearings. In the supplemental views to the report on the 1955 amendments we find additional warnings as to the danger to our economy of continual increases in the social security tax and the inequity which it creates. Following are some pertinent statements from these supplemental views:

BASIC PROBLEMS

Cost: In order to finance the multibillion-dollar increase in benefits contained in this bill, a higher tax schedule is provided. An almost immediate increase to 2½ percent each on employees and employer, respectively, is provided effective January 1, 1956. Each of the subsequent periodic increases provided under existing law is also increased by one-half of 1 percent. As a result the ultimate tax rate projected under the bill, effective in 1975, is 9 percent shared equally by employees and their employers. The self-employment tax, applicable to professional individuals, will become 6¾ percent at that time.

As high as these future rates are, the rates themselves do not convey a complete picture of the true burden they involve. The tax on wages is a tax on gross wages without any allowance for personal exemptions, dependents, or other deductions. The tax on self-employment income only permits certain business deductions, such as depreciation. It is, in effect, a tax on adjusted gross income. Therefore, unlike the income tax, the social security tax is not limited to net income. As a result, that tax, as a percentage of net income, is substantially higher than the actual rates would indicate. In fact, the eventual 6¾-percent rate on the self-employed would be the equivalent of a net income tax in the neighborhood of 20 percent and higher in many cases.

Let us take the example of a farmer with a net income from self-employment of $4,200 in 1975. Assuming that he has a wife and two children and uses the standard deduction, his Federal income tax under present rates, will be $276. His social security tax, on the other hand, will be $283.50. In this example, which is a completely average case, the social security tax, as a percentage of net taxable income, would be in excess of 20 percent. If the same individual had three children his income tax would be cut to $156 but his social security tax would still amount to $283.50. In such a case, the latter tax would be the equivalent of a net income tax of 36 percent. We again point out that this would be an ordinary case and not at all an unusual one.

It is estimated that in 1975 the total social security tax collections will approximate $20 billion annually, a colossal sum. Moreover, this estimate assumes continuation of existing wage levels and makes no allowance for the increase in those levels which past experience indicates will occur. The $20 billion estimate, is therefore, extremely conservative.

We are concerned over this fact, moreover, because by their very nature, the liberalizations contained in this bill will create demands for additional changes involving further costs.

We are further concerned over these ultimate costs because of the danger that they may eventually weaken or even destroy public acceptance of the social security system. A social insurance program cannot be expected to provide against all insurable risks. It must be designed to provide a basic protection at a cost within the reach of all, especially those in the lower income brackets who are most in need of that protection. Despite this fact, we are creating a scale of benefits which must be supported by a social security tax which, in the not too distant future, will be equal to and in many cases higher than the Federal income tax.

Finally, insofar as the cost of this program is concerned, we should take sober warning that, in our zeal to provide ever greater benefits and to provide against an ever wider area of need, we do not destroy the very system which we have created. We have succeeded in avoiding the full impact of the cost by shifting most of the burden to the future. At that time, the high tax rates may make it very difficult to retain the contributory principle which we believe so essential to the program. However, we would be deluding ourselves should we believe that the general revenue could be depended upon to support the system. We have already pointed out that, under the present schedule, social security tax collections in 1975 will amount to about $20 billion. If such a vast sum were financed through the individual income tax for example, it would necessitate approximately a 50-percent across-the-board increase in that already burdensome tax. These figures show clearly the magnitude of the problem we are so casually creating.

It is our earnest hope that the questions we have raised will lead thoughtful citizens everywhere to search for the answers. The social security system was created to give our people confidence and faith in their future. It should be above politics.

Hollidaysburg, Pa., Elicits Nationwide Attention Through the Success of Project 60 Which Modernized the Downtown Business Section, Thus Recapturing the Historic Charm of the County Seat of Blair County, Pa.

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. VAN ZANDT. Mr. Speaker, the completion of project 60 by the businessmen of Hollidaysburg, Pa., in my congressional district, was the source of a community celebration that included a week of festivities beginning June 13, with outstanding leaders in Pennsylvania being scheduled for programs on June 15, 16, and 17. During the week, Gov. David M. Lawrence visited Hollidaysburg and was escorted on a tour of the borough after which he delivered an address warmly commending those responsible for the success of the community effort to beautify the business district of the county seat of Blair County, Pa.

Mr. Frank M. "Bud" Palmer, general manager of WFBG–AM–TV, was the creative genius and the sparkplug in the community effort behind project 60. Bud found that his ideas received the wholehearted endorsement and support of the community's businessmen and the Hollidaysburg Chamber of Commerce whose president, William Hubler, mustered the support of his group to the extent that more than 75 percent of the businessmen and property owners in the downtown area embarked on a campaign of facelifting for their respective properties. The result was a great success and reflected credit on the sponsors and businessmen who devoted their time and efforts to attaining the common goal.

Special credit is due the Peoples Natural Gas Co., which underwrote the expense of obtaining services of Prof. Milton Osborne, the head of the Pennsylvania State University's School of Architecture. Professor Osborne was commissioned to sketch more than 75 storefronts and buildings in a 5-block section of downtown Hollidaysburg. In commenting on project 60, Professor Osborne said—

No small Pennsylvania community has attempted downtown revitalization on such a wide scope and with such unified effort.

As an example of the keen interest in the project, representatives of the fifth generation of the descendants of Adam Holliday, founder of Hollidaysburg, donated $400 to the project although they own no property in downtown Hollidaysburg. State Assemblyman Joseph R. Holliday, of Blair County, made the donation on behalf of himself, the last male descendant of the founder, his wife, daughter, and a sister and niece living in Indianapolis, Ind.

Because of weather conditions and the legislative situation on the floor of the House Friday afternoon, June 17, I was unable to leave Washington in time to appear on the project 60 program that evening when I was scheduled to deliver the principal address. Since I had prepared the following remarks for the occasion, I wish to incorporate them at this time in my tribute to all those who played a part in making project 60 such an outstanding success:

ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE CELEBRATION OF THE COMPLETION OF PROJECT 60, HOLLIDAYSBURG, PA., JUNE 17, 1960

It is an honor to be here tonight with all of you distinguished guests and citizens on this happy occasion to celebrate the completion of project 60 here in Hollidaysburg, the county seat of Blair County.

We have all heard of the marvelous job of revitalizing done on the Golden Triangle in Pittsburgh and similar projects undertaken in Philadelphia and Harrisburg.

These projects have cost millions of dollars in Federal and State moneys.

Project 60, a program of beautifying the main business district of Hollidaysburg, has of course involved a far more modest outlay of funds.

But I am sure that no Pennsylvania community of this size has undertaken a bootstrap operation like project 60—planned and executed on an entirely local level.

I would like to take a few moments to commend the leading figures in this wonderful community effort.

The originator of project 60 and the driving force behind it is Frank M. Palmer, general manager of WFBG–AM–TV.

Mr. Frank Palmer had the idea of beautifying Hollidaysburg in his mind for a long time.

As he himself has said, tearing every structure down and starting over was impossible.

Funds for a project on such a large scale were not available.

However, renovation of existing buildings did seem to him a good possibility.

Bud—as all of his friends know him—next talked with Prof. Milton Osborne, head of the School of Architecture at the Pennsylvania State University.

From an 8-inch by 10-inch photograph, Professor Osborne drew sample sketches of a plan for refurbishing the business district. The rest is history.

Bud then visited the Hollidaysburg Chamber of Commerce. They gave him complete support. Bill Hubler, president of the chamber, and the entire membership became enthused.

Bill Hubler envisioned Hollidaysburg as "one of the most unique and charming shopping centers in the East."

The Peoples Natural Gas Co., under its new program of community development, underwrote Professor Osborne's sketches for renovation of the buildings. In all, sketches were drawn for more than 75 stores and buildings in a 5-block area, and project 60 was underway.

Community response was extraordinary. The county commissioners, whose headquarters are here at Hollidaysburg, have restored some of their buildings along the lines suggested by Professor Osborne.

The borough council has cooperated generously in the project.

The fifth generation descendants of Adam Holliday, founder of Hollidaysburg, donated $400 to the project. Joseph R. Holliday, last male descendant of Adam Holliday, made the contribution for himself, his wife, daughter, a sister, and a niece.

Hollidaysburg's garden club agreed to maintain flower boxes, shrubs, and trees placed in front of many stores.

Now, ladies and gentlemen, I have been paying tribute to many individuals and organizations who have been moving spirits behind this program to beautify the business district of Hollidaysburg.

We must never forget, however, the many merchants and property owners who have participated in this renewal project by giving of their time, effort, and funds.

To all of these individuals, organizations, and the entire community of Hollidaysburg, my heartiest congratulations.

As I view this charming, quaint shopping center, a symbol of what a body of civic-minded citizens can accomplish on its own, I am certain that Hollidaysburg has fulfilled the destiny which its founder, Adam Holliday, foresaw in 1790—170 years ago.

Today this borough is peaceful, happy, untouched by the scars of yesterday's strife.

In those early years, settlement of this area, then the frontier of our new Nation, was beset by battle after battle with the Indians.

Many a pioneer perished in frightful massacres.

Only through extraordinary sacrifices and superhuman courage could the settlers, banding together, pursue their historic destiny.

Today, at this time of crisis in our national and world affairs, it is imperative that once again Americans band together toward a common goal—the goal of survival of our Nation.

True, we are not assailed by tribes of tomahawk-wielding Indians. Far worse, we are confronted with a totalitarian force which seems bent upon imperiling the peace and safety of the entire world—aggressive and godless communism.

Those qualities which our forebears exhibited during those dangerous years of settlement of western Pennsylvania—the same qualities manifested in perhaps a different way during this year of project 60—represent the moral fiber of which freedom fighters are made.

Following the recent collapse of the Paris summit conference, we may all be called upon to make further sacrifices in the cause of greater preparedness.

As President Eisenhower said in his speech of May 26, "we must keep up our strength and hold it steady for the long pull."

And speaking of America's policy of strengthening freedom President Eisenhower further stated, "We must do far more than concern ourselves with military defense against—and our relations with—the Communist bloc."

"Beyond this," he finally said, "we must advance constructive programs throughout the world for the betterment of peoples in the newly developed nations."

Therefore, the community spirit which made project 60 the tremendous success we see before us here in Hollidaysburg must be infused throughout the entire Nation.

And that sense of destiny, which earlier sustained our Pennsylvania pioneer forebears, must guide our entire Nation in its never-ceasing efforts to keep the free world truly free.

As I close, Mr. Chairman, let me congratulate again each and every one of you who participated so magnificently in project 60.

This undertaking of the citizens of Hollidaysburg is truly a thrilling example to the rest of Pennsylvania, and to the entire United States, of the achievements of concerted action at the community level.

In thanking you for inviting me to participate in this evening's program, let me urge you to keep up the good work because your efforts here are not only helping to build a better community, but also a better Nation.

1958 Report on Social Security Amendments Proves Early Assumptions Wrong

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in previous insertions in connection with our review of the progress of social security legislation, I have included excerpts from minority views to committee reports, warning that the actuarial soundness of the program was open to serious question. Contained in the committee report, generally, were assurances that assumptions based on future earnings and benefits proved the program sound. However, when we reach the 1958 report, we suddenly find that the assumptions did not prove accurate and the committee had to come up with a recommendation for an increase in the wage base to be taxed in order to reduce the actuarial deficit. To complete the record on a study of the concern of the committee over the soundness of the program, I would like to include the following brief excerpts from the committee report on Social Security Amendments for 1958:

The old-age and survivors insurance benefit structure and the contribution schedule by which the benefits are financed have not been revised by the Congress since 1954. Since that date there have been significant increases in wages and prices; also, new cost estimates have shown an increase in the actuarial deficit of the program. In the light of these developments, it is imperative that the Congress take prompt action to assure that the program be kept both effective and actuarially sound.

The latest long-range cost estimates prepared by the Chief Actuary of the Social Security Administration show that the old-age and survivors insurance part of the program (as distinct from the disability part) is further out of actuarial balance than your committee considers it prudent for the program to be. When the last major changes were made in 1956 the estimates prepared at that time showed an expected long-range actuarial deficit for old-age and survivors insurance of two-tenths of 1 percent of payroll on an intermediate cost basis. More recent estimates show that the old-age and survivors insurance part of the program is now expected to be out of balance by fifty-seven one-hundredths of 1 percent of payroll. Your committee believes that a deficit of the size indicated by present cost estimates should not be permitted to continue.

Soviet Russia's Vodka Diplomacy

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. PUCINSKI. Mr. Speaker, following is the speech which I had the honor of delivering last Saturday at the Department of Illinois AMVETS Convention in Peoria, Ill.:

REMARKS BY CONGRESSMAN ROMAN C. PUCINSKI, DEMOCRAT, OF ILLINOIS, DELIVERED AT THE COMMANDER'S DINNER ON JUNE 18, 1960, DURING THE STATE CONVENTION OF THE DEPARTMENT OF ILLINOIS AMVETS IN PEORIA, ILL.

My fellow Amvets and ladies of the auxiliary, this year's convention of the Department of Illinois AMVETS is being held at a time when the whole world is anxiously awaiting developments in the most crucial period of the cold war.

It is indeed fortunate that you men and women who have made such a great sacrifice in the defense of freedom and survival for democracy should be meeting here today to collectively appraise the situation which is threatening the peace for which you so desperately fought. I hope that before you leave here, you will have agreed on a program of action for our Nation which will represent the collective thoughts of those who have experienced the horror of war and who today so vividly understand the price of freedom.

Your task is not an easy one, but I am confident that because of the leadership which you are fortunate to have in the Department of Illinois AMVETS at this particular time, the program you will recommend for future action will reflect the high degree of responsibility the American people have learned to accept from your organization.

The free world today is locked in a bitter ideological struggle with those who, through despotism and brutality, are intent upon destroying man's God-given right to be free.

Not since the end of hostilities in World War II has the international arena been so fraught with tension as it is today. We are living in an era that demands the highest

degree of responsible analysis and understanding so that we can bring the world back to a concept of conduct acceptable to all civilized nations. The situation today demands extremely careful analysis because it is patently clear to all of us that one false move, one ill-conceived decision, could plunge the entire world into a nuclear war that could well set civilization back many centuries.

The free world today, with its high ideals and unyielding determination to preserve peace with dignity, is pitted against a conspiracy emanating from the Kremlin, which has made "vodka diplomacy" the order of the day.

I have no fear that leaders of the free world will do anything sufficiently provocative to touch off a third world war. But, unfortunately, we in the free world are not masters of the situation. Rather, we must endure countless humiliations and retain a degree of patience not even equaled by Job, simply because we know that the Kremlin leaders shift and pivot their own regard for peace commensurate with the amount of vodka they have consumed.

We in the free world are being forced to play "Russian roulette" with a despotic leadership in the Kremlin which has repeatedly shaken the peaceful conduct of diplomatic relations with violent threats of nuclear retaliation. I need not tell you that on any number of occasions at diplomatic receptions in Moscow, after consuming several vodkas, the Premier of the Soviet Union has made not only bold and arrogant insults against the leaders of the free world, including our own President, but also has threatened to destroy our bases in friendly countries with nuclear bombs.

The real threat to world peace is the ever present possibility that these unstable and unpredictable leaders of the Kremlin, in one of their fits of rage or outright intoxication, could very well throw the entire world into nuclear conflict.

Your responsibility, therefore, as leaders of your respective communities, is to constantly help place this entire situation in its proper perspective to our American people, because as never before, our people must understand the complex problems of the world today.

We are witnessing the ugly specter of conventional diplomatic relations being forced to surrender to mob rule. A few weeks ago we watched with horror as a wild and violent mob drove the President of Korea out of office. Only last Thursday we witnessed one of the most catastrophic diplomatic disasters when we saw our own President forced to abandon his plans to visit Japan because the Japanese Government is apparently unable to cope with mob violence in its own country.

It is important for those of us who have learned the meaning of respect and discipline as veterans to be ever mindful of the fact that mob rule is infectious. If it could happen in Korea; if it could happen in Japan; we, as Americans, must go beyond the realm of normal assumption and take cognizance of the ugly fact that it could happen here.

You, therefore, have the challenge to make sure that young people in your own communities recognize the meaning of orderly dissent, if they so wish to dissent, within the framework of standards commonly accepted in an organized society. Let there be no question about this.

The AMVETS has a history of tolerance and respect for diversity. Your organization has attracted many veterans from the armed services because they know that within your framework there is ample provision for free debate and progressive ideas. But you also have a proud history of service to the community to preserve the highest ideals of America in freedom and democracy. Now, more than ever before, you must recognize the fact that through your leadership the people of your community, especially the young people, can have a better understanding of the great complexity of freedom. I am certain that the young people in your community will not be any party to mob violence—such as we witnessed among students in Korea and Japan—if you properly orient them on the responsibility of their citizenship.

People are moved to mob violence and to forsake law and order only when they fail to understand the complex structure of the democratic process. You, as men and women who have fought so hard to preserve that democratic process in our country, must today become the ambassadors who will carry to your communities not only the meaning of freedom, but also the responsibility that goes with it to those who would enjoy it.

The AMVETS, by the very nature of your organization's charter, have a responsibility to make your collective voice heard on urgent legislation and on policy of our national administration. I hope that before you leave here this weekend, your organization will reemphasize America's national purpose and, having done that, will spell out in a series of resolutions how you believe this national purpose can best be dramatized and implemented among the growing number of Americans who, either through impatience or lack of desire, seem to have forgotten what our national purpose really is. Those of you present here today certainly know what it is because you fought so valiantly to defend it.

Perhaps every one of us present in this room may have a different opinion on the details of our national purpose. But I trust we can be unanimous in our agreement that the foundation of our national purpose is to remain free.

Freedom is built of many ingredients. In order to be able to preserve freedom, we, as a nation, must be economically strong; and to do this, we must have a normal economic growth which can absorb the increasing number of Americans coming into the labor market. Ironically, in recent years our Nation has failed to maintain a degree of growth which can give us the economic strength we need to preserve our freedom. There are still almost 4 million people unemployed, and we have many areas of our country which have been chronically depressed because of shifting industries and changing times. You must take cognizance of this and give serious thought to this problem, particularly since right here in Illinois we have four counties that are listed by the Labor Department as chronically depressed areas.

In order to preserve our freedom, we must have a strong defense establishment. This does not mean one that would tolerate or condone waste of the taxpayers' money; but on the other hand, it does not mean that in our search for economy we should deprive our military leadership of those sinews which they consider absolutely essential to preserve our Nation's survival.

You, as veterans, have a twofold responsibility. One, to ferret out, wherever you see them, examples of waste and inefficiency. But just as important is your responsibility to explain to the people in your community why the vast sums which we are spending today on defense are so urgently needed.

In order to remain free, we Americans must realize that the two large oceans which have for centuries safeguarded us from the problems of the rest of the world are today but insignificant ciphers on the sliderule of guided missiles.

Our own survival today requires alliances and treaties of mutual security with our allies. Earlier this week there were many voices raised in Congress to eliminate the mutual security program, which in the last 14 years has cost this Nation $103 billion. No one would contend that this is not a serious amount of money, but I dare say no one can deny that this serious expenditure has helped us to preserve the allies on whom we must today rely for mutual assistance should the Soviet Union be foolish enough to disturb even the shaky peace the world is experiencing. It is up to people like you to explain to those in your communities the real significance of mutual security.

In order to remain free, there is a myriad of domestic problems which we must first try to understand and then persuade our neighbors to support legislation which would help alleviate them.

Finally, in order to remain free, you must make your own voice heard in the great debate on foreign policy. This is a subject which under no circumstances should we Americans ever permit to become discussed on a partisan basis. Conversely, if we feel that our foreign policy is not achieving results which would produce better understanding among nations, we would be derelict if we failed to make our voices heard. This is the dynamics of our Republic: the ability to contribute your own views to the great discussion on survival.

Too often I have seen in Washington outright carelessness, inefficiency, or even tragically bad judgment being concealed under the guise of secrecy with excuses that full disclosure might affect our national security. Here again the situation requires extreme responsibility. It is one thing to assail our President or his administration with bitter criticism for demagogic reasons only. It is another thing to point out in responsible tones where you feel our national leaders have erred in their conduct, if you believe they have indeed erred.

I, myself, for instance, very severely criticized our State Department for inviting the Soviet leaders to this country. I said then—and I think time has proven me right—that we were wrong in dignifying them with the traditional hospitality so characteristic of us Americans. But that does not mean that today, when we have recognized the degree of our mistake in inviting these men I or anyone else should engage in reckless criticism of the President just for the sake of criticizing.

This, therefore, is your challenge: Help your fellow man to better understand the complicated world in which he lives. You veterans are the leaders of your community. Do not make the mistake of looking for leadership elsewhere; it rests with you. Through the process of leaving the job of leadership to somebody else, we might conceivably reach a point where but a handful of Americans could actually affect the future of our country. This you must never permit.

I am very disturbed that this Nation for some years now has been tragically slipping into the limbo of conformity. More and more of our people are perfecly willing, often subliminally, to fall into a single cadence; and those who want to speak out on the great issues of a tremendously complicated world are being more and more shouted down by a populace that is growing increasingly impatient with the art of free speech. I need not remind you that perhaps the greatest tragedy to beset our Nation would be to have all of us march in a single cadence and for all of us to think alike. We would then lose that precious characteristic which distinguishes us as free people from those now enslaved behind the Iron Curtain.

The AMVETS were organized because you wanted a greater voice in the affairs of your postwar Nation. Let us then rekindle the spirit that gave birth to this organization; let us then as veterans go back into our communities and soberly provide that avenue of understanding which we as Americans need if our Nation is to survive. Our form of government is the most complicated form of government in existence anywhere in the

world today. Yet, in this complexity we have been able to guarantee our citizens the greatest degree of freedom enjoyed by people anywhere in the world today.

I urge you to exert your leadership to keep our country great. You have fought hard on the battlefields of World War II, and you won the war. Now you must continue to fight to preserve the peace.

May I take this opportunity to congratulate your State department commander, Edwin Fifielski, and his entire staff for the excellent work he has done during the past year and may I wish all of you success in your efforts during this coming year.

Thank you.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of June 18, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, June 18, 1960)

A pay raise for all Federal employees was voted in the House this week amid confusion which would have been comic had it not pointed up so graphically the power of certain self-serving lobbying organizations. A discharge petition demanded by postal unions and other employee organizations gained the requisite 219 signatures of House Members with almost unbelievable promptness, took jurisdiction away from the Post Office and Civil Service Committee which was considering selective pay boosts, and called up for floor debate the straight-across-the-board 9-percent hike sought by the unions. On the day this bill was to come up on the floor, the committee met again and voted out the new and different version calling for a 7.5-percent increase. This amendment wasn't printed up, read or explained to the committee members but it was passed by the committee nevertheless. Later on the floor of the House it was more of the same. Member after Member took the floor to condemn the procedure and deplore the lobbyists' pressure (the galleries were filled with employee representatives who had earlier jammed the corridors and committee room). The bill passed 378 to 40. I was one of the 40. Frankly, I'm content (and I believe that most of the 40 dissenters would agree) that some sensible pay raise for postal employees and other Federal workers is in order. I'm certain, though, that it should be a selective one considering the demands of varying jobs, the increase in the cost of living since last Federal pay rates were adjusted, and other pertinent factors. There was no basis whatever to my mind for any across-the-board increase—no basis, that is, other than the baldly-stated demands of the lobbyists seeking this increase.

The constitutional amendment granting District of Columbia residents the right to vote for President and Vice President passed handily, and I agree that this right should not be denied. This amendment should not be confused with home rule which would grant local control of Washington to locally elected officials—a control now residing in Congress. After ratification by three-fourths of the States, this suffrage amendment will become law.

Tighter accounting and control of funds covering the necessary additional expenses of Congressmen during the course of official business would be provided by H.R. 11654 in whose sponsorship I joined this week.

The mutual security appropriation (foreign aid) evoked the usual controversial debate. Few new ideas or arguments came to light except as further developments of earlier presentations (see newsletter Apr. 23, 1960). Here, however, are a few thoughts that struck home to me: (1) Foreign aid since World War II totals $103,209 million for mutual security gifts of money and goods, grants and loans under seven separate lending institutions, Public Law 480 (surplus food disposal), and oversea military construction and expenditures; (2) foreign nations are now in a position to demand our gold, if they choose, to the full extent of our holdings of some $19 billion ($12 billion of our $19 billion is earmarked to support our currency); (3) each year part of the funds appropriated are now spent; (4) the Comptroller General in a report on foreign aid states the problems stem from too much money; (5) we continue to support, as a matter of policy, Communist regimes in Yugoslavia and Poland; (6) some of the snafus are hard to believe. Among some new ones: We shipped 421 jet planes to a country with 186 pilots; 255 tanks to a country whose total active tank force is 30 men; 391 jet planes ($70 million cost) to a country which placed 160 of them in temporary storage and 45 in permanent storage. We provided three army surgical hospitals to Ethiopia at a time when there was only one native doctor in the Ethiopian Army; (7) $451 million in counterpart funds have been "discovered," which we apparently didn't know we had; (8) the very name, Development Loan Fund, is a misnomer. The funds provided under it are gifts. Loans are repayable in local currencies which we can't spend without the local country's permission to take the money out of the country; (9) defense support (economic aid) in Vietnam: a highway system to cost $18,300,000, at this point $130 million; (10) we now have 44,000 employees and 10,000 trainees in "mutual security" work in 77 countries.

In the field of economic assistance we have found ourselves only subsidizing our enemies or at best dubious "fair weather" friends while weakening our own economy and pyramiding our own debt. Militarily we have poured money and materiel into a number of nations with no assurance of their military support when it may be needed. Certainly all of us are now concerned as a result of Japan's Communist-inspired student and labor uprisings that we are vulnerable in our oversea bases. Such bases can be neutralized politically before they can be used militarily. This leaves us faced with the realization that our strategic air command may not prove the deterrent force we think it to be in an emergency. Only as we ourselves are demonstrably strong will our allies rally to us.

National Rivers and Harbors Congress: Report of Committee on Irrigation and Reclamation

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CHENOWETH. Mr. Speaker, I include in my remarks a copy of the report of the committee on irrigation and reclamation to the National Rivers and Harbors Congress 47th National Convention which was held in Washington in May. This report was submitted to the convention by the vice chairman, Mr. J. W. Grimes, State engineer of South Dakota, on May 26, and was unanimously adopted. I again had the honor to serve as chairman of the committee, but much of the credit for this report belongs to Ival V. Goslin, chief engineer and secretary of the Upper Colorado River Commission, and to William E. Welsh, secretary-manager of the National Reclamation Association. I am happy to also include a list of the members of the committee.

The committee's report follows:

NATIONAL RIVERS AND HARBORS CONGRESS—COMMITTEE ON IRRIGATION AND RECLAMATION

Chairman: Representative J. EDGAR CHENOWETH, Colorado.

Vice chairman: J. W. Grimes, Pierre, S. Dak.

Secretary: Ival V. Goslin, Salt Lake City, Utah. Chief engineer and secretary, Upper Colorado River Commission.

MEMBERS

Arizona: Representative STEWART L. UDALL, Tucson; member, Interior and Insular Affairs Committee.

California: Representative B. F. SISK, Fresno, Calif.; member, Interior and Insular Affairs Committee.

Colorado: Representative BYRON G. ROGERS, Denver. Harold H. Christy, Pueblo; director, National Reclamation Association.

Idaho: George L. Crookham, Jr., Caldwell; president, Guffey Water Development Association.

Kansas: Robert V. Smrha, chief engineer, division of water resources, State board of agriculture, Topeka.

Montana: Everett W. Rising, Washington representative, State Water Board of Montana.

Nebraska: Pete Badura, Ashton; president, Farwell Irrigation District.

Nevada: Representative WALTER S. BARING, Reno; member, Interior and Insular Affairs Committee.

New Mexico: John P. Murphy, Albuquerque; secretary, New Mexico Reclamation Association.

North Dakota: Fred Fredrickson, Valley City; Washington representative, Greater North Dakota Association.

Oklahoma: Frank Raab, Oklahoma City; president, Canton Irrigation District; represented by Guy H. James.

Oregon: Representative AL ULLMAN, Baker; member, Interior and Insular Affairs Committee.

South Dakota: J. W. Grimes, Pierre, S. Dak., State engineer.

Texas: Kenneth M. Smith, McAllan; water master, Lower Rio Grande.

Utah: T. W. Jensen, Salt Lake City; secretary, Utah Water Users Association.

Washington: John Richardson, Olympia, Wash.; supervisor, department of conservation and development.

Wyoming: State senator Earl T. Bower, Worland.

REPORT OF COMMITTEE ON IRRIGATION AND RECLAMATION

INTRODUCTION

The committee on irrigation and reclamation of the National Rivers and Harbors Congress was convened for the first time at the 44th annual convention 3 years ago. Since that time the committee has continued to function and to maintain a high level of interest and participation in the

irrigation and reclamation program of the United States.

During January of 1960 efforts were made to hold an extra session of the irrigation and reclamation committee for the purpose of reviewing the Federal reclamation program and making recommendations relative to it to the U.S. Congress. Because it became apparent that it would not be practicable to have a majority of the committee members present at such a meeting these efforts had to be abandoned.

PURPOSES OF THE IRRIGATION AND RECLAMATION COMMITTEE

This committee has been directed to deal only with matters of general policy.

At its inception the purposes of this committee were defined as the formulation of a policy and a program for the continued, orderly development by reclamation and irrigation of our water and land resources in the arid and semiarid regions of the West, and to suggest ways and means whereby the National Rivers and Harbors Congress may better cooperate and coordinate its efforts with the advocates of reclamation and irrigation.

COMMITTEE PERSONNEL

The personnel of the committee on irrigation and reclamation are listed on page 1 of this report. This committee is interested not only in irrigation and reclamation, but in flood control projects, rivers and harbors projects, and, in fact, all phases of water resource development.

PROGRESS

In this committee's report for 1957 to the National Rivers and Harbors Congress, several policy and procedural recommendations were outlined. These were designed as guides and suggestions for implementing basic principles. The adoption of these recommendations by this organization has contributed greatly to a better understanding of water resources problems. It is gratifying to note that sponsors of projects are recognizing new possibilities for coordination of efforts and cooperation in developing water and land resources. This new spirit and its resultant accomplishments constitute progress—not because during the past year we feel that the program of project development has been accelerated to the point necessary or desirable—but because future results will prove the wisdom of united efforts.

As a result of cooperative efforts, Congress enacted a public works appropriation bill for fiscal 1960 that contained many unbudgeted water development projects, of which seven were major reclamation new starts. In addition, four were initiated under the Small Reclamation Projects Act, Public Law 984, and two were loans for irrigation distribution systems under Public Law 130.

RECLAMATION IS A VITAL PART OF AMERICA'S FUTURE

Our committee concurs with the Honorable WAYNE N. ASPINALL, of Colorado, chairman of the Interior and Insular Affairs Committee of the U.S. House of Representatives, who said to the House Appropriations Committee "the continued development of supplemental water supplies for existing irrigated areas and the opening of new lands to settlement through reclamation are entirely consistent with sound, long-term agricultural objectives. Such development provides the most important basic element to a successful regional economy—a stable, diversified agriculture. In addition to improving our existing agricultural situation, reclamation helps to insure adequate future food and fiber for our rapidly growing population.

"The objective of expanding the economy of the West is of prime importance to the whole Nation. The Federal reclamation program has been one of the important tools by which the underdeveloped arid and semiarid regions of the West have been made into a habitable and productive part of the Nation by promoting westward movement of population, business, and agriculture, and providing a solid base for investment and employment where little existed previously. The reclamation program still has these positive influences today.

"With respect to my statement that reclamation tends to alleviate the existing imbalances of agriculture, I have this to say. It is not widely understood that irrigation farming in the West enjoys a complementary, rather than competitive, relationship with the whole of the country's agriculture. Of the major crops in surplus, those that constitute more than four-fifths of the holdings and loan commitments of the Commodity Credit Corporation, reclamation farms grew only three of these crops, and the 1958 contribution from reclamation farms amounted to only 1.8 percent of the holdings. The reason why this proportion is so small when the total importance of reclamation in the economy of the West is so great is that the irrigation farmer has been able to shift production from surplus crops to those that are in current demand. The nonirrigated land is largely tied to a 1-crop economy and cannot diversify in response to changing demand patterns. Reclamation has played a large role in facilitating these adjustments and in enhancing the efficiency of the agriculture of the West as a whole. The misapprehension that any extension of irrigation will compound the Nation's agricultural difficulties is not borne out by the facts, either past or present.

"In addition, we are advised by agricultural authorities that our present crop imbalances are merely temporary and that continued efforts are needed in research and the conservation and development of soil and water resources. They emphasize that the capacity to meet the food and fiber needs of the expanding population does not happen automatically. Because major irrigation projects do not reach a fully developed stage until 15 to 25 years after authorization or start of construction, it is essential that reclamation needs be viewed in future perspective.

"The Nation's population is increasing at about 8,600 additional persons per day while the acreage of good cropland diminishes at a rate of 3,000 acres per day due to conversion to roads, airports, and cities. Just how soon our agricultural abundance will give way to shortages depends on what positive steps are taken to overcome the efforts of these incursions."

Senator ALLEN ELLENDER, of Louisiana, said at a dinner sponsored by the National Association of Soil Conservation Districts honoring the 25th anniversary of the Soil Conservation Service:

"It is interesting to note that these additional mouths must be fed; these additional bodies must be clothed, these additional people housed from substantially fewer acres than are now available for cultivation. The fact is we have no new land to bring into cultivation. All we have is land which we can improve.

"Yet, each year we are losing precious irreplaceable soil and water resources due to the encroachments of urban population areas, among other things. Specifically, by the year 2000 some 80 million additional acres of our very finest cropland will be lost to creeping urbanization. Against this 80 million acre loss we can count, on this plus side of the ledger, only about 25 million acres, which we hope to add to our production base during the same period of time. The difference, that is 55 million acres, must be derived from increased productivity—by producing more food and fiber from the same acreage which we cultivate today."

RECLAMATION—KEY TO THE FUTURE

Reclamation is the key to the future. It is a real American enterprise that unlocks the doors to opportunities in industry and business. Reclamation is not to be considered only in terms of agricultural development. Recognition must be given to the industrial and business economies that are directly dependent upon and inevitably follow the development of an irrigated agricultural project.

A productive agricultural economy and the availability of water for domestic and industrial uses, made possible by reclamation, are essential to provide for our expanding populations. Agriculture and industry are complementary.

Reclamation projects are providing millions of Americans with opportunities for recreation and constructive use of an increasing amount of leisure time in a world filled with nervous tensions. Immeasurable as these recreation values may seem, they are real values and contribute greatly to both physical and mental health and productive potential in many vocations. In 1959 the visitor count at reclamation reservoirs of the 17 Western States reached the astounding total of 22,700,000.

Only through continuing the development of our water resources can our Nation meet the future needs of its citizens.

The reclamation program has proved to be an economically sound and financially feasible enterprise for the Federal Government. Every four years the value of crops produced on reclamation farms equals the total money appropriated for Federal Reclamation since its inception 58 years ago. The cash value of the crops produced in 1958 was almost $1 billion. Since the reclamation program was initiated in 1902, $14,265,-102,000 worth of crops have been produced. The Federal Government has received nearly $3,900 million in Federal taxes derived from reclamation projects and adjacent trade areas since 1902.

From a financial standpoint, Reclamation projects repay the investment in many ways besides repaying to the United States all of the costs allocated to irrigation features without interest and the costs allocated to power and municipal water supplies with interest. Reclamation portions of Federal multiple-purpose developments create economic returns in the form of stabilized downstream flows for industrial waters, pollution abatement, and other benefits that are not reflected in the financial feasibility of irrigation use of water. Western reclamation projects develop floodwater as the irrigation water supply, thereby accomplishing flood control as an important by-product.

IMPORTANT CURRENT PROBLEMS

1. Criteria for evaluating water development projects

There is a definite need for the formulation of modern, consistent and realistic general principles to guide Federal agencies in analyzing and appraising potential water development projects. The National Rivers and Harbors Congress can do a real service to future progress by urging the U.S. Congress to establish the policy to be followed by Federal agencies in the evaluation of project benefits.

2. Protection of water rights acquired under State laws

For many years efforts have been made to persuade Congress to enact legislation that would protect owners of water rights acquired in the various States against the encroachment of Federal agencies. These efforts have been largely unsuccessful. There are several bills for this purpose pending before the U.S. Congress. It is the consensus of our committee that the National Rivers and Harbors Congress should join the campaign to inform our legislators of the

importance of enacting a States water rights bill that will accomplish the desired purpose of protecting water rights vested under State laws.

RECOMMENDATIONS

The following recommendations embody principles essential to a well-rounded yet progressive irrigation and reclamation program to be correlated with and complementary to a national program of development, utilization, and conservation of our Nation's water resources.

It is recommended that:

1. Where opposition to water development programs exist, officers, members of, and delegates to, the National Rivers and Harbors Congress should act without delay to neutralize such opposing influences with any effective means available at local, State, and National levels.

2. Authorization and construction should not be subjected to a stop-and-go policy. Funds for reclamation portions of multiple-purpose developments should be increased and maintained at a level that would be consistent with the annual gross national product.

3. The Congress of the United States should establish the policy and criteria under which all Federal water development projects will be authorized and constructed.

4. On multiple-purpose projects, wherever practicable, the development of water resources should be preceded by basinwide planning.

5. Power revenues derived from Federal projects should be used on a basinwide or areawide basis to assist in repayment of irrigation allocations on Federal projects.

6. The principle of the interstate compact should be encouraged in order to avoid litigation between and among States and to preclude domination of the development and control of natural resources by Federal agencies.

7. Procedures under which Federal water resources projects are investigated and reported should be simplified.

8. Criteria under which Federal agencies evaluate water resource development projects before submitting them to Congress for authorization or construction should be reviewed and reestablished to include consideration of all future benefits.

9. Basic land and water inventories, soil and water research, snow surveys and stream forecasting should be continued, expanded, and modernized in order to provide adequate data for current and future planning.

10. The use of conservancy-type districts capable of levying taxes on project beneficiaries as agencies to execute repayment contracts with the Federal Government should be encouraged in order to more equitably allocate costs of a project and meet the burden of expensive and complex project construction.

11. In planning and constructing water resource projects the principle of supplying supplemental water to lands presently inadequately irrigated should be given priority over bringing new lands into cultivation.

12. It is further recommended that the National Rivers and Harbors Congress, through its executive offices and appropriate committees:

(a) Accelerate its campaign in support of a water-utilization program designed to fully develop our land and water resources placing special emphasis on starting new water development projects that are financially feasible and economically justified;

(b) Continue to bring to the attention of the executive and legislative branches of our Federal Government the need for a continuous, progressive, planned program of project authorization;

(c) Urge and actively support adequate appropriations for investigating and planning conservation water-use projects:

(d) Support legislation requiring compliance with and adherence to State water laws by Federal agencies.

(e) Support legislation to require Federal agencies to employ more liberal and realistic criteria in their evaluation of water development projects prior to authorization and construction.

SUMMARY

In summary, the purposes of the committee on irrigation and reclamation of the National Rivers and Harbors Congress shall be to promote the development, control, conservation and utilization of the Nation's water resources, to work for the continuation of the services and the coordination of activities of Federal agencies dealing with water resources, to cooperate with and assist in securing authorization and construction of Federal conservation water-use projects which meet with the approval of States and local agencies, to assist water users of the Nation in the economic development of river basins, to preserve the rights and interests of the States in their water resources, to promote the enactment of legislation favorable to these principles.

SENATE

TUESDAY, JUNE 21, 1960

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Most merciful God, who art the fountain of all grace, the source of all goodness, in whose keeping are the destinies of men and nations:

Before our wistful yearnings break into the faltering words of our stammering tongues, Thou seest our deepest needs. Every thought of every heart is fully known to Thee.

Open our eyes to the futility of changing systems and maps without changing men. Make us aware and sensitive to the beauty and strength of a spiritual world more real even than the dust beneath our feet, or June gardens where loveliness reigns—more real than the feathered songsters that wing their trackless way above our heads.

As those in whose unworthy hands have been placed the crying needs of stricken humanity, may the thoughts of our minds, the sympathies of our hearts, the words of our lips, and the decisions of our deliberations be acceptable in Thy sight, O Lord, our strength and our Redeemer. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, June 20, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed a joint resolution (H.J. Res. 765) making a supplemental appropriation for the Department of Labor for the fiscal year ending June 30, 1960, and for other purposes, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

H.R. 1543. An act for the relief of Angela D'Agata Nicolosi;

H.R. 2007. An act for the relief of May Hourani;

H.R. 3242. An act for the relief of Mrs. Virginia Lee Sage;

H.R. 5530. An act for the relief of Lelia Bernstorff Grauert;

H.R. 5738. An act to authorize the Secretary of the Army to transfer to the Waukegan Port District the commitment of the city of Waukegan, Ill., to maintain a public wharf in Waukegan Harbor on land conveyed to the city in 1914, and for other purposes; and

H.R. 5850. An act for the relief of the Borough of Ford City, Pa.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Is there morning business?

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On the request of Mr. MANSFIELD, and by unanimous consent, the Internal Security Subcommittee of the Committee on the Judiciary and the Committee on Foreign Relations were authorized to meet during the session of the Senate today.

On request of Mr. JOHNSTON of South Carolina, and by unanimous consent, the Subcommittee on Trading With the Enemy Act of the Committee on the Judiciary was authorized to meet during the session of the Senate today.

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Subcommittee on Education of the Committee on Labor and Public Welfare was authorized to meet during the session of the Senate today.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON NUMBER OF OFFICERS ON DUTY WITH HEADQUARTERS, DEPARTMENT OF THE ARMY

A letter from the Secretary of the Army, transmitting, pursuant to law, a report of the number of officers on duty with Headquarters, Department of the Army, and the Army General Staff, on March 31, 1960 (with an accompanying report); to the Committee on Armed Services.

CONTRACTS COVERING DRAINAGE CONSTRUCTION PROGRAM ON ROZA DIVISION OF YAKIMA PROJECT, WASHINGTON

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, drafts of contracts covering drainage works and minor construction required for completion of the drainage construction program on the Roza division of the Yakima project, Washington (with accompanying papers); to the Committee on Interior and Insular Affairs.

CONTRACT FOR DRAINAGE WORK, WELLTON-MOHAWK DIVISION, GILA PROJECT, ARIZONA

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a draft of contract relating to proposed drainage work, exceeding a total cost of $200,000, on the Wellton-Mohawk division, Gila project, Arizona (with accompanying papers); to the Committee on Interior and Insular Affairs.

EXPRESSION OF THANKS FROM CHILEAN SENATE

The PRESIDENT pro tempore laid before the Senate a letter from the Assistant Secretary of State, transmitting a telegram dated June 9 from the American Embassy in Santiago, Chile, conveying a message from the Chilean Senate to the United States Senate expressing appreciation for the assistance given to Chile in connection with the recent disasters, which, with the accompanying paper, was ordered to lie on the table.

RESOLUTION OF BROOKLYN, N.Y., INSURANCE AGENTS ASSOCIATION

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Brooklyn Insurance Agents Association, Inc., of Brooklyn, N.Y., relating to the public debt.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas it is our considered opinion that the constantly decreasing value of the American dollar has been brought about mainly through the steady increase in Government spending, bringing the public debt of the country to an all-time high; and

Whereas the interest and refunding of the public debt together with the steadily rising costs of Government services requires a tax-load on the American public which is fast approaching the confiscation stage; and

Whereas there is constant pressure by various groups for more and more so-called welfare legislation, whereby the public debt would be further increased, or alternatively, taxes would be increased to meet the costs of such projects; and

Whereas this association representing the insurance agency business in Brooklyn believes the time has come to call a halt to Government spending for any but defense purposes and the most essential services: Now, therefore, be it

Resolved, That we call on our representatives in Congress to actively oppose any legislation that would further increase the public debt, or increase the already heavy tax-load on the people, and that they further oppose any legislation that will extend the present "creeping" inflation in our American economy; and be it further

Resolved, That a copy of this resolution be sent to each Senator from New York, and to each Representative from Brooklyn in the Congress.

BROOKLYN INSURANCE AGENTS ASSOCIATION,
By W. F. STANZ, *Secretary*.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service, without amendment:

H.R. 10695. An act to provide for the rotation in oversea assignments of civilian employees under the Defense Establishment having career-conditional and career appointments in the competitive civil service, and for other purposes (Rept. No. 1624).

By Mr. HILL, from the Committee on Labor and Public Welfare, without amendment:

S. Res. 336. Resolution extending greetings to Miss Helen Keller on the occasion of her 80th birthday (Rept. No. 1625).

By Mr. MURRAY, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 9201. An act to validate certain mining claims in California (Rept. No. 1626).

REPORT ON DISPOSITION OF EXECUTIVE PAPERS

Mr. JOHNSTON of South Carolina, from the Joint Select Committee on the Disposition of Papers in the Executive Departments, to which was referred for examination and recommendation a list of records transmitted to the Senate by the Administrator of General Services that appeared to have no permanent value or historical interest, submitted a report thereon, pursuant to law.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JAVITS:

S. 3706. A bill to establish a medal to be known as the Presidential Medal for Civilian Achievement to provide recognition for certain persons who have made outstanding contributions in the arts, sciences, and related fields, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. HOLLAND:

S. 3707. A bill for the relief of John E. Beaman and Adelaide K. Beaman; to the Committee on the Judiciary.

S. 3708. A bill to authorize the Secretary of the Interior to sell reserved phosphate interests in the United States in lands located in the State of Florida to the record owners of the surface thereof; to the Committee on Interior and Insular Affairs.

By Mr. THURMOND:

S. 3709. A bill to provide for the conveyance of certain real property to the City of Myrtle Beach, S.C., for National Guard purposes; to the Committee on Armed Services.

By Mr. MURRAY (by request):

S. 3710. A bill to provide for the withdrawal from the public domain of certain lands in the Granite Creek Area, Alaska, for use by the Department of the Army at Fort Greely, Alaska, and for other purposes; and

S. 3711. A bill to provide for the withdrawal from the public domain of certain lands in the Big Delta Area, Alaska, for continued use by the Department of the Army at Fort Greely, and for other purposes; to the Committee on Interior and Insular Affairs.

PRESIDENTIAL MEDAL FOR CIVILIAN ACHIEVEMENT

Mr. JAVITS. Mr. President, I introduce, for appropriate reference, a bill to establish a medal to be known as the Presidential Medal for Civilian Achievement. The bill would authorize the President of the United States to award annually 25 Presidential medals for civilian achievement to individuals whose outstanding contributions in public service, the arts, sciences, and related fields deserve national recognition.

The award would be called the Presidential Medal for Civilian Achievement and carries with it a cash grant of up to $10,000 which would be tax exempt under existing law; no grant would accompany the posthumous award of the medal. Under the terms of the bill, any citizen or national of the United States would be eligible to receive a Presidential medal, as well as any alien legally admitted to this country who is in the process of applying for citizenship and is eligible to become a naturalized citizen.

The awards would be made by the President following his receipt of recommendations from a special Medal for Civilian Achievement Board composed of 15 members, including 9 appointed by the President—3 from the executive branch and 6 from private life—3 selected by the President of the Senate and 3 more appointed by the Speaker of the House of Representatives.

The Presidential Medal for Civilian Achievement would represent the highest honor that any U.S. civilian could receive. It would be the equivalent of the Congressional Medal of Honor awarded for wartime heroism by members of the U.S. armed services.

My reason for introducing the bill is to codify in one place, at one time, the fact that a great free people like ours knows how to recognize outstanding and unusual distinction in the fields of public service in national affairs, social and spiritual betterment, science, health and medicine, education, letters, the arts, law, engineering, agriculture, labor, industry and related fields. The principal means of recognizing such U.S. civilian contributions today comes from private sources such as the Ford, Rockefeller, and Carnegie foundations and through the awarding of the Pulitzer and Bollingen prizes, among others, and through the establishment of special chairs at universities and colleges.

It seems to me that our Nation ought to give such recognition. We do not create knights or baronets or marquis, but it seems to me to be essential that we provide for such award in this tremendous struggle for freedom in which we are engaged, and give this kind of recognition and distinction.

Our Federal Government has an awards program limited to the Fermi and Lawrence awards of the Atomic Energy Commission and the President's Award for Distinguished Federal Civilian Service for presentation to Government employees, created by President Eisenhower 3 years ago. Last year Congress made provision for a National Medal of Science—a program which has not yet gotten under way.

On occasion, Congress has authorized the President to award medals to individual civilians for various services and acts of heroism; as witness, for example, the awarding of a medal the other day to Robert Frost, the poet.

However, none of these programs or individual awards to civilians is equivalent to those in countries like England, Sweden, Netherlands, Denmark, France, Austria, Argentina, and the U.S.S.R. No one U.S. award now carries with it the official recognition and respect of the U.S. Government and 180 million Americans for a job done beyond the line of duty. President Eisenhower has repeatedly asked Congress to establish such a program, and the request was made again in this year's budget for an awards program giving "suitable recognition in the United States for distinguished achievement."

The United States, more than any country on earth, should have such a program. We are the world's mightiest democracy and our free institutions need constant replenishment from the initiative, drive, zeal and accomplishment of the individual who while exercising freedom of choice, voluntarily works for human betterment and the advancement of all mankind. A permanent program of Presidential medals would further strengthen our national morale and in so honoring civilian achievement, it would help spell out our national purpose and our pursuit of peace to our allies and friends abroad.

This kind of recognition is one of the elements of our growing up. I sincerely hope the bill may have the very early attention of Congress. I believe such a proposal can help tremendously in the struggle in which we are engaged, in building up the morale of our country, and in showing that we respect and honor in a very appropriate way our outstanding citizens.

The PRESIDING OFFICER (Mr. CLARK in the chair). The bill will be received and appropriately referred.

The bill (S. 3706) to establish a medal to be known as the Presidential Medal for Civilian Achievement to provide recognition for certain persons who have made outstanding contributions in the arts, sciences and related fields, and for other purposes, introduced by Mr. JAVITS, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

FEDERAL HIGHWAY ACT OF 1960—AMENDMENT

Mr. WILLIAMS of Delaware (for himself and Mr. FREAR) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 10495) to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes, which was referred to the Committee on Public Works and ordered to be printed.

COMMISSION ON NOXIOUS PRINTED AND PICTURED MATERIAL—AMENDMENT

Mr. MUNDT submitted an amendment, in the nature of a substitute, intended to be proposed by him to the bill (S. 3325) creating a Commission to be known as the Commission on Noxious Printed and Pictured Material, which was referred to the Committee on Government Operations and ordered to be printed.

RETIREMENT BENEFITS PROTECTED AGAINST INCREASES IN COST OF LIVING—ADDITIONAL COSPONSOR OF BILL

Mr. McNAMARA. Mr. President, I ask unanimous consent that the name of the senior Senator from Minnesota [Mr. HUMPHREY] may be added as an additional cosponsor of the bill (S. 3684) to assist individuals to obtain retirement benefits protected against increases in the cost of living by providing for the issuance by the Treasury of a new series of bonds containing adjustments, under certain conditions, in maturity and redemption values to compensate for increases in the cost of living which may be purchased by individuals and eligible institutions, introduced by me on June 16, 1960, on behalf of myself and other Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MUNDT:

Address delivered by Senator STYLES BRIDGES, at the FBI commencement exercises in Washington, D.C., June 8, 1960.

GOVERNOR'S CONFERENCE ON AGING—ADDRESS BY GOVERNOR GAYLORD NELSON, OF WISCONSIN

Mr. PROXMIRE. Mr. President, Governor Gaylord Nelson, of Wisconsin, delivered an extremely fine address on the subject of the elderly. Before I put it in the RECORD, I wish to read the last brief paragraph, in which he said:

Beyond all of this, we must set our goals far above the old standards of mere custodial care. We are dealing with human beings, many of them retaining great talents and abilities, many possessing knowledge and judgment only acquired after many years of experience. Our entire society is the real loser if we fail to use the full potential of every elder citizen, in government, in industry and in civic activities. What I am saying is quite simple. We must stop thinking of our senior citizens solely in terms of their disabilities. We must begin in terms of their abilities, and in terms of how much these abilities can contribute to our communities, our State, and our Nation.

I ask unanimous consent that the address by Governor Nelson be printed in the RECORD, at this point.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY GOV. GAYLORD NELSON, GOVERNOR'S CONFERENCE ON AGING, MEMORIAL UNION, MADISON, WIS.

Aging has different meanings for different people.

To the doctor, aging means the changes in the human body that occur with the passage of time. Physicians agree that the onset of what we call old age cannot be measured by the calendar, but varies widely from person to person.

To the psychologist, aging refers to changes in the intellectual and emotional capacities of the individual. Again, the point of entry into old age varies widely. Today, we are discovering that earlier notions on the decline in intelligence and learning ability—assumed to occur rapidly past the age of 50—must be revised. The decline is less than once supposed. Most older persons are still well equipped to learn and function. There are even certain tasks where the older adult appears to exceed the younger in performance.

To the individual, entry into the later years is marked by the loss of the responsibilities of a job, frequently at an arbitrarily determined age. Retirement is generally preceded by the end of child-raising responsibilities, and the individual is thus given a chance to construct an entirely new pattern of life, built around leisure and the freedom to do what he wants. Unfortunately, many find themselves unprepared for this transition. They lack meaningful and challenging activities to replace those of earlier years. And in many cases, this situation further deteriorates as a result of declining income.

To society, the startling increases in our aging population present a major challenge. Modern medicine and ever-higher American standards of living have combined to raise life expectancy in the United States from 49 years in 1900 to almost 70 years in 1960. During the same period, mechanization has provided the means of increasing productivity while requiring less and less time from our work force. Thus, we have achieved two of the ancient dreams of mankind—the ability to live long and the chance to live out a portion of our lives without the iron necessity of work. Yet, paradoxically, the achievement of these dreams is referred to as a problem when it arrives. It is a problem because the wealthiest nation the world has ever known has not made timely provision for this new group of elder citizens. The success we have in meeting this challenge will become a measure of the humanitarian instincts of our society.

Despite a 21-year increase in life expectancy at birth, the person reaching 65 today does not have many more years ahead of him than his grandfather did at the same age. Life expectancy at 65 has only increased from 12 years in 1900 to 14 years in 1960. Most of the medical progress thus far has been in the reduction of mortality in infancy, childhood and early manhood.

Today, medical research is for the first time turning its attention to cancer, heart disease and the other causes of death in the later years. Even though this work has barely begun, however, the fact remains that the person reaching 65 this year still has one-sixth of his total life span ahead of him.

In Wisconsin today, 1 out of every 10 citizens is over 65, compared to 1 out of 20 in 1900. Wisconsin's proportion of people over 65 is about 10 percent above the national average. This is substantially higher than in California or any other State in the Southwest, and only slightly lower than in Florida.

These 395,000 elder citizens of our State have some definite characteristics. They are—and prefer to be—independent members of their communities. Less than 4 percent live in private nursing homes or in State and county institutions. Less than 30 percent live with their children. Two out of every three live in their own households.

The greatest immediate problems facing our elder citizens are money and medical care. People over 65 comprise about one-third of the entire "low income" group in the United States. In 1952, national estimates showed a median income of $2,276 for families headed by persons 65 and over and $803 for persons living alone.

The past 8 years have seen a pronounced improvement in income due to expansion of old-age and survivors insurance and to the introduction of mass industrial pension programs. The share of Wisconsin's elder citizens receiving OASI payments has increased from 14 percent in 1949 to 68 percent in 1958. And in the same period, the average OASI grant has increased from $265 a year to $732. These figures are indeed encouraging. But we should not delude ourselves into thinking that $732 a year provides any degree of economic security.

Personal health poses an even more tragic dilemma for our elder citizens. At the very time when their earning power is declining, their need for medical care greatly increases. The aged require about 2½ times more medical care than persons under 65 and have only one-third of the income.

The problem has also become critical because of soaring medical costs. The increase for all items on the consumer price index between 1948 and 1958 was 20 percent. Medical costs rose 43 percent, and hospital costs increased even more.

In the face of this cost-and-increase squeeze, a 1957 national survey showed that less than 40 percent of those over 65 had any form of health insurance coverage, and another survey the following year showed that only one elder citizen in 200 was covered against catastrophic medical expenses.

Both Wisconsin and the Nation have made important strides toward meeting this twin problem of income and medical care in the past few years. The increase in both payments and coverage under old-age and survivors insurance is part of this pattern, as are the introduction of mass pension systems and the State's old-age assistance program, which is one of the most liberal in the entire Nation.

We in Wisconsin have moved forward in other fields in the past year. We have passed a law prohibiting discrimination in employment because of age. We have authorized State standards of care and treatment in Wisconsin's 38 county mental hospitals, which means better treatment for the 4 out of every 10 people in these institutions who are over 65. We have made major changes in procedures at the University of Wisconsin Hospital, promoting greater use by public patients. We are well along on a study of basic tax revision, and one of the basic goals of this study is relief of the property taxes that are so harsh on those with fixed incomes. We have instituted an examination of retirement policies in State government. Finally, in one of the proudest accomplishments of this State administration, we have changed the statutory definition of "total disability" to conform with the Federal interpretation, thereby permitting almost four times as many Wisconsin residents to qualify for total disability payments. Today, more than 180 people a month are being transferred from local relief rolls to total disability rolls. The average grant to those transferred has jumped from $64 to $107 a month, or 67 percent. By August, more than 2,000 citizens will be transferred to total disability rolls, or almost 1 out of every 10 receiving general relief at the time the new act went into effect. And an additional 1,100 people will be approved for total disability payments who were never on relief.

This means a substantial saving in local property taxes that go to pay for general relief. Far more important, however, it means that more than 3,000 disabled people will get anywhere from $30 to $100 more per month. Everyone here knows how often such increases can spell the difference between poor health and good health, between human misery and human dignity.

More—much more—remains to be done. We should study the possibility of a publicity campaign aimed at the employment of older workers, on the order of the present campaign for employment of the handicapped. We should examine the terms in workmen's compensation and pension programs to see if they inhibit the hiring of older workers. We should investigate broader use of our State vocational rehabilitation program to retrain elder citizens. And we should provide State guidance and planning help for the whole scope of problems facing the aged, ranging from housing to nursing homes to civic programs to recreational needs.

State planning assistance offers many bright hopes. Unknown to most, for example, and unheralded, Wisconsin is developing a new kind of community—the retirement village. In the lake region of southwest Kenosha County, resort communities are developing large clusters of retired Chicagoans who live there year round. This could be duplicated in other resort areas around the State. But the process to date is haphazard, and no community has attempted to offer facilities or make itself attractive for this kind of development. Planning assistance can open the door to this and many other opportunities.

On the Federal level, I think we must give early consideration to raising the $1,200 earning level permitted before reduction in social security benefits. And we must act now to meet the medical care and hospital needs of our senior citizens. This matter has been before the Congress for several years. The problem has been well studied and all of the various viewpoints fully presented to the Congress and the public. The time has come for action and such action to be considered adequate must do the following: (1) Guarantee good, comprehensive health services to senior citizens now and in the future without regard to their income, where they may live, increases in health costs, or the willingness of State legislatures to appropriate funds. (2) Recognize that most States, particularly the low-income States, will be unable to financially assist, in whole or in part, in meeting this problem with any degree of adequacy without impairing other services. (3) Avoid expensive administrative procedure which will limit funds available for needed benefits. (4) Minimize the means test approach to this problem and recognize health care as a basic human right to which all people are entitled.

Thus, I believe that the most direct and simplest way to meet the objective is to provide health and hospital benefits under the provisions of the old-age and disability insurance program. I urge you to do everything in your power to obtain congressional action immediately.

Beyond all of this, we must set our goals far above the old standards of mere custodial care. We are dealing with human beings, many of them retaining great talents and abilities, many possessing knowledge and judgment only acquired after many years of experience. Our entire society is the real loser if we fail to use the full potential of every elder citizen, in government, in industry and in civic activities. What I am saying is quite simple. We must stop thinking of our senior citizens solely in terms of their disabilities. We must begin thinking in terms of their abilities, and in terms of how much these abilities can contribute to our communities, our State, and our Nation.

Thank you.

MEDICAL NEEDS OFTEN CONSUME ENTIRE INCOME OF SENIOR CITIZENS

Mr. PROXMIRE. Mr. President, letters pouring into my office continue to tell the story of senior citizens of this Nation caught in the trap of sudden staggering debts incurred through illness, and literally eliminating their income.

Our senior citizens actually are forced, in many cases, to sign over to hospitals their entire social security checks each month, sometimes for a period of years. Is this the situation that we want to confront our senior citizens during their retirement years? If we answer in the negative, then we must act, quickly and effectively, before this Congress adjourns.

Mr. President, I have here a letter which tells that very tragic story. I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

I hope the Senate will pass some kind of a health bill for the old people. I am collecting $49 per month social security. The first part of May I was in a hospital for 12 days having undergone a major operation. So now I will pay the bill with my social security check for the next 27 months. I will sign my social security check over to the hospital. I am 67 and I will be almost 70 before I will have another social security check for myself.

Yours truly,

——— ———.

TAX DEDUCTIONS FOR ENTERTAINMENT

Mr. BENNETT. Mr. President, last Friday I was charged with having sabotaged a conference by opposing in conference things I had opposed on the floor.

Yesterday I opposed the amendment to the rate extension bill which would deny expense deductions for entertainment and for gifts. So, frankly, if what I am saying today should sabotage this particular amendment in conference I am doing it openly because this time I will not be a conferee.

The amendment denies deductions for entertainment without defining them, allowing unlimited expenditures for both food and drink.

Reference was made yesterday to the use of company yachts. The amend-

ment does not deny expenditures for transportation or lodging of customers. Yachts provide transportation and lodging as well as food and drink. So I assume that if the yacht had a specific destination, the amendment would allow deductions for its use. On the other hand, a seller could not take his customer to a ball game or pay his green fee for a round of golf because this is obviously entertainment.

As I said last night, the amendment leaves a wide open question as to whether food and drink can be purchased in a place where entertainment is provided, ranging from a string quartet playing dinner music to a nightclub with a floor show.

Because travel and lodging are not eliminated, it seems to me this amendment permits sales conventions and dealer education programs, so long as they provide no entertaining relaxation.

But what about the company picnic, which is certainly entertainment? Would it be denied by the bill?

When we get into the area of gifts, the problem, in my opinion, becomes impossible.

I should like to raise this question for the information of the conferees. If unlimited expenses for food and drink are permitted, does not that destroy the $10 limit if the gift is of food or drink?

I see the Senator from Pennsylvania present. It was stated last night that if a box of Senator BYRD's apples cost $10, he could not give them. I think if apples are food, he could certainly give any amount of them away, and still claim a deduction. Under the amendment as it was written, it would be possible for the seller to give his customer an unlimited supply of whisky and champagne. It could not be said drinks could be given only when they are served with a meal, because in my State it is against the law to serve a drink with a meal. If one wants to give a customer a drink, he would have to buy him a bottle.

So that leaves the question, What is a gift? Is it anything of value given to a customer without charge? For instance, does it include sales helps? In the paint business, the manufacturer supplies color cards to dealers. Is that a gift? Is the total value of such helps that may be provided without loss of the deduction limited to $10? Does the limit include sample kits, or special display devices, or window displays, if they cost more than $10? Is there going to be a limitation of $10 on these things in combination when so supplied?

Would the bill eliminate prizes for contests, since they are gifts? I suppose a case could be made for eliminating advertising giveaways. What about bonuses paid by manufacturers to wholesalers and their customers, and salesmen, as a part of a sales promotion program? And what about prizes and scholarships for students?

A little while ago Mrs. Bennett and I attended the American table dinner contest, which was a dinner given by General Mills to high school girls who, in each State, had won a contest, which I think included cooking with General Mills products. There were prizes given, including scholarships. They are gifts worth more than $10. Would such prizes be denied under the bill?

In my State there are a number of corporations that give scholarships at local universities to deserving students. Would the bill deny these?

Finally, what about the traditional gold watch to the retiring employee after a lifetime of service?

These are only a few of the problems created by the bill.

On the other hand, the Senator from Utah thinks the bill is incomplete, because it leaves the company free to pay travel and hotel bills, and in the area of entertainment and gifts, it strikes down many things which its authors did not intend to strike down.

I hope the conferees will recognize this weakness in the bill and eliminate the amendment. At the same time I hope the conferees will recognize the abuses that exist and will cooperate with the two committees involved and the Treasury to develop both legislation and regulations by which these abuses can be eliminated.

I think it would be completely appropriate if the conference report recognized this problem and made some statement which could later lead to what I think would be a more effective solution of the problem.

Mr. CLARK. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). The time of the Senator from Utah has long since expired. Does the Senator wish to ask for additional time?

Mr. CLARK. Mr. President, I ask unanimous consent that the Senator may retain the floor for not more than 1 minute, in order that I may direct a comment to him.

The PRESIDING OFFICER. Will 1 minute be enough?

Mr. CLARK. Yes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Pennsylvania? The Chair hears none, and it is so ordered.

Mr. CLARK. Mr. President, I shall reply on my own time to the Senator from Utah. I hope he will be present. I disagree with every single one of the interpretations the Senator has given of the amendment. I can only conclude that my good friend, for whose ability and integrity I have the highest regard, would never have made these suggestions had he been a lawyer.

Mr. BENNETT. The Senator from Utah is a businessman and has had experience with all these problems. I think the meaning of the amendment is so simple and so clear that it would undoubtedly have the effects I have mentioned.

THE LASSIE LEAGUERS

Mr. SALTONSTALL. Mr. President, our country owes much to the many people who have worked hard to build it to its present position as leader of the free world. Our moral code and our spirit of friendly cooperation with other nations have been the keynote of this world leadership.

This spirit was not built by accident. It is one which needed the encouragement of dedicated people.

The education which produced our present leaders began when they were very young. So today, to educate our country's future leaders we must begin in their youth. The President has recognized this need to build in his proclamation of National Youth Fitness Week which began the 1st of May of this year.

To encourage youth fitness we must build both the mind and the body—best of all is the activity which builds them together. For girls between the ages of 10 and 15, one of the most attractive and enjoyable activities with this purpose is the Lassie Leaguers, which has its international headquarters in Worcester, Mass. This organization was founded in Pennsylvania in 1953, and moved its headquarters to Worcester in January 1959. It presently has franchised leagues in 10 States and some 10,000 girls are playing lassieball, over 1,500 of them in Massachusetts, which is a game similar to softball, and especially designed to suit the needs of girls in the 10 to 15 year age group. Its emphasis is on development of mind and body, without the pressure of all-out competition.

Any of my colleagues who have individuals in their States who wish to participate in this activity may write to Mr. Lawrence A. Bacon, the executive director, at the international headquarters of Lassie Leaguers, Inc., 18 Auburn Street, Worcester, Mass. Mr. Bacon will be pleased to provide the particulars of this game which is now achieving national recognition. Mr. Bacon is one of those dedicated individuals to whom the future of our present day youth is very important.

My colleague, the junior Senator from Massachusetts [Mr. KENNEDY] joins with me in paying tribute to this fine organization.

SALUTE TO THE LASSIE LEAGUERS

Mr. CLARK. Mr. President, today is Lassie League Day in Mahanoy City, Pa., and it is a pleasure to welcome to Washington and to the Senate galleries a group of young ladies who make up the Mahanoy City Lassie League, along with their team managers and officers, and some of their mothers.

Lassieball gives girls of 10 to 15 an opportunity to play a game similar to baseball, organized on the national level.

In a community like Mahanoy City, which is plagued by the economic problems that distress so many Pennsylvania areas, it is particularly important to have organized recreational activities providing constructive outlets for youthful energies. The adults of Mahanoy City who are devoting their effort and time to working with the girls of the Lassie League are to be commended on a worthy job, well done.

As a fan both of baseball and of girls, I look forward to a chance to see a game of lassieball. I am sure that irresistible combination makes it a delightful sport to watch.

I ask unanimous consent to insert in the RECORD the names of the members of this group.

There being no objection, the names were ordered to be printed in the RECORD, as follows:

MAHANOY CITY LASSIE LEAGUERS

Lassie Leaguers: Gwen Eichman, Cathey Tierney, Monica Gabuzda, Audrey Palulis, Nelda Palulis, Sherry Gavel, Stephanie Perry, Donna Perry, Kathy Petrucka, Grace DiLabio, Ginny Butcavage, Victoria Pleszkoch, Judy Ulshafer, Marie Merinsky, Kitty Minnick, Andrea Geshan, Jean Elchisak, Janet Wirtz, Celeste Whalen, Kitty Green, Helene Starkey, Sonia Syzdek, Lucille Salvadore, Jane Dower, Carol Koval, Mary Jane Picciano, Barbara Nolter.

Managers of the teams: Mrs. Catherine McCann, Mrs. Eunice Palulis, Mrs. Anna Streisel, Miss Kathleen Paris, Miss Elsie Tolan, Miss Judy Boner, Miss Doretta Jones.

Mothers of the Lassie Leaguers: Mrs. Natalia Gabuzda, Mrs. Anna Merinsky, Mrs. Betty Nolter, Mrs. Eleanor Whalen, Mrs. Mary Geshan, Mrs. Helen Syzdek, Mrs. Arthur Picciano.

Officers of the Lassie League: Mr. Peter Mahalage, president; Mr. Edward Nahas, vice president.

PERU WINNING FIGHT AGAINST INFLATION

Mr. AIKEN. Mr. President, the United States is presently being honored by a visit from one of the most distinguished businessmen and statesmen of the Western Hemisphere. I refer to the Honorable Pedro G. Beltran, the Finance Minister of Peru. The manner in which Mr. Beltran is guiding the economic and political fortunes of his country is set forth in an article published in the New York Times this morning, entitled "Peru Scoring Against Inflation," and I ask unanimous consent that the article may be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERU SCORING AGAINST INFLATION

Although not quite a year old, the Financial Ministry of Pedro G. Beltran in Peru is attracting wide attention in financial circles because of the achievement of Peru's Prime Minister in halting inflation and bringing stability to the cost of living there.

A year ago, Peru's foreign exchange reserves were exhausted, the Government was living off freshly printed money, advances from the central bank, the international value of the Peruvian sol was deteriorating rapidly and the cost of living was soaring.

Senor Beltran took over the top financial job last July 20. There was no money in the till and Government employees were due to be paid in 3 days. He went to the central bank for the money, but it was the last time.

Senor Beltran brought to the Finance Ministry broad experience fed by years as an industrialist and an official figure. He served as Peru's Ambassador to the United States in 1944 and 1945. Among his business interests is the publication of a daily newspaper—La Prensa—in Lima. He resigned from the newspaper upon entering Government service.

The Beltran formula for breaking the inflation fever in which Peru was caught consisted of old-fashioned practices that smacked of austerity. Among them were these:

No more borrowing from the central bank.

Balancing Government spending with tax collections.

Permitting the treasury to have access to certain tax collections pending the time for their specially dedicated use.

Wiping out certain import subsidies—meat, for instance—that was bringing injury to Peru's livestock industry and other enterprises.

Tiding the Government over an initial period of financial stringency by borrowing money, not from the central bank, but from the public. A short-term loan amounting to 250 million soles (about $9 million) was floated successfully. Tax-free and bearing 10 percent interest, the loan was subscribed by more than 63 percent, even though industrial corporations were limited by allotment to the amount of notes they could buy.

OTHER COUNTRIES EYED

With Peru's foreign exchange reserves the highest since the spring of 1957 and with the sol stabilized at 27.40 to the U.S. dollar, against 31.50 to the dollar a year ago. Finance Minister Beltran is now shifting his scrutiny from Lima to major cities of the outside world, especially centers of capital export.

The reason lies in the fact that Peru needs investment capital from abroad—long-term loans as well as equity investment money. Internal loans—probably there will be more following the success of the $9 million short-term credit arranged last year—can promote financial stability, but the long-term capital that Peru needs to reform the nation's agrarian structure is not obtainable at home. Senor Beltran's present problem is to convince those who might supply foreign capital that the money will be safe working at long term in developing the Peruvian economy.

Agrarian reform and urban housing renewal are foremost among the priorities, as they are viewed from the perspective of Senor Beltran and other leading citizens of the South American Republic. Money outlays for such purposes are not self-liquidating and do not qualify for loans of the bankable type granted by the International Bank for Reconstruction and Development (World Bank) and by commercial lending institutions. Neither do such expenditures lend themselves to the loans generally extended by the Export-Import Bank, where money advances usually are related to export sales of U.S. equipment.

The Peruvian Prime Minister was interviewed here while en route to Washington, where he will address the Pan American Union tomorrow. He expressed the hope that Peru would be able to make a start in his administration toward financing agrarian reform and housing renewal. He said that Peru's greatest resource was her people and that the living conditions of Peru's masses must be improved if their productivity were to be enhanced.

The Beltran dream is resettlement of the mountain communities that are now getting a scanty living from shallow soil in altitudes of 10,000 feet or more. Most of these people could be resettled in the broad and fertile river valleys—those of the Apurimac and Urubamba, for instance—if connecting roads giving access to the rich valleys could be built and if the mass migrations could be otherwise financed by long-visioned capital.

VICE PRESIDENT'S DYNAMIC AND PRAISEWORTHY FOOD SURPLUS PLAN

Mr. KEATING. Mr. President, the proposal of Vice President NIXON to distribute food surpluses to hungry people all over the world is a wise and statesmanlike move. This suggestion represents a carefully planned initiative in the cause of peace. What could reveal more sharply the differences in United States and Soviet aims than this generous offer, made in the spirit of charity and of brotherhood?

While Khrushchev and his colleagues were scheming in the Kremlin to destroy the summit conference and raise cold war temperatures, the President and his advisers were drawing up an unprecedented offer for harmonious joint action to help less fortunate nations. Now the raucous, war-crazy voices from Moscow and Peiping have drowned out any hopes of United States-Russian cooperation in this humane venture. But for the United States and for such other free world nations which do produce surplus crops, the proposal is timely and promising.

A United Nations agency for distributing surplus foods would serve many good purposes. First, and foremost, it would ease the hunger pangs that, more than anything else, have inclined many poorer nations toward the false but alluring promises of Communists.

Second, it would show in a very tangible way the very real concern which citizens of this country feel for the well-being of all free world peoples. Third, it would exemplify the U.S. desire and ability to work through the United Nations harmoniously for the good of all people. Fourth, it would make clear, to put it bluntly, that the only food the Soviets have a surplus of is baloney. All this Communist talk about great strides forward in agriculture is, in fact, pure baloney, because the surpluses will not come from the boastful Communist lands, but from the United States and other countries where free enterprise continues to offer the best incentives for increased productivity. Fifth, although we might not relish the idea that some of our surpluses could go to Communist-subjugated countries, such assistance would, in reality, constitute a moral victory, since a fair, United Nations supervised distribution would make clear both the failure of Communist programs and the success and generosity of free world policies.

While the Communist countries feed the world nothing but propaganda, violence, and war, let us offer grains and foodstuffs to provide real nourishment where it is needed. If the way to a man's heart is through his stomach, let us not neglect this important channel.

The PRESIDING OFFICER (Mr. CLARK in the chair). The time of the Senator from New York has expired.

Mr. KEATING. Mr. President, I ask unanimous consent that I may proceed for 1 additional minute.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New York? The Chair hears none, and it is so ordered.

Mr. KEATING. Mr. President, the Vice President's proposal represents the kind of bold, imaginative, positive action which is imperatively called for in the presence of the systematic and hard-hitting worldwide campaign of communism to extend the frontiers of tyranny. We must have such dynamic counteraction as this—we must set forth affirmative programs of this nature—if we are to cope successfully with the massive Red design to win the hearts and loyalties of men as a prelude to their enslavement.

Mr. President, I hope the Vice President's proposal will gain wide support. In a "bread for peace" program, all free world people can be winners.

TASK FORCE STUDIES OF AMERICAN STRATEGY AND STRENGTH

Mr. KEATING. Mr. President, I was delighted yesterday to learn about the task force studies recently released by a number of distinguished and very able Republican Members of the House. These studies seek to analyze and evaluate America's defense strategy and economic strength in the world in which we live.

Mr. President, I heartily commend the task force members and the many well-qualified academicians and research consultants who worked with them. I have read a summary of their study papers and task force report and am looking forward to the complete documents which, I assume, are now being released for general circulation.

It is, of course, necessary that America's political leaders, of both of our major parties, look to the future in a spirit of imagination and vitality, keyed to the challenges which face America and the free world. The leaders of our two great political parties are fully aware of this need. Perhaps this explains the strength and vigor of American democracy.

The Republican Party is sometimes criticized for a lack of planning—an inability to see and understand the handwriting on the wall, the events of the future. I think we can and have very emphatically repudiated this allegation.

Let me cite a few of the many examples of the ways in which the Republican Party has looked—and continues to look—to the future. President Eisenhower has just appointed a new council on national goals. This is indeed a most dramatic and far-reaching idea. It will certainly make America stronger.

The report by the Republican Council on Program and Progress headed by Charles H. Percy, now platform committee chairman for the forthcoming Republican Convention, recently released a series of forward-looking and dynamic studies and proposals. Gov. Nelson A. Rockefeller of my own State of New York has, through the Rockefeller Brothers Fund and his own research and staff efforts, produced some historical and abundantly sound recommendations for the future of our Nation.

The task force studies of the Republican Members of the House are a new and similarly clear affirmation of the Republican Party's vision and perspective.

Mr. President, I was particularly impressed with the House Republican task force study entitled "An Economy for the Long Pull" by Representative THOMAS B. CURTIS, of Missouri. This report is riddled with realism and is at the same time bereft of overambitions, promises, and generalizations. The author recognizes the hard facts which confront us. He is, in customary fashion, fully aware that these challenges cannot be met simply with glibness and a fine phrase. He points out that we need a very extensive defense force, that this will cost us a great deal of money and that the tax burden upon every American will not as a result be shortly and easily reduced.

Let me quote a number of excerpts from this particular report which illustrates the spirit in which this entire document is written:

> We can afford all the defense that is needed, if we will soundly finance the full cost. But critics who would increase defense spending should discuss the full price tag.
>
> There is no painless way to pay for preparedness. Increased tax revenues mean increased tax rates. Deficit financing means inflationary erosion of our overall economic position in world markets at a time when these markets are, in fact, a battleground, and at a time when our own balance of payments position has shifted downward.
>
> Elimination of waste is a goal toward which to work but not a panacea immediately available.

Mr. President, I hope that Members of this body on both sides of the aisle, and all informed Americans will read and think about all of the several House Republican task force reports. I certainly think that this is a fine and worthwhile endeavor and I wish to join in congratulating all those responsible.

RESOLUTIONS ADOPTED BY LONG ISLAND FEDERATION OF WOMEN'S CLUBS

Mr. KEATING. Mr. President, on May 20 of this year the Long Island Federation of Women's Clubs, representing some 60,000 women, held a convention in Rockville Centre. They have been kind enough to send me copies of resolutions adopted at that time, and at their request, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

LONG ISLAND FEDERATION OF WOMEN'S CLUBS CONVENTION RESOLUTION IN SUPPORT OF PRESIDENT EISENHOWER AT THE SUMMIT CONFERENCE

Whereas the Premier of Russia, Nikita Khrushchev, has for the past several years urged meetings of the heads of great states, known as summit conferences, to discuss and settle matters incident to world peace; and

Whereas such a summit conference was scheduled to open in Paris on May 16, with the President of the United States, Mr. Eisenhower; the Prime Minister of Great Britain, Mr. Macmillan; the President of France, Mr. Charles de Gaulle; and Mr. Khrushchev; and

Whereas, at or prior to the opening of such conference Mr. Khrushchev in a most reprehensible, vindictive, and scurrilous manner verbally attacked and derogated Mr. Eisenhower and demanded from him a humiliating and self-disgracing apology for the presence of a spy plane in Russia; and

Whereas it is a well-known fact that spying by whatever means is a universally accepted practice by all nations; and

Whereas the barbaric behavior of Mr. Khrushchev and his dishonorable attack on Mr. Eisenhower were of a nature unparalleled in modern diplomatic history; and

Whereas Mr. Eisenhower, in declining to demean his honor and his country's honor to the whim and anger of an upstart, boorish dictator, and in refusing to lower his dignity and his country's dignity to this humiliating demand, conducted himself in a dignified, honorable, and gentlemanly manner in the fullest and finest traditions of his country and its heroes, past and present: Therefore be it

Resolved, That the Long Island Federation of Women's Clubs in convention assembled this 20th day of May 1960 commend and uphold the President of the United States, Dwight D. Eisenhower, for his unremitting efforts in behalf of peace, for his honorable and dignified efforts to achieve peace through negotiation, and for selfless devotion to these continued efforts in the face of discouraging and adverse circumstances and sacrifices; and be it further

Resolved, That the Long Island Federation of Women's Clubs unanimously endorse and approve Mr. Eisenhower's refusal to lower his personal honor and his Nation's honor to this irresponsible demand, his honorable conduct in upholding the dignity of his high office, and his heroic refusal to lower the Stars and Stripes to the unreasonable demands of the tyrannical ruler of Red Russia.

PROPOSED RESOLUTION OF THE LONG ISLAND FEDERATION OF WOMEN'S CLUBS, INC.

Whereas in the preparation of income tax returns the head of the household is permitted to deduct a fixed sum for the expenses of a minor child; and

Whereas families of moderate circumstances are discovering that the cost of higher education has risen approximately 50 percent in the last 10 years to an almost prohibitive level; and

Whereas our Federal Government urges college, university, or other specialized training as a benefit to the Nation to the extent of postponing national military service until the successful completion of such education; and

Whereas it is manifestly unjust that deductions for the higher educational expenses of a dependent child are not allowed at a time when these tuitions represent a virtual family deprivation: Now, therefore, be it

Resolved, That the Long Island Federation of Women's Clubs, Inc., in convention assembled this 20th day of May, 1960, urge the immediate adoption of a law to exempt all higher education tuitions from all income taxation; and be it further

Resolved, That copies of this resolution be sent to the Secretary of Health, Education, and Welfare; superintendent of New York State Department of Education; chairman of the Finance Committee of the Senate and House of Representatives; and Commissioner of Internal Revenue.

PROPOSED RESOLUTION OF THE LONG ISLAND FEDERATION OF WOMEN'S CLUBS, INC.

Whereas widespread propaganda of Communist origin has been, and still is, aimed at the internationalization of the Panama Canal and the wresting of its ownership and control from the United States of America; and

Whereas radical elements in the Republic of Panama are carrying on active and highly provocative propaganda on behalf of fantastic demands for (a) further, and impossible annuity and other benefits, and (b) the impairment and practical destruction of the absolute and exclusive sovereignty, in perpetuity, of the United States of America over constitutionally acquired territory of the Canal Zone, and over the Panama Canal, constructed at the expense of the American taxpayer and maintained and operated by the United States of America on terms of equality for all nations as required by treaty; and

Whereas these agitations have as their purpose the liquidation or fatal weakening of such sovereignty altogether indispensable for the maintenance, operation, and protection of the canal, and this without the slightest suggestion of reimbursement to the United States of America for its vast investment in the canal enterprise: Therefore be it

Resolved by the Long Island Federation of Women's Clubs, Inc. (in convention assembled this 20th day of May 1960), That the recurring crises in relations between our Government and that of the Republic of Panama should receive immediately the most serious attention of our executive as well as our legislative bodies; and be it further

Resolved, That we urge both Houses of the Congress of the United States to proclaim by joint resolution the constitutional sovereignty of the United States over the Canal Zone, and to declare that the policy of the United States shall be not to surrender in any way, nor to compromise, U.S. jurisdiction over and control of the Canal Zone and U.S. ownership, control, management, maintenance, operation, and protection of the Panama Canal in accordance with existing treaty provisions; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, Vice President of the United States, Secretary of State, and Secretaries of the Senate and House of Representatives.

PROPOSED RESOLUTION OF THE LONG ISLAND FEDERATION OF WOMEN'S CLUBS, INC.

Whereas there is a perilous movement to repeal the Connally reservation which was incorporated by the U.S. Senate in the resolution of submission to the jurisdiction of the United Nations World Court in 1946. The Connally reservation reserves to the United States the right to determine what matters are within our domestic jurisdiction as determined by the United States; and

Whereas the majority of the nations subject to the World Court retain similar safeguards as the Connally reservation for the protection of their domestic affairs; and

Whereas the United States is entitled to have only one member at any time on the 15-member World Court, although there are now two representatives of Communist countries (Russia and Poland) now on the World Court, with no limit to the others which may be added from Iron Curtain countries with dissimilar ideas of justice; and

Whereas no Iron Curtain country will submit to the jurisdiction of the World Court, although they have judges on the Court; and

Whereas the proposed elimination of the Connally reservation, in the opinion of informed patriots, would mean a dangerous surrender of our sovereignty to an alien court with perilous consequences to our Nation and its citizens: Therefore be it

Resolved by the Long Island Federation of Women's Clubs, Inc. (in convention assembled this 20th day of May, 1960), urges the retention of the Connolly reservation as a vital safeguard to our Nation; and be it further

Resolved, That copies of this resolution be sent to the President, Vice President, Secretary of State, Attorney General, chairman of the Senate Foreign Relations Committee, and chairman of the House Foreign Relations Committee.

Mr. KEATING. Mr. President, it is not necessary to agree in every respect with the comments which the members of the federation make, but they have certainly performed a very useful service in furnishing to the Congress these well-thought-out resolutions.

PURCHASE OF FURNITURE FOR U.S. EMBASSY IN VENEZUELA

Mr. DIRKSEN. Mr. President, I should like to insert in the RECORD a letter in connection with the discussion which took place last week by the distinguished Senator from Wisconsin [Mr. PROXMIRE] and myself as to the allegations he made in the Senate with respect to the Mueller Metals Co., the president of which is the son of the Secretary of Commerce. One of the allegations was that the State Department had no authority to contract for the purchase of furniture for the new Embassy at Caracas. I have a letter from the Comptroller General addressed to the Senator from Wisconsin dated June 16, and I ask unanimous consent to have it printed in the RECORD at this point in my remarks. I am sure that the letter will close the whole incident and it will require and receive no further elaboration.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C., June 16, 1960.

B–142814.

Hon. WILLIAM PROXMIRE,
U.S. Senate.

DEAR SENATOR PROXMIRE: Reference is made to our letter to you of May 26, 1960, in reply to your letter of May 16, 1960, concerning the purchase of furniture for the Embassy office building at Caracas, Venezuela, by the Department of State from the Mueller Metals Corp.

In our letter to you of May 26, 1960, we stated in answer to your question No. 5 that we found nothing in Public Law 547, 79th Congress, or in the pertinent appropriation act which would authorize the Department to negotiate contracts for the purchase of furniture without advertising.

In view of the recent statements made on the Senate floor concerning the matter, we have reexamined the authority relied on by the Department of State to negotiate the purchase in question and we find it necessary to correct our answer to your question No. 5.

The authority originally cited by the Department of State for the negotiation of the purchase order involved was section 3 of the Foreign Service Buildings Act of May 7, 1926 (44 Stat. 404), as amended. Section 3 specifically authorizes the negotiation of contracts for "all work of construction, alteration, and repair" provided for in the act. It is our view this authority does not extend to the purchase of furniture.

The Department later cited Public Law 547, approved July 25, 1946 (60 Stat. 663). Public Law 547 authorized an appropriation of $125 million for the purpose of further carrying into effect the provisions of the Foreign Service Buildings Act. It was also provided that expenditures for furnishings from sums appropriated pursuant to the act should not be subject to the provisions of section 3709 of the Revised Statutes.

In authorizing the appropriation of $125 million, the Congress specified that $110 million of the total authorization should be available exclusively for payments representing the value of property or credits acquired through lend-lease settlements, the disposal of property abroad, or otherwise, and held abroad by the Government or owing the Government by any foreign government or by any person or organization residing abroad, which property or credits may be used by the Department of State for sites, buildings, equipment, construction, and leaseholds.

While Public Law 547 is primarily concerned with the payment for and use of foreign credits or property, it also authorizes an appropriation of $15 million for use under the Foreign Service Buildings Act for purposes other than the payment for foreign credits and property. In the absence of any legislative history showing a contrary intent, we must conclude that the exemption for purchases of furnishings from section 3709, Revised Statutes, under the 1946 act is applicable to all appropriations made pursuant to the authorization.

Accordingly, we are of the opinion that the Department of State did have authority under the exemption in the 1946 act to negotiate for the purchase of the furniture in question without advertising.

Copies of this letter are being sent to Senator DIRKSEN, the Secretary of Commerce, and the Director, Office of Foreign Buildings, Department of State.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, we plan to proceed today to the consideration of the Japanese Security Treaty in an orderly manner.

The distinguished Secretary of State, Mr. Herter, has advised us that the State Department considers ratification to be of extreme importance. The Senate will consider the treaty with great care and thoroughness. It is of importance that the world realize that we are neither going to accelerate nor delay the treaty because of events which have taken place in Japan. The treaty will be considered now as it would have been under any circumstances, upon its merits. I do not anticipate that there will be any serious difficulty, as I think most Members of the Senate feel that the treaty was well drawn in the mutual interest of both nations.

I understand that there are some speeches to be made today on other subjects, although the independent offices bill is the pending business. The minority leader has a policy meeting at lunchtime, but I wish all Senators to be informed. I ask attachés of the Senate to inform all Senators that we plan to proceed to consider the Japanese Security Treaty sometime during the day.

SPENDERS AND SAVERS

Mr. YOUNG of Ohio. Mr. President, none of us is immune from a certain amount of partisanship in interpreting the actions of the Congress and the Executive. It might be said that this is especially true when any analysis of the Federal budget is being made by spokesmen of one party or the other.

Recently, the Republican leader of the House of Representatives, Mr. HALLECK, in a speech in California accused the Democratic Party of wild spending. His reference was that the Democratic Party is the party of spenders. At just about the same day and hour, across the country, speaking in New Hampshire, the distinguished junior Senator from New York [Mr. KEATING] charged this Democratic controlled Congress with cutting too many billions of dollars from President Eisenhower's budget request for national defense and foreign aid programs.

Perhaps these two outstanding spokesmen for that Grand Old Party of which I am not a member should meet in the geographical center of the United States and agree on a joint statement which might possibly impress those Republicans who are presently confused over these conflicting statements.

However, Mr. President, regardless of partisanship, certain realities do exist. The fact is that during the first session of this 86th Congress, we cut over $1,300 million from the President's appropriation requests; this in addition to eliminating a $500 million appropriation that was requested by President Eisenhower at that time for fiscal year 1961.

Let us refer to facts demonstrated by the record made in this Democratic-controlled Congress. The record demonstrates that this Congress under Democratic leadership saved taxpayers that sum—$1,800 million—by appropriating that amount under President Eisenhower's budget requests.

Mr. President, in addition to the substantial saving of last year, the Congress, controlled by the Democratic Party, has sliced a total of $10,600 million from appropriations requested by President Eisenhower from fiscal 1955 through fiscal 1959.

I am sure that these savings of taxpayers' money were not the result of action by Senators on only one side of the aisle. It was an achievement for which all Senators and Representatives who so voted may take credit. In doing so, however, let us remember that it was the Democratic Party that organized this Congress under the magnificent leadership of Speaker SAM RAYBURN and of our majority leader, Senator LYNDON B. JOHNSON.

Incidentally, Mr. President, when General Eisenhower first became President our national debt was $265 billion. The annual interest charge on this was less than $6 billion. Government bonds were selling at par. This was the fiscal situation when Harry S. Truman retired from the White House.

After 7 years of the present administration, our national debt is $292 billion. Our annual interest charge is $9,500 million. Government bonds have been selling below par.

In connection with these figures it must be remembered that only one of the President's vetoes was overridden by the Congress. The responsibility for these increases cannot, therefore, be laid to the Congress.

Now, I ask, if a label must be assigned, which is the party of savers?

Mr. President, the great issues before us are not those involving "spenders" or "savers." The great and pressing issues are those involving the future safety, well-being, and economic growth of our Nation.

Much, if not all, of the cost of what is necessary to be done can be defrayed out of savings achieved through the elimination of current waste, duplication, and inefficiency in our sprawling Federal bureaucracy. Elimination of waste and duplication in our defense policy alone would result in savings of at least $5 billion annually.

Mr. President, in this election year I realize it would be foolhardy to call for an end to partisan statements. However, if these statements must be made, let them be based on the facts. A look at the record proves that actions of the Democratic Congresses from 1955 to date have saved American taxpayers billions of dollars.

HOUSTON, TEX.

Mr. JOHNSON of Texas. Mr. President, it is with a deep feeling of pride that I am privileged to call the attention of my distinguished colleagues to a notable achievement by one of the great cities of our Nation and one of the great cities of Texas—Houston.

This booming gulf coast port, industrial and agricultural center, has demonstrated a record of growth and of civic vitality that places Houston virtually in a class by itself.

Census Bureau figures show that since the last population count in 1950, Houston has leapfrogged eight other great metropolitan centers of the United States.

Fourteenth in size a decade ago, Houston now ranks No. 6 in the Nation.

The latest count shows that Houston has a population of 929,991, an increase of 56 percent over the tally of 1950.

In 10 years—in moving from 14th to 6th place—Houston has advanced in population ahead of Milwaukee, Pittsburgh, San Francisco, Boston, Washington, D.C., St. Louis, Cleveland, and Baltimore.

This great city is now riding hard on the heels of Detroit, Philadelphia, Los Angeles, Chicago, and New York.

The record of Houston in the last 10 years offers a factual answer to the cynics who say that America is old, that America is tired, that the age of our growth has ended.

Demonstrated in the growth of Houston are the qualities that have made—and will keep—America great. It is with confidence that I predict that in the 10 years ahead—by 1970—Houston will have demonstrated equal or even greater growth than it has in the decade just ended.

AMERICAN STRATEGY AND STRENGTH AND THE NATIONAL PURPOSE

Mr. SALTONSTALL. Mr. President, yesterday's CONGRESSIONAL RECORD includes a series of insertions relating to America's strategy and strength. This group of excellent statements is the work of a task force appointed by the chairman of the Republican policy committee of the House of Representatives, Representative JOHN BYRNES, of Wisconsin.

The study group itself was headed by Representative GERALD R. FORD, JR., of Michigan. The so-called Task Force Report is a commentary on the challenges we face and our preparedness—present and future—to meet them—U.S. public strategy in the latter 20th century. It is based on 21 background papers contributed by Congressmen, academic authorities, and Government leaders.

The whole project represents a positive effort to depict the great issues of our times in a thoughtful, objective, constructive manner; and to consider carefully the resources and the mechanics through which they can be utilized. Particular emphasis is placed on the relativity of our capabilities to those of the Soviet Union. But the Ford report also is a valuable guide to the absolute strengths of our system, and how they can best be sustained for the future.

It is a forward-looking report, measured and thoughtful; not shallow, negative, or hysterical. It is not bipartisan, since the project was conceived and executed by the House G.O.P. policy committee, but it is nonpartisan in that its motivation and tone are essentially not political. I believe that this is the kind of study which honestly and profoundly serves the national interest. It is a standard for depth analysis and positive conclusions which can be used by all American citizens interested in either studying or solving the public problems of our times.

I have read certain newspaper accounts describing the Ford report both as an answer to Governor Rockefeller's recent public statements and as a prelude to the 1960 Republican Convention platform. This dual characterization seems to be based on the fact that Vice President NIXON has given his support to the overall purposes of the project and that G.O.P. Platform Chairman Charles W. Percy is impressed by its findings. I feel that such a description of the Task Force Report misses the basic point; that this is an effort devoted to the larger purpose of understanding the core of our survival. Of course it is helpful if this can be directed to more limited and specific objectives also.

The various segments of the continuing nationwide debate on our national purpose has focused on many aspects. I feel that this spontaneous, informal, varied self-appraisal is a very helpful institution—the hallmark of a free society—and I believe that the Ford report comprises a valuable contribution to this debate.

Obviously there are many dimensions to our national destiny. We have heard about leadership, religious strength, public awareness of traditional ideals, and so forth. I believe that the national purpose is intimately related to the national vitality. Our health, our future, our survival depends on a vigorously inquiring populace, a populace concerned about the great challenges of the age and dedicated to contributing to their solution, each according to his own individual abilities. Our electorate must be critical without being destructive, aware without being desperate, self-confident without being complacent. We must resist the shallow temptation to oversimplify and distort for the purposes of vested interest, whether it be political, economic or social.

The principal issue before America in the 1960's is whether a society which is dominated by a large and powerful Central Government and by a huge and unprecedented wealth can sustain the strength and stamina of her great ideals—intellectually, spiritually, and physically.

In my opinion, the House Task Force Report contributes substantially to the objective of national vitality and alertness.

At the present moment in the struggles of the cold war, we are perhaps discouraged at the collapse of the summit conference and the recent events in

Japan which prevented the visit of President Eisenhower during his otherwise triumphal tour in the Far East. I believe that these developments underscore two points which particularly attracted my own attention in the House study of American strategy and strength. These are, first, that we must emphasize the long-term realities rather than short-sightedness; and, second, that "survival only" as a national policy is a dangerous and introverted strategy largely unaware of the basic problems of the world today.

Here I would like to mention two critical aspects of public policy with which Congress is dealing at this very moment. Recently the Senate passed a $40-billion plus defense appropriations bill, which has now gone to conference. The Senate added more than $1 billion in excess of the President's request, believing that a new aircraft carrier was needed, that the B–70 supersonic bomber's development should be funded, that more money should be allowed for the Bomarc antiaircraft missile program, that modernization of our land Army's weapons should be speeded up, and so forth. These objectives are very worthy and as we heard on the Senate floor during the debate of this measure, "there can be no price tag on freedom." But there is more to the picture than this—there is more to the business of preserving freedom and guaranteeing security, and we must be aware of the long view and the broad view as we approach this greatest question of public policy.

For instance, the House study points out that military power in the final analysis must be based on economic power—on sound monetary and overall economic policies. The full view demands practical understanding of this. So as we consider the uses of money in any given direction, we must consider also the stamina of that money's value—our overall economic soundness for the long haul.

Second, I would like briefly to call attention to the mutual security appropriations bill recently sent over to the Senate of $3,584,500,000—$590,500,000 below the President's request, but well below threatened cuts of up to $1½ billion. I hope that in its final consideration of this measure, Congress will demonstrate its awareness of the full challenge before us and further reduce the cuts which have taken place. Our security is imperatively involved with the plight of the rest of the world. First, we cannot stand alone against the threat of a united Communist bloc. Second, we must act to reduce the huge causes of international strife, discontent, and threatened nuclear annihilation. This can be done by helping to reduce poverty, disease, and human frustration in the less-developed areas of the world and by assisting their peoples in gaining dignity, self-respect, and international recognition. The strong and free nations must help to bridge the world's social and economic gaps. Mutual security is a major means of public policy to accomplish this. Here again is the broad view.

I am grateful to those who prepared background papers for the study of America's strategy and strength, and I compliment those House Members who have worked 4 months toward its successful completion.

TRADE WITH FINLAND

Mr. JAVITS. Mr. President, as one who has long been an advocate of expanded world trade, I call attention to the noteworthy strides that have been taken by Finland in setting the stage for increased mutually beneficial trade with the West and the United States. This small nation of 4½ million people is well known to all of us for at least two important reasons: for paying its debts and for fighting valiantly for its independence. It is not so well known that Finland is a constitutional democracy, in which the traditions of freedom and individual liberty, as they are in the United States, serve as cornerstones of a private enterprise system.

Early this year the Finnish Government modified trade restrictions so that the United States can now sell more goods to Finland. Other significant steps, such as liberalization of currency restrictions, have strengthened consumer buying power and have provided the opportunity for increased trade between our two democratic countries.

It is worth pointing out that the Government of Finland has never solicited aid, grants, or gifts from any country—nor has it received any. Only on a strictly business basis has Finland entered into loans which she has received from this country or from international banking institutions; and, as has been her custom, Finland is repaying such obligations.

The vitality of Finland's way of life was dramatically exemplified when this small country harnessed its resources to pay in a relatively short period about $650 million in reparations to Russia after World War II. This tremendous burden was met and overcome by the determination and perseverance of the Finnish people.

Though located on the very border of Communist Russia, Finland's private economic system serves as a meaningful symbol to all mankind. Clearly, this is a country which deserves our esteem and our cooperation. Its economic life is no longer one sided. The leadership of the forestry and paper industries is being followed vigorously by Finland's metal and manufacturing industries in establishing themselves on a world market level.

In this connection, a report has been published expressing concern that American businessmen today are not sufficiently aware of the opportunities for profitable trade between Finland and the United States. I ask unanimous consent to have printed in the RECORD pertinent excerpts from an article entitled "Finnish Trade Turns to West," written by Frank C. Porter, and published in the Washington Post and Times Herald, June 8, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FINNISH TRADE TURNS TO WEST—BUT U.S. MISCONCEPTIONS HURT

(By Frank C. Porter)

A Finnish trade representative approached a large American women's magazine. Could arrangements be made, he asked, for qualified Finnish products to display the magazine's consumer research seal of quality?

No sir, the magazine replied. After all, was not Finland a Soviet satellite?

Another Finn visited a leading U.S. textile firm, proposing that some of its products be manufactured under license in his country. He was turned down flatly on grounds that Finland is a member of the Russian trade bloc.

These and countless similar rebuffs have deepened the quandary of the brave little country that won U.S. hearts by holding Russia's military might at bay for months in 1939.

Despite her traditional resistance to encroachments by her huge neighbor, Finland finds herself sometimes labeled a Soviet bedfellow. And nowhere is the misconception more widespread than among American businessmen, with whom the Finns would like to trade.

The misunderstanding stems from the post-World War II peace treaty which forced a Soviet trade partnership on the Finnish people. Finland was required to pay the equivalent of about $650 million in reparations—roughly one-fifth of its annual gross national product—and virtually all of this was in the form of exports to Russia.

The Finns also recognized that they could not afford to join any alliance which might be hostile to Russia, and thus passed up membership in NATO and similar groups. At the same time, if Finland appeared to step out of line, Russia could put the squeeze on her by worsening the terms of their trading relationship.

A decade ago, there were dire predictions that Finland could never stand up under such pressure, that it would slip to the slave status of a Hungary or a Czechoslovakia.

But the reverse has been true. Although some 50 of the 200 members of the Finnish Diet are Communists, the rival Agrarian Socialist and Conservative Parties have worked effectively to keep the cabinet free of Reds.

Equally important has been Finland's growing independence in the economic sphere. She paid off all Soviet reparations within 4 or 5 years and since then has been steadily strengthening her trade ties with the free world, particularly with the other Scandinavian countries and Western Europe.

Part of Finland's increased trade appeal in non-Communist markets is due to its rapid diversification. Until recently the country was limited by largely a forest economy—timber, pulp, paper, and other wood products. In later years, there has been a great increase in metalworking, heavy machinery, textiles, agriculture, and crafts. Forest products made up 91 percent of exports in 1952; since then they have declined to 73 percent while metal and engineering exports have quadrupled, agricultural exports nearly tripled.

Finland is particularly noted for its artistic work in furniture, glass, and architecture.

American friends of Finland insist U.S. businessmen are passing up not only a growing source of imports but a promising market for American goods as Finland continues to improve its reserves of free world currencies.

KHRUSHCHEV'S BLUEPRINT FOR CONQUEST

Mr. MARTIN. Mr. President, I have come across a very interesting and informative discussion that I know will be of great interest to all Members of Congress at this time. It is contained in the June 1960 issue of Air Force in the form of a special report, and I ask unanimous consent to have it printed at this point in the body of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

The Communist propaganda apparatus made it appear that Soviet Premier Khrushchev delivered a disarmament address to the Supreme Soviet early this year. In fact, what Russia's top government body heard was—

KHRUSHCHEV'S BLUEPRINT FOR CONQUEST

As 1960 dawned, some Western analysts still were describing Soviet military developments in terms of factors the Communists long ago relegated to Orwell's "memory hole of history." They maintained that Soviet reliance on mobile infantry—the predominating practice before the advent of nuclear weapons—was likely to continue to prevail in the missile-space age. They argued that the Soviets still adhere to the strategy of the counteroffensive embraced by Czar Peter, Kutuzov, and Stalin. According to them, Asia and Africa, conquerable through infantry invasions, would remain the principal targets for Soviet conquest—even in the 1970's. Soviet missiles would serve to deter U.S. interference should Communist troops attempt to conquer Burma or invade Ghana.

Although these analysts admitted the possibility of a war "of desperation" against the United States and her NATO allies, they ruled out deliberate Soviet resort to total war to plant the red flag of communism over all world capitals. If, somehow, the Soviets should be forced into all-out war, doctrinal commitment to the importance of occupation still would govern Communist military strategy. One has gone so far as to argue that the U.S.S.R.'s massive numbers of ground troops would then be transported by rockets to carry out transoceanic invasions and occupy the United States.

Against this farrago of western sovietology, Nikita S. Khrushchev, on January 14, 1960, personally disclosed 13 new concepts in Soviet military doctrine. The nature and role of the Soviet military establishment, as Khrushchev described it, bears little resemblance to the wish-dreams indulged in by experts unskilled in looking forward. Khrushchev, of course, envisages a "strike-the-United States-and-NATO-first" strategy. And he does not intend to march troops across the Bering Straits and down the Mississippi Valley, let alone drop them from rockets like manna from heaven.

Khrushchev made his disclosures in a speech to the U.S.S.R. Supreme Soviet—a high-level body to which, theoretically, he must account. In the same speech, he said that the U.S.S.R. possessed the capability in being to implement the concepts he had enunciated. Some Western observers have, quite rightly, accused him of exaggeration on this point. But the best evidence indicates that the Soviets are converting their force structure as rapidly as possible to one which meets the requirements of the nuclear age and of continuing advances in technology. Present Soviet capabilities have been dismissed too lightly and too often.

There have been earlier indications that Soviet military doctrine was undergoing drastic revisions. Yet future historians are likely to describe Khrushchev's innovations as a turning point in Soviet military history. For the first time since securing his position as absolute dictator, he revealed that, like Stalin, he had assumed the role of the final authority on military doctrine.

Undoubtedly, Khrushchev, in formulating his doctrinal concepts, sought the advice of his military high command. However, in public at least, all of them—including Minister of Defense Rodon Y. Malinovsky—have been reduced to a position of endorsement and implementation. And there are indications that, like Stalin, Khrushchev has forced his military commanders to carry out his orders, turning a deaf ear to protests and objections from some of them. He is demonstrating the total Bolshevik ruthlessness characteristic of his predecessors and is directing all efforts toward the urgent business of communizing the world.

The 13 Soviet strategic concepts Khrushchev disclosed are:

1. Weapon systems capable of defeating the United States and completing the world revolution exist for the first time—nuclear/thermonuclear firepower plus superior delivery vehicles.

2. The rest of the world will surrender automatically if the United States has been conquered. Steps are being taken to translate into reality Marx' dream of a rapid revolution resulting in Communist domination of the world.

3. All types of surprise and all their components have assumed new and perhaps decisive significance—in the initial phase of the war and in all subsequent phases.

4. Timing surprise is a factor governing all phases of strategy, tactics, training, and organization.

5. Initial surprise blows will take the form of rapidly executed missile salvos; the prime objective will be to destroy the bases of the enemy's retaliatory forces first.

"Our armed forces * * * have been transferred over to missile-nuclear arms. These arms have been perfected and will continue to be perfected. * * * Potential depends on total firepower and means of delivery. * * * The Soviet military establishment now has delivery systems and firepower never before possessed." (Khrushchev, Jan. 14, 1960.)

6. Targeting of the initial ICBM strike and threats of follow-on strikes by delivery systems with a recall capability are expected to deter enemy retaliation. Despite these measures, retaliatory strikes still could occur during the first hours of the war. Therefore, should they eventuate, steps are being taken to minimize their effectiveness and to absorb inevitable resultant damage.

7. To absorb enemy retaliation, trained reserves prepared for instant mobilization will fight at home, performing missions of population defense and control.

8. Advantages gained in the initial strike must be exploited by follow-on strikes on key industrial targets and other strategic centers. A mixed-force structure of missiles, aircraft, and, ultimately, space-weapon systems, will be used to maximize surprise in the second strike and in subsequent strikes.

9. ICBM's and IRBM's must be based to ensure 360 degrees coverage of the earth's surface. Proper basing arrangements permit such coverage from sites on Soviet-controlled territory.

10. Concepts of ground operations have been adapted to missile/nuclear warfare—firepower conquers and ground forces occupy, to accept surrender and supervise installation of Communist regimes.

11. Constant and intensive research and development is required to maintain a winning force structure in the face of rapid technological advances.

12. Leadtimes must be pared to the minimum to insure technological surprise and to meet continuing requirements for combining all modern arms.

13. No obsolescent weapon systems will be tolerated, now or in the future.

"Modern missiles can destroy the selected target with the first salvo. * * * A missile salvo has enormous power, exceeding the total power of all explosions which have occurred on earth during all the wars in the history of mankind." (Maj. Gen. G. I. Pokrovsky, Mar. 9, 1960.)

In enunciating these 13 strategic concepts, Khrushchev and high-level Soviet military leaders have left no doubt that they envisage a decisive war ending in global communization. They are inspired by this vision of future war:

Mass use of nuclear weapons of all yields and types and employment of delivery systems with global range and a capability to be switched rapidly from one theater to another will characterize the entire war.

Surprise of many types will govern both strategy and tactics throughout the conflict.

War will start with massed attacks by missiles with nuclear warheads to knock out the U.S. strategic striking forces.

Threat of a second strike can deter us from retaliation, or a second strike can be launched from hidden bases to take out remaining military capabilities with spillover to population and industrial targets.

A third strike could be used to increase destruction to the level of genocide or, in the form of threat, could serve to include surrender followed by the installation of a Communist regime.

Firepower will be redirected quickly, by threat or employment, to induce the capitulation of nations allied to the United States as well as the surrender of underdeveloped and neutral nations. In all cases, conquest will serve as the prelude to communization.

"The Soviet Union is militarily the most powerful state in the world." (Khrushchev, Mar. 1, 1960.)

After nuclear strikes, regular ground forces will occupy areas easily accessible to them. Areas less accessible to ground forces will be occupied by irregulars—guerrillas and local revolutionaries—assisted where practicable by airlifted Soviet cadres.

In the Soviet homeland, reserves will perform cleanup and disciplinary missions.

The Communist propaganda apparatus has applied characteristic and skillfully worked-out methods to conceal Khrushchev's doctrinal innovations and to convince the world that his speech to the U.S.S.R. Supreme Soviet—where he initially disclosed his strategic plan—was a "disarmament" speech and another Soviet move in the interests of peace.

Despite Communist concealment efforts, even superficial examination of Khrushchev's remarks and subsequent statements by Minister of Defense Malinovsky, Air Force Commander in Chief Vershinin, Marshal A. A. Grechko, and other high-level Soviet military leaders reveals the true nature of the Soviet military "new look."

Thirteen implications affecting free-world security may be derived from the 13 newly disclosed Soviet strategic concepts. What are these implications?

1. The Soviets have added a new dimension to their spectrum of conflict weapons. Possession of nuclear firepower means that Soviet capabilities to mount a surprise attack on the United States, and thereby to conquer the world, have been increased by a quantum jump. The U.S.S.R. is acquiring a set of weapon systems based on nuclear firepower and characterized by the following advantages:

Global coverage.

Ability to shift rapidly from one target to another.

Flexibility of levels of destruction, which now can be tailored to suit the target.

Surprise potentials.

"In the * * * competition with capitalism * * * the question of the time factor, of gaining time * * * is the main question." (Khrushchev, Nov. 28, 1959.)

Material and psychological impact in combination.

Effectiveness for cheap world conquest, particularly if utilized in the absence of a free-world capability to survive the first strike with adequate retaliatory forces.

In brief, the Soviets estimate that proper utilization of nuclear weapon systems will furnish the means required to carry out their fundamental ideological commitment: bringing the entire world under Communist domination.

2. Khrushchev never tires of assuring us that this doctrinal commitment remains unchanged. He says that the Soviets have stood and will continue to stand like a rock on the principles of Marxism-Leninism, that there can be no coexistence on questions of ideology; that capitalism is historically doomed; that he will bury us. Furthermore, since his return from the United States, he has iterated the orthodox doctrine that war is required for Communist conquest of the most powerful non-Communist states.

Khrushchev also frequently reminds us that a third world war would result in the destruction of capitalism, but that, meanwhile, communism and its home base—the U.S.S.R.—would survive. He adds that the U.S.S.R. is capable of absorbing the losses caused by U.S. nuclear retaliation.

3. The Communists consider the United States, the chief capitalist power, to be the principal enemy. They believe that if North America goes, the rest of the world will capitulate. Initial massed missile salvos would hit both the U.S. zone of interior and our oversea bases, and affect non-American populations.

Conquest of NATO, SEATO, and CENTO nations would be simplified in the wake of the disruption of communications, command, and control which would result. Domination of South America, Asia, and Africa would be accelerated by utilizing a combination of indigenous revolutionary forces and guerrilla units, both striking under the shield of Soviet missile threats.

4. The key to successful nuclear war is to avoid harm to oneself. Minimizing expected retaliation has created a Soviet doctrinal requirement for maximizing all types of surprise. Since the weapon systems involved in the first exchange are ICBM's, the initial blow assumes new importance. Moreover, deterrence of a retaliatory strike may be achieved by launching or threatening to launch follow-up strikes. Absorption of retaliation also is possible; effective military and civil defense and population control will reduce considerably the impact of expected retaliatory blows. Radiological prophylaxis will be accomplished by preplanning and executing well timed decontamination and evacuation measures. Population control and panic prevention measures will include dispersing or sheltering essential cadres, furnishing medical care, prepositioning food and water, and exploiting previously carried out conditioning designed to reduce fears of fallout.

"The central task and the supreme form of revolution is the seizure of political power by force of arms and the solution of problems by war." (Mao Tse-Tung.)

5. Despite the new importance attached to the initial surprise blow, the Soviets remain committed to the idea of the necessity to combine all arms, nuclear and nonnuclear, military and psychopolitical. A winning strategy depends upon follow-on strikes to exploit opportunities resulting from the initial success. Such blows are designed both to complete conquest of the United States and to expand the war in other theaters. To be effective, such blows depend on preservation of a second-strike missile capability through the phase of U.S. retaliation. Furthermore, other strategic systems must be utilized in combination with missiles, and military success must be exploited through occupation.

6. To meet these requirements, the Soviets, in true dialectic fashion, have synthesized all other weapons in the spectrum of conflict with nuclear/missile systems which form the core of their military and psychopolitical power.

7. Consolidation of the gains from the war will pose stringent postwar demands on the Soviet leadership. The concept of a citizen's army of trained reserves is based, in part, on the necessity to preserve the means to carry out postwar demands on the capital of world communism.

8. The Soviets already have made the decision to prepare themselves to retain, at all times, the option to attack. Orthodox doctrine requires the exercise of extreme caution on the eve of the final showdown with capitalism, and the enemy must be softened up before the attack. The softening-up process has taken the form of the current intensive Communist effort to convince the West of the necessity for disarmament, a nuclear test ban, peaceful coexistence, and interminable negotiations on other outstanding issues such as Berlin.

The purposes of these moves are: deception concerning actual intentions, paralyzation of Western leadership and initiative, isolation of the United States from its allies, and a gain in time to increase Soviet force superiority.

The Soviets believe that the greater the success of these degradation tactics, the less the risk involved in launching an attack.

"Missile forces are undoubtedly the main type of our armed forces. However; it is not possible to solve all the tasks of war with one type of troops. * * * In a modern war, to carry out military actions successfully requires unified use of all means of armed combat, combining the efforts of all types of armed forces. * * * In organization and means of action * * * military operations will little resemble those of the last war." (Malinovsky, Jan. 14, 1960.)

9. A decision concerning timing of the initial surprise strike could be made any time that requisite strength has been achieved. Precisely when the strike will be launched will depend on Soviet assessment of the success of degradation moves, the balance of forces, and the status of training, as well as on evaluation of the effectiveness of preattack preparations, including Soviet salvo capabilities. United States alertness, if extant, could cancel out a Communist decision to exploit a superior strength ratio which was purely statistical.

"If anyone in the West imagines that the status of the Soviet economy does not permit the maintenance of the military establishment required * * * then so much the worse for those who think so. * * * It should be clear * * * that if an increase in expenditure for the maintenance of the armed forces [is required], our budget and our economy would make it possible to allocate extra tens of billions of rubles." (Khrushchev, Jan. 14, 1960.)

10. Possibilities of further new advances in technology introduce further uncertainties which the Soviet planners must take into account. In order to eliminate the possibility that the United States might achieve technological surprise, the Soviets are applying their degradation tactics in an effort designed to commit us to a completely predictable program of technological progress.

11. The Soviets have taken further steps to nullify all uncertainties by commitments to a broad and intensive spectrum of R. & D. efforts, by announced intent to win the leadtime race, and by planning operations around a program of continuous phaseout of all obsolescent weapons combined with phasein of new ones. They have the necessary technological know-how, raw materials, funds, and motivation to come up with imaginative new weapon systems, and Khrushchev has announced their R. & D. intentions. He told the Supreme Soviet:

"The armament which we now have is formidable armament. The armament under development is even more perfect and more formidable. The armament which is being created and which is to be found in the folders of the scientists and designers is truly unbelievable armament.

"We deploy our missile complexes in such a way that duplication and triplication is guaranteed. The territory of our country is huge; we are able to disperse our missile complexes, to camouflage them well. * * * If some weapons * * * were put out of commission one could always send into action weapons duplicating them and hit targets from reserve positions." (Khrushchev, Jan. 14, 1960.)

The Soviets have become technocrats and are intensely preoccupied with firepower. It would be a mistake to interpret Khrushchev's warning exclusively in terms of new delivery systems. For a nation committed to global conquest, a nation which has already impacted the moon, delivery systems cease to be "unbelievable." Khrushchev may very well be referring to a new type of firepower.

12. If the Soviets find they cannot insure victory by military means, they will continue to employ psychopolitical measures to lull the West to sleep, to induce us to abandon our missiles and nuclear weapons, and to slow down our R. & D. effort even more. Meanwhile, they will be preparing to strike a few years later with new weapons furnishing a capability for even more effective technological surprise.

13. If current degradation tactics succeed, the Soviets could complete the world revolution at minimal cost resulting from retaliation. U.S. alertness, as well as our deterrent and retaliatory capability, would virtually disappear if the Soviets were able to cheat on nuclear disarmament and test-ban agreements, if any are made. Communist doctrine teaches that agreements of all types must be signed "whenever life and the interests of the cause demand it" but should be broken without notice whenever they cease to serve the interests of the global revolution.

Missile delivery systems coupled with nuclear firepower have confronted the leaders of the world Communist movement with the most difficult military problem they—or others—have ever faced. On the one hand, weapons in being promise an initial opportunity for completing the world revolution once and for all. But on the other hand, global conquest is impossible unless Western alertness to the true intentions of the Communists is minimized and U.S. strengths degraded to a point where the risks of retaliation become negligible.

"Present-day ballistic missiles guarantee a high probability of inflicting powerful strikes simultaneously on a great variety of targets * * * to redirect firepower quickly, shifting the decisive thrust from one target or one theater of operations to the other, and by means of massed nuclear strikes to * * * change the situation to one's own advantage." (Malinovsky, Jan. 14, 1960.)

If they wish, citizens of the United States—and of the entire free world—can assist the Communists to gain global domination. The requirements are simple and easy to execute. They can continue to be apathetic toward civil defense and disinterested in effective utilization of our own potential and actual strengths. They can be reluctant to pay for effective missile hardening, and for airborne alert. They can attack proposals to accelerate the phase-

in of second-generation ICBM's and to surge forward with the nuclear aircraft program. They can join groups supporting a nuclear test ban à tout prix.

In the process, they will give the Soviets new basis for their contemptuous assessment that the balance of power is shifting to favor the Communist camp. They will reinforce the Soviet belief that the free world can be deceived about true Communist objectives and has been deterred from taking effective steps to prevent global takeover.

We are confronted with an enemy born and bred on violence. Khrushchev and his henchmen have been utterly explicit about their intentions. Eventually, we will have to face the final showdown.

We have danced too long and too ceremoniously in the heiau of "horrors of nuclear holocaust," proffering our military superiority and moral strength on the altars of "negotiation," "disarmament," and "coexistence." The god we are worshiping is one the Communists neither recognize nor fear—the false god of international "togetherness" who, by accepting our sacrificial offertories, assists the Communists without realizing it.

"Flying machines piloted by man have been mechanized, semiautomated, and, finally, fully automated and integrated with missiles. Air Force personnel * * * will be required to learn to use the new, more perfect, and hence more complicated airplanes." (Vershinin, Jan. 19, 1960.)

URGENT NECESSITY FOR INEXPENSIVE METHOD OF CONVERTING SALINE AND BRACKISH WATER INTO FRESH WATER

Mr. WILEY. Mr. President, we are approaching a strange, new day in our land when we must create a planned sufficiency of water, rather than passively enjoy a natural abundance of this precious resource. This is the carefully substantiated prediction made in a recent staff study conducted by the Select Committee on National Water Resources of the Senate. This study further indicates that the national water requirements by 1980 will closely approximate the supply of 600 billion gallons per day, which is our estimated present limitation. This amount, incidentally, represents about half the total outflow of all the rivers in our country.

Secretary of the Interior Fred Seaton, as well as other qualified sources, have recently emphasized that the United States will have to turn to the ocean for our water supply by the year 1980—if consumption of this precious resource continues at the present rate.

Mr. President, we know that a vast amount of research is currently being done and that a number of water resource agencies and research centers are putting to work more scientists and engineers who can provide the type of research information that is needed. The vital question facing our country is: Can they come up with the necessary answers in time? The Nation is rapidly approaching a period when we will need and use all the water we can possibly get from every conceivable source.

Recognizing this important fact, I recently joined in sponsoring proposed legislation to carry forward the program to find more inexpensive ways of transferring saline, or brackish, water into water suitable for industrial and other consumptive purposes. The bill S. 3446 would authorize the Secretary of the Interior to negotiate contracts with public-owned organizations for the use of saline water conversion plant facilities in order to further the research and demonstration programs now authorized. Preliminary hearings on this legislation have already been held by the Senate Committee on Interior and Insular Affairs and it is my understanding that it is scheduled to be considered in executive session by that committee today.

Experts generally agree that low-cost conversion of saline and brackish water is a goal that can be achieved. Future conversion processes—which would be aided in development by the proposed legislation—hold promise of the attainment of a major breakthrough in turning sea water into fresh water so that the cost will eventually be lowered to less than 50 cents per 1,000 gallons. This figure favorably compares with the present average cost of water in the United States of 30 cents per 1,000 gallons.

Believing it to be essential that the Senate Committee on Interior and Insular Affairs take early action to report out the bill S. 3446, so that this important program can be effectively continued, I recently contacted its distinguished chairman, the senior Senator from Montana [Mr. MURRAY], in this regard. I ask unanimous consent that the text of my letter to the committee be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to respectfully urge early and favorable approval by your committee of S. 3446.

As you know, this legislation—if enacted—would authorize the Secretary of the Interior to negotiate contracts with public owned organizations for the use of saline water conversion plant facilities to further the research and demonstration programs now authorized.

As you recall, the Secretary of the Interior has stated that the United States will have to turn to the ocean for water by 1980; but has added that future conversion processes hold promise of developing entirely new methods which may permit the attainment of a major breakthrough in turning sea water into fresh water so that the cost will eventually be lowered to less than 50 cents per 1,000 gallons. Although a vast amount of research toward this objective is currently being done, the vital question is whether or not such research information can be supplied by the time that it will be urgently required.

It is my understanding that hearings have recently been completed by the Subcommittee on Irrigation and Reclamation, of the Committee on Interior and Insular Affairs, on this measure which I have been happy to cosponsor. It is hoped that your committee will take action to issue a favorable report on the bill as soon as possible.

With best wishes, I am
Sincerely yours,

ALEXANDER WILEY.

THE MEANING OF MATERIALISM

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a lecture on the meaning of materialism delivered by the Reverend Francis J. Conklin, S.J.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

In the preceding lectures we examined the meaning of Hegel's philosophy and came to an understanding of the word "dialectic." The philosophy of communism is classified as dialectical materialism. We must now explore the meaning of the word "materialism."

Karl Marx began with the fundamental premise that matter alone exists. To understand why this seemed so self-evident to him one must understand a bit of Marx's background.

Marx began with a false philosophical dichotomy. He believed that philosophers were easily categorized into idealists and materialists, and that one must choose either horn of this dilemma. Idealism for Marx represented the unreal so he chose materialism.

While writing his doctorate dissertation at Jena, Marx brought forward two ideas that were to permeate all of his philosophy. The dissertation compared the materialism of two Greek philosophers: Democritus and Epicurus. For Democritus, everything was fixed and unvarying. The world was composed of nothing but atoms and a void. These atoms fell in straight lines and predetermined all else. For Epicurus, only atoms and the void existed, but the atoms were endowed with an active principle. They were free to go where they wanted. Marx favored this more active type of materialism because it allowed room for free will and for hope in the fight against entrenched religion and authority.

Marx attended the University of Berlin shortly after the golden age of idealism closed with the death of Hegel in 1831. For those attending the university no middle course lay open between idealism and materialism, and in that context materialism was the inevitable choice for progressives. This intellectual situation had political and religious implications for the leftwing Hegelians as we mentioned previously. Consequently, it should come as no shock to find that Marx terminates his doctorate dissertation with the words of Prometheus: "I hate all the gods."

Marx interpreted the history of philosophy in the light most favorable to materialism. In "The Holy Family" Marx states that materialism is a natural-born son of Great Britain. "Duns Scotus had asked whether it was possible for matter to think. In order to effect a miracle, Duns Scotus took refuge in God's omnipotence, i.e., he made theology preach materialism. Moreover, Scotus was a nominalist and nominalism, the main form of materialism, is chiefly found among the English schoolmen."

After Dun Scotus in the history of British materialism, comes Francis Bacon. Bacon attacked the Aristotelians and in a way, was very much in the right. The Aristotelians (and the woods were full of them) had created a world in which everything conformed with Aristotle's astronomy of metaphysics. (Apart from the geocentric nonsense of the spheres, Aristotle's "Prime Mover," races after the unattainable "Uncaused Cause" like a squirrel on a treadmill.)

Bacon reacted by stressing the need for empirical proof of all metaphysical and physical assertions. Accentuating the particular and sense experience came to be misinterpreted so that only sense knowledge was respected as valid knowledge. Bacon asserted, but made no serious attempt to prove, that our knowledge is confined to what may be formally known in the senses.

Materialism took a giant step forward in the person of Hobbes. For Hobbes, philosophy concerns itself only with things of

bodily nature, which are generated through motion. Hobbes, a nominalist, opened the passage for materialism into mathematics. Thought no longer remains separate from thinking matter. In the practical sphere might makes right.

From Hobbes the torch was passed on to Locke because Locke advanced theoretical proofs that Bacon and Hobbes were correct. You will recall that Rene Descartes had separated mind and matter into two watertight compartments. For those who choose to emphasize matter a mechanical explanation of the material world sufficed. Everything ran like a machine; sensation itself was nothing more complex than a mechanical reflex. Descartes had isolated the human mind by his absolute separation of mind and matter. Consequently, Descartes had to demand and insist upon infused ideas because access to the intellect through the senses had been stopped.

Locke attacked infused ideas, insisting that all knowledge comes through the senses. This insistence was accepted as theoretical validation of Bacon and Hobbes.

At this time materialism splits into two groups. One group is very myopic; mechanical, and one might say, artificial in its expression. The other seeks solace in social humanitarianism.

Lamettrie published a famous book in which he called man a machine. This represents the extreme of the mechanical materialism arising out of Descartes. In the same tradition Diderot preached complete determinism as the only solution to the human equation. Man, the machine, lacks free will or freedom of any type.

Helvetius and Condillac represent the social outlook. These men look for progress in reason to match progress in industry and they regard education as all powerful. Only sense knowledge, of course, has validity. But to change man's knowledge they would change what he senses. In a word, all depends upon education and environment. They place the materialist accent upon the social life of man so that man may be changed by changing his environment. Holbach, the next materialist, insists that all men are created equal; that education is the all powerful solution to man's problems because every man is naturally good.

Marx will side with the latter group of materialists. Marx will nowhere acknowledge his debt to them but will adopt them by qualifying their position and integrating it into his world view.

By contrasting two materialisms—scientific determinism versus liberal, social progressivism we arrive at some interesting points of departure. Engels favored scientific determinism, and, as we shall see in subsequent lectures, had to be rescued by Lenin because he relied too heavily upon the narrow limits of the materialistic interpretation of science. Marx, a more profound thinker than Engels, embraced the social doctrine of the materialists and the great vision that the material world must be organized in a more human way.

When we study progressive materialism's emphasis on the natural goodness of man; the equal intelligence of all men; the all importance of experience in habits and education; the influence of external forces such as work; etc. the connection between progressive materialism and socialism or communism becomes rather apparent—and so does the insoluble dilemma of legislative thought investigation and/or control. Man draws his knowledge from the material world and acts on that world as a result of this experience. This world of experience must be organized in such a fashion that man here encounters and fulfills all truly human aspirations. Man must come to realize his human potentialities.

The materialism of Karl Marx may be logically integrated with the philosophical materialism of his predecessors, but logical analysis may abstract the man from the social context of his times. Marx embraced materialism in a logical—but more profoundly—in a social and humanitarian quest for truth. To appreciate this quest we turn to the "Thesis on Feuerbach":

"The chief defect of all hitherto existing materialism, that of Feuerbach included is that the object, reality, sensuousness, is conceived only in the form of the object of contemplation, but most as human sensuous activity; practice; not subjectively. Thus it happens that the active side in opposition to materialism was developed by idealism, but only abstractly, since idealism does not know real sensuous activity as such.

"Feuerbach wants sensuous objects really differentiated from thought objects, but he does not conceive human activity itself as activity through objects."

Fundamentally, Marx is saying that philosophy must cease to be pure contemplation.

Up until Marx's time, materialism has stressed the concrete; the real; the object which is known. In this analysis of knowing the object, the thing known, remains passive. This is especially true in the mechanical theory of sensation, where all emphasis is placed upon the object as something apart. An active, knowing subject counterbalances an inactive object.

On the other hand, the idealists have placed emphasis upon the creativity of the subject. They have monopolized the dynamic view. Idealists stress the subject to such an extent that they delineate the object—the subject comes to create its own object. Marx wants to take the dynamic or active insights of the idealist and transfuse them into the anemic staticism of the materialist camp. Marx wants to make the real active; to unify thought and action. Human activity is the real action of real men who change the world while being changed themselves.

Marx comes to grips immediately with an epistomological problem: "The question whether objective truth can be attributed to human thinking, is not a question of theory but a practical question. In practice, man must prove the truth—i.e., the reality and power, the this-sidedness of his thinking. The dispute over the reality or nonreality of thinking which is isolated from practice is a purely scholastic question."

Practice for Marx is the dynamic activity of the real. Activity permeates the real world, the object of human thought. The Hegelian dynamic spirit now inhabits matter. The test of truth; the test of union of mind and matter, of thought and objects, becomes the simple question: Does the thought work in its conformity with the real?

Just as Hegel rejected Kant and Fichte because they were based upon a false theory of opposition between subject and object, Marx has rejected Hegel by denying the validity of all knowledge which exists only for itself. Marx has repudiated all contemplative knowledge. What counts for Marx is the this-sidedness of thinking. This-sided thinking has reality and power.

Expressed in other terms: intrinsic contradiction has always been a test of truth in the speculative order. The real criterion of truth is whether the thought proves itself in the real world. If it does, intrinsic contradiction is quite academic. Real truth can be grasped only in real action.

From this premise Marx alludes to the social progressive trend in the history of materialism: "The materialistic doctrine that men are products of circumstances and up-bringing, and therefore changed men are products of other circumstances and changed up-bringing, forgets that circumstances are changed precisely by men and that the educator must himself be educated. Hence, this doctrine necessarily arrives at dividing society into two parts of which one towers above the other."

Society divides into the institutions and traditions which condition the thinking of people and the people conditioned or molded by these same institutions and traditions. For Marx, human progress cannot be incarnated in political and social institutions and traditions. Circumstances make men. External forces and forms at work in a society condition the thinking of any historical era. But existing conditions are not self-explanatory. In a word, Marx wants to know what makes external forces or external circumstances what they are. Marx's solution to this problem, we will have occasion to describe later on as historical materialism or economic determinism.

"Feuerbach starts from the fact of a religious self-alienation—the duplication of the world into a religion, imaginary world and a real one. His work consists in the dissolution of the religious world into its secular basis. He overlooks the fact that after completing this work, the chief thing still remains to be done. For the fact that the secular foundation can lift itself above itself and establish itself in the clouds as an independent realm, is only to be explained by the self-cleavage and self-contradictions in the secular basis. The latter must itself be understood in the contradiction and then, by removal of that contradiction, revolutionized in practice."

Marx simply states that the materialism, the atheism, if you prefer, of Feuerbach, did not go far enough. Feuerbach has correctly explained the origin of religion and of religious ideals. Feuerbach has answered the question "how"; he has not answered the question "why."

Marx will devote the rest of his life to seeking an answer to that second question: "Why does man create his own gods?" Feuerbach does not understand that religion is a product of society; nor that the individual he analyzes pertains to a definite form of society. For Marx, there must be a return to the real, a return to the individual—or, in epistomological terms, a return to the given. There must be an analysis of society and a solution offered to societies' evils.

"The supreme result so far obtained by perceptive materialism, that is, materialism which does not conceive the sensible world as practical activity, is the perception of isolated individuals in bourgeois society. The point of view of the old materialism is bourgeois society; the point of view of the new materialism is human society or socialized humanity."

The trouble with older materialists has been passivity; content to sit back and point out the evils of society then let things go as they are. Marx will not stop at such an elementary position as this: "The philosophers have hitherto only interpreted the world in different ways; the point is to change it."

Let us begin to integrate. The metaphysics of communism is called dialectical materialism. In Hegel we have seen the dialectic; in the last lecture we considered the materialist origin of Marx's thought. The fusion of these elements produced the alloy of dialectical materialism.

Matter alone exists. This is Marx's fundamental and most self-evident intuition. Why did Marx say that matter alone exists? For many reasons. First of all, he is concerned with the problem: which is more important, spirit or nature. In his view, those who have emphasized spirit, have fallen into the trap of idealism. Those who have emphasized nature, have fallen into the trap of static materialism.

Marx insists that nature is primary, that our concepts, our ideas (or whatever you want to call them) are nothing more than images of nature and are themselves products of organized matter. We do know the world as it is. Things can be known and things are known by the human mind. With one quick stroke, Marx brushes through a whole epistomological problem. Nature is active and the human mind is active. Nature copies or photographs things and the human mind expresses the photographs in terms of concepts or images. This is to say, that the thing in itself is the thing for us. All of the object's relations must be known and are known by the active human mind.

From what has already been said we may be led to oversimplify Marx and equate Marxism with pragmatism. This facile classification must be resisted. Marxists criticize the shallow, superficial approach of the true pragmatist and there is a good deal of truth in what the Marxists say. Although the Marxist test of truth is successful action upon matter, this test of practice if emphasized in isolation, becomes a very selfish and individualistic thing. To state that Marxism is merely another form of pragmatism, fails to properly evaluate the social content in the teaching of Marx.

The second fundamental metaphysical principle propounded by Marx is that this existing material world constantly changes. Eternal matter moves unceasingly. In this regard, Marx agrees with Heraclitus: "Change is the essence of things." (Recall, once again, that Marx is thinking in the atmosphere of evolution and progress which permeated the 19th century.)

Marx sees many dialectic or contradictory oppositions in the real world. First of all, a dialectical action permeates men's thoughts. Secondly, man and nature interact dialectically. Finally, a dialectical action lies in the heart of nature itself.

The dialectical interaction in human thought needs no comment. Anyone who momentarily considers the problem realizes that our concepts are clarified and purified by a constant opposition and interplay between contradictory, or opposed ideas. For example: One doctor says cancer is caused by a virus; another says it is not. The truth probably lies somewhere in between: a virus unlike any that have hitherto been discovered, etc.

The dialectical intersection between man and nature are explicable thus: Nature—i.e., the material world—has produced man. Man is the highest product of organized matter. Yet, man, the product of nature, wants to change nature—in other words, to humanize it. The contradictory pulls are man with his material needs opposed to nature which is supposed to provide satisfaction for these fundamental needs. Material satisfaction results from work. Work is the action which mediates between man's material needs and the material world which will provide satisfaction. Thus, the true equation is: man plus need, plus work, plus nature give satisfaction.

However, in the 19th century Marx looked around him and saw man plus need, plus nature, plus work all adding up to frustration. This is a simple way of saying that work is estranged; it is alienated; that work does not satisfy elementary human needs; that man in his most profound relationship to the world is alienated or estranged.

Finally, and without doubt, on a somewhat more superficial basis, Marx propounded a dialectical interaction in nature expressed in three laws. Actually, we are indebted to Engels for most of this material. A good part of it is contained in Engels refutation of the German philosopher Dühring.

Let's insert a parenthesis: Engels makes vociferous and emphatic claims that dialectical materialism is the only true materialistic philosophy of becoming. He proves this by certain terminological laws which we shall discuss in a moment. Actually, these laws are carried over from the Hegelian dialetical system. Eugen Dühring correctly understood Hegel's analysis of the dialectical nature of human thought and Hegel's attempt to explain the real world in terms of this natural dialectical process. Dühring questioned the legitimacy of transferring this idealistic concept to matter and using it to explain the motion of material beings in a philosophical system that rejects all the spiritual characteristics which render the dialectical thought process possible for humans. A careful examination of Engel's only major philosophical work: "Herr Eugen Dühring's Revolution in Science (Anti-Dühring)," will reveal that Engels did not give a satisfactory solution to the problem—despite the thunder and lightning.

Returning to the dialectical interaction in nature and the famous three laws of the dialectic: In theory these three laws are supposed to explain why there is motion in the material world. Engels popularized them in the "Anti-Dühring" and in the manuscript: "The Dialectics of Nature." Marx's adherence to these laws—especially in later life—may be seriously questioned. But whether true or false these laws provide the system with a marvelously logical coherence.

First of all, there is the law of opposites; reality is a unity of opposites. In other words, motion is a contradiction. A thing which is moving, both is and is not at the same time. Life itself is a contradiction; life is a process; life is the interaction of anabolism and katabolism. From time to time either anabolism or katabolism predominates, but life itself lives by simultaneous construction and destruction. Life is a contradiction in terms. In mathematics we have positive and negative. In calculus, we have differential and integral. These are contradictory operations. In electricity we have positive and negative. In magnetism we have north and south. In atomic physics we have proton and electron, or matter and antimatter. Thus the world as we discover it, is truly a unity of opposites. Whatever is, if you think about it enough, is really a contradiction.

Motion proceeds according to the second principle which is the negation of the negation. To paraphrase a passage from the Bible: if a grain of seed falls into the ground and dies, it brings forth many grains. In other words, one grain drops into the ground, dies; that is, ceases to exist, and there comes into life the negation of that one grain—the plant with its abundant grains. The new plant in its turn must die. And it bequeaths the world many grains. Thus, the many grains are negations of plant, or negations of a negation.

Reality makes progress by this process of negation of negation. This is illustrated in mathematics by the old dictum that minus times minus is plus. Two negatives make a positive. Perhaps the clearest example may be brought from geology. If you study the crust of the earth as you find it today and consider the effect of rainfall, you will note that the crust of the earth is gradually being worn away, washed down in rivers and deposited as fine sand or mud on the bottom of the ocean. The fine sand and mud is a negation of the dolomites, red and green argillites, or white quartzites that once constituted impassible mountain barriers on the surface of the earth. However, this accumulated fine sand and mud creates pressure of its own, and this downward thrust at sea level forces up new mountains, so that we find algae colonies and other evidences of ocean life in the Sizeh limestone high in the Rockies. The new crust is not really a negation of the old—but a negation of the negation—a negation of the fine sand which was a negation of the original crust. Thus minus times minus gives plus.

Applied to history: at the beginning of time common ownership of land prevailed but yielded to the march of private ownership. Private ownership was the negation of common ownership. The new order will demand a common ownership of land in a classless society. Thus will be accomplished the negation, the extinction, of the first negation.

Marx (really, Engels) is saying that the old is constantly dying and being replaced by the new. In the world of philosophy the old materialism ran up against its negation in the form of idealism. The old materialism could not cope with idealist philosophy because it could not incorporate the dynamism found in idealist philosophy. The new materialism negates idealism. It incorporates the best to be found in idealism because the new materialism is the negation of a negation.

The final metaphysical law is the law of transformation of quantity into quality. This explains why the new is better. The problem confronting Engels is that in nature there seems to be a leak: there seems to be a jump from simple negation to something new, which is a negation of that negation. Engels believes that this results from a simple process whereby continuous quantitative change produces a new quality.

Engels proves his contention by example: if you take water and heat it, the change is quantitative—that is to say, the increase in temperature is measurable in degrees. You are adding new measurable quantities of heat to the water. However, prolonging this process for a sufficient period of time develops a new quality in the water: steam. Conversely, if water is cooled the gradual quantitative diminution results in a quantitative change, and terminates in the production of a qualitatively different substance: ice.

The same may be illustrated from the field of organic chemistry. If you commence with an elementary hydrocarbon: Methane (CH_4) and make quantitative additions such as CH_2 you have Ethane, Propane, Butane, Peutane, Octane, etc. Each of these new products is entirely new—something never seen before—something never ascertainable from the nature of the original CH_4. Thus continuous quantitative change produces new qualities.

In summary: matter alone exists; matter is constantly in motion; matter's motion is dialectical in pattern. The dialection motion develops from the nature of the dialectical interaction in men s thoughts; in the dialectical manner of operation between man and nature; finally, from the dialectical interaction within nature itself. This latter interaction in nature is explicable through the three laws of the dialectic: Reality is a unity of opposites; progress is explicable by a process of the negation of the negation; continuous quantitative transformation results in the production of new qualities. This constitutes the metaphysical foundation of dialectical materialism.

ORDER OF BUSINESS

The PRESIDING OFFICER. Is there any further business in the morning hour?

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CLARK. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. Is there further business in the morning hour?

Mr. RUSSELL. Mr. President, I desire to ascertain whether there is further business in the morning hour, because before the Senate proceeds to consider the unfinished business, I desire to have a live quorum.

Mr. CLARK. Mr. President, will the Chair indulge me for a moment while I confer with the Senator from Georgia?

Mr. President, I renew my request that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLARK. Mr. President, I ask unanimous consent that I may proceed for not in excess of 10 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

PUBLIC DEBT AND TAX RATE EXTENSION ACT OF 1960

Mr. CLARK. Mr. President, earlier during the morning hour the distinguished senior Senator from Utah [Mr. BENNETT] undertook to criticize at some length the amendment sponsored by me, and which, in my judgment at least, if not in the judgment of the Senator from Utah, the Senate wisely adopted yesterday afternoon in connection with the excise tax bill.

My amendment dealt with the problem of business expense deductions for entertainment, gifts, and dues to social and athletic clubs. It would, I believe, conservatively yield an additional $250 million of badly needed revenue.

The Senator from Utah made a series of quite extraordinary statements. I should like to repeat them and then rebut them. He said, first, that my amendment permitted unlimited expenditures for liquor and food. This, of course, is not true.

The amendment retains the present requirement that any entertainment expenditure, to be deductible as a business expense, must be a necessary and ordinary expenditure in furtherance of the business. The amendment does not change that requirement at all. The amendment simply prohibits deductions for entertainment expenses except for food and beverages. The reason for the exception is that as a matter of both draftsmanship and administration, it was found impossible to draw an amendment which would be fair and just, and yet prohibit deductions for necessary and ordinary business expense in connection with trying to put across a business deal by the purchase of food and beverages. However, there is a clear limitation in present law on the amount which can be deducted for such expenses, and that limitation will continue.

My friend said that although I talked a great deal about yachts, in support of the amendment, that, as he read the amendment, one could yacht to his heart's content and could charge off the expenses to Uncle Sam, because we had not forbidden travel. Of course that comment is equally unsound; the bill did not prohibit deducting travel expense if it is a necessary and proper business expense, because we found that the administrative difficulties in writing such a provision into the amendment were quite substantial.

Mr. President, the distinguished Senator from Utah suggested that despite my amendment, an individual or a business could maintain and operate a yacht for entertainment purposes and could charge off the expense for it as business expense, to the heart's content of the owner of the yacht. Of course, the Senator from Utah stated that his belief is based on the fact that in the amendment there is no prohibition against travel.

But I can assure the Senator from Utah that I am quite certain that any competent lawyer would advise him that my amendment does prohibit business-expense deductions based on the use of yachts for the pleasure or entertainment of business customers, not for travel. Of course, if a yacht were chartered to take a group to some sort of business convention in another part of the world, that travel expense would be a legitimate business expense. But the ordinary entertainment for which a yacht is utilized would not be a deductible business expense under the provisions of my amendment.

Then my friend wished to know whether my amendment would exclude deduction of expenses of the well-known company picnic. Of course, it would not, because food and beverages would be deductible on the same basis as they were before. If a company picnic is found by the revenue agents to involve an ordinary and necessary business expense—within the meaning of section 162 of the code—the company could continue to deduct the cost of such picnics. Under the amendment the company could not deduct the expenses of hiring entertainers to perform at the company picnic. But if the company wished to hold a picnic in a park, I assure my friend that nothing in the amendment would prevent deduction for the food and drink expenses of that picnic.

Then my friend said he thought deduction of the costs of sample kits and window displays would be forbidden under my amendment, if they cost more than $10. But, of course, they would not, because those are not gifts. They are advertising expenses; and my amendment does not prohibit in any way legitimate advertising.

Then the Senator asked what would happen if at the end of the year one gave a salesman a bonus for having sold an extraordinarily large number of automobiles or dishwashers or whatever might be the article he was selling; and the Senator said that bonus would be a gift. But, of course, it would not be a gift, because a payment of this sort is treated as compensation for services performed, deductible by the employer and taxable as ordinary income for the employee.

Then the Senator said—and he almost wept as he said it—that the result of the amendment would be that corporations with a heart or with a soul would be denied the privilege of giving a scholarship to some worthy cake baker who used General Mills products, as he said, or to some worthy youth who, by means of a contest, won a scholarship. But, of course, my amendment would not prohibit that. A scholarship is a charitable or educational contribution and if it is deductible under section 170 of the code which covers the tax treatment of such contributions, it would continue to be deductible if and when my amendment becomes law, since my amendment does not change section 170.

Then my friend, with emotion in his words, inquired whether a faithful employee who had served a company for 50 years, would be prohibited, by my amendment, from receiving a gold watch when he retired from the company. The Senator suggested that in that respect there was a sad contest between permitting someone to wine and dine a customer, but forbidding a gray-haired, 50-year employee from being rewarded by being given a gold watch.

Mr. President, this does not bother me very much. Either the gold watch would be treated as extra compensation for services rendered which would be fully deductible under existing law, or if it would be considered to be a genuine "gift," and the company would claim a $10 deduction, after 50 years of service it would not seem too harsh to make the company carry the balance of the cost of the watch without help from Uncle Sam. At any rate there is no doubt that the practice of rewarding old employees will continue.

So, Mr. President, I hope very much that the Senate conferees will stand firm behind this wise amendment, which will make a beginning on cutting in on one of the most disgraceful aspects of our free enterprise system—namely, the swindle sheet racket—and, in addition, I am confident that the amendment will raise an additional $250 million of revenue for the Treasury.

Mr. President, I turn to another allied matter, and I ask unanimous consent that I may proceed on this matter for not in excess of 7 minutes.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Is there objection? The Chair hears none, and the Senator may proceed.

Mr. CLARK. Mr. President, the action taken by the Senate yesterday in defeating the committee amendments to the tax extension bill, H.R. 12381, and in passing three loophole closing amendments, if approved, will increase revenues in the coming fiscal year by $1.165 billion dollars. This could well spell the difference between a $200 million deficit and a $1 billion surplus in fiscal 1961. I ask unanimous consent that a table which I have had prepared to demonstrate these facts be inserted in the RECORD at this place in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Estimated surplus for fiscal year 1961 (spending $79.8 billion; revenue $84 billion)	$4,200,000,000

Less net increases over budget estimates in appropriation bills passed to date:	
Increases:	
Defense, June 16	$1,179,997,000
HEW, June 17	465,566,950
Interior, May 13	7,337,300
Subtotal	1,652,901,250
Decreases:	
Commerce, May 13	69,990,625
Treasury-Post Office	55,939,000
Agriculture	141,165,590
District of Columbia	2,932,567
Subtotal	270,027,782
Net increase	1,382,873,468
Surplus balance	2,817,126,532
Less cost of Federal employee pay bill	746,000,000
Surplus balance	2,071,126,532
Less postal rate increase (budgeted but not agreed to)	554,000,000
Aviation fuel tax and miscellaneous taxes (budgeted but not agreed to)	146,000,000
Subtotal	700,000,00
Surplus balance	1,371,126,532
Less cost of certain bills which may be passed before adjournment:	
Education (S. $900 million; H.R. $325 million) average	612,500,000
Housing	100,800,000
Medical care for aged (McNAMARA)	132,000,000
Foreign tax credit (S. $20 million, H.R. $45 million) (average)	32,500,000
H.R. 10 (estimate $150–$250 million) (average)	200,000,000
Subtotal	1,000,000,000
Surplus balance	371,126,532
Less cost of H.R. 12381, as reported by Finance Committee	565,000,000
Deficit	−193,873,468
Plus restoration of communications and passenger excise taxes	565,000,000
Plus new revenue raised by loophole closing amendments to H.R. 12381, as passed by Senate:	
McCarthy amendment repealing 4 percent dividend credit	175,000,000
Gore amendment preventing depletion allowance on finishing processes	300,000,000
Clark amendment narrowing expense account deductions	125,000,000
Subtotal	+600,000,000
Total revenue added by H.R. 12381 as passed by Senate	1,165,000,000
Surplus balance	+971,126,532

Mr. CLARK. Since there are no differences in H.R. 12381, as passed by the Senate and the House, in regard to the extension of all existing taxes, this matter will not be at issue in the conference committee. The three loophole closing amendments adopted by the Senate, however, do represent points of disagreement which will have to be ironed out by the conferees.

Before the Senate conferees were appointed last night, I reminded the Senate of the principle stated in Cleaves' manual that "the majority party and the prevailing opinion shall have the majority of the managers" in the conference committee. That principle was not followed in the appointments made last, because a majority of the Senate conferees voted against the McCarthy amendment to repeal the dividend credit provision of the code, and against my amendment to tighten the rules regarding the deduction of business expenses. As I indicated last night, however, I did not object to the appointment of conferees in violation of the precedent I have just cited, because I have confidence that they will truly and ably represent the views of the Senate majority in conference, regardless of their own individual opinions of the actions taken yesterday.

The importance of retaining the loophole-closing amendments in the bill on the revenue position of the Treasury cannot be overemphasized. The best estimates we have show that the three amendments adopted by the Senate will add $1.2 billion to Government receipts in the first full year of their operation, or $600 million in fiscal 1961—since they all become operable under their terms on December 31, 1960.

The Washington Post, in an editorial in this morning's edition, complimented the Senate on the soundness of its actions on the tax bill yesterday, and I ask that the editorial be inserted in the RECORD at this place in my remarks. Even the Wall Street Journal gave grudging acknowledgment that the Senate had acted in the interests of fiscal responsibility on the tax extension bill, although, of course, it added the usual pleas to stop all further spending. I ask unanimous consent that the editorial also be included in my remarks at this place in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post June 21, 1960]

TAXES IN THE SENATE

The Senate has acted responsibly in overriding its Finance Committee to continue, for another year, the communications and transportation taxes. While it is quite true that the original purpose of the transportation levy—to discourage travel in wartime—is no longer relevant, the need for Federal revenues is pressing. And while it is true that many States need an expanded tax base and would have welcomed the opportunity to take over the excise on telephone and telegraph bills, the Federal Treasury is this year in no position to be generous. For Congress to have voted several necessary increases in the budget and, at the same time, to have allowed these taxes to lapse would have made a poor record for any Democratic candidate to run on.

The budget surplus foreseen for fiscal 1961 now seems bound to be much smaller than had been hoped for 6 months ago. Congress' refusal to raise postal rates and its insistence upon pay increases at a time of relative price stability threaten, along with justified increases for defense and other items, to eliminate much chance of debt retirement or advantageous refinancing. Against this backdrop, tax cuts of any kind would look—and would be—quite irresponsible.

Several of the moves in the Senate to close certain tax loopholes have much merit, but without early and concerted action in the House, where revenue measures must originate, it is nearly impossible to accomplish such reforms. We hope the extended study of the tax structure which the House Ways and Means Committee has been conducting will lead to enactment of some of these and other corrective amendments to the internal revenue laws in the next Congress, if, as seems likely, complete action is impossible now. The Senate action and debate have at least pointed to some of the more obvious flaws, such as the unduly broad minerals depletion allowances (which it voted unanimously to curtail), the abuse of entertainment expense accounts, the poorly justified tax credit on dividend income and the seemingly widespread evasion of dividend and interest taxes altogether, to say nothing of the excessive oil and gas depletion allowance rates.

These are but a few of the many opportunities that exist to broaden the income tax base, which must be done before nuisance taxes like the transportation levy and other similar inequities can be eliminated. It is a pity that this Congress could not have addressed itself broadly and early to revenue problems, but the Senate, at least, has done about the best that it could under the gun of a July 3 adjournment.

[From the Wall Street Journal, June 21, 1960]

PINNING THE LABEL

The Senate, this newspaper reports, will face a lot of opposition to the Senate Finance Committee's approval of a bill to repeal the 10 percent Federal levy on local telephone calls, telegrams, and passenger travel.

The taxes are unduly burdensome, but some of the Democrats fear somebody might pin a label of "fiscal irresponsibility" on the Congress they control if those taxes—laughingly labeled "temporary" when enacted—are killed. The reason for the fear is that repeal would cost the Government around $752 million annually, and some Democrats want to spend much more money than even the administration thinks proper on a great many things such as Federal school construction aid, Federal medical aid to the aged and Federal housing aid, to cite a few.

Well, in an election year it's probably a futile exercise to suggest that Congress ought to do the sensible thing and not increase spending just to lure unwary voters. And in any other year, either, it's probably equally futile to hope that Congress will cut special taxes that provide money to spend. Once a tax is on and the initial taxpayer grumbling has ceased, it's about as hard to get elected officials to reduce taxes as it would be to get them to cut their own pay.

Still, there's a gleam of hope in all this. For here is a clear case of letting the public know outright that anything it gets from Washington the public itself must pay for. We don't know how many people use telegrams or travel around, but there are a mighty lot of them who have telephones and if the Senate does refuse a tax reduction they'll know their bills are 10 percent higher than they might be because of greater spending by Congress.

In a way, we suppose the taxpayer ought to be grateful to the Senators who say they want to keep the taxes so as not to endanger the balanced budget the administration is hoping for. That's a lot better than going deeper into debt, which truly would be fiscal irresponsibility of the worst sort, considering that some of the programs Congress seeks aren't necessary.

But since the Democratic majority seems worried about labels, we'd like to remind them that there are degrees of fiscal irresponsibility. And spending just about every cent they can get their hands on—with the country deep in debt and the public deep in taxes—can hardly be called fiscal responsibility.

Mr. CLARK. Mr. President, I should like to express my strong hope that the Senate conferees will stand firm behind the amendments passed by the Senate yesterday. I point out again to my colleagues in this body who may perhaps read the RECORD tomorrow that we are about to go into a political campaign in which our party is going to be accused of thriftless spending and of lack of fiscal responsibility. This charge may be made to stick, Mr. President, if it can be shown that this Congress, controlled by the Democrats, has taken the $4.2 billion surplus set forth in the President's budget and has substituted therefor a deficit of $200 million.

I hope this will not come to pass. The best way to handle the situation, both from the point of view of party policy and the national interest, is to see to it that we provide enough additional revenues before we adjourn this year to assure a balanced budget in fiscal 1961.

That, in my judgment, can be done only if the loophole-closing amendments are retained in the bill we passed yesterday.

Mr. President, I shudder to think of both the political implications and the effect on our national economy if we leave Washington having been only too willing to appropriate for the public interest, but entirely unwilling to provide the revenues to give us a balanced budget and an opportunity to make a payment on the national debt.

I hope very much the Senate conferees will stand firm. I would hesitate a long time before approving a conference agreement which left my party again subject to the charge of fiscal irresponsibility.

Mr. President, I yield the floor.

TRIBUTE TO SENATOR BYRD OF WEST VIRGINIA

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that I may proceed for 2 additional minutes.

The PRESIDING OFFICER. The Chair will state to the Senator from Ohio that there is no limitation on time.

Mr. YOUNG of Ohio. Mr. President, may I express my high admiration for the distinguished and very able junior Senator from West Virginia [Mr. BYRD], who is presently presiding over the Senate, and my pleasure over the fact that the junior Senator from West Virginia is in the Presiding Officer's chair this afternoon.

Mr. President, from the knowledge I have acquired since I first became a Senator in January 1959, I have learned to regard the present Presiding Officer, the junior Senator from West Virginia, Mr. ROBERT BYRD, as one of the most devoted, dedicated, and industrious Members of the Senate.

During his 2 years in the Senate—it will be 2 years at the end of the present year—and his three terms in the other body, I know that the junior Senator from West Virginia has made a remarkable record of achievement. He has served his State and the Nation with fidelity and zeal, and great brilliance.

The people of West Virginia may well be proud of his contributions to our Nation's welfare. Those of us who know Senator BOB BYRD well have learned that he is one of the hardest working and most selfless Members of the Senate.

It has come to my attention that, as of last Saturday, our distinguished colleague who is presently presiding over the Senate, has spent 104 hours presiding over the U.S. Senate during this second session of the 86th Congress.

It is interesting to note, Mr. President, that the Vice President of the United States, who is, officially, the Presiding Officer of the Senate, has served a little more than one-fifth as much time in presiding over this body during the present session as has the distinguished junior Senator from West Virginia.

As of last Saturday, Mr. President, the record shows that Vice President RICHARD NIXON had presided over the Senate for a total of 24 hours during this session, while, as I have said the distinguished present occupant of the Chair had presided for a total of 104 hours.

On the other side of the aisle I observe the distinguished junior Senator from Pennsylvania [Mr. SCOTT], who is a most interesting letter writer.

I read recently in a newspaper a most informative letter which the distinguished junior Senator from Pennsylvania had written. In addition to his long record of notable service in the House of Representatives, the Senator has been the chairman of the Republican National Committee. He has a distinguished place in his party.

It may be that in addition to the informative letter which the distinguished Senator from Pennsylvania recently wrote, he might choose to write an informative letter to Vice President RICHARD NIXON, advising him of what we are accomplishing during these night sessions under the leadership of the majority leader, the senior Senator from Texas [Mr. JOHNSON]. He may choose to report that. I would not choose to do so, Mr. President, because I realize the Vice President has important work he is seeking to accomplish throughout the Nation. I only make the suggestion.

Mr. SCOTT. Mr. President, will my friend from Ohio yield?

Mr. YOUNG of Ohio. I shall yield in a moment. I promised I would yield to the distinguished junior Senator from Wisconsin [Mr. PROXMIRE], and of course I shall also yield to the Senator from Pennsylvania.

The distinguished Senator from Pennsylvania, to whom I shall yield shortly, became a Member of the Senate at the same time I became a Member. It has been the high honor of some of us freshman Senators, so-called, to be asked to preside over the Senate of the United States. I am not boasting about the time I have spent presiding, because it is insignificant contrasted with the service of the distinguished Senator from West Virginia, the present Presiding Officer of the Senate. However, it is a fact, and the RECORD shows, that the junior Senator from Ohio has presided a total of approximately 44 hours in the Senate of the United States. If the Senator from Pennsylvania chooses to write another of those informative letters, he might advise the Vice President of the United States that he himself has presided over this body for a total of 2 hours during the same period the present Presiding Officer has presided a total of 104 hours.

Mr. President, I did not mean to refer to political matters. I meant only to advert to the service of the distinguished junior Senator from West Virginia. I wished to express my high admiration to the Senator, to attest my deference and devotion to the great work he is doing as a Senator of the United States. The great amount of time which our colleague from West Virginia has spent presiding over the Senate has made it necessary, I know, for him to burn the midnight oil in order to keep pace with the staggering workload of a Senator's office.

In my opinion, Mr. President, the distinguished junior Senator from West Virginia has earned the admiration of all of us for his notable efforts in presiding over the Senate for a total of 104 hours during the present session of the Congress.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. YOUNG of Ohio. I yield to the Senator from Wisconsin, and then I shall yield to the Senator from Pennsylvania.

Mr. PROXMIRE. Mr. President, I am very happy to join the distinguished Senator from Ohio is commending the present occupant of the Chair, the junior Senator from West Virginia [Mr. BYRD]. I was impressed, when I was presiding over the Senate a week or two ago, by the figures as to the Senators who had presided, and for how long. I was particularly amazed by the fact that the distinguished present Presiding Officer has actually presided over the Senate for more time than all of the Republicans combined, including the Vice President of the United States, whose constitutional duty it is to preside over the Senate. It has been a neck-and-neck race between our present Presiding Officer and the entire Republican Party, but the Senator from West Virginia has been doing a magnificent job.

I have presided for some time myself, particularly last year and the year before, and I know it is a chore. It is a tedious chore. There are few things which are more tedious than having to sit in the Presiding Officer's chair and listen to speech after speech after speech. It is necessary that some Senator do it. It is necessary that the Presiding Officer conduct himself with dignity and propriety. It is necessary that the Presiding Officer have control over the parliamentary situation.

I point out that the present Presiding Officer is not a Senator who does nothing.

He is a very busy Senator. I know few Senators who are as busy. It is well known that the Senator does graduate work. He is a very hard-working committee member. I have the honor to serve on a committee with the Senator from West Virginia. He is very concerned about proposed legislation, and particularly concerned about legislation affecting his State. He has some very deep, profound, and well-articulated convictions about international affairs. He has given some of the finest speeches given by any Senator on the floor of the Senate. I think the Senator from West Virginia deserves great approval for the fine record he has compiled.

I am delighted to join the distinguished Senator from Ohio in commending the Senator from West Virginia for his service. The fact that he, all by himself, has served in this difficult but important, tedious but important, job more time than all the Republican Senators combined, including the man who has the constitutional responsibility for doing it, is a particularly impressive feat.

Mr. SCOTT. Mr. President——

Mr. YOUNG of Ohio. I yield to the Senator from Pennsylvania.

Mr. SCOTT. Mr. President, I am very much gratified that the distinguished junior Senator from Ohio has paid this tribute to the present occupant of the chair, the Senator from West Virginia [Mr. BYRD], whom we all admire and whose willingness through long and tedious hours to occupy the chair of the presidency of the Senate is appreciated by all of us, many of whom regard it as a chore to be avoided. Many of us often, I fear, escape from the Chamber at times when we feel we are about to be asked to preside. Many of us would prefer not to make this particular sacrifice, but the generous and kindly character of the Senator from West Virginia is such he does relieve all of us many times from this obligation. Therefore, I wish to join in paying tribute to the Senator not only in this capacity but also because he does work hard and because he is a man whom we like and whom we admire.

Since I seem to have been caught in a slight downdraft by virtue of some of the remarks of my friend from Ohio, which refer to the fact that occasionally I write a letter, I will say to the Senator from Ohio that such a letter, of course, would not be addressed to him, because he has been present much more than 22 percent of the time. He is a very faithful Senator. He responds to his duty as a representative of his State in this body. He has voted on most of the bills. He is well known in his reaction to the press and to various groups of people as "Mr. Blunt" himself. He speaks his mind, and we respect him for it.

Mr. YOUNG of Ohio. I thank the Senator very much for that kind remark.

Mr. SCOTT. It should be noted first of all that there are some Senators on the other side of the aisle who still believe in the ancient concept of the Vice Presidency as an office somewhat sedentary in nature, with the Vice President thought to be no more than a figurehead, to be no more than a man who presides over all manner of subjects, no matter what the state of the world or the state of the Union may be.

So this was the old concept of the Vice Presidency, and under the Vice Presidency of members of the party of the Senator from Ohio, the rather gruesome privilege of innocuous desuetude was enjoyed by numerous occupants of the Vice Presidential chair. Most regarded the office as one which one of our Founding Fathers described as the most useless office ever invented by the mind of man for the discomfort of a human being.

However, I am glad to say that the concept of the Vice Presidency has changed during the occupancy of that chair by Vice President NIXON. He has not regarded it as a sedentary post for the purpose of presiding and avoiding other responsibilities.

First, it ought to be called to the attention of the Senate that the Vice President has seldom failed to be present every time there has been a tie vote to be broken and that the Vice President has courageously cast his votes. He was present even during the long hours of the civil rights filibuster, when there were certain Senators on the Democratic side of the aisle, as we all know, who showed a marked disinclination to occupy the chair in the event of a close vote involving the touchy issue of civil rights.

It ought also to be noted that the Vice President has been present by far the greater part of the time when other candidates for the Presidential office have distinguished this Chamber by their absence.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

Mr. PROXMIRE. The Senator from Ohio has the floor.

Mr. SCOTT. I should like to conclude this part of what I have to say. One is not, of course, too critical of those who campaign for the Presidency, because it is a post which requires a frequent return to the people. But the Vice President, generally speaking, has observed the necessity to be present, even though his duties here are occasional at best, and his principal duty is to break a tie in the event of such a vote in the Senate. He has observed the duties and responsibilities of his office to a far better degree than have others who are competing for the Presidency. By that I certainly do not mean to include the majority leader (Mr. JOHNSON of Texas), who has been faithful in the Senate day and night, and whose leadership is of the sort which has commanded the respect of Senators on both sides of the aisle.

The Senator from Ohio has mentioned the fact that I myself have presided only 2 hours during my year and a half in the Senate. I shall be glad to advise the Senator from Ohio——

Mr. YOUNG of Ohio. The Senator is mistaken. The junior Senator from Ohio stated that the Senator from Pennsylvania presided approximately 2 hours during the present session.

Mr. SCOTT. During the present session.

Mr. YOUNG of Ohio. I have been referring only to Vice President NIXON, who presided only 24 hours during the present session.

Mr. SCOTT. I take no offense. I should be glad to continue and supplement my statement by advising the Senator from Ohio that during my 16 years in the House I doubt very much if I presided any more than 2 hours during the entire 16 years, because I come from a State neighboring to his, with 11 million people. Those 11 million people make many demands upon my time. I am a member of four committees and several subcommittees.

Mr. YOUNG of Ohio. The junior Senator from Ohio appreciates the truth of that statement, because he comes from a State that has a population of 9 million. The junior Senator from Ohio during the present session of the Senate has presided only 44 hours.

Mr. SCOTT. I am all the more grateful to Senators who are willing to permit the use of their sitting endurance for the benefit of the rest of us. I say only that it is not my particular forte.

Il n'est pas mon metier, as the Senator will understand—it is not my hobby—to spend time in presiding. I am glad that other Senators do so.

Mr. YOUNG of Ohio. I merely commented on that. I intended to compliment the junior Senator from Pennsylvania upon his forte as a very informative letter writer, who receives widespread publicity.

Mr. SCOTT. I am glad the Senator from Ohio appreciates that.

I wish to make some reference to what the distinguished Senator from Wisconsin has said. I am aware that there has been a certain amount of interest in a recent letter of mine. I have found more interest on the other side of the aisle than I have on this side and, I may add, with fully as much approval. I shall be very glad to make further comment on the letter. I am very glad to have the additional notice brought to it.

But at this point I wish to make a comment on what my friend the Senator from Wisconsin [Mr. PROXMIRE] has said, because I am afraid that his statement as it now appears in the RECORD may mislead the general public. He remarked that the present occupant of the chair had spent more time in the chair than all the Republican Senators combined.

During the 20 years since I first came to Washington, throughout my study of political science and in all the period preceding that time, under the two-party system, a certain custom has existed and been observed. The custom is that the Vice President—constitutionally the President of the Senate—presides frequently at the opening of the Senate and for the occasion of breaking a tie vote. But when the Vice President gives up the chair to attend to other duties, the right to fill the chair is assumed by the majority party. Under the direction of the distinguished President pro tempore of this body, who is the Senator from Arizona [Mr. HAYDEN], a Democrat, various officials of the Senate select members of the Democratic Party to

preside over the Senate. Therefore, because this custom is and almost always has been followed, the Senator from Wisconsin would have people believe that the reason why one or more Democrats have occupied the chair more often that Republicans is due to the fact that the President pro tempore of the Senate is an office pertaining to the majority party.

There are twice as many members of the majority party in the Senate, and therefore it is not unusual that there should be more Democrats sitting in the Presiding Officer's chair than Republicans. Visitors to the galleries, I am sure, if they arrive early, will ordinarily see the Vice President in the chair. They may see one or two Senators of the party of the Vice President presiding briefly. Then when the Senate reaches legislative issues, the President pro tempore, through agents of the Senate, designates a Democrat, who is normally succeeded by Democrats throughout the rest of the session.

Finally, I think it should be pointed out, as I have said, that the present Vice President has given a new concept to the office. Rather than do nothing save preside nominally in the Senate, this Vice President has presided over a very considerable percentage of the meetings of the President's Cabinet. He has presided many times over the very important meetings of the National Security Council. He has, moreover, been Chairman of the President's Committee on Government Contracts. He has served ex officio, by designation, on many other agencies or missions. He has been the busiest Vice President in the history of the United States. He has been the best trained Vice President in the history of the United States, and the most experienced. I am sure neither he nor his party would trade that record for the privilege of presiding endlessly over a distinguished body where, as one visitor has observed, the procedure goes something like this: One Member gets up and says nothing. Nobody pays any attention. Then everybody gets up and disagrees.

I hope that is not a fair judgment of our body. However, certainly in this distinguished body, which has been facetiously referred to as a cave of the winds, there are other duties than merely presiding all day and all night and listening to other distinguished Senators express their views on everything from men to manhole covers. I thank the Senator from Ohio for yielding.

Mr. YOUNG of Ohio. Mr. President, I yield to the junior Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, to reply explicitly to the Senator from Pennsylvania in his disagreement with me, I should like to say that I have served in the Senate from the end of 1957 until now, and in that time I have observed that, because of generosity and consideration and a recognition of the tedium of presiding over the Senate, the Republicans, at least in 1958, were very generous in sharing the burden of presiding over the Senate.

I think it is striking and impressive that the Senator from West Virginia [Mr. BYRD] has such a deep conception of his duty that he has actually served more time in the chair, as I have said, than the Vice President and all the Republican Senators combined.

What the junior Senator from Pennsylvania says is correct; it is the duty of the majority party to preside. But there is a matter of consideration and exchange of burdens in the Senate, which is one of its finest characteristics. The fact that some Senators in both parties are willing to take this burden over is to their great credit. The fact that the Senator from West Virginia has been willing to assume this burden more than all the Republicans combined is to his great credit.

Mr. SCOTT. I agree that we are all indebted to the Senator from West Virginia for his thoughtfulness in relieving the rest of us of that burden for a considerable period of time.

Mr. YOUNG of Ohio. Mr. President, may I interrupt briefly?

Mr. PROXMIRE. The Senator from Ohio has the floor.

Mr. YOUNG of Ohio. I intend to yield further to the Senator from Wisconsin for any further remarks he wishes to make. As a student of history, I know something about the history of this country and the Constitution of the United States. The Constitution, as the Senator from Wisconsin will agree, specifically imposes two duties upon the Vice President. One is to serve as Presiding Officer over the sessions of the Senate. The second is to cast his vote to break tie votes in the Senate. It is not the duty of members of the majority party to preside. The Constitution specifically makes it the duty of the Vice President of the United States.

When the junior Senator from Pennsylvania speaks about the ancient concept of the Vice Presidency and the new concept of the Vice Presidency, there is no basis for such assertion. The precise duties of the Vice Presidency are set forth in the Constitution of our country.

I should like to answer the statement of the junior Senator from Pennsylvania, and I am certain that the junior Senator from Wisconsin will agree with me. According to the Congressional Quarterly of February 8 of this year, at page 4660, to be exact—if the junior Senator from Pennsylvania cares to look it up—Vice President NIXON has not voted following nine tie votes, as of February 3. It may be that he intended to vote in the negative on all of these occasions. However, that is difficult for me to believe. He did not break even one of these nine tie votes.

I do recall distinctly that not many weeks ago the Vice President, when one of his duties to which the junior Senator from Pennsylvania [Mr. SCOTT] has adverted took him elsewhere, spoke in Chicago. At that time, according to newspaper reports, he stated publicly that he favored Federal aid to education. However, when the chips were down, and when the amendment of the senior Senator from Pennsylvania [Mr. CLARK], providing for that very thing, came up for vote, a tie vote resulted, as I recall, of 42 to 42. On that day the Vice President was here and he cast a negative vote, contrary to his stated beliefs.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. YOUNG of Ohio. The Senator from Wisconsin has the floor.

Mr. PROXMIRE. I should like to complete my remarks. I hope to make them very brief. I do not wish to detain the Senate. I realize that we have a great deal of business to transact, and perhaps we should not spend too much time on this subject. I did wish to answer the issues the junior Senator from Pennsylvania has developed.

He said that Vice President NIXON has developed a new concept of the Vice Presidency, not the sedentary occupation of merely sitting endlessly in the chair in presiding over the Senate.

I should like to call to the attention of the junior Senator from Pennsylvania the fact that the immediately preceding Vice President was Alben Barkley. I believe that all Americans in both parties recognize the fact that Alben Barkley was an exceedingly active and responsible and effective Vice President. He was not content simply to sit still and let time go by. He was a man who contributed greatly to the Nation, not only as a Senator, but also as Vice President. He was extremely active.

I wish also to say to the junior Senator from Pennsylvania that the burden of his remarks and the burden of the letter which the Senator from Ohio has discussed, was a discussion of the junior Senator from Massachusetts [Mr. KENNEDY]. I think the junior Senator from Massachusetts has had a superb record in the Congress, both in the House and in the Senate. I believe that most objective persons who evaluate his record will agree.

Of course, he has not been present a great deal this year. The fact is that it is necessary for him to be an active candidate for the Presidency. He knows that his only chance is to go out and win in the primaries.

I recall that back in 1952 Senator Robert Taft, who had a much heavier obligation considering his position at that time for being on the floor of the Senate, was out in Wisconsin campaigning in our primary, day after day, every day for weeks during the 1952 presidential primary in Wisconsin. No one criticized Senator Taft for that, and nobody should have done so. The fact is that there are few greater responsibilities than serving in the Senate of the United States, but I think one of them is running for the Presidency as a major candidate of one of our two great political parties.

When JACK KENNEDY goes around the country and makes his important speeches, and when he appeals to the Nation, as he has done repeatedly throughout the country, in State after State, he is performing a great service to the country. Both Winston Churchill and Woodrow Wilson have said that the most important function of public service in a democracy is in the campaign, because that is where the democratic—and I spell that with a small "d"—consensus is arrived at. Here is where

the vital discussion, deliberation, and decision of democracy takes place. JACK KENNEDY deserves credit for the wonderful campaign he has conducted. It is impossible for him to sit in the Senate day after day and vote on the measures the Senate is considering. The fact is, however, that, except for this campaign year, Senator KENNEDY has had an excellent record of attendance, as well as a brilliant record of performance. However, in every year the Vice President has spent very little time presiding over the Senate, performing the duty which he is required to perform under the Constitution. And frankly under all the circumstances I cannot blame him much for it.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. CLARK. Which Senator had charge of marshaling through the committee and handling on the floor the repeal of the disclaimer affidavit?

Mr. PROXMIRE. The junior Senator from Massachusetts [Mr. KENNEDY] did, and he did his usual very high quality job, and he did it only a few days ago.

Mr. CLARK. Which Senator is in charge of marshaling in the committee and bringing to the floor the infinitely complicated minimum wage bill?

Mr. PROXMIRE. The junior Senator from Massachusetts. Not only is that bill infinitely complicated; it is a controversial bill mined with boobytraps. It is dynamite and has to be handled with maturity and skill. The Senator from Massachusetts has done a masterful job with this measure, in spite of his other responsibilities as a candidate.

Mr. CLARK. Does the Senator from Wisconsin realize that on practically every yea-and-nay vote the Senate has taken this session, the position of the junior Senator from Massachusetts has been announced?

Mr. PROXMIRE. I am aware of that; and also, as far as possible, he has been paired. But in all cases, as the Senator from Pennsylvania has said, the position of the junior Senator from Massachusetts has been made crystal clear.

Mr. CLARK. Does the Senator from Wisconsin appreciate the fact that the Senator from Massachusetts has been here and has voted substantially more frequently than a good many of his colleagues, even in this session?

Mr. PROXMIRE. The Senator from Pennsylvania is correct. I have examined the record of the Senator from Massachusetts over the years. He has compiled a fine conscientious attendance record.

Mr. SCOTT. Mr. President, will the Senator from Ohio yield?

Mr. YOUNG of Ohio. I yield.

Mr. SCOTT. First, with respect to the duties of the Vice President, I call the attention of the Senator from Wisconsin to the fact that about all that appears on that point is to be found in this paragraph:

> The Vice President of the United States shall be President of the Senate, but shall have no vote, unless they be equally divided.

As the junior Senator from Ohio has pointed out——

Mr. YOUNG of Ohio. I may say that I promised the junior Senator from Louisiana [Mr. LONG] that I would yield to him. He must leave the floor shortly.

Mr. SCOTT. I shall try to be brief. What I shall say is in line with the discussion.

The junior Senator from Pennsylvania made the statement that the Vice President has been here every time there has been a tie vote. The Senator from Ohio said the Vice President did not vote on certain tie votes. That is because, as the Senator from Ohio has said, if the Vice President is not in favor of a measure, and his vote would be negative, there is no need to cast it. Therefore, the Vice President abstains from voting.

The Vice President breaks a tie, but only by voting in the affirmative. If the vote is a tie, the particular measure fails to carry. The Senator from Ohio mentioned that fact on various occasions.

I do not wish to go into the matter of the junior Senator from Massachusetts. His views are of record. His votes are of record.

I did not rise for that purpose. I rose because some sort of effort, apparently, is underway to make it appear that when the Vice President is not presiding over the Senate, he is not working as Vice President. I say to Senators who evidently have that thought in mind that they are not going to get away with it. The general public knows that the Vice President is working. They know that he was in Russia and stood up to Khrushchev. They know that the Vice President has made other visits to chiefs of state and to peoples. They know that he presides over the National Security Council. They know that he presides over the Cabinet on many occasions.

Therefore, the attempt to make it appear that the most important job in the world for Vice President NIXON to perform is to sit here and preside over this body, even when no great issues are involved, is an effort which, I am certain, will come to nothing.

Mr. PROXMIRE. The junior Senator from Pennsylvania wants to have it both ways. When Vice President NIXON goes around the country giving his speeches, that is statesmanship; it is an example of the Vice President going to the people.

When the junior Senator from Massachusetts [Mr. KENNEDY] does it—and everyone recognizes that he is the leading Democratic candidate for President of the United States—that is absenteeism; apparently it is felt that he should not be conducting this great crucial presidential campaign of 1960. He should be in the Senate, performing his routine duties.

I think it is obvious to any fairminded American that both these men have a perfect right to go out and campaign. The junior Senator from Massachusetts has been performing a great service to all Americans by talking hard, tough sense to them on the great issues of 1960 as the leading Democratic candidate, bringing his position to them at first hand. The Vice President has been the leading Republican candidate. He too has been performing a service to his country by campaigning.

Mr. YOUNG of Ohio. I thank the distinguished junior Senator from Wisconsin. I now yield to the distinguished senior Senator from South Carolina.

Mr. JOHNSTON of South Carolina. I have been listening to the discussion. I could not help thinking of the past and what has taken place in history.

So far as the Vice President is concerned, he has been going out over the country, and when something was popular in a certain territory, he spoke in behalf of it. He would not mention anything which was not popular, and when his party had taken a position to the contrary.

To illustrate the point, we might consider the subject of agriculture for a minute. Where does the Vice President stand on that subject? Is he for Benson or against Benson at the present time? The people of the Nation realize that the farmers have been thrown into bankruptcy, so to speak. About three-quarters of a million people leave the farms every year because they cannot make a living on them. Also, the income of farm families has been dropping at the rate of about $500 million a year. The Vice President does not talk much about that subject, so it is not possible to tell where he stands on the subject. One does not know whether he is for Benson's policies, or whether he stands with the administration or against it on agricultural policy at the present time. No; he will not take any part in that matter.

On other matters, he comes around only when there is a tie vote. Of course, he votes at that particular time.

I am reminded of what is said about a chandelier in the Vice President's office. A Vice President who became President of the United States—and one of the best Republican Presidents the country ever had, in my opinion—was Theodore Roosevelt. He was a great outdoor man. When he went to the White House, he raised all the windows to let the air come in and blow around.

It is said that the tinkle tinkle of the chandeliers kept him awake at night, and that he said they should be moved. He was asked, "Where shall we put them, if you will not have them at the White House?"

It is said that Theodore Roosevelt replied, "Put them in the Capitol. It does not make any difference where they go. But be sure to put one in the office of the Vice President. He does not have anything to do; maybe it will keep him awake in the future."

The Vice President does not have much to do; and he has not presided often over the Senate, whether it has been in a time of campaign or not. He has not waited until campaign time to get away from here. He has been away from here, speaking on popular issues in every area of the United States.

He could say, "No, I did not have anything to do with this matter," if it is something unpopular which Congress passed. "I did not have anything to do with that. I am the Vice President. I do not have any authority at all."

But he has authority in connection with some of the other matters, and he claims authority when he speaks of something which is popular.

That is politics. It goes on and on.

Mr. SCOTT. Mr. President, will the Senator from Ohio yield for a correction?

Mr. YOUNG of Ohio. I yield to the distinguished junior Senator from Louisiana. I thank the Senator from South Carolina for his contribution.

Mr. LONG of Louisiana. Mr. President, I assumed the Senator from Pennsylvania [Mr. SCOTT] had researched the statement he made when he said the Vice President had always been here in the event of a tie vote, so as to take a position on it.

Mr. SCOTT. If the Senator from Louisiana will yield, I said the Vice President had been here every time there had been a tie vote. While the Senator from Louisiana was out of the Chamber, I indicated that there are certain tie votes as to which the Vice President by abstaining from voting will create the same effect as if he had voted negatively, and the motion will lose. There were nine such occasions.

Mr. LONG of Louisiana. I assume that would have been the result in the case of a vote on an amendment of the junior Senator from Louisiana 3 years ago, in which I sought to provide additional funds for needy persons.

So far as the good State of California is concerned, the State which the Vice President had earlier represented both in the House and the Senate, he voted against an amendment which would have been of benefit to the health of aged persons. The amendment lost on a tie vote. I regret that we did not get the vote of a single Senator from California. I suppose the amendment would have been lost even if the Vice President had been present. The amendment was lost by a vote of 40 to 40.

I notice the statement that the question was put to a vote by the Presiding Officer. I assume that means that the Vice President, if he had been present, would have voted against 3½ million aged persons, needy old folks, because there is no indication that he would not have done so. I should say that that perhaps would stand as an exception to the statement that the Vice President had always been here in case of tie votes.

I think it would be well if the Vice President would make it clear that on an amendment which would have benefited 3,500,000 aged and needy persons, he would have cast his vote in the negative had he been present.

I am pleased to say that every time the junior Senator from Louisiana has offered an amendment to help the aged and needy, the junior Senator from Massachusetts [Mr. KENNEDY], in all fairness to him, has been here and has voted for my amendment.

Mr. YOUNG of Ohio. What date was the vote on additional unemployment compensation?

Mr. LONG of Louisiana. There was a yea-and-nay vote on May 28, 1958.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the proceedings in connection with the vote on my amendment to H.R. 12065, to provide for temporary additional unemployment compensation, and for other purposes, which was offered on May 28, 1958, in the 2d session of the 85th Congress.

There being no objection, the proceedings in connection with the vote were ordered to be printed in the RECORD, as follows:

SUBJECT AND RESULT OF VOTE, 85TH CONGRESS, 2D SESSION

ADDITIONAL UNEMPLOYMENT COMPENSATION (H.R. 12065)

(A bill to provide for temporary additional unemployment compensation, and for other purposes.) Vote on LONG, of Louisiana (and 32 others) amendment providing for additional average payment of $5 per month for needy aged and needy blind. This would increase the maximum monthly payment to $70 per person.

Rejected: Yeas 40, nays 40.

ADDITIONAL UNEMPLOYMENT COMPENSATION

The Senate resumed the consideration of the bill (H.R. 12065) to provide for temporary additional unemployment compensation, and for other purposes.

Mr. LONG. Mr. President, I call up my amendment which is at the desk, and which is identified as "5–26–58—C."

Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. Without objection, the text of the amendment will be printed in the RECORD.

The amendment offered by Mr. LONG is as follows: At the end of the bill insert a new title III, as follows:

"TITLE III

"SEC. 301. Section 3(a) of the Social Security Act is amended to read as follows:

"'SEC. 3. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for old-age assistance, for each quarter, beginning with the quarter commencing July 1, 1958, (1) in the case of any State other than Puerto Rico and the Virgin Islands, an amount equal to the sum of the following proportions of the total amounts expended during such quarter as old-age assistance in the form of money payments under the State plan, not counting so much of such expenditure with respect to any individual for any month as exceeds $70—

"'(A) four-fifths of such expenditures, not counting so much of any expenditure with respect to any month as exceeds the product of $30 multiplied by the total number of such individuals who received old-age assistance in the form of money payments for such month; plus

"'(B) two-thirds of the amount by which such expenditures exceed the maximum which may be counted under clause (A), not counting so much of any expenditure with respect to any month as exceeds the product of $45 multiplied by the total number of such individuals who received old-age assistance in the form of money payments for such month; plus

"'(C) one-half of the amount by which such expenditures exceed the maximum which may be counted under clause (B); and (2) in the case of Puerto Rico and the Virgin Islands, an amount, which shall be used exclusively as old-age assistance, equal to one-half of the total of the sums expended during such quarter as old-age assistance in the form of money payments under the State plan, not counting so much of such expenditure with respect to any individual for any month as exceeds $30, and (3) in the case of any State, an amount equal to one-half of the total of the sums expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan, including services which are provided by the staff of the State agency (or of the local agency administering the State plan in the political subdivision) to applicants for and recipients of old-age assistance to help them attain self-care, and (4) in the case of any State, an amount equal to one-half of the total of the sums expended during such quarter as old-age assistance under the State plan in the form of medical or any other type of remedial care (including expenditures for insurance premiums for such care or the cost thereof), not counting so much of such expenditure for any month as exceeds the product of $6 multiplied by the total number of individuals who received old-age assistance under the State plan for such month.'

"SEC. 302. Section 1003 (a) of the Social Security Act is amended to read as follows:

"'SEC. 1003. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for aid to the blind for each quarter, beginning with the quarter commencing July 1, 1958, (1) in the case of any State other than Puerto Rico and the Virgin Islands, an amount equal to the sum of the following proportions of the total amounts expended during such quarter as aid to the blind in the form of money payments under the State plan, not counting so much of such expenditure with respect to any individual for any month as exceeds $70—

"'(A) four-fifths of such expenditures, not counting so much of any expenditure with respect to any month as exceeds the product of $30 multiplied by the total number of such individuals who received aid to the blind in the form of money payments for such month; plus

"'(B) two-thirds of the amount by which such expnditures exceed the maximum which may be counted under clause (A), not counting so much of any expenditure with respect to any month as exceeds the product of $45 multiplied by the total number of such individuals who received aid to the blind in the form of money payments for such month; plus

"'(C) one-half of the amount by which such expenditures exceed the maximum which may be counted under clause (B); and (2) in the case of Puerto Rico and the Virgin Islands, an amount equal to one-half of the total of the sums expended during such quarter as aid to the blind in the form of money payments under the State plan, not counting so much of such expenditure with respect to any individual for any month as exceeds $30; and (3) in the case of any State, an amount equal to one-half of the total of the sums expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan, including services which are provided by the staff of the State agency (or of the local agency administering the State plan in the political subdivision) to applicants for and recipients of aid to the blind to help them attain self-support or self-care; and (4) in the case of any State, an amount equal to one-half of the total of the sums expended during such quarter as aid to the blind under the State plan in the form of medical or any other type of remedial care (including expenditures for insurance premiums for such care or the cost thereof), not counting so much of such expenditure for any month as exceeds the product of $6 multiplied by the total number of individuals who received aid to the blind under the State plan for such month.'

"SEC. 303. Section 1403(a) of the Social Security Act is amended to read as follows:

"'SEC. 1403. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for aid to the permanently and totally disabled, for each quarter, beginning

with the quarter commencing July 1, 1958, (1) in the case of any State other than Puerto Rico and the Virgin Islands, an amount equal to the sum of the following proportions of the total amounts expended during such quarter as aid to the permanently and totally disabled in the form of money payments under the State plan, not counting so much of such expenditure with respect to any individual for any month as exceeds $70—

"'(A) four-fifths of such expenditures, not counting so much of any expenditure with respect to any month as exceeds the product of $30 multiplied by the total number of such individuals who received aid to the permanently and totally disabled in the form of money payments for such months; plus

"'(B) two-thirds of the amount by which such expenditures exceed the maximum which may be counted under clause (A), not counting so much of any expenditure with respect to any month as exceeds the product of $45 multiplied by the total number of such individuals who received aid to the permanently and totally disabled in the form of money payments for such month; plus

"'(C) one-half of the amount by which such expenditures exceed the maximum which may be counted under clause (B); and (2) in the case of Puerto Rico and the Virgin Islands, an amount equal to one-half of the total of the sums expended during such quarter as aid to the permanently and totally disabled in the form of money payments under the State plan, not counting so much of such expenditure with respect to any individual for any month as exceeds $30; and (3) in the case of any State, an amount equal to one-half of the total of the sums expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan, including services which are provided by the staff of the State agency (or of the local agency administering the State plan in the political subdivision) to applicants for and recipients of such aid to help them attain self-support or self-care; and (4) in the case of any State, an amount equal to one-half of the total of the sums expended during such quarter as aid to the permanently and totally disabled under the State plan in the form of medical or any other type of remedial care (including expenditures for insurance premiums for such care or the cost thereof), not counting so much of such expenditure for any month as exceeds the product of $6 multiplied by the total number of individuals who received aid to the permanently and totally disabled under the State plan for such month.'

"SEC. 304. The amendments made by this title shall become effective July 1, 1958."

Amend the title so as to read: "An act to provide for temporary additional unemployment compensation, to provide for increased Federal financial participation in the State programs of public assistance established pursuant to titles I, X, and XIV of the Social Security Act, and for other purposes."

The question is on agreeing to the amendment of the Senator from Louisiana, Mr. LONG. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BARRETT (when his name was called). On this vote I have a pair with the Senator from Nebraska, Mr. HRUSKA. If he were present, he would vote "nay." If I were permitted to vote, I would vote "yea." I withhold my vote.

Mr. ERVIN (when his name was called). On this vote I have a pair with the junior Senator from Texas, Mr. YARBOROUGH. If he were present, he would vote "yea." If I were permitted to vote, I would vote "nay." I, therefore, withhold my vote.

The rollcall was concluded.

Mr. MANSFIELD. I announce that the Senator from New Mexico, Mr. ANDERSON, the Senator from Idaho, Mr. CHURCH; the Senator from Arkansas, Mr. FULBRIGHT; the Senator from Tennessee, Mr. GORE; the Senator from Minnesota, Mr. HUMPHREY; the Senator from Arkansas, Mr. MCCLELLAN; the Senator from Oklahoma, Mr. MONRONEY; the Senator from Wyoming, Mr. O'MAHONEY; and the Senator from Texas, Mr. YARBOROUGH, are absent on official business.

I further announce that if present and voting, the Senator from Idaho, Mr. CHURCH; the Senator from Minnesota, Mr. HUMPHREY; the Senator from Oklahoma, Mr. MONRONEY; and the Senator from Wyoming, Mr. O'MAHONEY; would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from Indiana [Mr. JENNER] is necessarily absent.

The Senator from Nebraska [Mr. HRUSKA] is absent on official business, and his pair with the Senator from Wyoming [Mr. BARRETT] has been previously announced.

The Senator from Minnesota [Mr. THYE] is absent on official business.

The Senator from Nevada [Mr. MALONE] is absent because of illness, and, if present and voting, would vote "yea."

The result was announced—yeas 40, nays 40, as follows:

Yeas, 40: Bible,[1] Carroll,[1] Chavez,[1] Clark,[1] Cotton, Douglas,[1] Eastland,[1] Ellender,[1] Frear,[1] Green,[1] Hayden,[1] Hennings,[1] Hill,[1] Holland,[1] Jackson,[1] Johnson of Texas,[1] Johnston of South Carolina,[1] Jordan,[1] Kefauver,[1] Kennedy,[1] Kerr,[1] Langer, Long,[1] Magnuson,[1] Mansfield,[1] McNamara,[1] Morse,[1] Murray,[1] Neuberger,[1] Pastore,[1] Payne, Potter, Proxmire,[1] Revercomb, Russell,[1] Smathers,[1] Smith of Maine, Sparkman,[1] Symington,[1] Talmadge.[1]

Nays, 40: Aiken, Allott, Beall, Bennett, Bricker, Bridges, Bush, Butler, Byrd,[1] Capehart, Carlson, Case of New Jersey, Case of South Dakota, Cooper, Curtis, Dirksen, Dworshak, Flanders, Goldwater, Hickenlooper, Hoblitzell, Ives, Javits, Knowland, Kuchel, Lausche,[1] Martin of Iowa, Martin of Pennsylvania, Morton, Mundt, Purtell, Robertson,[1] Saltonstall, Schoeppel, Smith of New Jersey, Stennis,[1] Thurmond,[1] Watkins, Williams, Young.

Not voting, 16: Anderson,[1] Barrett, Church,[1] Ervin,[1] Fulbright,[1] Gore,[1] Hruska, Humphrey,[1] Jenner, Malone, McClellan,[1] Monroney,[1] O'Mahoney,[1] Thye, Wiley, Yarborough.[1]

So Mr. LONG's amendment was rejected.

Mr. SCOTT. Mr. President, will the Senator from Ohio yield, to permit me to offer a correction to a statement which was made by the Senator from South Carolina?

Mr. YOUNG of Ohio. Yes.

Mr. SCOTT. I understood the Senator from South Carolina to say the Vice President has been away most of the time.

As one who has been present for, I think, all but eight of the some 240 quorum calls and yea-and-nay votes this year, and for approximately 96 or 97 percent of them last session, I, personally, am aware of the fact that the Vice President has been here most of the time during the weekdays. When he has had to go away, he has done so largely on weekends. Certainly he has responded to his duty.

The Senator from Massachusetts [Mr. KENNEDY] has been here, I think, only 22 percent of the time on yea-and-nay votes on the various issues, and has been absent 78 percent of the time

I have not wished to say that, and would not have done so, except for the fact that the Senator from South Carolina stated that the Vice President has been away most of the time.

As the press knows from its own contacts with the Vice President, he has been here most of the time.

Mr. JOHNSTON of South Carolina. Mr. President, all I can say in passing is that I have not seen the Vice President here in the Chamber or presiding over the Senate more than 5 percent of the time when the Senate was in session. I defy anyone to say to the contrary, based on the facts.

Mr. YOUNG of Ohio. Mr. President, in concluding my remarks, let me reiterate that the yea-and-nay vote adverted to by the junior Senator from Louisiana took place on May 28, 1958. That vote was on a measure to increase the aid for the aged by $5 a month, in some States, and by as much as $7.50 a month in other States. At that time there was a tie vote by the Senate. The vote was 40 to 40. The proposal failed because, according to the RECORD, the tie was not broken.

Presumably, the Senate was then presided over by some Member of the Senate, who cast his vote either for or against the proposal, because the RECORD shows that the Vice President was not present at the time. That was in 1958. At that time, there was no campaign for the Presidency of the United States; and yet some Senator, not the Vice President, was then presiding over the Senate.

Finally, Mr. President, let me say that I commenced my remarks for the purpose of paying tribute to the distinguished junior Senator from West Virginia [Mr. BYRD], for his diligence and his outstanding service in presiding over the Senate. I wish to conclude my remarks by once more paying tribute to him.

I yield the floor.

Mr. PROXMIRE. Mr. President, I should like to conclude on the same note.

However, I wish to point out, in all fairness, that there is a great difference between the problems faced by the Senator from Massachusetts [Mr. KENNEDY] and those faced by the Vice President. All of us know that the Vice President has not had any very serious election competition.

The Vice President was in Wisconsin for only part of one day in this campaign year. He was automatically winner of the Wisconsin primary as elsewhere without competition. On the other hand, the Senator from Massachusetts [Mr. KENNEDY] has had to fight every inch of the way. He has had to earn his right to represent his party in hard-fought primary elections, sometimes against heavy odds.

I believe that in all fairness we should consider these facts when we consider the activities of the two candidates.

One who has to campaign and campaign hard, 16 to 18 hours a day, 7 days a week, all over the country, obviously cannot be in two places at the same time. It is physically impossible for him to be constantly in the Senate.

On the other hand, I know of no reason why the Vice President cannot

[1] Democrats. Republicans unmarked.

discharge his duties as the Presiding Officer of the Senate—although I wish to make it clear that I do not criticize him, for he has his other duties, too.

I should like to conclude this colloquy by pointing out, once again, that at this session the distinguished Presiding Officer [Mr. BYRD of West Virginia] had, when I recently checked the RECORD—presided over the Senate more times and more hours than all 35 Republican Members of the Senate and the Vice President combined.

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the President pro tempore:

H.R. 6149. An act for the relief of Wesley C. Newcomb;

H.R. 6456. An act concerning payment of debts out of compensation for trust land on the Lower Brule Sioux Reservation taken by the United States;

H.R. 6498. An act concerning payment of debts out of compensation for trust land in the Standing Rock Sioux Reservation taken by the United States;

H.R. 6529. An act concerning payment of debts out of compensation for trust land on the Crow Creek Sioux Reservation taken by the United States;

H.R. 7480. An act to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil;

H.R. 7847. An act to make the uniform law relating to the record on review of agency orders (Public Law 85–701) applicable to the judicial review of orders issued under the Federal Aviation Act of 1958 and the Food Additives Amendment of 1958;

H.R. 8457. An act for the relief of Richard Schoenfelder and Lidwina S. Wagner;

H.R. 9028. An act to provide that certain funds shall be paid to the Kickapoo Tribal Council of Oklahoma;

H.R. 9226. An act for the relief of Pietro Mela;

H.R. 9652. An act for the relief of Lt. Col. Alonzo C. Tenney;

H.R. 10631. An act for the relief of George T. Moore, Carl D. Berry, and Dr. Harold J. Heck;

H.R. 10639. An act to amend section 3(b) of the act of May 9, 1958 (72 Stat. 105) relating to the preparation of a roll of the members of the Otoe and Missouria Tribe and to per capita distribution of judgment funds;

H.R. 10840. An act to amend Public Law 85–626 relating to dual rate contract agreement;

H.R. 11161. An act to donate to the pueblos of Zia and Jemez a tract of land on the Ojo del Esperitu Santo grant, New Mexico;

H.R. 11615. An act to amend section 4 of the Watershed Protection and Flood Prevention Act;

H.R. 11706. An act to authorize an extension of time for final proof under the desert land laws under certain conditions;

H.R. 11952. An act to repeal the act of May 29, 1958, which authorized and directed the Administrator of General Services to provide for the release of restrictions and reservations contained in an instrument conveying certain land by the United States to the State of Wisconsin;

H.R. 11985. An act to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950;

H.R. 12115. An act to extend the minimum national marketing quota for extra-long staple cotton to the 1961 crop; and

H.J. Res. 696. Joint resolution to provide for the designation of the month of September 1960, as "National Wool Month."

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I should like to have the Senate proceed to consider executive business, to pass on certain of the nominations on the Executive Calendar, and the Japanese Security Treaty, and, after acting on some of the nominations, to make the treaty the pending business. I wish to have that done, because in a few moments I must leave the floor.

Will the course I propose be acceptable to the Senator from Pennsylvania?

Mr. CLARK. Certainly.

Mr. JOHNSON of Texas. Then, Mr. President, I ask unanimous consent that the Senate proceed to the consideration of executive business, to consider certain of the nominations on the Executive Calendar, beginning with the postmaster nominations.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to the consideration of executive business.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

Henry Cabot Lodge, of Massachusetts, to be a representative of the United States of America to the 15th session of the General Assembly of the United Nations;

WAYNE MORSE, U.S. Senator from the State of Oregon, to be a representative of the United States of America to the 15th session of the General Assembly of the United Nations;

GEORGE D. AIKEN, U.S. Senator from the State of Vermont, to be a representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Francis O. Wilcox, Assistant Secretary, International Organization Affairs, Department of State, to be a representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Mrs. Oswald B. Lord, of New York, to be a representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Miss Frances E. Willis, Ambassador Extraordinary and Plenipotentiary of the United States of America to Norway, to be an alternate representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Mrs. Zelma Watson George, of Ohio, to be an alternate representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Arthur F. Lamey, of Montana, to be an alternate representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Frederick Blake Payne, of New York, to be an alternate representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Charles Rosenbaum, of Colorado, to be an alternate representative of the United States of America to the 15th session of the General Assembly of the United Nations;

Vinton Chapin, of New Hampshire, a Foreign Service officer of the class of career minister to be Ambassador Extraordinary and Plenipotentiary to the Dominican Republic;

Leland Barrows, of Kansas, a Foreign Service officer of class 1, now Ambassador Extraordinary and Plenipotentiary to the Republic of Cameroun, to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary to the Republic of Togo; and

Herbert P. Fales, of California, and sundry other persons, for appointment and promotion in the foreign and diplomatic service.

The PRESIDING OFFICER. If there be no further reports of committees, the nominations on the Executive Calendar, beginning with the postmaster nominations, will be stated.

POSTMASTERS

The legislative clerk proceeded to read sundry nominations of postmasters.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the postmaster nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the postmaster nominations will be considered en bloc; and, without objection, they are confirmed.

U.S. ARMY

The legislative clerk read the nomination of Maj. Gen. Lionel Charles McGarr, O17225, U.S. Army, to be lieutenant general.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

U.S. NAVY

The legislative clerk proceeded to read sundry nominations in the Navy.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the Navy nominations will be considered en bloc; and, without objection, they are confirmed.

APPOINTMENTS IN THE REGULAR ARMY

The legislative clerk proceeded to read sundry nominations for appointment in the Regular Army.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations are considered en bloc; and, without objection, they are confirmed.

NOMINATIONS IN THE REGULAR ARMY AND THE REGULAR AIR FORCE, FAVORABLY REPORTED AND PLACED ON THE VICE PRESIDENT'S DESK

The legislative clerk proceeded to read sundry nominations in the Regular Army and the Regular Air Force, favorably reported, and placed on the Vice President's desk, without printing.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of all these nominations.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

SCHEDULE FOR CONSIDERATION OF NOMINATIONS TO CIVIL AERONAUTICS BOARD, FEDERAL MARITIME BOARD, AND FEDERAL COMMUNICATIONS COMMISSION

Mr. JOHNSON of Texas. Mr. President, I should like to ask Senators to observe that we would like to give consideration on tomorrow—assuming that all Senators have notice, and that it is agreeable—to the nominations to the Civil Aeronautics Board, the Federal Maritime Board, and the Federal Communications Commission.

TREATY OF MUTUAL COOPERATION AND SECURITY WITH JAPAN

Mr. JOHNSON of Texas. Mr. President, while we are in executive session, I should like to have the Japanese security treaty reported and made the pending business.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the treaty, Executive E (86th Cong., 2d sess.), a Treaty of Mutual Cooperation and Security Between the United States of America and Japan, signed at Washington on January 19, 1960, which was read the second time, as follows:

TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN

The United States of America and Japan,

Desiring to strengthen the bonds of peace and friendship traditionally existing between them, and to uphold the principles of democracy, individual liberty, and the rule of law,

Desiring further to encourage closer economic cooperation between them and to promote conditions of economic stability and well-being in their countries,

Reaffirming their faith in the purposes and principles of the Charter of the United Nations, and their desire to live in peace with all peoples and all governments,

Recognizing that they have the inherent right of individual or collective self-defense as affirmed in the Charter of the United Nations,

Considering that they have a common concern in the maintenance of international peace and security in the Far East,

Having resolved to conclude a treaty of mutual cooperation and security,

Therefore agree as follows:

ARTICLE I

The parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered and to refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purpose of the United Nations.

The parties will endeavor in concert with other peace-loving countries to strengthen the United Nations so that its mission of maintaining international peace and security may be discharged more effectively.

ARTICLE II

The parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between them.

ARTICLE III

The parties, individually and in cooperation with each other, by means of continuous and effective self-help and mutual aid, will maintain and develop, subject to their constitutional provisions, their capacities to resist armed attack.

ARTICLE IV

The parties will consult together from time to time regarding the implementation of this treaty, and, at the request of either party, whenever the security of Japan or international peace and security in the Far East is threatened.

ARTICLE V

Each party recognizes that an armed attack against either party in the territories under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provisions and processes.

Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations in accordance with the provisions of article 51 of the charter. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

ARTICLE VI

For the purpose of contributing to the security of Japan and the maintenance of international peace and security in the Far East, the United States of America is granted the use by its land, air, and naval forces of facilities and areas in Japan.

The use of these facilities and areas as well as the status of U.S. Armed Forces in Japan shall be governed by a separate agreement, replacing the administrative agreement under article III of the Security Treaty Between the United States of America and Japan, signed at Tokyo on February 28, 1952, as amended, and by such other arrangements as may be agreed upon.

ARTICLE VII

This treaty does not affect and shall not be interpreted as affecting in any way the rights and obligations of the parties under the Charter of the United Nations or the responsibility of the United Nations for the maintenance of international peace and security.

ARTICLE VIII

This treaty shall be ratified by the United States of America and Japan in accordance with their respective constitutional processes and will enter into force on the date on which the instruments of ratification thereof have been exchanged by them in Tokyo.

ARTICLE IX

The Security Treaty Between the United States of America and Japan signed at the city of San Francisco on September 8, 1951 shall expire upon the entering into force of this treaty.

ARTICLE X

This treaty shall remain in force until in the opinion of the Governments of the United States of America and Japan there shall have come into force such United Nations arrangements as will satisfactorily provide for the maintenance of international peace and security in the Japan area.

However, after the treaty has been in force for 10 years, either party may give notice to the other party of its intention to terminate the treaty, in which case the treaty shall terminate 1 year after such notice has been given.

In witness whereof the undersigned plenipotentiaries have signed this treaty.

Done in duplicate at Washington in the English and Japanese languages, both equally authentic, this 19th day of January, 1960.

For the United States of America:

CHRISTIAN A. HERTER.
DOUGLAS MACARTHUR 2D.
J GRAHAM PARSONS.

For Japan:

NOBUSUKE KISHI.
AIICHIRO FUJIYAMA.
MITSUJIRO ISHII.

AGREED MINUTE TO THE TREATY OF MUTUAL COOPERATION AND SECURITY

Japanese Plenipotentiary:

While the question of the status of the islands administered by the United States under article 3 of the treaty of peace with Japan has not been made a subject of discussion in the course of treaty negotiations, I would like to emphasize the strong concern of the Government and people of Japan for the safety of the people of these islands since Japan possesses residual sovereignty over these islands. If an armed attack occurs or is threatened against these islands, the two countries will of course consult together closely under article IV of the Treaty of Mutual Cooperation and Security. In the event of an armed attack, it is the intention of the Government of Japan to explore with the U.S. measures which it might be able to take for the welfare of the islanders.

U.S. Plenipotentiary:

In the event of an armed attack against these islands, the U.S. Government will consult at once with the Government of Japan and intends to take the necessary measures for the defense of these islands, and to do its utmost to secure the welfare of the islanders.

WASHINGTON, *January 19, 1960.*

C.A.H.
N.K.

WASHINGTON, *January 19, 1960.*

His Excellency CHRISTIAN A. HERTER,
Secretary of State of the United States of America.

EXCELLENCY: I have the honor to refer to the Treaty of Mutual Cooperation and Security between Japan and the United States of America signed today, and to inform Your Excellency that the following is the understanding of the Government of Japan concerning the implementation of article VI thereof.

"Major changes in the deployment into Japan of U.S. Armed Forces, major changes in their equipment, and the use of facilities and areas in Japan as bases for military combat operations to be undertaken from Japan other than those conducted under article V of the said treaty, shall be the subjects of prior consultation with the Government of Japan."

I should be appreciative if Your Excellency would confirm on behalf of your Government that this is also the understanding of the Government of the United States of America.

I avail myself of this opportunity to renew to Your Excellency the assurance of my highest consideration.

NOBUSUKE KISHI.

DEPARTMENT OF STATE,
Washington, January 19, 1960.

His Excellency NOBUSUKE KISHI,
Prime Minister of Japan.

EXCELLENCY: I have the honor to acknowledge the receipt of Your Excellency's note of today's date, which reads as follows:

"I have the honor to refer to the Treaty of Mutual Cooperation and Security Between Japan and the United States of America signed today, and to inform Your Excellency that the following is the understanding of the Government of Japan concerning the implementation of article VI thereof:

" 'Major changes in the deployment into Japan of U.S. Armed Forces, major changes in their equipment, and the use of facilities and areas in Japan as bases for military combat operations to be undertaken from Japan other than those conducted under article V of the said treaty, shall be the subjects of prior consultation with the Government of Japan."

"I should be appreciative if Your Excellency would confirm on behalf of your Government that this is also the understanding of the Government of the United States of America.

"I avail myself of this opportunity to renew to Your Excellency the assurance of my highest consideration."

I have the honor to confirm on behalf of my Government that the foregoing is also the understanding of the Government of the United States of America.

Accept, Excellency, the renewed assurances of my highest consideration.

CHRISTIAN A. HERTER,
Secretary of State of the United States of America.

DEPARTMENT OF STATE,
Washington, January 19, 1960.

His Excellency NOBUSUKE KISHI,
Prime Minister of Japan.

EXCELLENCY: I have the honor to refer to the Security Treaty Between the United States of America and Japan signed at the city of San Francisco on September 8, 1951, the exchange of notes effected on the same date between Mr. Shigeru Yoshida, Prime Minister of Japan, and Mr. Dean Acheson, Secretary of State of the United States of America, and the Agreement Regarding the Status of the United Nations Forces in Japan signed at Tokyo on February 19, 1954, as well as the Treaty of Mutual Cooperation and Security Between the United States of America and Japan signed today. It is the understanding of my Government that:

1. The above-mentioned exchange of notes will continue to be in force so long as the Agreement Regarding the Status of the United Nations Forces in Japan remains in force.

2. The expression "those facilities and areas the use of which is provided to the United States of America under the Security Treaty Between Japan and the United States of America" in Article V, paragraph 2 of the above-mentioned Agreement is understood to mean the facilities and areas the use of which is granted to the United States of America under the Treaty of Mutual Cooperation and Security.

3. The use of the facilities and areas by the U.S. Armed Forces under the unified command of the United Nations established pursuant to the Security Council resolution of July 7, 1950, and their status in Japan are governed by arrangements made pursuant to the Treaty of Mutual Cooperation and Security.

I should be grateful if Your Excellency could confirm on behalf of your Government that the understanding of my Government stated in the foregoing numbered paragraphs is also the understanding of your Government and that this understanding shall enter into operation on the date of the entry into force of the Treaty of Mutual Cooperation and Security signed at Washington on January 19, 1960.

Accept, Excellency, the renewed assurances of my highest consideration.

CHRISTIAN A. HERTER,
Secretary of State of the United States of America.

WASHINGTON, *January 19, 1960.*

His Excellency CHRISTIAN A. HERTER,
Secretary of State of the United States of America.

EXCELLENCY: I have the honor to acknowledge the receipt of Your Excellency's note of today's date, which reads as follows:

"I have the honor to refer to the Security Treaty Between the United States of America and Japan signed at the city of San Francisco on September 8, 1951, the exchange of notes effected on the same date between Mr. Shigeru Yoshida, Prime Minister of Japan, and Mr. Dean Acheson, Secretary of State of the United States of America and the Agreement Regarding the Status of the United Nations Forces in Japan signed at Tokyo on February 19, 1954, as well as the Treaty of Mutual Cooperation and Security between the United States of America and Japan signed today. It is the understanding of my Government that:

"1. The above-mentioned exchange of notes will continue to be in force so long as the Agreement Regarding the Status of the United Nations Forces in Japan remains in force.

"2. The expression 'those facilities and areas the use of which is provided to the United States of America under the Security Treaty Between Japan and the United States of America in article V, paragraph 2 of the above-mentioned agreement is understood to mean the facilities and the areas the use of which is granted to the United States of America under the Treaty of Mutual Cooperation and Security.

"3. The use of the facilities and areas by the United States Armed Forces under the Unified Command of the United Nations established pursuant to the Security Council Resolution of July 7, 1950, and their status in Japan are governed by arrangements made pursuant to the Treaty of Mutual Cooperation and Security.

"I should be grateful if Your Excellency could confirm on behalf of your Government that the understanding of my Government stated in the foregoing numbered paragraphs is also the understanding of your Government and that this understanding shall enter into operation on the date of the entry into force of the Treaty of Mutual Cooperation and Security signed at Washington on January 19, 1960."

I have the honor to confirm on behalf of my Government that the foregoing is also the understanding of the Government of Japan.

I avail myself of this opportunity to renew to Your Excellency the assurance of my highest consideration.

NOBUSUKE KISHI.

WASHINGTON, *January 19, 1960.*

His Excellency CHRISTIAN A. HERTER,
Secretary of State of the United States of America.

DEAR SECRETARY HERTER: I wish to refer to the Treaty of Mutual Cooperation and Security between Japan and the United States of America signed today. Under article IV of the treaty, the two Governments will consult together from time to time regarding the implementation of the treaty, and, at the request of either Government, whenever the security of Japan or international peace and security in the Far East is threatened. The exchange of notes under article VI of the treaty specifies certain matters as the subjects of prior consultation with the Government of Japan.

Such consultations will be carried on between the two Governments through appropriate channels. At the same time, however, I feel that the establishment of a special committee which could as appropriate be used for these consultations between the Governments would prove very useful. This committee, which would meet whenever requested by either side, could also consider any matters underlying and related to security affairs which would serve to promote understanding between the two Governments and contribute to the strengthening of cooperative relations between the two countries in the field of security.

Under this proposal the present "Japanese-American Committee on Security" established by the Governments of the United States and Japan on August 6, 1957, would be replaced by this new committee which might be called the Security Consultative Committee. I would also recommend that the membership of this new committee be the same as the membership of the "Japanese-American Committee on Security," namely, on the Japanese side, the Minister for Foreign Affairs, who will preside on the Japanese side, and the Director General of the Defense Agency, and on the U.S. side, the U.S. Ambassador to Japan, who will serve as Chairman on the U.S. side, and the Commander in Chief, Pacific, who will be the Ambassador's principal adviser on military and defense matters. The Commander, U.S. forces, Japan, will serve as alternate for the Commander in Chief, Pacific.

I would appreciate very much your views on this matter.

Most sincerely,

NOBUSUKE KISHI.

DEPARTMENT OF STATE,
Washington, January 19, 1960.

His Excellency NOBUSUKE KISHI,
Prime Minister of Japan.

DEAR MR. PRIME MINISTER: The receipt is acknowledged of your note of today's date suggesting the establishment of "the Security Consultative Committee." I fully agree to your proposal and share your view that such a committee can contribute to strengthening the cooperative relations between the two countries in the field of security. I also agree to your proposal regarding the membership of this committee.

Most sincerely,

CHRISTIAN A. HERTER.

AGREEMENT UNDER ARTICLE VI OF THE TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN, REGARDING FACILITIES AND AREAS AND THE STATUS OF UNITED STATES ARMED FORCES IN JAPAN

The United States of America and Japan, pursuant to article VI of the Treaty of Mutual Cooperation and Security between the United States of America and Japan signed at Washington on January 19, 1960, have entered into this Agreement in terms as set forth below:

ARTICLE I

In this Agreement the expression—

(a) "members of the United States armed forces" means the personnel on active duty belonging to the land, sea or air armed services of the United States of America when in the territory of Japan.

(b) "civilian component" means the civilian persons of United States nationality who are in the employ of, serving with, or accompanying the United States armed forces in Japan, but excludes persons who are ordinarily resident in Japan or who are mentioned in paragraph 1 of Article XIV. For the purposes of this Agreement only, dual nationals, United States and Japanese, who are brought to Japan by the United States shall be considered as United States nationals.

(c) "dependents" means

(1) Spouse, and children under 21;

(2) Parents, and children over 21, if dependent for over half their support upon a member of the U.S. Army Forces or civilian component.

ARTICLE II

1. (a) The United States is granted, under article VI of the Treaty of Mutual Cooperation and Security, the use of facilities and areas in Japan. Agreements as to specific facilities and areas shall be concluded by the two Governments through the Joint Committee provided for in article XXV of this agreement. "Facilities and areas" include existing furnishings, equipment and fixtures necessary to the operation of such facilities and areas.

(b) The facilities and areas of which the United States has the use at the time of expiration of the Administrative Agreement under article III of the Security Treaty Between the United States of America and Japan, shall be considered as facilities and areas agreed upon between the two Governments in accordance with subparagraph (a) above.

2. At the request of either Government, the Governments of the United States and Japan shall review such arrangements and may agree that such facilities and areas shall be returned to Japan or that additional facilities and areas may be provided.

3. The facilities and areas used by the United States armed forces shall be returned to Japan whenever they are no longer needed for purposes of this agreement, and the United States agrees to keep the needs for facilities and areas under continual observation with a view toward such return.

4. (a) When facilities and areas are temporarily not being used by the United States armed forces, the Government of Japan may make, or permit Japanese nationals to make, interim use of such facilities and areas provided that it is agreed between the two Governments through the Joint Committee that such use would not be harmful to the purposes for which the facilities and areas are normally used by the U.S. Armed Forces.

(b) With respect to facilities and areas which are to be used by United States armed forces for limited periods of time, the Joint Committee shall specify in the agreements covering such facilities and areas the extent to which the provisions of this agreement shall apply.

ARTICLE III

1. Within the facilities and areas, the United States may take all the measures necessary for their establishment, operation, safeguarding and control. In order to provide access for the U.S. Armed Forces to the facilities and areas for their support, safeguarding and control, the Government of Japan shall, at the request of the U.S. Armed Forces and upon consultation between the two Governments through the Joint Committee, take necessary measures within the scope of applicable laws and regulations over land, territorial waters and airspace adjacent to, or in the vicinities of the facilities and areas. The United States may also take necessary measures for such purposes upon consultation between the two Governments through the Joint Committee.

2. The United States agrees not to take the measures referred to in paragraph 1 in such a manner as to interfere unnecessarily with navigation, aviation, communication, or land travel to or from or within the territories of Japan. All questions relating to frequencies, power and like matters used by apparatus employed by the United States designed to emit electric radiation shall be settled by arrangement between the appropriate authorities of the two Governments. The Government of Japan shall, within the scope of applicable laws and regulations, take all reasonable measures to avoid or eliminate interference with telecommunications electronics required by the United States armed forces.

3. Operations in the facilities and areas in use by the U.S. Armed Forces shall be carried on with due regard for the public safety.

ARTICLE IV

1. The United States is not obliged, when it returns facilities and areas to Japan on the expiration of this Agreement or at an earlier date, to restore the facilities and areas to the condition in which they were at the time they became available to the United States armed forces, or to compensate Japan in lieu of such restoration.

2. Japan is not obliged to make any compensation to the United States for any improvements made in the facilities and areas or for the buildings or structures left thereon on the expiration of this Agreement or the earlier return of the facilities and areas.

3. The foregoing provisions shall not apply to any construction which the Government of the United States may undertake under special arrangements with the Government of Japan.

ARTICLE V

1. United States and foreign vessels and aircraft operated by, for, or under the control of the United States for official purposes shall be accorded access to any port or airport of Japan free from toll or landing charges. When cargo or passengers not accorded the exemptions of this agreement are carried on such vessels and aircraft, notification shall be given to the appropriate Japanese authorities, and their entry into and departure from Japan shall be according to the laws and regulations of Japan.

2. The vessels and aircraft mentioned in paragraph 1, U.S. Government-owned vehicles including armor, and members of the U.S. Armed Forces, the civilian component, and their dependents shall be accorded access to and movement between facilities and areas in use by the U.S. Armed Forces and between such facilities and areas and the ports or airports of Japan. Such access to and movement between facilities and areas by U.S. military vehicles shall be free from toll and other charges.

3. When the vessels mentioned in paragraph 1 enter Japanese ports, appropriate notification shall, under normal conditions, be made to the proper Japanese authorities. Such vessels shall have freedom from compulsory pilotage, but if a pilot is taken pilotage shall be paid for at appropriate rates.

ARTICLE VI

1. All civil and military air traffic control and communications systems shall be developed in close coordination and shall be integrated to the extent necessary for fulfillment of collective security interests. Procedures, and any subsequent changes thereto, necessary to effect this coordination and integration will be established by arrangement between the appropriate authorities of the two Governments.

2. Lights and other aids to navigation of vessels and aircraft placed or established in the facilities and areas in use by U.S. Armed Forces and in territorial waters adjacent thereto or in the vicinity thereof shall conform to the system in use in Japan. The United States and Japanese authorities which have established such navigation aids shall notify each other of their positions and characteristics and shall give advance notification before making any changes in them or establishing additional navigation aids.

ARTICLE VII

The U.S. Armed Forces shall have the use of all public utilities and services belonging to, or controlled or regulated by the Government of Japan, and shall enjoy priorities in such use, under conditions no less favorable than those that may be applicable from time to time to the ministries and agenices of the Government of Japan.

ARTICLE VIII

The Government of Japan undertakes to furnish the U.S. Armed Forces with the following meteorological services in accordance with arrangements between the appropriate authorities of the two Governments:

(a) Meteorological observations from land and ocean areas including observations from weather ships.

(b) Climatological information including periodic summaries and the historical data of the Meteorological Agency.

(c) Telecommunications service to disseminate meteorological information required for the safe and regular operation of aircraft.

(d) Seismographic data including forecasts of the estimated size of tidal waves resulting from earthquakes and areas that might be affected thereby.

ARTICLE IX

1. The United States may bring into Japan persons who are members of the U.S. Armed Forces, the civilian component, and their dependents, subject to the provisions of this article.

2. Members of the U.S. Armed Forces shall be exempt from Japanese passport and visa laws and regulations. Members of the U.S. Armed Forces, the civilian component, and their dependents shall be exempt from Japanese laws and regulations on the registration and control of aliens, but shall not be considered as acquiring any right to permanent residence or domicile in the territories of Japan.

3. Upon entry into or departure from Japan members of the U.S. Armed Forces shall be in possession of the following documents:

(a) personal identity card showing name, date of birth, rank and number, service, and photograph; and

(b) individual or collective travel order certifying to the status of the individual or group as a member or members of the U.S. Armed Forces and to the travel ordered.

For purposes of their identification while in Japan, members of the U.S. Armed Forces shall be in possession of the foregoing personal identity card which must be presented

on request to the appropriate Japanese authorities.

4. Members of the civilian component, their dependents, and the dependents of members of the U.S. Armed Forces shall be in possession of appropriate documentation issued by the U.S. authorities so that their status may be verified by Japanese authorities upon their entry into or departure from Japan, or while in Japan.

5. If the status of any person brought into Japan under paragraph 1 of this article is altered so that he would no longer be entitled to such admission, the U.S. authorities shall notify the Japanese authorities and shall, if such person be required by the Japanese authorities to leave Japan, assure that transportation from Japan will be provided within a reasonable time at no cost to the Government of Japan.

6. If the Government of Japan has requested the removal from its territory of a member of the U.S. Armed Forces or civilian component or has made an expulsion order against an ex-member of the U.S. Armed Forces or the civilian component or against a dependent of a member or ex-member, the authorities of the United States shall be responsible for receiving the person concerned within its own territory or otherwise disposing of him outside Japan. This paragraph shall apply only to persons who are not nationals of Japan and have entered Japan as members of the U.S. Armed Forces or civilian component or for the purpose of becoming such members, and to the dependents of such persons.

ARTICLE X

1. Japan shall accept as valid, without a driving test or fee, the driving permit or license or military driving permit issued by the United States to a member of the U.S. Armed Forces, the civilian component, and their dependents.

2. Official vehicles of the U.S. Armed Forces and the civilian component shall carry distinctive numbered plates or individual markings which will readily identify them.

3. Privately owned vehicles of members of the U.S. Armed Forces, the civilian component, and their dependents shall carry Japanese number plates to be acquired under the same conditions as those applicable to Japanese nationals.

ARTICLE XI

1. Save as provided in this agreement, members of the U.S. Armed Forces, the civilian component, and their dependents shall be subject to the laws and regulations administered by the customs authorities of Japan.

2. All materials, supplies and equipment imported by the U.S. Armed Forces, the authorized procurement agencies of the U.S. Armed Forces, or by the organizations provided for in article XV, for the official use of the U.S. Armed Forces or for the use of the members of the U.S. Armed Forces, the civilian components, and their dependents, and materials, supplies and equipment which are to be used exclusively by the U.S. Armed Forces or are ultimately to be incorporated into articles or facilities used by such forces, shall be permitted entry into Japan; such entry shall be free from customs duties and other such charges. Appropriate certification shall be made that such materials, supplies and equipment are being imported by the U.S. Armed Forces, the authorized procurement agencies of the U.S. Armed Forces, or by the organizations provided for in article XV, or, in the case of materials, supplies and equipment to be used exclusively by the U.S. Armed Forces or ultimately to be incorporated into articles or facilities used by such forces, that delivery thereof is to be taken by the U.S. Armed Forces for the purposes specified above.

3. Property consigned to and for the personal use of members of the U.S. Armed Forces, the civilian component, and their dependents, shall be subject to customs duties and other such charges, except that no duties or charges shall be paid with respect to:

(a) Furniture and household goods for their private use imported by the members of the U.S. Armed Forces or civilian component when they first arrive to serve in Japan or by their dependents when they first arrive for reunion with members of such forces or civilian component, and personal effects for private use brought by the said persons upon entrance.

(b) Vehicles and parts imported by members of the U.S. Armed Forces or civilian component for the private use of themselves or their dependents.

(c) Reasonable quantities of clothing and household goods of a type which would ordinarily be purchased in the United States for everyday use for the private use of members of the U.S. Armed Forces, civilian component, and their dependents, which are mailed into Japan through U.S. military post offices.

4. The exemptions granted in paragraphs 2 and 3 shall apply only to cases of importation of goods and shall not be interpreted as refunding customs duties and domestic excises collected by the customs authorities at the time of entry in cases of purchases of goods on which such duties and excises have already been collected.

5. Customs examination shall not be made in the following cases:

(a) Units of the U.S. Armed Forces under orders entering or leaving Japan;

(b) Official documents under official seal and official mail in U.S. military postal channels;

(c) Military cargo shipped on a U.S. Government bill of lading.

6. Except as such disposal may be authorized by the United States and Japanese authorities in accordance with mutually agreed conditions, goods imported into Japan free of duty shall not be disposed of in Japan to persons not entitled to import such goods free of duty.

7. Goods imported into Japan free from customs duties and other such charges pursuant to paragraphs 2 and 3, may be reexported free from customs duties and other such charges.

8. The U.S. Armed Forces, in cooperation with Japanese authorities, shall take such steps as are necessary to prevent abuse of privileges granted to the U.S. Armed Forces, members of such forces, the civilian component, and their dependents in accordance with this article.

9. (a) In order to prevent offenses against laws and regulations administered by the customs authorities of the Government of Japan, the Japanese authorities and the U.S. Armed Forces shall assist each other in the conduct of inquiries and the collection of evidence.

(b) The U.S. Armed Forces shall render all assistance within their power to ensure that articles liable to seizure by, or on behalf of, the customs authorities of the Government of Japan are handed to those authorities.

(c) The U.S. Armed Forces shall render all assistance within their power to ensure the payment of duties, taxes, and penalties payable by members of such forces or of the civilian component, or their dependents.

(d) Vehicles and articles belonging to the U.S. Armed Forces seized by the customs authorities of the Government of Japan in connection with an offense against its customs or fiscal laws or regulations shall be handed over to the appropriate authorities of the force concerned.

ARTICLE XII

1. The United States may contract for any supplies or construction work to be furnished or undertaken in Japan for purposes of, or authorized by, this agreement, without restriction as to choice of supplier or person who does the construction work. Such supplies or construction work may, upon agreement between the appropriate authorities of the two Governments, also be procured through the Government of Japan.

2. Materials, supplies, equipment, and services which are required from local sources for the maintenance of the U.S. Armed Forces and the procurement of which may have an adverse effect on the economy of Japan shall be procured in coordination with, and, when desirable, through or with the assistance of, the competent authorities of Japan.

3. Materials, supplies, equipment, and services procured for official purposes in Japan by the U.S. Armed Forces, or by authorized procurement agencies of the U.S. Armed Forces upon appropriate certification shall be exempt from the following Japanese taxes:

(a) Commodity tax.

(b) Traveling tax.

(c) Gasoline tax.

(d) Electricity and gas tax.

Materials, supplies, equipment, and services procured for ultimate use by the U.S. Armed Forces shall be exempt from commodity and gasoline taxes upon appropriate certification by the U.S. Armed Forces. With respect to any present or future Japanese taxes not specifically referred to in this article which might be found to constitute a significant and readily identifiable part of the gross purchase price of materials, supplies, equipment, and services procured by the U.S. Armed Forces, or for ultimate use by such forces, the two Governments will agree upon a procedure for granting such exemption or relief therefrom as is consistent with the purposes of this article.

4. Local labor requirements of U.S. Armed Forces and of the organizations provided for in article XV shall be satisfied with the assistance of the Japanese authorities.

5. The obligations for the withholding and payment of income tax, local inhabitant tax and social security contributions, and, except as may otherwise be mutually agreed, the conditions of employment and work, such as those relating to wages and supplementary payments, the conditions for the protection of workers, and the rights of workers concerning labor relations shall be those laid down by the legislation of Japan.

6. Should the U.S. Armed Forces or as appropriate an organization provided for in article XV dismiss a worker and a decision of a court or a labor relations commission of Japan to the effect that the contract of employment has not terminated become final, the following procedures shall apply:

(a) The U.S. Armed Forces or the said organization shall be informed by the Government of Japan of the decision of the court or commission;

(b) Should the U.S. Armed Forces or the said organization not desire to return the worker to duty, they shall so notify the Government of Japan within 7 days after being informed by the latter of the decision of the court or commission, and may temporarily withhold the worker from duty;

(c) Upon such notification, the Government of Japan and the U.S. Armed Forces or the said organization shall consult together without delay with a view to finding a practical solution of the case;

(d) Should such a solution not be reached within a period of 30 days from the date of commencement of the consultations under (c) above, the worker will not be entitled to return to duty. In such case, the Government of the United States shall pay to the Government of Japan an amount equal to

the cost of employment of the worker for a period of time to be agreed between the two governments.

7. Members of the civilian component shall not be subject to Japanese laws or regulations with respect to terms and conditions of employment.

8. Neither members of the U.S. Armed Forces, civilian component, nor their dependents, shall by reason of this article enjoy any exemption from taxes or similar charges relating to personal purchases of goods and services in Japan chargeable under Japanese legislation.

9. Except as such disposal may be authorized by the United States and Japanese authorities in accordance with mutually agreed conditions, goods purchased in Japan exempt from the taxes referred to in paragraph 3, shall not be disposed of in Japan to persons not entitled to purchase such goods exempt from such tax.

ARTICLE XIII

1. The U.S. Armed Forces shall not be subject to taxes or similar charges on property held, used or transferred by such forces in Japan.

2. Members of the U.S. Armed Forces, the civilian component, and their dependents shall not be liable to pay any Japanese taxes to the Government of Japan or to any other taxing agency in Japan on income received as a result of their service with or employment by the U.S. Armed Forces, or by the organizations provided for in article XV. The provisions of this article do not exempt such persons from payment of Japanese taxes on income derived from Japanese sources, nor do they exempt U.S. citizens who for U.S. income tax purposes claim Japanese residence from payment of Japanese taxes on income. Periods during which such persons are in Japan solely by reason of being members of the U.S. Armed Forces, the civilian component, or their dependents shall not be considered as periods of residence or domicile in Japan for the purpose of Japanese taxation.

3. Members of the U.S. Armed Forces, the civilian component, and their dependents shall be exempt from taxation in Japan on the holding, use, transfer inter se, or transfer by death of movable property, tangible or intangible, the presence of which in Japan is due solely to the temporary presence of these persons in Japan, provided that such exemption shall not apply to property held for the purpose of investment or the conduct of business in Japan or to any intangible property registered in Japan. There is no obligation under this article to grant exemption from taxes payable in respect of the use of roads by private vehicles.

ARTICLE XIV

1. Persons, including corporations organized under the laws of the United States, and their employees who are ordinarily resident in the United States and whose presence in Japan is solely for the purpose of executing contracts with the United States for the benefit of the U.S. Armed Forces, and who are designated by the Government of the United States in accordance with the provisions of paragraph 2 below, shall, except as provided in this article, be subject to the laws and regulations of Japan.

2. The designation referred to in paragraph 1 above shall be made upon consultation with the Government of Japan and shall be restricted to cases where open competitive bidding is not practicable due to security considerations, to the technical qualifications of the contractors involved, or to the unavailability of materials or services required by U.S. standards, or to limitations of U.S. law. The designation shall be withdrawn by the Government of the United States:

(a) Upon completion of contracts with the United States for the U.S. Armed Forces;

(b) Upon proof that such persons are engaged in business activities in Japan other than those pertaining to the U.S. Armed Forces; or

(c) When such persons are engaged in practices illegal in Japan.

3. Upon certification by appropriate U.S. authorities as to their identity, such persons and their employees shall be accorded the following benefits of this agreement:

(a) Rights of accession and movement, as provided for in article V, paragraph 2;

(b) Entry into Japan in accordance with the provisions of article IX;

(c) The exemption from customs duties, and other such charges provided for in article XI, paragraph 3, for members of the U.S. Armed Forces, the civilian component, and their dependents;

(d) If authorized by the Government of the United States, the right to use the services of the organizations provided for in article XV;

(e) Those provided for in article XIX, paragraph 2, for members of the Armed Forces of the United States, the civilian component. and their dependents;

(f) If authorized by the Government of the United States, the right to use military payment certificates, as provided for in article XX;

(g) The use of postal facilities provided for in article XXI;

(h) Exemption from the laws and regulations of Japan with respect to terms and conditions of employment.

4. Such persons and their employees shall be so described in their passports and their arrival, departure and their residence while in Japan shall from time to time be notified by the U.S. Armed Forces to the Japanese authorities.

5. Upon certification by an authorized officer of the U.S. Armed Forces, depreciable assets except houses, held, used, or transferred, by such persons and their employees exclusively for the execution of contracts referred to in paragraph 1 shall not be subject to taxes or similar charges of Japan.

6. Upon certification by an authorized officer of the U.S. Armed Forces, such persons and their employees shall be exempt from taxation in Japan on the holding, use, transfer by death, or transfer to persons or agencies entitled to tax exemption under this agreement, of movable property, tangible or intangible, the presence of which in Japan is due solely to the temporary presence of these persons in Japan, provided that such exemptions shall not apply to property held for the purpose of investment or the conduct of other business in Japan or to any intangible property registered in Japan. There is no obligation under this article to grant exemption from taxes payable in respect of the use of roads by private vehicles.

7. The persons and their employees referred to in paragraph 1 shall not be liable to pay income or corporation taxes to the Government of Japan or to any other taxing agency in Japan on any income derived under a contract made in the United States with the Government of the United States in connection with the construction, maintenance or operation of any of the facilities or areas covered by this agreement. The provisions of this paragraph do not exempt such persons from payment of income or corporation taxes on income derived from Japanese sources, nor do they exempt such persons and their employees who, for U.S. income tax purposes, claim Japanese residence, from payment of Japanese taxes on income. Periods during which such persons are in Japan solely in connection with the execution of a contract with the Government of the United States shall not be considered periods of residence or domicile in Japan for the purposes of such taxation.

8. Japanese authorities shall have the primary right to exercise jurisdiction over the persons and their employees referred to in paragraph 1 of this article in relation to offenses committed in Japan and punishable by the law of Japan. In those cases in which the Japanese authorities decide not to exercise such jurisdiction they shall notify the military authorities of the United States as soon as possible. Upon such notification the military authorities of the United States shall have the right to exercise such jurisdiction over the persons referred to as is conferred on them by the law of the United States.

ARTICLE XV

1. (a) Navy exchanges, post exchanges, messes, social clubs, theaters, newspapers, and other nonappropriated fund organizations authorized and regulated by the U.S. military authorities may be established in the facilities and areas in use by the U.S. Armed Forces for the use of members of such forces, the civilian component, and their dependents. Except as otherwise provided in this Agreement, such organizations shall not be subject to Japanese regulations, license, fees, taxes or similar controls.

(b) When a newspaper authorized and regulated by the U.S. military authorities is sold to the general public, it shall be subject to Japanese regulations, license, fees, taxes, or similar controls so far as such circulation is concerned.

2. No Japanese tax shall be imposed on sales of merchandise and services by such organizations, except as provided in paragraph 1(b), but purchases within Japan of merchandise and supplies by such organizations shall be subject to Japanese taxes.

3. Except as such disposal may be authorized by the United States and Japanese authorities in accordance with mutually agreed conditions, goods which are sold by such organizations shall not be disposed of in Japan to persons not authorized to make purchases from such organizations.

4. The organizations referred to in this article shall provide such information to the Japanese authorities as is required by Japanese tax legislation.

ARTICLE XVI

It is the duty of members of the U.S. Armed Forces, the civilian component, and their dependents to respect the law of Japan and to abstain from any activity inconsistent with the spirit of this Agreement, and, in particular, from any political activity in Japan.

ARTICLE XVII

1. Subject to the provisions of this article,

(a) the military authorities of the United States shall have the right to exercise within Japan all criminal and disciplinary jurisdiction conferred on them by the law of the United States over all persons subject to the military law of the United States;

(b) the authorities of Japan shall have jurisdiction over the members of the U.S. Armed Forces, the civilian component, and their dependents with respect to offenses committed within the territory of Japan and punishable by the law of Japan.

2. (a) The military authorities of the United States shall have the right to exercise exclusive jurisdiction over persons subject to the military law of the United States with respect to offenses, including offenses relating to its security, punishable by the law of the United States, but not by the law of Japan.

(b) The authorities of Japan shall have the right to exercise exclusive jurisdiction over members of the U.S. Armed Forces, the civilian component, and their dependents with respect to offenses, including offenses

relating to the security of Japan, punishable by its law but not by the law of the United States.

(c) For the purpose of this paragraph and of paragraph 3 of this article a security offense against a state shall include—

(i) treason against the state;

(ii) sabotage, espionage, or violation of any law relating to official secrets of that state, or secrets relating to the national defense of that state.

3. In cases where the right to exercise jurisdiction is concurrent the following rules shall apply:

(a) The military authorities of the United States shall have the primary right to exercise jurisdiction over members of the United States Armed Forces or the civilian component in relation to

(i) offenses solely against the property or security of the United States, or offenses solely against the person or property of another member of the U.S. Armed Forces or the civilian component or of a dependent;

(ii) offenses arising out of any act or omission done in the performance of official duty.

(b) In the case of any other offense the authorities of Japan shall have the primary right to exercise jurisdiction.

(c) If the State having the primary right decides not to exercise jurisdiction, it shall notify the authorites of the other State as soon as practicable. The authorities of the State having the primary right shall give sympathetic consideration to a request from the authorities of the other State for a waiver of its right in cases where that other State considers such waiver to be of particular importance.

4. The foregoing provisions of this article shall not imply any right for the military authorities of the United States to exercise jurisdiction over persons who are nationals of or ordinarily resident in Japan, unless they are members of the U.S. Armed Forces.

5. (a) The military authorities of the United States and the authorities of Japan shall assist each other in the arrest of members of the U.S. Armed Forces, the civilian component, or their dependents in the territory of Japan and in handing them over to the authority which is to exercise jurisdiction in accordance with the above provisions.

(b) The authorities of Japan shall notify promptly the military authorities of the United States of the arrest of any member of the U.S. Armed Forces, the civilian component, or a dependent.

(c) The custody of an accused member of the U.S. Armed Forces or the civilian component over whom Japan is to exercise jurisdiction shall, if he is in the hands of the United States, remain with the United States until he is charged by Japan.

6. (a) The military authorities of the United States and the authorities of Japan shall assist each other in the carrying out of all necessary investigations into offenses, and in the collection and production of evidence, including the seizure and, in proper cases, the handing over of objects connected with an offense. The handing over of such objects may, however, be made subject to their return within the time specified by the authority delivering them.

(b) The military authorities of the United States and the authorities of Japan shall notify each other of the disposition of all cases in which there are concurrent rights to exercise jurisdiction.

7. (a) A death sentence shall not be carried out in Japan by the military authorities of the United States if the legislation of Japan does not provide for such punishment in a similar case.

(b) The authorities of Japan shall give sympathetic consideration to a request from the military authorities of the United States for assistance in carrying out a sentence of imprisonment pronounced by the military authorities of the United States under the provisions of this article within the territory of Japan.

8. Where an accused has been tried in accordance with the provisions of this article either by the military authorities of the United States or the authorities of Japan and has been acquitted, or has been convicted and is serving, or has served, his sentence or has been pardoned, he may not be tried again for the same offense within the territory of Japan by the authorities of the other State. However, nothing in this paragraph shall prevent the military authorities of the United States from trying a member of its Armed Forces for any violation of rules of discipline arising from an act or omission which constituted an offense for which he was tried by the authorities of Japan.

9. Whenever a member of the U.S. Armed Forces, the civilian component or a dependent is prosecuted under the jurisdiction of Japan he shall be entitled:

(a) to a prompt and speedy trial;

(b) to be informed, in advance of trial, of the specific charge or charges made against him;

(c) to be confronted with the witnesses against him;

(d) to have compulsory process for obtaining witnesses in his favor, if they are within the jurisdiction of Japan;

(e) to have legal representation of his own choice for his defense or to have free or assisted legal representation under the conditions prevailing for the time being in Japan;

(f) if he considers it necessary, to have the services of a competent interpreter; and

(g) to communicate with a representative of the Government of the United States and to have such a representative present at his trial.

10. (a) Regularly constituted military units or formations of the U.S. Armed Forces shall have the right to police any facilities or areas which they use under article II of this agreement. The military police of such forces may take all appropriate measures to insure the maintenance of order and security within such facilities and areas.

(b) Outside these facilities and areas, such military police shall be employed only subject to arrangements with the authorities of Japan and in liaison with those authorities, and insofar as such employment is necessary to maintain discipline and order among the members of the U.S. Armed Forces.

11. In the event of hostilities to which the provisions of article V of the Treaty of Mutual Cooperation and Security apply, either the Government of the United States or the Government of Japan shall have the right, by giving 60 days' notice to the other, to suspend the application of any of the provisions of this article. If this right is exercised, the Governments of the United States and Japan shall immediately consult with a view to agreeing on suitable provisions to replace the provisions suspended.

12. The provisions of this article shall not apply to any offenses committed before the entry into force of this agreement. Such cases shall be governed by the provisions of article XVII of the Administrative Agreement under article III of the Security Treaty Between the United States of America and Japan, as it existed at the relevant time.

ARTICLE XVIII

1. Each party waives all its claims against the other party for damage to any property owned by it and used by its land, sea, or air defense services, if such damage—

(a) was caused by a member or an employee of the defense services of the other party in the performance of his official duties; or

(b) arose from the use of any vehicle, vessel or aircraft owned by the other party and used by its defense services, provided either that the vehicle, vessel or aircraft causing the damage was being used for official purposes, or that the damage was caused to property being so used.

Claims for maritime salvage by one party against the other party shall be waived, provided that the vessel or cargo salved was owned by a party and being used by its defense services for official purposes.

2. (a) In the case of damage caused or arising as stated in paragraph 1 to other property owned by either party and located in Japan, the issue of the liability of the other party shall be determined and the amount of damage shall be assessed, unless the two Governments agree otherwise, by a sole arbitrator selected in accordance with subparagraph (b) of this paragraph. The arbitrator shall also decide any counterclaims arising out of the same incident.

(b) The arbitrator referred to in subparagraph (a) above shall be selected by agreement between the two Governments from amongst the nationals of Japan who hold or have held high judicial office.

(c) Any decision taken by the arbitrator shall be binding and conclusive upon the parties.

(d) The amount of any compensation awarded by the arbitrator shall be distributed in accordance with the provisions of paragraph 5(e) (i), (ii) and (iii) of this article.

(e) The compensation of the arbitrator shall be fixed by agreement between the two Governments and shall, together with the necessary expenses incidental to the performance of his duties, be defrayed in equal proportions by them.

(f) Nevertheless, each party waives its claim in any such case up to the amount of 1,400 U.S. dollars or 504,000 yen. In the case of considerable variation in the rate of exchange between these currencies the two Governments shall agree on the appropriate adjustments of these amounts.

3. For the purposes of paragraphs 1 and 2 of this article the expression "owned by a party" in the case of a vessel includes a vessel on bare boat charter to that party or requisitioned by it on bare boat terms or seized by it in prize (except to the extent that the risk of loss or liability is borne by some person other than such party).

4. Each party waives all its claims against the other party for injury or death suffered by any member of its defense services while such member was engaged in the performance of his official duties.

5. Claims (other than contractual claims and those to which paragraphs 6 or 7 of this article apply) arising out of acts or omissions of members or employees of the U.S. Armed Forces done in the performance of official duty, or out of any other act, omission or occurrence for which the U.S. Armed Forces are legally responsible, and causing damage in Japan to third parties, other than the Government of Japan, shall be dealt with by Japan in accordance with the following provisions:

(a) Claims shall be filed, considered and settled or adjudicated in accordance with the laws and regulations of Japan with respect to claims arising from the activities of its self-defense forces.

(b) Japan may settle any such claims, and payment of the amount agreed upon or determined by adjudication shall be made by Japan in yen.

(c) Such payment, whether made pursuant to a settlement or to adjudication of the case by a competent tribunal of Japan, or the final adjudication by such a tribunal denying payment, shall be binding and conclusive upon the parties.

(d) Every claim paid by Japan shall be communicated to the appropriate U.S. authorities together with full particulars and a proposed distribution in conformity with subparagraphs (e) (i) and (ii) below. In

default of a reply within two months, the proposed distribution shall be regarded as accepted.

(e) The cost incurred in satisfying claims pursuant to the preceding subparagraphs and paragraph 2 of this Article shall be distributed between the parties as follows:

(i) Where the United States alone is responsible, the amount awarded or adjudged shall be distributed in the proportion of 25 percent chargeable to Japan and 75 percent chargeable to the United States.

(ii) Where the United States and Japan are responsible for the damage, the amount awarded or adjudged shall be distributed equally between them. Where the damage was caused by the defense services of the United States or Japan and it is not possible to attribute it specifically to one or both of those defense services, the amount awarded or adjudged shall be distributed equally between the United States and Japan.

(iii) Every half year, a statement of the sums paid by Japan in the course of the half-yearly period in respect of every case regarding which the proposed distribution on a percentage basis has been accepted, shall be sent to the appropriate U.S. authorities, together with a request for reimbursement. Such reimbursement shall be made, in yen, within the shortest possible time.

(f) Members or employees of the U.S. Armed Forces, excluding those employees who have only Japanese nationality, shall not be subject to any proceedings for the enforcement of any judgment given against them in Japan in a matter arising from the performance of their official duties.

(g) Except in so far as subparagraph (e) of this paragraph applies to claims covered by paragraph 2 of this Article, the provisions of this paragraph shall not apply to any claim arising out of or in connection with the navigation or operation of a ship or the loading, carriage, or discharge of a cargo, other than claims for death or personal injury to which paragraph 4 of this Article does not apply.

6. Claims against members or employees of the United States armed forces (except employees who are nationals of or ordinarily resident in Japan) arising out of tortious acts or omissions in Japan not done in the performance of official duty shall be dealt with in the following manner:

(a) The authorities of Japan shall consider the claim and assess compensation to the claimant in a fair and just manner, taking into account all the circumstances of the case, including the conduct of the injured person, and shall prepare a report on the matter.

(b) The report shall be delivered to the appropriate United States authorities, who shall then decide without delay whether they will offer an ex gratia payment, and if so, of what amount.

(c) If an offer of ex gratia payment is made, and accepted by the claimant in full satisfaction of his claim, the U.S. authorities shall make the payment themselves and inform the authorities of Japan of their decision and of the sum paid.

(d) Nothing in this paragraph shall affect the jurisdiction of the courts of Japan to entertain an action against a member or an employee of the U.S. Armed Forces unless and until there has been payment in full satisfaction of the claim.

7. Claims arising out of the unauthorized use of any vehicle of the U.S. Armed Forces shall be dealt with in accordance with paragraph 6 of this article, except insofar as the U.S. Armed Forces are legally responsible.

8. If a dispute arises as to whether a tortious act or omission of a member or an employee of the U.S. Armed Forces was done in the performance of official duty or as to whether the use of any vehicle of the U.S. Armed Forces was unauthorized, the question shall be submitted to an arbitrator appointed in accordance with paragraph 2(b) of this article, whose decision on this point shall be final and conclusive.

9. (a) The United States shall not claim immunity from the jurisdiction of the courts of Japan for members or employees of the U.S. Armed Forces in respect of the civil jurisdiction of the courts of Japan except to the extent provided in paragraph 5(f) of this article.

(b) In case any private movable property, excluding that in use by the U.S. Armed Forces, which is subject to compulsory execution under Japanese law, is within the facilities and areas in use by the U.S. Armed Forces, the U.S. authorities shall, upon the request of Japanese courts, possess and turn over such property to the Japanese authorities.

(c) The authorities of the United States and Japan shall cooperate in the procurement of evidence for a fair hearing and disposal of claims under this article.

10. Disputes arising out of contracts concerning the procurement of materials, supplies, equipment, services and labor by or for the U.S. Armed Forces, which are not resolved by the parties to the contract concerned, may be submitted to the Joint Committee for conciliation, provided that the provisions of this paragraph shall not prejudice any right which the parties to the contract may have to file a civil suit.

11. The term "defense services" used in this article is understood to mean for Japan its self-defense forces and for the United States its Armed Forces.

12. Paragraphs 2 and 5 of this article shall apply only to claims arising incident to noncombat activities.

13. The provisions of this article shall not apply to any claims which arose before the entry into force of this agreement. Such claims shall be dealt with by the provisions of article XVIII of the Administrative Agreement under article III of the Security Treaty Between the United States of America and Japan.

ARTICLE XIX

1. Members of the U.S. Armed Forces, the civilian component, and their dependents, shall be subject to the foreign exchange controls of the Government of Japan.

2. The preceding paragraph shall not be construed to preclude the transmission into or outside of Japan of U.S. dollars or dollar instruments representing the official funds of the United States or realized as a result of service or employment in connection with this agreement by members of the U.S. Armed Forces and the civilian component, or realized by such persons and their dependents from sources outside of Japan.

3. The U.S. authorities shall take suitable measures to preclude the abuse of the privileges stipulated in the preceding paragraph or circumvention of the Japanese foreign exchange controls.

ARTICLE XX

1. (a) U.S. military payment certificates denominated in dollars may be used by persons authorized by the United States for internal transactions within the facilities and areas in use by the U.S. Armed Forces. The Government of the United States will take appropriate action to insure that authorized personnel are prohibited from engaging in transactions involving military payment certificates except as authorized by United States regulations. The Government of Japan will take necessary action to prohibit unauthorized persons from engaging in transactions involving military payment certificates and with the aid of U.S. authorities will undertake to apprehend and punish any person or persons under its jurisdiction involved in the counterfeiting or uttering of counterfeit military payment certificates.

(b) It is agreed that the U.S. authorities will apprehend and punish members of the U.S. Armed Forces, the civilian component, or their dependents, who tender military payment certificates to unauthorized persons and that no obligation will be due to such unauthorized persons or to the Government of Japan or its agencies from the United States or any of its agencies as a result of any unauthorized use of military payment certificates within Japan.

2. In order to exercise control of military payment certificates the United States may designate certain American financial institutions to maintain and operate, under U.S. supervision, facilities for the use of persons authorized by the United States to use military payment certificates. Institutions authorized to maintain military banking facilities will establish and maintain such facilities physically separated from their Japanese commercial banking business, with personnel whose sole duty is to maintain and operate such facilities. Such facilities shall be permitted to maintain U.S. currency bank accounts and to perform all financial transactions in connection therewith including receipt and remission of funds to the extent provided by article XIX, paragraph 2, of this agreement.

ARTICLE XXI

The United States may establish and operate, within the facilities and areas in use by the U.S. Armed Forces, U.S. military post offices for the use of members of the U.S. Armed Forces, the civilian component, and their dependents, for the transmission of mail between U.S. military post offices in Japan and between such military post offices and other U.S. post offices.

ARTICLE XXII

The United States may enroll and train eligible U.S. citizens residing in Japan, who apply for such enrollment, in the reserve organizations of the Armed Forces of the United States.

ARTICLE XXIII

The United States and Japan will cooperate in taking such steps as may from time to time be necessary to insure the security of the U.S. Armed Forces, the members thereof, the civilian component, their dependents, and their property. The Government of Japan agrees to seek such legislation and to take such other action as may be necessary to insure the adequate security and protection within its territory of installations, equipment, property, records, and official information of the United States, and for the punishment of offenders under the applicable laws of Japan.

ARTICLE XXIV

1. It is agreed that the United States will bear for the duration of this agreement without cost to Japan all expenditures incident to the maintenance of the U.S. Armed Forces in Japan except those to be borne by Japan as provided in paragraph 2.

2. It is agreed that Japan will furnish for the duration of this agreement without cost to the United States and make compensation where appropriate to the owners and suppliers thereof all facilities and areas and rights-of-way, including facilities and areas jointly used such as those at airfields and ports, as provided in articles II and III.

3. It is agreed that arrangements will be effected between the Governments of the United States and Japan for accounting applicable to financial transactions arising out of this agreement.

ARTICLE XXV

1. A Joint Committee shall be established as the means for consultation between the Government of the United States and the Government of Japan on all matters requiring mutual consultation regarding the implementation of this agreement. In particular, the Joint Committee shall serve as the means for consultation in determining the

facilities and areas in Japan which are required for the use of the United States in carrying out the purposes of the Treaty of Mutual Cooperation and Security.

2. The Joint Committee shall be composed of a representative of the Government of the United States and a representative of the Government of Japan, each of whom shall have one or more deputies and a staff. The Joint Committee shall determine its own procedures, and arrange for such auxiliary organs and administrative services as may be required. The Joint Committee shall be so organized that it may meet immediately at any time at the request of the representative of either the Government of the United States or the Government of Japan.

3. If the Joint Committee is unable to resolve any matter, it shall refer that matter to the respective Governments for further consideration through appropriate channels.

ARTICLE XXVI

1. This agreement shall be approved by the United States and Japan in accordance with their legal procedures, and notes indicating such approval shall be exchanged.

2. After the procedure set forth in the preceding paragraph has been followed, this agreement will enter into force on the date of coming into force of the Treaty of Mutual Cooperation and Security, at which time the Administrative Agreement under article III of the Security Treaty Between the United States of America and Japan, signed at Tokyo on February 28, 1952, as amended, shall expire.

3. The Government of each party to this agreement undertakes to seek from its legislature necessary budgetary and legislative action with respect to provisions of this agreement which require such action for their execution.

ARTICLE XXVII

Either Government may at any time request the revision of any article of this agreement, in which case the two Governments shall enter into negotiation through appropriate channels.

ARTICLE XXVIII

This agreement, and agreed revisions thereof, shall remain in force while the Treaty of Mutual Cooperation and Security remains in force unless earlier terminated by agreement between the two Governments.

In witness whereof the undersigned plenipotentiaries have signed this agreement.

Done at Washington, in duplicate, in the English and Japanese languages, both texts equally authentic, this 19th day of January, 1960.

For the United States of America:

CHRISTIAN A. HERTER.
DOUGLAS MACARTHUR 2D.

AGREED MINUTES TO THE AGREEMENT UNDER ARTICLE VI OF THE TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN, REGARDING FACILITIES AND AREAS AND THE STATUS OF U.S. ARMED FORCES IN JAPAN

Two Plenipotentiaries of the United States of America and Japan wish to record the following understanding which they have reached during the negotiations for the agreement under article VI of the Treaty of Mutual Cooperation and Security between the United States of America and Japan, Regarding Facilities and Areas and the Status of U.S. Armed Forces in Japan, signed today:

ARTICLE III

The measure that may be taken by the United States under paragraph 1 shall, to the extent necessary to accomplish the purposes of this Agreement, include, inter alia, the following:

1. To construct (including dredging and filling), operate, maintain, utilize, occupy, garrison and control the facilities and areas;

2. To remove buildings or structures, make alterations, attach fixtures, or erect additions thereto and to construct any additional buildings or structures together with auxiliary facilities;

3. To improve and deepen the harbors, channels, entrances and anchorages, and to construct or maintain necessary roads and bridges affording access to such facilities and areas;

4. To control (including measures to prohibit) insofar as may be required by military necessity for the efficient operation and safety of the facilities and areas, anchorages, moorings, landings, takeoffs and operation of ships and waterborne craft, aircraft and other vehicles on water, in the air or on land comprising, or in the vicinity of, the facilities and areas;

5. To construct on rights of way utilized by the United States such wire and radio communications facilities, including submarine and subterranean cables, pipelines, and spur tracks from railroads, as may be required for military purposes; and

6. To construct, install, maintain and employ in any facility or area any type of installation, weapon, substance, device, vessel or vehicle on or under the ground, in the air or on or under the water that may be requisite or appropriate, including meteorological systems, aerial and water navigation lights, radio and radar apparatus and electronic devices.

ARTICLE IV

1. "U.S. and foreign vessels * * * operated by, for, or under the control of the United States for official purposes" mean U.S. public vessels and chartered vessels (bare boat charter, voyage charter and time charter). Space charter is not included. Commercial cargo and private passengers are carried by them only in exceptional cases.

2. The Japanese ports mentioned herein will ordinarily mean "open ports."

3. The exemption from making "appropriate notification" will be applicable only to exceptional cases where such is required for security of the U.S. Armed Forces or similar reasons.

4. The laws and regulations of Japan will be applicable except as specifically provided otherwise in this article.

ARTICLE VII

The problem of telecommunications rates applicable to the U.S. Armed Forces will continue to be studied in the light of, inter alia, the statements concerning article VII recorded in the official minutes of the 10th Joint Meeting for the Negotiation of the Administrative Agreement signed on February 28, 1952, which are hereby incorporated by reference.

ARTICLE IX

The Government of Japan will be notified at regular intervals, in accordance with procedures to be agreed between the two Governments, of numbers and categories of persons entering and departing.

ARTICLE XI

1. The quantity of goods imported under paragraph 2 by the organizations provided for in article XV for the use of the members of the U.S. Armed Forces, the civilian component, and their dependents shall be limited to the extent reasonably required for such use.

2. Paragraph 3(a) does not require concurrent shipment of goods with travel of owner nor does it require single loading or shipment.

3. The term "military cargo" as used in paragraph 5(c) is not confined to arms and equipment but refers to all cargo shipped to the U.S. Armed Forces on a U.S. Government bill of lading, the term "military cargo" being used to distinguish cargo shipped to the U.S. Armed Forces from cargo shipped to other agencies of the U.S. Government.

4. The U.S. Armed Forces will take every practicable measure to ensure that goods will not be imported into Japan by or for the members of the U.S. Armed Forces, the civilian component, or their dependents, the entry of which would be in violation of Japanese customs laws and regulations. The U.S. Armed Forces will promptly notify the Japanese customs authorities whenever the entry of such goods is discovered.

5. The Japanese customs authorities may, if they consider that there has been an abuse or infringement in connection with the entry of goods under article XI, take up the matter with the appropriate authorities of the U.S. Armed Forces.

6. The words "The U.S. Armed Forces shall render all assistance within their power etc." in paragraph 9 (b) and (c) refer to reasonable and practicable measures by the U.S. Armed Forces.

ARTICLE XII

1. The U.S. Armed Forces will furnish the Japanese authorities with appropriate information as far in advance as practicable on anticipated major changes in their procurement program in Japan.

2. The problem of a satisfactory settlement of difficulties with respect to procurement contracts arising out of differences between United States and Japanese economic laws and business practices will be studied by the Joint Committee or other appropriate persons.

3. The procedures for securing exemptions from taxation on purchases of goods for ultimate use by the U.S. Armed Forces will be as follows:

a. Upon appropriate certification by the U.S. Armed Forces that materials, supplies, and equipment consigned to or destined for such forces, are to be used, or wholly or partially used up, under the supervision of such forces, exclusively in the execution of contracts for the construction, maintenance or operation of the facilities and areas referred to in article II or for the support of the forces therein, or are ultimately to be incorporated into articles or facilities used by such forces, an authorized representative of such forces shall take delivery of such materials, supplies and equipment directly from manufacturers thereof. In such circumstances the collection of commodity and gasoline taxes shall be held in abeyance.

b. The receipt of such materials, supplies and equipment in the facilities and areas shall be confirmed by an authorized officer of the U.S. Armed Forces to the Japanese authorities.

c. Collection of commodity and gasoline taxes shall be held in abeyance until

(1) The U.S. Armed Forces confirm and certify the quantity or degree of consumption of the above referred to materials, supplies and equipment, or

(2) The U.S. Armed Forces confirm and certify the amount of the above referred to materials, supplies, and equipment which have been incorporated into articles or facilities used by U.S. Armed Forces.

d. Materials, supplies, and equipment certified under c (1) or (2) shall be exempt from commodity and gasoline taxes insofar as the price thereof is paid out of U.S. Government appropriations or out of funds contributed by the Japanese Government for disbursement by the United States.

4. The Government of the United States shall ensure that the Government of Japan is reimbursed for costs incurred under relevant contracts between appropriate authorities of the Government of Japan and the organizations provided for in article XV in connection with the employment of workers to be provided for such organizations.

5. It is understood that the term "the legislation of Japan" mentioned in paragraph 5, article XII includes decisions of the courts and the Labor Relations Commissions of Japan, subject to the provisions of paragraph 6, article XII.

6. It is understood that the provisions of article XII, paragraph 6 shall apply only to discharges for security reasons including disturbing the maintenance of military discipline within the facilities and areas used by the U.S. Armed Forces.

7. It is understood that the organizations referred to in article XV will be subject to the procedures of paragraph 6 on the basis of mutual agreement between the appropriate authorities.

ARTICLE XIII

With respect to article XIII, paragraph 2 and article XIV, paragraph 7, income payable in Japan as a result of service with or employment by the U.S. Armed Forces or by the organizations provided for in article XV, or under contract made in the United States with the U.S. Government, shall not be treated or considered as income derived from Japanese sources.

ARTICLE XV

The facilities referred to in paragraph 1 may be used by other officers and personnel of the U.S. Government ordinarily accorded such privileges abroad.

ARTICLE XVII

Re paragraph 1(a) and paragraph 2(a):

The scope of persons subject to the military laws of the United States shall be communicated, through the Joint Committee, to the Government of Japan by the Government of the United States.

Re paragraph 2(c):

Both Governments shall inform each other of the details of all the security offenses mentioned in this subparagraph and the provisions governing such offenses in the existing laws of their respective countries.

Re paragraph 3(a)(ii):

Where a member of the U.S. Armed Forces or the civilian component is charged with an offense, a certificate issued by or on behalf of his commanding officer stating that the alleged offense, if committed by him, arose out of an act or omission done in the performance of official duty, shall, in any judicial proceedings, be sufficient evidence of the fact unless the contrary is proved.

The above statement shall not be interpreted to prejudice in any way article 318 of the Japanese Code of Criminal Procedure.

Re paragraph 3(c):

1. Mutual procedures relating to waivers of the primary right to exercise jurisdiction shall be determined by the Joint Committee.

2. Trials of cases in which the Japanese authorities have waived the primary right to exercise jurisdiction, and trials of cases involving offenses described in paragraph 3(a)(ii) committed against the state or nationals of Japan shall be held promptly in Japan within a reasonable distance from the places where the offenses are alleged to have taken place unless other arrangements are mutually agreed upon. Representatives of the Japanese authorities may be present at such trials.

Re paragraph 4:

Dual nationals, United States and Japanese, who are subject to the military law of the United States and are brought to Japan by the United States shall not be considered as nationals of Japan, but shall be considered as U.S. nationals for the purposes of this paragraph.

Re paragraph 5:

1. In case the Japanese authorities have arrested an offender who is a member of the U.S. Armed Forces, the civilian component, or a dependent subject to the military law of the United States with respect to a case over which Japan has the primary right to exercise jurisdiction, the Japanese authorities will, unless they deem that there is adequate cause and necessity to retain such offender, release him to the custody of the U.S. military authorities provided that he shall, on request, be made available to the Japanese authorities, if such be the condition of his release. The U.S. authorities shall, on request, transfer his custody to the Japanese authorities at the time he is indicted by the latter.

2. The U.S. military authorities shall promptly notify the Japanese authorities of the arrest of any member of the U.S. Armed Forces, the civilian component or a dependent in any case in which Japan has the primary right to exercise jurisdiction.

Re paragraph 9:

1. The rights enumerated in items (a) through (e) of this paragraph are guaranteed to all persons on trial in Japanese courts by the provisions of the Japanese Constitution. In addition to these rights, a member of the U.S. Armed Forces, the civilian component or a dependent who is prosecuted under the jurisdiction of Japan shall have such other rights as are guaranteed under the laws of Japan to all persons on trial in Japanese courts. Such additional rights include the following which are guaranteed under the Japanese Constitution:

(a) He shall not be arrested or detained without being at once informed of the charge against him or without the immediate privilege of counsel; nor shall he be detained without adequate cause; and upon demand of any person such cause must be immediately shown in open court in his presence and the presence of his counsel;

(b) He shall enjoy the right to a public trial by an impartial tribunal;

(c) He shall not be compelled to testify against himself;

(d) He shall be permitted full opportunity to examine all witnesses;

(e) No cruel punishment shall be imposed upon him.

2. The U.S. authorities shall have the right upon request to have access at any time to members of the U.S. Armed Forces, the civilian component, or their dependents who are confined or detained under Japanese authority.

3. Nothing in the provisions of paragraph 9(g) concerning the presence of a representative of the U.S. Government at the trial of a member of the U.S. Armed Forces the civilian component or a dependent prosecuted under the jurisdiction of Japan, shall be so construed as to prejudice the provisions of the Japanese Constitution with respect to public trials.

Re paragraphs 10(a) and 10(b):

1. The U.S. military authorities will normally make all arrests within facilities and areas in use by and guarded under the authority of the U.S. Armed Forces. This shall not preclude the Japanese authorities from making arrests within facilities and areas in cases where the competent authorities of the U.S. Armed Forces have given consent, or in cases of pursuit of a flagrant offender who has committed a serious crime.

Where persons whose arrest is desired by the Japanese authorities and who are not subject to the jurisdiction of the U.S. Armed Forces are within facilities and areas in use by the U.S. Armed Forces, the U.S. military authorities will undertake, upon request, to arrest such persons. All persons arrested by the U.S. military authorities, who are not subject to the jurisdiction of the U.S. Armed Forces, shall immediately be turned over to the Japanese authorities.

The U.S. military authorities may, under due process of law, arrest in the vicinity of a facility or area any person in the commission or attempted commission of an offense against the security of that facility or area. Any such person not subject to the jurisdiction of the U.S. Armed Forces shall immediately be turned over to the Japanese authorities.

2. The Japanese authorities will normally not exercise the right of search, seizure, or inspection with respect to any persons or property within facilities and areas in use by and guarded under the authority of the U.S. Armed Forces or with respect to property of the U.S. Armed Forces wherever situated, except in cases where the competent authorities of the U.S. Armed Forces consent to such search, seizure, or inspection by the Japanese authorities of such persons or property.

Where search, seizure, or inspection with respect to persons or property within facilities and areas in use by the U.S. Armed Forces or with respect to property of the U.S. Armed Forces in Japan is desired by the Japanese authorities, the U.S. military authorities will undertake, upon request, to make such search, seizure, or inspection. In the event of a judgment concerning such property, except property owned or utilized by the U.S. Government or its instrumentalities, the United States will turn over such property to the Japanese authorities for disposition in accordance with the judgment.

ARTICLE XIX

Payment in Japan by the U.S. Armed Forces and by those organizations provided in article XV to persons other than members of the U.S. Armed Forces, civilian components, their dependents and those persons referred to in article XIV shall be effected in accordance with the Japanese foreign exchange control law and regulations. In these transactions the basic rate of exchange shall be used.

ARTICLE XXI

U.S. military post offices may be used by other officers and personnel of the U.S. Government ordinarily accorded such privileges abroad.

ARTICLE XXIV

It is understood that nothing in this Agreement shall prevent the United States from utilizing, for the defrayment of expenses which are to be borne by the United States under this Agreement, dollar or yen funds lawfully acquired by the United States.

WASHINGTON, *January 19, 1960.*

C.A.H.
N.K.

DEPARTMENT OF STATE,
Washington, January 19, 1960.

His Excellency NOBUSUKE KISHI,
Prime Minister of Japan.

EXCELLENCY: I have the honor to refer to paragraph 6(d) of article XII of the Agreement under article VI of the Treaty of Mutual Cooperation and Security between the United States of America and Japan, Regarding Facilities and Areas and the Status of U.S. Armed Forces in Japan, signed today. The second sentence of the said paragraph provides that "in such case the Government of the United States shall pay to the Government of Japan an amount equal to the cost of employment of the worker for a period of time to be agreed between the two Governments."

I wish to propose on behalf of the Government of the United States that the period of time mentioned above shall not exceed 1 year after the notification provided for in paragraph 6(b) of article XII of the above-cited agreement, and may be determined in the consultations under paragraph 6(c) of

article XII above on the basis of mutually agreeable criteria.

If the proposal made herein is acceptable to the Government of Japan, this Note and Your Excellency's reply to that effect shall be considered as constituting an agreement between the two Governments.

Accept, Excellency, the renewed assurances of my highest consideration.

CHRISTIAN A. HERTER,
Secretary of State of the United States of America.

WASHINGTON, *January 19, 1960.*

His Excellency CHRISTIAN A. HERTER,
Secretary of the State of the United States of America.

EXCELLENCY: I have the honor to acknowledge the receipt of Your Excellency's Note of today's date, which reads as follows:

"I have the honor to refer to paragraph 6(d) of article XII of the Agreement under article VI of the Treaty of Mutual Cooperation and Security between the United States of America and Japan, Regarding Facilities and Areas and the Status of U.S. Armed Forces in Japan, signed today. The second sentence of the said paragraph provides that 'in such case the Government of the United States shall pay to the Government of Japan an amount equal to the cost of employment of the worker for a period of time to be agreed between the two Governments.'

"I wish to propose on behalf of the Government of the United States that the period of time mentioned above shall not exceed 1 year after the notification provided for in paragraph 6(b) of article XII of the above-cited agreement, and may be determined in the consultations under paragraph 6(c) of article XII above on the basis of mutually agreeable criteria.

"If the proposal made herein is acceptable to the Government of Japan, this note and Your Excellency's reply to that effect shall be considered as constituting an agreement between the two Governments."

I have the honor to inform Your Excellency that the Government of Japan accepts the above proposal of the Government of the United States, and to confirm that your note and this reply are considered as constituting an agreement between the two Governments.

I avail myself of this opportunity to renew to Your Excellency the assurance of my highest consideration.

NOBUSUKE KISHI.

Mr. JOHNSON of Texas. Mr. President, as I said earlier today, we shall proceed in orderly fashion to the consideration of the treaty. The Department has advised us that it considers ratification of the treaty of extreme importance. The Secretary testified again to that effect this morning.

At the moment, the chairman of the Foreign Relations Committee [Mr. FULBRIGHT] is having lunch with an Ambassador, but thereafter will be prepared to go into a detailed discussion of the treaty.

I should like to have all the aids, on both sides of the aisle, notify absent Senators, because this is a matter of the highest importance, and all Senators should be prepared to come to the Chamber and discuss the matter on its merits.

The minority policy committee is having its meeting. For that reason, it is agreeable to the chairman of the Foreign Relations Committee that the Senate not proceed to discuss the treaty at the moment. But we shall do so in a short time.

In a moment, I must leave the floor, and I shall not be able to return for a while. I wish all Senators to know what is planned.

Mr. CASE of South Dakota. Is it planned to take up the independent offices appropriation bill before the Japanese Treaty is acted on?

Mr. JOHNSON of Texas. No. That appropriation bill is the unfinished business. But when it is agreeable to the Senator from Arkansas [Mr. FULBRIGHT] and when it is agreeable to the minority leader [Mr. DIRKSEN], we shall discuss the treaty with Japan; and I wish all Senators to be on notice.

Mr. CASE of South Dakota. Can the Senator from Texas give any indication, in point of time, as to when that might be—possibly around 2 o'clock?

Mr. JOHNSON of Texas. I cannot tell; I do not know how long it will be before the Senators who now are out of the Chamber will enter the Chamber.

Mr. CASE of South Dakota. I hope to get some lunch, myself, in a few minutes.

Mr. JOHNSON of Texas. Certainly the Senator from South Dakota is entitled to do so, for he is one of the most dedicated and conscientious Members of this body; and certainly he should not hesitate to leave the Chamber to go to lunch.

Mr. McCLELLAN. Mr. President, there is a matter which I should like to have taken up.

Mr. JOHNSON of Texas. Has the Senator from Arkansas cleared his request with the minority?

Mr. McCLELLAN. I am sure there is no objection.

Mr. JOHNSON of Texas. It would be best, first, to have definite clearance with the minority.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JOHNSON of Texas. Are we in executive session to consider the Japanese Treaty?

The PRESIDING OFFICER. The treaty is before the Senate as in Committee of the Whole.

Mr. JOHNSON of Texas. Mr. President, for several days I have been in constant touch with the highly respected, very able Senator from Arkansas [Mr. FULBRIGHT], chairman of the Foreign Relations Committee, and the State Department, and I am informed by the Senator from Arkansas that he is now prepared to make his recommendations to the Senate.

As all of us who serve with him know, the Senator from Arkansas has rendered outstanding service in the field of relations with other nations. Since he first came to Congress as a Member of the other body, he has taken active leadership in this field. His voice and his vote are respected throughout the world, but particularly in this Chamber, with those of us who know him best.

I shall follow with great interest the recommendations the Senator will make, and I hope other Senators will do likewise.

The PRESIDING OFFICER. The treaty is before the Senate for consideration.

Mr. FULBRIGHT. Mr. President, I wish to express my appreciation to the majority leader for the kind words he has said about the chairman of the Foreign Relations Committee. He has cooperated in every possible way with the chairman in arranging to have this treaty brought before the Senate today.

Mr. President, the Committee on Foreign Relations has favorably reported Executive E, the Treaty of Mutual Cooperation and Security to the Senate. This agreement has been nearly 2 years in the making, but in the past few weeks—on the eve of its ratification by both parties—it has become an issue of barely manageable proportions in Japan and a source of deep concern in this country and elsewhere. The uncomfortable intensity of this drama has been sharpened by the cancellation of the President's visit to Japan, a regrettable and unfortunate development.

In trying to get a broad understanding of this situation, it should first be noted that the Sino-Soviet bloc, in whipping up opposition to the treaty, has unleashed a torrent of slander and abuse that is interesting, both for its intensity and its volume. This campaign has been supported tactically by a peculiarly crude, arm-twisting diplomatic pressure. Clearly, the revision of this security treaty is for our adversaries an event so inconsonant with their objectives as to dictate a maximum—indeed, an exceptional—effort to prevent its happening.

Having said this, I should quickly add that the opposition in Japan to the pending treaty is by no means confined to Communist-oriented elements. Great numbers of literate, highly motivated people oppose it—wrongly, in my view—because they believe that any such treaty will earn for Japan not security, but insecurity. More specifically, they fear that the war-renouncing article of the Japanese Constitution will eventually disappear, in the face of a revived militarism. They also fear that a mutual security treaty conceivably could involve Japan in a war that might otherwise have been avoided.

Mr. President, I deeply respect the concern of these well-meaning Japanese. Their reservations are doubtless reinforced by their shattering experience in World War II, which for them included massive bombings and, finally, atomic attack.

I should like to quote at this point a fragment of the conclusion of the committee report on the treaty:

Some of the pacific, antitreaty elements in Japan ask that their country be left free

to cultivate such benign pursuits as trade, commerce, and science. The committee would sympathetically remind the Japanese who hold such views of the threats of those who, by one means or another, are determined to bring all such activities within the scope of their own dictatorial control.

The point I should like to leave with my Japanese friends, some of whom are in the galleries, is that the prospect of war is as abhorrent to the United States as it is to Japan. In view of the unmistakable and implacably hostile intentions of the Communist bloc, the United States has taken the lead in trying to protect the non-Communist countries from either war, or external domination. In performing this historic role, the United States has made alliances with many other nations. The United States can only perform this urgent mission in collaboration with other nations whose benign and peaceful aspirations are compatible with its own. Japan is surely one of these nations.

It is my belief that the majority of the Japanese acknowledge and welcome the growing interdependence between their country and ours. I believe, as well, these Japanese recognize that the aims and sentiments of the American people are much the same as their own. The communique that was issued by Prime Minister Kishi and President Eisenhower on the occasion of the signing of this treaty contained strong evidence that both leaders were deeply aware of this dominant interest of their peoples in the quest for peace.

Mr. President, I should like to quote a significant section of that joint statement:

The President and the Prime Minister agreed that disarmament, with the essential guarantees of inspection and verification, is a problem of urgent and central importance to all nations, whose resolution would contribute greatly to reducing the burden of armaments and the risk of war. They expressed the further hope that early agreement can be reached on an adequately safeguarded program for the discontinuance of nuclear weapons tests. They concluded that the world is entering a period affording important opportunities which they have every intention of exploring most seriously, but only on the basis of tested performance, not merely promises. Both leaders recognized that all of man's intellect, wisdom and imagination must be brought into full play to achieve a world at peace under justice and freedom.

I hasten to say that the views expressed in the communique of last January are shared in this country by Republicans and Democrats alike. Whoever our next President is, he will most certainly endorse the spirit and letter of the Eisenhower-Kishi statement. And I know that most Japanese are profoundly interested in advancing the cause of such objectives as phased disarmament and a nuclear test suspension.

In my studied opinion, nothing in the treaty before the Senate is inconsistent with the spirit of the language that I have just quoted. The treaty is defensive in character. It formalizes a relationship that has grown in importance both to the treaty parties themselves, and to other nations with a common interest in remaining free of foreign domination.

Earlier in these remarks, I used the word "interdependence" to characterize the relationship that has developed between the United States and Japan. It was used advisedly. Both countries are among the world's great trading nations, and each is a great market for the other's goods. In 1958, the United States supplied nearly 35 percent of Japan's imports and absorbed about one-fourth of Japanese exports. Only Canada buys more American goods.

In the arts and sciences, there is a growing mutuality of respect between Americans and Japanese. A great many Americans record their fondest experiences with Japanese cameras, buy Japanese prints and paintings, and see performances by Kabuki dancers when the rare opportunity presents itself. A good many American soldiers who were assigned to Japan returned home with Japanese wives. There is no question but that the two peoples find much that is admirable and compatible in one another. In view of the bitter war that was concluded only 15 years ago, this salutary development in their relations is all the more remarkable.

The consequences of war caused significant changes in Japan. Military vulnerability is one example. However, nothing has discouraged or deterred the prodigious Japanese enterprise and capacity for economic growth. By 1958, virtually all sectors of the Japanese economy—industry, mining, public utilities, agriculture and fishing—were well above the prewar—1934–36—average. National income had risen by about 68 percent above the prewar level. Per capita income was about $262, which, while substantially below that of many Western nations, is about three times higher than the average of other Asian nations in the Far East. In total industrial output, Japan ranked seventh in the non-Communist world in 1957, falling barely behind France and Italy. Japan has led the world in shipbuilding in the last 3 years and in 1958 was the fifth largest producer of crude steel, exclusive of Communist bloc countries.

In short, Japan represents one of the four great industrial complexes of the world. The other three are, of course, the United States, Western Europe, and the Soviet Union. The latter will be joined in this small elite by Communist China. At that point it would seem that the only other modern industrial society in Asia will still be Japan. The example of Japan has significance for other Asian nations, and by its example Japan can represent a counterpoise to the aggressive thrust of international communism in the Far East. Thus, Japan has become a factor in the struggle for freedom which has become the central struggle in our lives and which will dominate our future, almost certainly for the balance of this century.

It is against that background that the campaign by the Sino-Soviet bloc against this treaty must be considered. As noted, there is nothing aggressive in the treaty. Nor does it grant to the United States a "senior partner" status, or privileges outside the framework of a normal quid pro quo. To the contrary, less than 15 years after Japan's unconditional surrender to the Allied Powers, this treaty emphasizes, in the language of the committee report, "Japan's rebirth as a fully sovereign nation." This is implicit in the preamble, in several of the articles of the treaty, and in relevant exchanges of notes between officals of the treaty parties.

Under the existing security treaty, which was signed in 1951, Japan, by implication, was required to rely for its defense upon the military forces of the United States. However, the preamble of the new treaty says that the two nations share "a common concern in the maintenance of international peace and security in the Far East."

What this and other concessions to Japanese opinion reflect is the somewhat anachronistic character of certain provisions in the existing agreement. For example, one significant deletion is the provision—in article I of the old treaty—that U.S. forces could be used at the discretion of the Japanese Government to "put down large-scale internal riots and disturbances in Japan." Also deleted was a provision forbidding Japan to grant "without the prior consent" of the United States any military rights to a third power.

Article V stresses the coequal status of the partners, providing that an attack on either in Japanese territory would constitute a "common danger" that both must meet together "in accordance with the constitutional provisions and processes" of each. As noted in the report, the reference to "constitutional provisions" implies an acknowledgment of article IX of the Japanese Constitution, the war-renouncing article which forbids Japan to send military forces away from its own shores. Furthermore, under this article, the treaty parties acknowledge the ultimate authority of the United Nations in settling disputes between nations. They pledge themselves to report all measures taken to deal with an armed attack to the Security Council, and to terminate these measures when the Security Council "has taken the measures necessary to restore and maintain international peace and security."

Mr. President, at this point I should add that, of the 10 articles in this treaty, 4 of them either affirm or imply the primacy of the role of the United Nations in settling matters that endanger international peace and security.

Under article VI the continued use by the United States of certain military facilities in Japan is assured. The details regarding maintenance of these facilities, as well as the status of U.S. forces in Japan, are spelled out in an executive agreement that supersedes the present agreement covering these matters.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

Mr. FULBRIGHT. I yield.

Mr. LONG of Louisiana. Does the treaty provide some arrangement that requires the consent of the Japanese Government for the shifting of American troops to other theaters?

Mr. FULBRIGHT. The agreement is that such movement would follow consultation with the Japanese. The agreement provides for consultation, a term which was interpreted in the hearings to mean the assent of the Japanese.

Mr. LONG of Louisiana. Let me see if I understand the answer. The troops that are stationed on Japanese soil, for the most part, are from either the Air Force or the Navy, are they not?

Mr. FULBRIGHT. They are largely from the Air Force.

Mr. LONG of Louisiana. Does the Senator know whether there are any substantial Navy contingents there?

Mr. FULBRIGHT. The number is substantial, but the number is not as large as that of the Air Force.

Mr. LONG of Louisiana. There could conceivably be a number of marines in addition to the Air Force?

Mr. FULBRIGHT. That is correct.

Mr. LONG of Louisiana. Under the agreement, the troops that are there could be used outside Japan only with the consent of the Japanese Government, if I understand correctly what the Senator has said.

Mr. FULBRIGHT. The language of the treaty is "prior consultation" with the Japanese Government. During our interrogation of the Secretary, the committee asked, "Does that term mean 'assent'?"

He said it did.

Mr. LONG of Louisiana. Does the agreement between the President of the United States and the Prime Minister of Japan stipulate that there must be assent or agreement with the Japanese before our troops on Japanese soil could be used outside Japan?

Mr. FULBRIGHT. If there is an attack upon Japan in which both countries are involved, it is understood that the military forces would be used in our common defense. A situation in which the United States desired to use its forces outside Japan, and an attack upon Japan itself was not involved, those forces could be used after consultation, which, as explained at the hearings, means the assent of the Japanese.

Mr. LONG of Louisiana. So if the Senate ratifies the agreement, it will do so with the full understanding that our troops stationed on Japanese soil cannot be used outside of Japan without the consent of the Japanese Government, is that correct?

Mr. FULBRIGHT. I think that is a fair statement. That is not the language of the treaty but the Secretary of State, in response to questioning, said that he interpreted the word "consultation" to mean the equivalent of Japan's assent. If the Japanese seriously objected and would not assent to an action that we wished to undertake I would assume that the spirit of this treaty would mean that we would not take the action.

Mr. LONG of Louisiana. Certainly, so far as Senators are concerned, when we vote to ratify the treaty, we should understand the meaning of the word "consultation" in the context in which it is used. It means American forces cannot be used outside Japan without agreement of Japan. Is that correct?

Mr. FULBRIGHT. I refer the Senator to the transcript of the hearings. I think I have stated the hearings as accurately as I can. That is what the hearings reflect.

Mr. LONG of Louisiana. Does the executive agreement make any more clear what the word "consultation" means in the context?

Mr. FULBRIGHT. I can refer to the page of the transcript of the hearings, which makes the point very clear. There are two places in which reference is made. I refer first to the note on page 9, if the Senator has that before him.

Mr. LONG of Louisiana. Does the Senator have a copy of the executive agreement which implements this language?

Mr. FULBRIGHT. To complete the RECORD, let me read this language and then I will show the Senator from Louisiana the point where the question was asked of the Secretary.

> Major changes in the deployment into Japan of U.S. Armed Forces, major changes in their equipment, and the use of facilities and areas in Japan as bases for military combat operations to be undertaken from Japan other than those conducted under article V of the said treaty, shall be the subject of prior consultation with the Government of Japan.

This is an agreed exchange of notes between Mr. Herter and the Prime Minister of Japan. Then at page 10 of the hearings I asked the Secretary:

> The CHAIRMAN. Does the term "prior consultation" as expressed in the minute to the treaty mean that Japanese assent is required as a precondition to certain U.S. military activities in the area?
>
> Secretary HERTER. It would.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. MANSFIELD. At the bottom of page 19 also the Senator from Vermont [Mr. AIKEN] asked the meaning of "prior consultation," and at the top of page 20, Secretary of State Herter in effect gave to the Senator from Vermont the same answer in a little more detail than he gave to the chairman of the committee.

Mr. LONG of Louisiana. So no doubt remains that, after the treaty is agreed to, we could not use our bases in Japan in the way we did during the Korean war, when those bases were used as staging bases to bring our forces forward into that conflict without the consent of the Japanese Government?

Mr. FULBRIGHT. That is correct. I think there could be independent logistic support, but no independent movement of forces. And I think that it would be useful to have this freedom of logistic activity.

Mr. LONG of Louisiana. To cite a specific situation, if fighting broke out tomorrow and this treaty were ratified and became effective tomorrow, and fighting should break out in Korea the day after tomorrow, our forces that are stationed in Japan could not be shifted forward into Korea for support or to engage in hostile activities there without the consent of the Japanese Government?

Mr. FULBRIGHT. I think that is correct. This is one of the principal changes between the present treaty and the new treaty.

I have tried to make that clear in my remarks. I shall make it even clearer by saying that I have no doubt that we are giving up rights of a substantial nature that we now have. But most of us believe that there are good reasons for doing that. In the broadest sense this treaty means a return of full sovereignty to Japan. This is one of the key adjustments. I hope I have made that clear. I certainly intended to do so. The rest of my remarks will, I hope, support that same thought.

Mr. LONG of Louisiana. Would the Senator not agree that this is a very major concession so far as the defense posture of this Nation is concerned?

Mr. FULBRIGHT. I would say it is a major concession, yes; but we believe there are good reasons for making it.

Mr. TALMADGE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. TALMADGE. I should like to ask the distinguished chairman of the Foreign Relations Committee, if Russia or Red China fired a thermonuclear missile and it landed on the city of Washington or the city of New York, would we still have to consult with the Japanese Government before we could use our forces stationed in Japan for the purpose of retaliation?

Mr. FULBRIGHT. Under the treaty, I think so.

Mr. TALMADGE. Is that same situation true with other treaties with countries where we have American forces stationed?

Mr. FULBRIGHT. Does the Senator mean in NATO?

Mr. TALMADGE. Yes; in NATO, or SEATO.

Mr. FULBRIGHT. Well, under the NATO agreement we do agree to consult as to the measures to be taken in our common defense. But as for our own defense the NATO treaty is more flexible in this respect. We could use our own forces. I might say that one of the further reasons for this particular aspect of the treaty, with regard to Japanese participation, is article 9 of the Japanese constitution, which forbids Japan to take the reciprocal obligation that our NATO partners do.

Mr. BUSH and Mr. HICKENLOOPER addressed the Chair.

Mr. TALMADGE. Will the Senator yield further?

Mr. FULBRIGHT. I yield.

Mr. HICKENLOOPER. I should like to interject on the point the Senator from Georgia has raised. It occurs to me that the NATO treaty contains a specific provision that an attack on one is an attack on all. There is that particular provision in the NATO treaty.

Mr. FULBRIGHT. Yes; but the Senator asked if the Russians, in a hypothetical case, should attack us, we could use our forces stationed in England in retaliation without consulting the Government.

Mr. HICKENLOOPER. I am sorry, but I think perhaps I misunderstood the statement.

Mr. TALMADGE. I asked, first, with reference to Japan. The able Senator replied, as I understand, that our forces located in Japan could not retaliate without prior approval of the Japanese Government. I followed that up by asking if that were true of other countries where we have American military components stationed.

Mr. HICKENLOOPER. Mr. President——

Mr. TALMADGE. Would the Senator answer that question first?

Mr. HICKENLOOPER. Perhaps I misconstrued the statement. In the NATO agreement and in some of the other agreements, as I understand, where the statement is used that an attack is an attack on all, it would be my personal opinion that in these cases an attack on us would be considered an attack on our allies, under the NATO agreement.

Mr. FULBRIGHT. Under the NATO treaty, the parties would act together in a common cause. It would follow consultation in accordance with our constitutional processes. But as to how we could deploy our forces from another NATO country, it is our opinion that we could use them in a retaliatory gesture.

Mr. TALMADGE. Are there any other agreements, except the proposed treaty with Japan, under which we could not utilize our military forces for retaliation if we were attacked?

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. FULBRIGHT. We have so many different alliances, I do not believe I should answer that question offhand. I will review it.

Mr. TALMADGE. Does the Senator know of any other existing treaty under which American forces could not be used for retaliation if we were attacked?

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I am trying to think on that point. I might mention the case of Taiwan. As a practical matter I think that we certainly would have no difficulty in achieving agreement with our allies either in NATO or in SEATO in this connection. I would hesitate to answer immediately the question with regard to forces on Taiwan, for example.

Mr. TALMADGE. Does the able Senator have an opinion as to whether it would be wiser to have our military forces located in some other area, where they could be immediately utilized for retaliation if the situation made it necessary?

Mr. FULBRIGHT. No; not so far as speaking of Japan is concerned. I think it is the right place for the forces we have there. I have tried to make that clear. It is the strongest nation in the area. It has the greatest industrial base. It is an area which we have a greater interest in protecting than any other in the Far East.

Mr. TALMADGE. I am delighted that the Senator from Arkansas has the floor and that he has yielded for a series of questions.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. MANSFIELD. In response to the question raised by the distinguished Senator from Georgia, article 5 of the treaty states:

Each party recognizes that an armed attack against either party in the territories under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provisions and processes.

Mr. TALMADGE. That language would have to do with an attack on Japan, at which point we would go to the aid of Japan. If an attack were made against America, Japan might not go to the aid of America.

Mr. MANSFIELD. It reads:

Each party—

That is, Japan and the United States—

recognizes that an armed attack against another party in the territories—

Mr. TALMADGE. Under the administration of Japan.

Mr. MANSFIELD. Yes.

Mr. TALMADGE. That does not mean Washington or Florida or Seattle.

Mr. MANSFIELD. No. What I am trying to get at is this. The American troops and a few marines and some sailors stationed there, so far as the treaty is concerned, are in an area under the jurisdiction of Japan. That is why I wished to call this article to the attention of Senators, as to just what the situation is vis-a-vis this particular treaty as it affects American forces in Japan.

Mr. TALMADGE. I still do not understand how the treaty would apply to release and trigger American forces stationed in Japan if the attack were not on Japan itself but against the continental United States of America or on some of our possessions.

Mr. MANSFIELD. I would have the idea that there are other countries in which American troops are stationed which would likewise be in the same position. I refer to the fact that we have a large base at Wheelus Field in Libya, and another at Dhahran, Saudi Arabia. There very likely are other places where the same situation would apply and the same result could be anticipated. As far as the NATO countries are concerned, the Senator from Iowa [Mr. HICKENLOOPER] is correct when he states that an attack against one is an attack against all the other members of the NATO group.

Mr. TALMADGE. Mr. President, will the distinguished chairman of the Foreign Relations Committee yield further?

Mr. FULBRIGHT. I yield.

Mr. TALMADGE. What are the terms of the treaty with reference to the jurisdiction of the courts of Japan over American troops, military personnel or civilians that are involved in the criminal or civil courts?

Mr. FULBRIGHT. The criminal jurisdiction provision is the same as that provided in the NATO Status of Forces Treaty. I refer the Senator from Georgia to page 23 of the message from the President of the United States on Executive E.

ARTICLE XVII

1. Subject to the provisions of this Article.

(a) the military authorities of the United States shall have the right to exercise within Japan all criminal and disciplinary jurisdiction conferred on them by the law of the United States over all persons subject to the military law of the United States;

(b) the authorities of Japan shall have jurisdiction over the members of the United States Armed Forces, the civilian component, and their dependents with respect to offenses committed within the territory of Japan and punishable by the law of Japan.

2. (a) The military authorities of the United States shall have the right to exercise exclusive jurisdiction over persons subject to the military law of the United States with respect to offenses, including offenses relating to its security, punishable by the law of the United States, but not by the law of Japan.

(b) The authorities of Japan shall have the right to exercise exclusive jurisdiction over members of the United States Armed Forces, the civilian component, and their dependents with respect to offenses, including offenses relating to the security of Japan, punishable by its law but not by the law of the United States.

(c) For the purposes of this paragraph and of paragraph 3 of this Article a security offense against a State shall include

(i) treason against the State;

(ii) sabotage, espionage or violation of any law relating to official secrets of that State, or secrets relating to the national defense of that State.

3. In cases where the right to exercise jurisdiction is concurrent the following rules shall apply:

(a) The military authorities of the United States shall have the primary right to exercise jurisdiction over members of the United States Armed Forces or the civilian component in relation to

(i) offenses solely against the property or security of the United States, or offenses solely against the person or property of another member of the United States Armed Forces or the civilian component or of a dependent;

(ii) offenses arising out of any act or omission done in the performance of official duty.

(b) In the case of any other offense the authorities of Japan shall have the primary right to exercise jurisdiction.

(c) If the State having the primary right decides not to exercise jurisdiction, it shall notify the authorities of the other State as soon as practicable. The authorities of the State having the primary right shall give sympathetic consideration to a request from the authorities of the other State for a waiver of its right in cases where that other State considers such waiver to be of particular importance.

These are the same provisions that we ratified in 1953, with respect to the NATO countries.

On page 81 of the hearings there is a discussion of the subject.

Mr. BUSH. Mr. President, will the Senator yield for a question?

Mr. FULBRIGHT. I yield to the Senator from Connecticut.

Mr. BUSH. Mr. President, I am very much disturbed by this very discussion. I should like to point it up a little more closely. It does not seem to me that the treaty or the letter from the Prime Minister would foreclose the possibility of the United States acting promptly by using its Armed Forces in the event, for

instance, of an attack on South Korea, where we have our own forces stationed for the defense of South Korea; or, let us say, upon Okinawa, where we have forces stationed also. I do not believe the treaty should forbid the use of our forces stationed in Japan for such a purpose.

Mr. FULBRIGHT. It does not forbid their use.

Mr. BUSH. That is the point I wanted the Senator to make very clear for the record.

Mr. FULBRIGHT. It does not forbid their use. It merely provides that we shall consult with Japan.

Mr. BUSH. That is correct; but it does not necessarily give the Japanese a veto power upon the use of forces for such a purpose.

Mr. FULBRIGHT. It would be only those forces stationed in Japan itself; it would not apply to other forces. The situation mentioned by the Senator from Georgia [Mr. TALMADGE] would apply only where the act of aggression took place outside the area concerned. He cited a situation in which New York or Washington was bombed. It is contemplated by the treaty, and the proper interpretation of it, in my opinion, is that in certain situations the forces which are in Japan would be used only after consultation with Japan. I am confident there would be no great difficulty in the consultations. The treaty parties have common concerns and common objectives.

Mr. BUSH. The word "consultation" is a moot expression.

Mr. FULBRIGHT. There is nothing moot about it. It is clear from the letter and the record that it means that the consent of Japan is a precondition to certain activities. I do not want any misunderstanding to arise about that. That is my interpretation of the language, and it is what our Government says it means.

Mr. BUSH. I have the greatest respect for the Senator from Arkansas, but I frankly think that if the treaty meant to say it would require the consent of the Japanese Government for us to use such forces, under the circumstances I have mentioned, the treaty ought to say so; but it does not say so.

Mr. FULBRIGHT. The trouble with that view is that it neglects the borderline cases. I think it is wiser not to try to anticipate every possible combination of circumstances in a treaty. I think there are valid reasons for drafting the treaty in the way in which it was drawn. I think it will be found in actual practice that situations arise which do not follow preconceived ideas; so it is necessary to have some flexibility.

I do not want to deceive anyone. I asked the Secretary of State about this matter, and I read what he said.

As a general proposition, where the issue is quite outside the territory of Japan, the Japanese Government wants to be consulted before the forces on their land involve them in a war. To me, there is nothing irrational or irregular about that. I think a country which allows foreign military forces to be stationed on her own soil has some interest in how those forces are used.

We must remember that Japan is a great country and is allowing the forces of another country to be stationed on her soil. I think Japan has an interest in the question when something takes place in another theater. If something occurred within the area of Japan, that would be a different matter.

Mr. BUSH. I appreciate what the Senator says, but I still return to the language about consultation. I think it is safe, as does the Senator from Arkansas, and as the Secretary of State probably does. I think it is safe because it does not talk about consent; it talks about consultation.

I think it is appropriate that the Japanese, if we are to station our troops in Japan—and incidentally, we have no ground troops there; we have only Air Force and Navy personnel there—should be consulted, because the relationships between the two Governments are close, and we hope they will remain close and become closer. We hope our ties will become cemented by friendly, satisfactory relations. There is little doubt that the Japanese would respond to any reasonable request or any reasonable consultation if we felt it was necessary for us to use our forces stationed there in connecton with an incident in Korea, for example.

Mr. FULBRIGHT. I think the Senator from Connecticut is carrying this further than I intended to.

I refer again, if it concerns the Senator from Connecticut too much, to a further statement on the question on page 19 of the hearings, when the Senator from Vermont [Mr. AIKEN] explored it a little further.

Mr. BUSH. Is this statement in the RECORD?

Mr. FULBRIGHT. It is in the hearings. The Senator can see that the matter was not overlooked at all. I first asked about it, and later the Senator from Vermont asked almost the same question.

The language does not mean that we are tied down and cannot use our troops at all; that they are immobilized. It means that if something occurs between the United States and Cuba, for example, and we wanted to use our forces here, we could bring them back and use them, if necessary.

I believe, as a practical matter, that this provision is not nearly so important as it is made to appear. I do not imagine anything could occur in the Far East without involving Japan. Japan is one source of strength in that whole area outside the Communist world. I think, as a practical matter, that we are not taking any great risks. I think Japan would be involved in a conflict in that theater. It would be very foolish, it seems to me, for Communist Red China or the Russians to bypass Japan. I do not believe they could. Japan is a source of strength.

Mr. BUSH. I thank the Senator from Arkansas for his statement. I should like to make a further observation. So long as we are talking about consultation and not consent, I think the Senator is correct. I do not believe that there is any danger in that respect. Nevertheless, I wanted the record to show that when we are approving a treaty on the floor of the Senate, we are talking about consultation and not consent.

Let us consider the possibility of using our troops in an area in connection with a possible incident, as I can visualize one which might take place in Korea, where we have a division station on the line, or in Okinawa; or our wanting to use our naval or air forces very quickly sometime. I have little doubt that Japan would be ready to agree to consultation, but I believe it should be made clear here that the treaty does not forbid the use of these forces. It does require consultation.

Mr. FULBRIGHT. It requires consultation. Suppose a very minor skirmish occurred, and it did not appear to the Japanese that there was any point in their becoming involved, but that we had to use aircraft which happened to be based in Japan. We might move them to bases in Korea and use them there. I do not believe Japan's position is unreasonable.

Mr. BUSH. I do not think so, either. I thank the Senator from Arkansas for his patience with me on this question.

Mr. FULBRIGHT. Not at all; I have been glad to yield.

Mr. CASE of South Dakota. Mr. President, will the Senator from Arkansas yield to me?

The PRESIDING OFFICER (Mr. PROXMIRE in the chair). Does the Senator from Arkansas yield to the Senator from South Dakota?

Mr. FULBRIGHT. I yield.

Mr. CASE of South Dakota. It seems to me that whatever the facts are, they should be on the record very clearly.

On the date of the signing of the treaty, here in Washington, on the 19th of January, notes were exchanged between the Department of State and Secretary Herter and Mr. Kishi; and I find in the Executive E report to the Senate from the committee these notes are given. In both our note to the Japanese Minister and in his reply, this paragraph appears:

> Major changes in the deployment into Japan of U.S. Armed Forces, major changes in their equipment, and the use of facilities and areas in Japan as bases for military combat operations to be undertaken from Japan other than those conducted under article V of the said treaty, shall be the subjects of prior consultation with the Government of Japan.

The committee report, at page 3, recites the sentence I have just read, and then states:

> The committee was interested to have a precise understanding of the meaning of the term "prior consultation." In a public hearing on the treaty, the Secretary of State was asked by two members whether Japanese "assent" would be a precondition to certain U.S. military activities. The Secretary's answer was unequivocally affirmative. The committee understands that the Department of Defense's interpretation of "prior consultation" is in harmony with that of the Department of State.

It seems to me that on the record and from the report, it is very clear that the committee undertook to determine what "prior consultation" meant, and that it means assent of the Japanese with respect to certain U.S. military activities.

In the light of that statement in the report that assent is involved, it seems to me that any personal or individual opinions of Members of the Senate would fall before the plain statement of the committee in its report that in open session it asked the Secretary of State for a definition of the term "prior consultation," and that the committee understands that the Department of Defense has the same interpretation as does the Department of State.

Mr. FULBRIGHT. I think that is correct.

Mr. AIKEN. Mr. President, will the Senator from Arkansas yield to me?

Mr. FULBRIGHT. I yield.

Mr. AIKEN. I think that is very clear. This plainly means that the United States would not use Japan as a base of operations from which to launch any attack upon other countries, without consultation with the Japanese; and, according to the interpretation of the Secretary of State, in the event of such circumstances, "prior consultation" would mean consent.

After all, should we expect to establish in other countries around the world, and without their consent, bases from which to launch attacks upon other countries? We would not want them to do that to us.

Mr. CASE of South Dakota. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield.

Mr. CASE of South Dakota. In that connection, let me say that General Norstad felt it necessary to remove certain squadrons from France to England, because there was some objection by France to the storage of certain weapons with those troops in France; and we respected the desires and the sovereignty of France in that connection.

I assume that with respect to consultation, our respect for Japanese sovereignty in certain matters is very similar to our respect for French sovereignty in certain matters.

Mr. AIKEN. In this case it clearly implies consent.

Mr. LAUSCHE. Mr. President, will the Senator from Arkansas yield to me?

Mr. FULBRIGHT. I yield.

Mr. LAUSCHE. I wish to elaborate a little on the questions put by the Senator from Connecticut.

According to my understanding, nowhere in the treaty is there any provision that we could not withdraw our forces, and operate them from bases of our own or from other bases. The language, as read by the Senator from Vermont, and as it was explained by him, simply states that we cannot use that as an operating base, without the consent of Japan, on any involvement that we may be in, in that area.

We can withdraw our forces and rush them to the United States or wherever we are; but we cannot use Japan as bases for military combat operations to be undertaken from Japan, under the conditions covered by article V.

To reduce it to a few words: Nothing in the treaty prevents us from moving out our troops and equipment, and operating them from our own bases or other nations' bases. But if we are involved in that area, we cannot use the Japanese bases without consulting with them. And "consultation," according to Secretary Herter, means that we must have their assent.

Mr. FULBRIGHT. I thank the Senator from Ohio.

Mr. JAVITS. Mr. President, on this point, will the Senator from Arkansas yield briefly to me?

Mr. FULBRIGHT. I yield.

Mr. JAVITS. It seems to me that many people wish to know what the United States gets out of the treaty. All the things which have been referred to recently are negative, insofar as the United States is concerned; they are protective things for Japan.

If the chairman of the committee would interpret in an affirmative way the sentence which appears on page 6 of the report, it seems to me that would answer this big question. The sentence is:

> It is not the treaty, but Japan's free institutions, that their Communist allies are trying to stifle. The treaty will not alter the Japanese Constitution, with its war-renouncing provision. But the treaty should serve to deter any external force from taking hostile, overt action against Japan.

Therefore, will the chairman of the committee agree that the value which the United States gets out of this treaty, which commends itself to the Senate of the United States, is that Japan, this key industrial power—and perhaps the only one—in the Far East must, by this treaty, be kept integral, in terms of her free institutions; and, right there, there is in being a deterrent, to keep anyone from having designs on Japan or from contemplating the extinction of Japan as a nation of free institutions.

Mr. FULBRIGHT. The Senator from New York is quite correct. We have great interest in helping Japan maintain her independence. Japan has only 360,000 in her defense forces at this time, I believe; and I think 160,000 of them are ground troops. They are, so to speak, an internal police force. They are not mobile; and if we had no bases there, I think Japan would be utterly helpless to resist an attack by any of her neighbors.

So it is very much in our interest to retain these bases, to maintain the independence of Japan, because we want Japan to be a member of the free world and to have control of her own affairs. There is no doubt in my mind about that.

I think the point discussed a moment ago was in connection with an attempt to make a comparison between this treaty and the old treaty.

The old treaty, conceived during the occupation, certainly gave us greater rights than those we have under this treaty. It is by comparison with the old treaty that the question is asked, "Are we giving up any rights?" The answer is that we are, for the old treaty gave us greater and more unfettered rights than this treaty does.

But certainly it is time for us to recognize the progress which has been made by Japan since that time—in other words, to recognize her sovereignty—for she is now a full partner of the other free countries.

Mr. JAVITS. Would the Senator from Arkansas say that, considering Japan's industrial strength and key position in the Far East, our policy that Japan be kept free is analogous with our policy that West Germany be kept free, and for the same reason?

Mr. FULBRIGHT. I think so. Both countries have shown remarkable stability in their governments, despite the very regrettable events in recent days, which are very complex. Nevertheless, over this 15-year period, Japan has had great stability. The Japanese are a great and extremely industrious people. It is in the interest of all that they retain their freedom, and not be dominated by any foreign power.

Mr. JAVITS. And that this vote today is a real gesture of friendships, the hand of friendship, by us?

Mr. FULBRIGHT. Yes. I think our country has gone far. I do not criticize that. I think it should have gone as far as it has. There is no question about it. I have tried to make it very clear that this treaty yields many rights we had under the old treaty.

Mr. JAVITS. And treating Japan as an equal.

Mr. FULBRIGHT. Yes.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. FULBRIGHT. Yes.

Mr. McCLELLAN. I am trying to determine what benefits we get out of the treaty.

Mr. FULBRIGHT. By comparison with the old treaty?

Mr. McCLELLAN. Any benefit at all. What benefit do we get under it? That is the crux of the question. I want to know where we get any advantage.

Mr. FULBRIGHT. The crux is related to what the Senator from New York has said. Here is one of the few highly industrialized nations in the world. She is seventh in the production of crude steel. She leads the world in shipbuilding. She is endowed an able people numbering 90 million. Our purpose is to preserve this very strong bastion of free people in the Far East.

To put it the other way, if Japan were brought under Communist domination and its strength were added to the strength, let us say, of Red China, the latter would present a far more formidable antagonist to us than presently. The industrial capacity, the scientific ingenuity, and the great skill of the Japanese would be an incalculable addition to the manpower of Red China. It would create a very dangerous force to the free world, and particularly to us.

So our interest is helping to maintain Japan; we cannot do it all, by any means; she is doing a great deal, herself, and she is doing more each year so that she may maintain her independence and stand as a bulwark of strength in this area of the world which is undergoing tremendous changes. I would say it would be dangerous to abandon Japan

to the dangers she faces from her Communist neighbors.

Mr. McCLELLAN. Our advantage from the treaty, or anything we gain, is indirect, in the fact that Japan remains a sovereign nation and retains her strength and power, whatever she may develop.

Mr. FULBRIGHT. That is correct.

Mr. McCLELLAN. Which is an indirect benefit to us.

Mr. FULBRIGHT. I do not know that it is indirect. I do not know how one could distinguish that benefit from that which derives from our close relations with West Germany, for example.

Mr. McCLELLAN. Well, let us see. If Japan is attacked, we are obligated to go to her help. Is that correct?

Mr. FULBRIGHT. Yes; if she is attacked, we are under obligation to go to her help.

Mr. McCLELLAN. If we are attacked, is she under obligation to come to our defense?

Mr. FULBRIGHT. No.

Mr. McCLELLAN. That is the difference. That is what I mean when I say she has a direct advantage, and we have only an indirect advantage, under the treaty.

Mr. FULBRIGHT. As I pointed out earlier, article 9 of Japan's Constitution, which we in our wisdom sponsored during the occupation, forbids her to take any of her military forces beyond her shores.

Mr. McCLELLAN. I am trying to get this picture right.

Mr. FULBRIGHT. The Senator has the picture right. That is exactly it.

Mr. McCLELLAN. The reference to consultation means Japan's consent. I hope no one disagrees with that interpretation. That is my interpretation. Under this treaty we must get her consent. If we are not able to get her consent, we are handicapped, and she does not become an ally.

Mr. FULBRIGHT. I do not think that is correct. We do not have a great many troops there. If the necessity arose, it would be a simple matter to move our troops to Korea or to Europe. It would take some time, but we have troops scattered in many places over the world. Unless they are needed in a particular area where they are stationed, they can be moved. I do not think that is a very serious handicap. As a practical matter, I cannot imagine any trouble taking place in that area which would not involve us.

Mr. McCLELLAN. Just one further observation that may help me in trying to understand the treaty. We are getting the right to maintain bases in Japan, are we not?

Mr. FULBRIGHT. That is right.

Mr. McCLELLAN. Of what advantage are those bases going to be to us if we cannot use them when we need them? In other words, they are of no advantage on earth except as we would defend Japan. That is the only way they could be used.

Mr. FULBRIGHT. I do not dissociate our own security from Japan's.

Mr. McCLELLAN. I do not, either. That is why I called it an indirect benefit.

Mr. FULBRIGHT. Japan's security increases our own.

Mr. McCLELLAN. The direct benefit flows to Japan. The indirect benefit flows to us, in the sense that if Japan is preserved and sustained and kept free from destruction, we benefit. That is what I call an indirect benefit, whereas Japan is given the direct benefit of all-out assistance from us.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. FULBRIGHT. Yes.

Mr. SPARKMAN. I should like to submit to the distinguished Senator from Arkansas this thought: There is a direct benefit if one considers the fact that when the original peace treaty was entered into, it was anticipated there would be a modification of the treaty as we went along. Remember, under this treaty we continue to have bases not only in Japan itself, but we have the use of the Ryukyu Islands, and probably one of the strongest bases in all the world is on Okinawa, over which we have virtually complete control.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. SPARKMAN. Yes.

Mr. McCLELLAN. That is what I am trying to find out. The bases are of great advantage so long as we are defending Japan, but the minute we are not, we have to get her consent before we can move.

Mr. SPARKMAN. I do not think that is true with reference to Okinawa.

Mr. McCLELLAN. Perhaps it is not with reference to Okinawa. I am talking about Japan.

Mr. SPARKMAN. Our strongest bastion of defense in the Pacific is Okinawa, and we retain control over it.

Mr. McCLELLAN. That is not controlled by Japan?

Mr. SPARKMAN. No; under residual sovereignty, it belongs to Japan, but we have control over it.

Mr. McCLELLAN. We have that control under the present agreement; do we not?

Mr. SPARKMAN. That is right.

Mr. McCLELLAN. We are not giving it up.

Mr. SPARKMAN. We get a direct benefit, if the Senator considers the fact that it was contemplated in the original treaty there would be modifications as we went along.

Mr. McCLELLAN. What direct benefits are we getting by reason of this treaty? We have pointed out some that we are giving up. What are some of the direct benefits? I am not attempting to say there are none; I am trying to make the record. There are direct benefits flowing to Japan. We have indirect benefits. Insofar as we are able to maintain and preserve Japan as a free country, we get overflow or residual benefits from that fact. But there is no direct obligation upon Japan to defend us. Japan does not have to defend us unless we are attacked in Japan.

Mr. SPARKMAN. Of course, we recognize Japan as being a part of what might be called the chain of defense. It is part of the chain of defense of the free world. I am of the opinion that, if we did not have a treaty, we would probably feel obligated to go to her defense.

Mr. McCLELLAN. I want to be perfectly clear as to what we are doing, so there will be no misunderstanding. I do not think we are getting any benefits from this treaty we do not already have and we are giving up some we do have.

Mr. SPARKMAN. This treaty is of advantage to Japan. As a matter of fact, one of the surprising things about the recent uprisings in Japan is that here is a treaty that is for the benefit of Japan. It carries out our word. We promised Japan in 1951, or early 1952, when the treaty was ratified, that, as time went on, and she made progress that would justify our doing so, we would make modifications in the treaty.

We started that, the Senator will remember, a couple of years ago when we started moving out our forces. We have a very small force in Japan now. We returned the buildings. There has been a gradual demilitarizing and deoccupying of Japan from the time we signed the original peace treaty. We promised Japan at that time we would modify the treaty. This is carrying out the promise. This is keeping our word. I think we are doing it in a way which is quite advantageous to Japan.

Mr. McCLELLAN. Mr. President, I thank my colleague for yielding. I definitely agree with the last statement of my friend from Alabama, that we are doing this quite advantageously for Japan.

Mr. SPARKMAN. At the same time, we should not overlook the fact that it is a good arrangement for us.

Mr. LONG of Louisiana. Mr. President, will the Senator yield at that point?

Mr. FULBRIGHT. I yield.

Mr. LONG of Louisiana. I should like to ask the chairman of the committee [Mr. FULBRIGHT] or the Senator from Alabama [Mr. SPARKMAN] for any evidence which can be shown that we did promise to modify, to rescind, or to withdraw the previous treaty. The best information I have is that there was no promise at the time we entered into the old treaty to make a subsequent treaty.

Mr. FULBRIGHT. In the original treaty I think that is clearly implied. I read to the Senator from the treaty:

> In exercise of these rights, Japan desires, as a provisional arrangement for its defense, that the United States of America should maintain armed forces of its own in and about Japan so as to deter armed attack upon Japan.

I think that phrase alone indicates this is a provisional arrangement, rather than a permanent one. That states the position.

Mr. LONG of Louisiana. Does the treaty say that Japan desires the United States to maintain forces? Will the Senator read the provision again?

Mr. FULBRIGHT. It says:

> In exercise of these rights, Japan desires, as a provisional arrangement for its defense,

that the United States of America should maintain armed forces of its own in and about Japan so as to deter armed attack upon Japan.

That is only one of the preambles.

Mr. LONG of Louisiana. I thank the Senator.

Mr. AIKEN, Mr. LAUSCHE, and Mr. RUSSELL addressed the Chair.

Mr. FULBRIGHT. I yield first to the Senator from Vermont.

Mr. AIKEN. I think the record would be incomplete if no Senator mentioned that Communist China has several million armed men. Communist China has not hesitated to use armed forces against any neighboring countries in southeast Asia. Red China has announced she is determined to annex Formosa, whether Formosa wishes to be annexed or not, by force.

Is there any reason to believe Red China, with 3 million or more men in the armed forces, would let Japan remain free?

If Japan is a virtually defenseless country militarily, although an extremely vital country industrially, is there any reason to believe Red China will permit Japan to remain free if no other country is willing to assist Japan in protecting herself? Japan has almost no military force at all to stand against the 3 million armed Chinese.

Let us suppose we got out of Japan. Suppose we threw the treaty away and said, "We do not want anything to do with it. We do not want anything more to do with it."

Let us suppose that the countries on the periphery of China became Chinese satellites. Then what would be the situation for us? The Philippines could not stand for long. None of those countries could stand, except for the American forces and the Seventh Fleet in that area at the present time. Our frontline of defense would be California, with Hawaii as an outpost for a while.

It is ridiculous to say that this is a one-sided treaty. Of course it is favorable to Japan, and it should be favorable to a country which permits us to maintain bases within its borders. Other countries in the world permit us to maintain bases, and receive certain assistance from us along different lines for so doing.

When we ask, "What does the United States get out of this?" It is easy to say that we get the protection of the Western Hemisphere. That is all—a simple little matter like that.

We would not get out of Japan and leave her defenseless unless Japan insistently asked us to get out. If Japan wanted to be a satellite of Red China, she surely could do so. No doubt we would have difficulty maintaining troops in Japan by force. I do not wish to see the time ever come when we would wish to do so, or think of doing so.

This is not a one-sided treaty by any means.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield to the Senator from Ohio.

Mr. LAUSCHE. I wish to pursue the thought expressed by the Senator from Vermont.

For the moment, I ask Senators to visualize Japan, with about 165,000 troops, facing Red China and the Soviet Union on its borders. Japan has a constitutional provision which says that Japan shall have no military force, and our power is far removed. I think we would have grave reason to be apprehensive about what would happen to Japan.

Can we afford to see Japan engulfed by Red China and the Soviets? If that is done, what will be our position regarding the defense of our own country? To what extent will we have brought the Reds closer to our shores? What will be the probability that battles may be fought on our land?

I believe the factor which has been mentioned by the Senator from Vermont is one we cannot dismiss. We cannot afford to leave Japan defenseless.

I think an examination of the treaty will point out to Senators that, in effect, we recognize this fact. Article V says:

> Each party recognizes that an armed attack against either party in the territories under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provisions and processes.

What are the constitutional provisions and processes which will regulate Japan? We saw to it that there was written into the Japanese Constitution a provision substantially as I shall now read.

Mr. BUSH. Mr. President, from where does the Senator propose to read?

Mr. LAUSCHE. I shall read from page 22 of the hearings, from a note which was sent by General MacArthur to Brigadier General Whitney, indicating what the Japanese Constitution should contain. That note, from MacArthur to Whitney, suggested the inclusion in the Constitution of a provision as follows:

> War as a sovereign right of the nation is abolished. Japan renounces it as an instrumentality for settling its disputes and even for preserving its own security. It relies upon the higher ideals which are now stirring the world for its defense and its protection.
>
> No Japanese army, navy, or air force will ever be authorized and no rights of beligerency will ever be conferred upon any Japanese force.

What position would Japan be in, with the Red threat at its doors, with such a limitation upon its powers?

Mr. FULBRIGHT. Mr. President, I wonder if the Senator from Ohio will permit me to finish my remarks, so that I may yield the floor? I have an injured foot, and I shall have to sit down before long.

Mr. LAUSCHE. I beg the Senator's pardon.

Mr. FULBRIGHT. I do not like to interrupt. I appreciate what the Senator is saying. It occurred to me that although I am holding the floor I could yield the floor and the Senator from Ohio could obtain it.

Mr. LAUSCHE. Will the Senator permit me to continue for 2 minutes?

Mr. FULBRIGHT. Yes.

Mr. LAUSCHE. We cannot overlook the value of the peace treaty, even with the limitations which are imposed.

Third, we cannot dismiss as final that the Japanese will not, under consultation, recognize the joint interests which we have for the security of both countries.

Mr. FULBRIGHT. Mr. President, I shall be glad to yield for a question. I shall be glad to relinquish the floor fairly soon.

Mr. RUSSELL. I had an observation I wished to make, but in view of the Senator's statement, I will confine my thoughts to a question.

Mr. FULBRIGHT. I welcome the Senator's observation.

Mr. RUSSELL. I merely wish to observe that even if we made a mistake in putting this provision in the Japanese Constitution or insisting that it go in—and it now appears very clearly that it was a mistake—I am quite sure that Japan, as a free and independent power, can now change that provision of its Constitution whenever she desires to do so. There are no restrictions in the treaty which would prevent her from doing so, are there?

Mr. FULBRIGHT. The Senator is quite correct. One of the sources of internal trouble that now afflicts Japan, of which there was clear evidence at least 2 years ago, revolves around this very problem. The experiences of the Japanese people in the last war were such as to give rise to a considerable sentiment of pacifism. I think the Senate must understand that. I believe the provision about which the Senator from Georgia is speaking is utterly unrealistic in the kind of world in which we live. The people of Japan will not be able to solve this problem as a political matter until they go through some considerable internal trouble. They are doing so right now. I think that issue is one of the things which has disturbed the political situation in Japan, and that out of the turmoil some solution will come. Not that it is our business to make it come, but this internal difficulty existed before the treaty became an issue.

Mr. RUSSELL. I hope I may be permitted, without in any way appearing to dictate or even to give advice to the people of Japan, to express the hope that they will clear up this problem. We know, perhaps better than does any other nation on earth, that the Japanese make magnificent soldiers. The free world could use a number of Japanese soldiers to great advantage in maintaining world peace today. I think this would make a contribution to world peace much more realistic than the provision in their Constitution.

The Senator does not really think, does he, that there is any close comparison between our treaty with Germany and that with Japan, other than the fact that both are great industrial nations—and that it is in our own enlightened self-interest to see that they stay outside the Communist orbit and remain free and independent?

Mr. FULBRIGHT. While I think it is of great importance to our selfish interests, I do not want to limit it to that. It also has great importance to the continued freedom of all free people.

Mr. RUSSELL. That is a part of it.

Mr. FULBRIGHT. All I said in answer to my colleague's question was that, in justification of our interest in the continued independence of Japan, the situation is somewhat comparable to that of Germany. We have an interest in both those peoples remaining independent and free from domination of a foreign power.

Mr. RUSSELL. The Germans, of course, have agreed to an arrangement by which they are rearming; they will make a material contribution in military might to the defense of the free world.

Mr. FULBRIGHT. That is true. The Senator must remember that the Japanese suffered a psychological blow similar to that suffered by the Germans, only greater perhaps because Japan was the only country upon which a nuclear bomb had ever been dropped. I think the horror of nuclear war is probably much greater in Japan than it is in any other country. I have been told, and I believe, that during the immediate past and as of the present no government could remove this difficulty or do anything about it, as a political matter. Whether or not they can we do not know. It is one of the burning issues of internal Japanese policy.

Mr. RUSSELL. Suppose Mr. Khrushchev should rattle his rockets so persuasively that the Japanese Government, under the domination of some of the forces that have been in play there in the last 2 or 3 weeks, were to demand that we withdraw from Japan. Would we then have any recourse? We would be compelled to leave; would we not?

Mr. FULBRIGHT. We would have the same recourse we have under any other international agreement. Any treaty can be denounced. Treaties are denounced from time to time, but it would be a denunciation of a solemn obligation which was assumed according to their constitutional processes when the treaty was ratified.

I agree with the Senator from Georgia that we always face the possibility which he mentioned in any case. A NATO partner could say, "We do not want any more to do with you," and get out. But I do not expect the Japanese to take such action. I hope they will not do so. We have no reason to believe they will except, of course, the nervousness which has arisen from the recent rioting which, I would say, was ultra vires. It certainly was not the act of responsible elements in government. I hope they will be able to maintain order.

I agree with the Senator that there is no certainty in this world. This is the best we can do in making these international arrangements.

Mr. RUSSELL. What amazes me, however, is that the Japanese treaty should apparently have met with such violent and widespread opposition within that country. The treaty may not be completely unilateral, but it is certainly extremely favorable; I think everyone agrees to that. It seems to me that someone must have done a poor job in publicizing the terms of the treaty and in expressing our good faith to have caused such tremendous turmoil as has apparently been generated among an otherwise very peaceful and law-abiding people.

Mr. FULBRIGHT. I am not quite clear as to the implication of the Senator's question. I am not certain whether he is questioning whether our representatives have been as efficient and as intelligent in their jobs as they should have been. All I am endeavoring to do is to talk about the treaty itself and its terms. I must comment that I believe the riots are influenced by many considerations besides the treaty. I think the treaty is only one of several influences and is rather a symbol of internal problems that are far more difficult, at times, than the mere treaty. But many considerations besides the treaty enter into the very complex internal problems. I do not really think the treaty is the inspiration and principal motive for the riots that have been taking place in Japan.

Mr. RUSSELL. Of course, the press may have done a poor job of reporting, but from all I have read the riotings were aimed at the President of the United States and his representatives, including Mr. Hagerty, his press secretary, because they in some way symbolized this treaty. That was the impression I received from reading the press reports on the situation.

Mr. FULBRIGHT. I do not interpret the situation that way. It is a complicated problem. If the Senator wishes to discuss it, I shall be glad to offer one or two thoughts. I believe the riots have a direct relation to what has happened in the past. I believe Communists all over the world have had instructions to do everything they can to embarrass the President of this country. Such instructions have come as a result of the blow-up in Paris. That is one consideration.

Another consideration is that the dominant party in Japan, which is led by Mr. Kishi, is made up of about four factions. Those factions are now, and for some time have been, struggling one against the other. The struggle has nothing to do with the United States, but they are struggling for power within the Government just as we have struggles in some of our own parties, though in a less violent way.

There is a struggle going on in our party as to whether this or that faction will gain control, which candidate will prevail, and so on. There is a struggle going on in Japan as to who will succeed Kishi.

Kishi uses the treaty as one of his accomplishments, which is quite natural, and the opposition is trying to denounce that accomplishment, to demean it, to lower it in importance, as a part of their effort to get rid of Mr. Kishi and take over the power of the Government. That struggle is involved.

Then a strong pacifist feeling grew out of the war, which was given constitutional expression by article 9 of the Japanese Constitution, which the United States caused to be written in.

All of those elements have contributed to the present situation. But is there not a rather strange contrast between that situation and the reception of the President of the United States in such countries as India not very long ago? There is no doubt in my mind that much of the present sentiment is due to the inspiration of the Communists growing, first, out of their frustration and disappointment and, second, from the collapse of the Paris meeting. That is why I and others thought it might have been wise for the President not to undertake his proposed trip because it also fed fuel to the fire. But that is water over the dam.

I do not believe the Senator is entitled to say that the pending treaty and the substance of the treaty is the primary objective of all that has been going on in Japan.

Mr. RUSSELL. I have no intention of challenging the distinguished Senator from Arkansas in the international field. I understood from reading press reports that the objection of the Japanese people to the treaty was probably the primary factor in the riots. The television reviews I saw showed that most of these people carried signs which, according to the interpretation given me, said that this treaty would get them into war, and they were opposed to getting into war.

Mr. FULBRIGHT. I believe that the organized leaders of the riots did use this argument and undoubtedly did tell the people that the treaty would get them into war. Of course, we have the difficulty of communication. We have great misunderstanding in our own country. There is no doubt that a number of these people felt that way. On the other hand, even in these riots, as large as they were, out of 90 million people in Japan they were confined almost altogether to the group in Tokyo, led by the Communists and radical student organizations, such as the Zengakuren, I do not believe it was representative of even a large minority of the people of the country.

What press reports I have seen and what official reports have come to me all indicate that the Liberal Democratic Party, the Kishi party, if an election were held in the near future, would receive a majority of the vote, assuming a change in leadership. The press reports I have seen, written by the most responsible reporters, show that.

I say this with the reservation that in many of these countries, which have not had a democratic system of government for very long, there is always the possibility of an organized, well-directed minority, particularly one that has been schooled in Moscow, taking over by force. That is possible. It is a possibility in Japan. I do not believe it is probable, and none of the other people I have talked to think it is probable.

I do not wish to minimize the seriousness of the situation. The only point I wish to make is that I do not believe the treaty is the principal cause of the turmoil in Japan at the present time.

Actually, as has been pointed out, the treaty is a fair reflection of United States-Japanese relations. If we do not ratify the treaty, the old treaty continues in force indefinitely. That treaty gives

us many rights or, stated another way, subjects Japan to many more onerous burdens and obligations than does the pending treaty. Thus, in comparative terms, Japanese opposition to the pending treaty is ill advised.

Mr. RUSSELL. I do not want to tax the Senator's patience or physical endurance, particularly in view of his injured foot. However, there is one further question I should like to ask. I will sum it up in a few words. I notice that the treaty would be in effect for 10 years, with the privilege of denunciation by either party after that on 1 year's notice.

Mr. FULBRIGHT. Yes.

Mr. RUSSELL. If conditions get somewhat parlous in Japan, is there any honorable way we can extricate ourselves within that 10-year period?

Mr. FULBRIGHT. No; I do not think so. If we enter into the treaty, it will be for 10 years, with the reciprocal and mutual right to give it up. We do not have to keep a certain number of troops in Japan, if we think it is not in our interest to do so. The treaty does not require any minimum number. We do not have a great many personnel there now, as the Senator from Georgia well knows.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. MANSFIELD. In response to the question raised by the able senior Senator from Georgia [Mr. RUSSELL], at any time during the 10-year period either or both countries could undertake to bring about a renegotiation of the treaty.

Mr. FULBRIGHT. Oh, yes.

Mr. MANSFIELD. At any time.

Mr. FULBRIGHT. Yes.

Mr. MANSFIELD. So I believe we would be protected there. I think we also ought to keep in mind the fact, as the chairman has pointed out, that the treaty vis-a-vis Japanese-American relations, is far more wholesome, is far better than the present 1951 treaty, which, in effect, is an occupation treaty. It is still in operation. Unless it is displaced by the treaty before the Senate, that treaty will remain in operation. That treaty puts the entire burden upon our country so far as the defense of Japan is concerned. The pending treaty equalizes that burden somewhat. This is a very fair treaty. It is certainly favorable to both Japan and the United States.

I point out also that Japan furnishes a good backstop, so to speak, for the two American divisions which we have in Korea, and which we may have to keep there for some time to come. We ought to keep in mind also that as far as peace in the Pacific is concerned, in my opinion, at least, it depends primarily upon the Empire of Japan and the United States of America. Together, our two countries can go a long way toward maintaining peace and stability in that area.

If there is a separation or a break, then I believe we can anticipate that the shift will be in the other direction, toward Communist China and the Soviet Union.

I point out also that if we look at the map of the western Pacific, we will note the Aleutians and the Japanese islands and Okinawa and Taiwan and the Philippines, and that they furnish a further protective ring for this country.

In response to the question raised earlier by the distinguished junior Senator from Georgia [Mr. TALMADGE], I have been looking over the treaty again, and it appears to me that, while article III is far from definite in its wording, nevertheless, it could be read to supply at least in part a satisfactory answer to the question raised by the junior Senator from Georgia. It reads as follows:

> The parties, individually and in cooperation with each other, by means of continuous and effective self-help and mutual aid will maintain and develop, subject to their constitutional provisions, their capacities to resist armed attack.

In contrast to article V, which looks to the situation in Japan or any territories under the sovereignty of Japan, article III is quite far ranging and, while it is hard to interpret, it would be my opinion that it would furnish an answer to the question raised by the junior Senator from Georgia [Mr. TALMADGE].

Mr. FULBRIGHT. I thank the Senator.

Mr. SCOTT rose.

Mr. FULBRIGHT. Does the Senator wish me to yield to him?

Mr. SCOTT. I am seeking recognition in my own right as soon as the Senator has finished his remarks. Is the Senator prepared to yield the floor?

Mr. FULBRIGHT. I have only a small part of my prepared statement remaining. I shall conclude in a very few minutes.

Mr. President, there are few significant changes in the new administrative agreement. The criminal jurisdiction provisions are unaltered and are in harmony with the NATO Status of Forces Agreement, which was ratified by the Senate in 1953. Indeed, such changes as have been made are designed to bring the new agreement nearer to the spirit of the NATO agreement.

An exchange of notes between the treaty parties more clearly defines the scope of American military activity in the treaty area, and deepens the bilateral spirit of the agreement. The note says:

> Major changes in the deployment into Japan of U.S. Armed Forces, major changes in their equipment; and the use of facilities and areas in Japan as bases for military combat operations to be undertaken from Japan other than those conducted under article V of the said treaty, shall be the subjects of prior consultation with the Government of Japan.

Mr. President, the committee has been assured by representatives of the Departments of State and Defense that the term "prior consultation" means that Japanese assent is a necessary precondition to the military activities covered in the exchange of notes.

I shall not dwell on the other provisions of this treaty; they are summarized in the committee report. However, in my opinion they are all entirely consistent with the tone of the preamble, which reaffirms the paramount interest of both parties in improving the prospects for peace by helping one another; and by pledging their faith in the purpose and principles of the United Nations, which includes the inherent right of individual and collective self-defense.

Mr. President, before concluding I should like to say a final word about the opposition to the treaty in Japan, much of which, as I have indicated, is represented by people who bear no animosity to the United States and are motivated by the highest concerns. However, between these people and the truculent Communist-oriented elements, with whom they share this common cause, are certain cynical groupings who would use the treaty issue to gain a political advantage. The present Japanese Government was voted into office by a majority of the electorate. The elections held since have added to the strength of the conservative bloc, which this government represents. Nevertheless, by their obstructionist tactics a noisy minority in the Diet for a period of time prevented any parliamentary action on the treaty. Finally, Prime Minister Kishi took the dramatic step of getting the necessary lower house ratification, while the opposition was boycotting the Diet chamber.

I shall not speculate on the advisability of this action, or its possible consequences. However, it should be noted that the issue raised by the performance of the Communist manipulated obstructionists is not the advisability of the treaty, but the future status of parliamentary government in Japan. Because if a noisy minority can stifle major government policies and even scuttle visits from friendly chiefs of state the principle of responsible, majority rule is placed in serious doubt.

Mr. President, in commending this treaty to the Senate, as I so unreservedly do, my deepest hope is that Japan's democratic institutions will suffer no permanent damage from the strains to which they are now being subjected.

Mr. MANSFIELD. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield.

Mr. MANSFIELD. I commend the distinguished Senator from Arkansas, the chairman of the Committee on Foreign Relations, not only for the speech he has made in behalf of this necessary and worthwhile treaty, but also for the patience and understanding he has shown in undergoing a grueling set of questions.

I believe the Senator is correct when he indicates in his speech that so far as Japan and the United States are concerned, we really need one another, and we can mutually accomplish much that is worth while.

Japan, as a country, occupies a peculiar position. It is 10,000 square miles smaller than my State of Montana. Montana has a population of 650,000. Japan's population is in excess of 90 million, and her annual increase in population is between 1 million and 2 million.

Not more than 16 percent of the land of Japan is arable. The Japanese are limited in their resources. So Japan must trade in order to live; and Japan must trade with the free world. If she does not, then she will be forced into the

arms of the Soviet Union and Communist China.

Thus there is much more besides a treaty which is involved in this arrangement. The future welfare of Japan and the future maintenance of peace in the Pacific, perhaps our own security, a better understanding between the two peoples, and a greater degree of tolerance and understanding, likewise are involved.

Again I commend the Senator from Arkansas. I hope the treaty will be overwhelmingly approved.

Mr. FULBRIGHT. I appreciate very much indeed the words of the assistant majority leader, the Senator from Montana. He has been of great assistance in the deliberations of the committee on this treaty. He has always come to the committee meetings with a wide personal knowledge of affairs in the Far East. He is an invaluable member of the committee.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. HOLLAND. First, I thank the distinguished Senator from Arkansas for his able and effective presentation. I think he has cleared up all the questions which have occurred to me.

I should simply like to ask the Senator if the background of the new treaty is not really this: In 1951, the United States entered into an agreement with Japan, when she was just reemerging from the position of being completely occupied; that the terms of that treaty necessarily gave Japan fewer rights, and gave to us more privileges and rights.

Is it not true that as Japan has sustained her independence, has regained her economic strength, and has regained, in great measure, her stature as one of the outstanding nations of the world, much less of the Orient, a time came when the old treaty would never be acceptable to a proud, independent, and successful people, and when the terms of the new treaty must recognize this growth, this strength, this complete emergence of a free and independent Japan? Is that not the real background of the treaty?

Mr. FULBRIGHT. I think the Senator has stated the case very well indeed. He has described exactly, I believe, the principal reasons why it was believed necessary to negotiate the new treaty, which has been in progress for 2 years. It was in recognition of those very factors, I believe, that it was felt necessary to have a new treaty.

Mr. HOLLAND. It would be unthinkable for us to assume for a moment that Japan as of this time, with her renewed strength, her independence, and economic stability, and her great stature among the nations of the world, would be satisfied to continue her relationship with us upon the basis of the 1951 treaty.

Mr. FULBRIGHT. The Senator is absolutely correct.

Mr. STENNIS. Mr. President, will the Senator yield.

Mr. FULBRIGHT. I yield.

Mr. STENNIS. I, too, am among those who appreciate the fine presentation made by the Senator from Arkansas. I think he is in a peculiar position, and a very advantageous one, to give us more of an analysis of the recent happenings and events in Japan. The Senator touched on that point very lightly. However, I think what he said will shed light on the spirit in which the treaty is adopted. I myself shall vote for the treaty.

However, I believe that things are not so rosy or so peaceful and quiet. I do not believe that everything is as fine as it might have appeared to be during the debate today. If it is, then Prime Minister Kishi was doubtless in error when he said a few days ago that he could not be responsible for the safety of the President of the United States.

Mr. FULBRIGHT. I hope the Senator from Mississippi did not interpret anything I said so as to leave the impression that things are stable and peaceful. They are not, at all. The only point I was really trying to make was that I do not believe the fact that the treaty has been negotiated is the prime cause of the disturbances; that is, the real reason for the trouble. I wish that were all. I think there are some of the other causes that go deeper than the treaty.

Mr. STENNIS. The Senator is very helpful on that point. If it was not the treaty which was causing the trouble, what was the basis of the disturbance, in the Senator's opinion?

Mr. FULBRIGHT. That is a long story.

I happened to be in Japan on my way home from a meeting of the International Bank which took place in New Delhi more than 2 years ago, in 1958. A struggle was then in progress between the Kishi government and the Diet over a bill which Premier Kishi had introduced to strengthen the power of the internal police. He also tried to curb or restrict the power of the unions.

Japan, as a result of the war, suffered serious emotional and psychological effects. These came not only from the military defeat, but from the use of the atomic bomb, as well. That was something to which the people of no other country had been subjected. The defeat of Japan was complete. Her disillusionment was complete.

Then there was the period of the occupation. The Japanese had not been accustomed to real democracy.

I dislike to talk too long about this matter.

Mr. STENNIS. I think the Senator is being very helpful.

Mr. FULBRIGHT. These struggles have been taking place since 1958, with Kishi trying to establish greater authority in the central government so as to control just such elements among the people as created this regrettable situation.

The Diet has been reluctant and tentative in this field and has now and then employed obstructive tactics.

I do not want to overemphasize that point. The French used similar tactics before de Gaulle came to power. There was a period when the French Parliament was almost as disruptive. I do not wish to offend the French with an inexact comparison. However, it will be recalled that the French could not maintain a durable government for some years.

Japan has had an internal problem. She has lacked a strong internal police. The policemen are not armed, and they have hesitated to act because of the fear of a revival of a militaristic government. The Japanese believe, and rightly, I think, that the militarists who led them into the last war, under the war cabinet, did a great disservice to their country.

It will be remembered that in 1936, I think, a group of young officers assassinated some of the principal leaders of the civilian government and assumed power. The Senator will recall that incident. It was a brutal and savage act.

The current situation must be viewed against this background.

Pacifism and resistance to anything which looked like a strong police or military have arisen out of Japan's recent history.

Japan has had a remarkably good government, I think, in recent years. There is a very fine, permanent civil service which deserves much of the credit for the very fine operation of the Japanese Government.

I think Mr. Kishi and those who have served with him during his service as Prime Minister have run "a very good show," and deserve much credit, and up to this time have kept peace in Japan.

The party itself is split by four different factions. The different factions are not really contending over the treaty. Actually, they are contending within their own party for power.

I hesitate to draw an analogy, but I observe that the situation there is somewhat similar to the situation in this country, where, within the Democratic Party, there are different groups, each of which would like to have its own candidate become the next President. Similarly, in Japan there are factions which wish to have their candidate become the Prime Minister. Since the war, the Prime Minister of Japan has changed approximately every 3 years.

I do not wish to stress particularly the various names. Mr. Ikeda is one. His views are thought to be approximately the same as those of Mr. Kishi and Mr. Yoshida, the former Prime Minister. There is also Mr. Ohno; and there are two or three others. The situation is much like that in our own country, in that, if one man holds a high position, his opponents attempt to attack him and weaken his position by attempting to lower his prestige.

Therefore, in this case opponents who can discredit the treaty may discredit Mr. Kishi. The situation, as I have said, is a complex one.

There are those internal conditions. In addition, there was the blowup of the Paris meeting and the attempt by Mr. Khrushchev to embarrass the President whenever he could; and those developments have come at the same time.

An internal struggle is now going on in Japan; and some of the groups or elements have opposed the treaty on pacifist or antimilitarist grounds. Communists moved into the situation, for there are Communists in Japan. The

Socialist Party there, which is leftist inclined, also has opposed it, and unfortunately allowed itself to be used by the Communists.

So the picture is a complex one; and the combined effects of these elements militated against the President's visit to Japan.

Mr. STENNIS. Mr. President, let me say that I am certain that the statement the Senator from Arkansas has made on this point has added to the record, and has clarified the thinking of some, and is of definite value, particularly because of the position he holds.

Mr. President, I desire to state that I shall support the treaty. I look upon Japan as a strong and very necessary and very valuable ally of ours in the Pacific.

But when I read about the great crowd and mob in Tokyo which held the personal representative of the President of the United States a virtual prisoner for 70 minutes, and then when I observed that there were no reports of strong public reaction or resentment on the part of the people of Japan, I felt that there must be some underground or beneath-the-surface movement or some other underlying reasons for that situation, and that it might grow. And it did grow.

I resent the treatment of the President's representative and of our Nation, by means of what happened in Tokyo; and I think everyone in the United States should resent it, and we should not be timid in saying so.

I cannot conceive that a government would remain in power if it were so weak as not to be able to try to do more about such a situation than the Japanese Government actually did.

However, I take it that that situation did not represent the real spirit and intent of the Japanese people, who form a fine nation, and certainly are worthy of this treaty, which also is to our advantage.

Mr. FULBRIGHT. Yes.

It is very difficult to be accurate in our description of that situation. I do not desire to paint too cheerful a picture. I think it is serious when a government cannot control its people any better than that government did, in the capital city.

But I have tried to point out some of the elements which have contributed to this serious situation. We know that in other countries there have been riots, including some very unpleasant ones in certain Latin-American countries. There have been local agitators, and probably in many cases there were local grievances. In such situations, the occasion of an important foreign dignatory can provoke trouble.

I take the position—and I think the Senator did—that this is not a very good time for a Presidential visit. Probably he stated that, and I agree with him.

But I believe the treaty should be judged on its own merits.

If for any reason the riots are not controlled, and if Japan cannot recover from the chaos which temporarily existed in Tokyo, that will be a tragedy. But a great many factors more important than the treaty would have produced the tragedy.

Mr. STENNIS. Does the Senator from Arkansas agree that if we ratify the treaty, our action certainly will not constitute approval of what has happened in Japan in recent days?

Mr. FULBRIGHT. Certainly it will not.

Mr. STENNIS. Does the Senator from Arkansas agree that, on the contrary, our action in ratifying the treaty, if we do, will be an expression of our faith in what will happen in Japan from now on?

Mr. FULBRIGHT. That is correct.

Mr. STENNIS. In regard to one matter on which the Senator touched, let me say that I have assembled some figures; and from them it is obvious that the really strong tie between the two countries is the economic tie, based on the very fine, excellent economic relationships between Japan and the United States.

Mr. FULBRIGHT. That is correct.

Mr. STENNIS. In 1959, our imports from Japan amounted to more than $1 billion worth, and in that year our exports to Japan amounted to more than $931 million worth. That shows a two-way exchange which makes the ties between the two countries binding and strong.

Mr. FULBRIGHT. I am sure the Senator from Mississippi will not be influenced adversely when I say that included in those exports there was a great deal of cotton. I am quite glad of that. The Japanese are our best cotton customer, I believe. They are very discriminating people; they want the best cotton.

Mr. AIKEN. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield—although I am ready to yield the floor.

Mr. AIKEN. I wish to proceed for only a minute.

The Senator from Mississippi referred to the imprisonment—although it was harmless—of Mr. Hagerty, in Japan. All of us regret that the demonstrations in Japan got out of hand, and that the police force was unable to control them.

Nevertheless, we might point out the difference between the methods of controlling demonstrations or not controlling them in a democratic country and in a country where a Communist government is in control.

All of us are familiar with the recent student demonstrations in Hungary. What happened? The Hungarian Communist Government called for troops and tanks to come there, and they killed approximately 10,000 of those students, sent thousands more to exile in Siberia, and drove 100,000 students out of the country, because they feared that they would lose their lives if they remained there.

So I think the world has a fairly good example of the difference, and that the people of the world will make up their minds as to which they prefer.

It is unfortunate that one girl, I believe, was killed in Japan. She was crushed in some way, and no one seems to know precisely what happened. But when we contrast that situation with the slaughter of tens of thousands of young Hungarian youth by the Russians, who had their armed forces in Hungary, I believe that in the long run we shall have to agree that even though the Japanese demonstrations got out of hand, what happened there was vastly preferable to what happened in Hungary.

Mr. FULBRIGHT. I am very glad the Senator from Vermont has made that point.

Mr. AIKEN. And that what happened in Japan is vastly preferable to what would happen in Japan or in any other country once the Communists got control of it.

Mr. FULBRIGHT. Yes, the Senator from Vermont is quite correct. Despite all the difficulty and commotion, the Japanese police did not use firearms; and only once—at the last, I believe—did the Japanese police even use tear gas. Those police do not carry firearms; and that fact adds to the problem, because I believe more police than students were injured, because of the desire of the police not to use force.

Mr. PASTORE. Mr. President, will the Senator from Arkansas yield for a question?

Mr. MORSE. Mr. President, I propose to discuss the treaty——

Mr. FULBRIGHT. Mr. President, I am ready to yield the floor, but I yield for a question.

Mr. PASTORE. I am wondering if this internal strife of which the Senator has spoken so eloquently is not, somehow, a symbol of mass resentment on the part of the working people of Japan because their wages are being kept down deliberately and because the profits are not filtering down to them, that the standard of living of the Japanese wage earner is not being improved in spite of the winning of world markets by Japan?

The reason I ask the question is that there is a continuous and consistent complaint on the part of American manufacturers. For instance, it has been said that Japan is the largest purchaser of American cotton, and at the same time the greatest exporter of textile goods in the world. I realize that in the nature of progress Japan must industrialize in order to meet world competition. I am wondering if, in this design, which I do not criticize, but which I understand, there is some reason for resentment on the part of the workers. They may feel that they are not getting their share of the benefits of industrialization and the winning of world markets.

Mr. FULBRIGHT. The Senator opens up a very broad area. Although I do not have them with me, I have seen the figures. What the Senator has said is true in any industrial country, and that resentment probably is behind some of the conflict between the factions and parties I have mentioned, one party being, let us say, prolabor, and the other being promanagement, representing the same kind of differences we have in this country. I did not anticipate this argument, but I may mention that the real wages in Japan have been substantially increased. However, they are never as much as people would like to have. The per capita income in Japan is $253, which is about three times the average of the other Asian nations in this area. It is still too low, but Japan is far better off than any other country in the area.

That fact probably explains some of the internal political infighting going on. However, I do not think it has anything to do with the treaty.

Mr. PASTORE. I realize that. The treaty may have been the excuse for the explosion.

Mr. FULBRIGHT. Yes. It may have been a symbol.

Mr. PASTORE. But I think the causes were already there.

Mr. FULBRIGHT. I agree. That condition is typical in a country making progress. When it is really poor and really poverty stricken, the masses are so inert that they do not riot. Often the people riot when a country is on the "make," when it has made some progress, when the people have tasted a bit of the better life and is eager to gain more of it.

Mr. PASTORE. The Senator knows that, while tremendous progress has been made in stabilizing the economy of countries in Europe and Asia through the foreign aid supplied by this country, much of the complaint we heard was that the rich were getting richer and the poor were getting poorer.

Mr. FULBRIGHT. That is true.

Mr. PASTORE. In many instances, strangely enough, the resentment felt by the people of those countries was directed toward the country furnishing the aid. I wondered how much of that was true in Japan.

Mr. FULBRIGHT. I think that is what we witnessed in France in earlier years. It was one reason why there was such a large following in the Community Party, which has receded. When France was on the "make," and was making the most progress under the Marshall plan, we heard the same complaint that all those benefits were accruing to management, and not to labor. During such a period there must be an accumulation of capital for the purchase of equipment, and labor resents the absence of immediate benefits. I am sure that feeling is involved in the recent events in Japan, but how much I do not know.

Mr. PASTORE. I thank the Senator for his fine presentation. I shall vote for ratification of the treaty.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. COOPER. I should join all of those who have commended the Senator from Arkansas, chairman of the Committee on Foreign Relations, for his presentation of the treaty. I have read the report, and I congratulate the committee. I think it one of the best reports I have read.

If the chairman of the committee will permit, I should like to address him concerning an aspect of the subject which I do not believe has been discussed in the debate. We have been discussing the treaty, under the assumption that having been ratified by Japan, and ratified by the Senate, as it will be, the greater part of the questions it has raised will be concluded. I earnestly hope this will be true, but I think it necessary to point out that it may well be an issue in Japan for some time. The success of the treaty will depend at last upon its understanding and its acceptance by the people of Japan as well as their Government.

I do not speak of its acceptance by the people of the United States, because I believe its importance to our country and to free peoples will grow.

We can agree with the comments of the distinguished Senator from Arkansas [Mr. FULBRIGHT] and the distinguished Senator from Vermont [Mr. AIKEN] that while the riots in Japan and the treatment of the President of the United States have been unhappy events, the Government of Japan did not use force against its own people, as Russia used in Hungary and as Communist China and other Communist countries would undoubtedly use to suppress any dissenting viewpoints. But it has raised the very serious question for Japan whether a minority, inspired by Soviet Russia and Communist China or any other minority can obstruct by force the parliamentary processes of a government. It raises serious questions about the depth of democratic support in Japan.

Again, as the Senator from Arkansas has suggested, there may be a strong movement in Japan toward neutrality, based in part upon emotional remembrance of the atomic bombing. From my own experience, I have no doubt that it is based in part upon the feeling one finds throughout Asia. There is a desire to avoid any situation they think draws Japan into the conflict between the United States and Russia. I am sure some of this thinking exists.

Does the Senator from Arkansas not believe that, even though this treaty is ratified, and it should be, the Japanese people will have to decide, at a general election, which we cannot know is coming, and in which the treaty will be an issue, whether they understand the treaty importance to their security and freedom, and will support it?

Mr. FULBRIGHT. I agree with the Senator, but I think it may be an oversimplification to assume that the treaty will be the main issue in an election. I think Mr. Kishi, perhaps individually—perhaps some others in his party are also concerned—has some prestige involved with respect to the treaty. As we know, in this country very often in an election certain issues become identified with a certain candidate. After the candidate is elected sometimes the issues have a way of changing, and go off in another direction. I think we can only await events and await developments.

Mr. COOPER. That is very true.

Mr. FULBRIGHT. I think as of the moment, considering what we know, with the obvious merits of the treaty, there is nothing for us to do other than to approve the resolution of ratification of the treaty. Then we should hope for the best. We should hope the Japanese can straighten out their political affairs.

I, for one, certainly do not wish to have my support of the treaty to be interpreted as any endorsement of any particular officeholder in Japan. I do not think it should be. We do not have any desire to influence the electorate in Japan simply because we support a treaty. That has nothing whatever to do with the matter. We shall judge the treaty upon its own merits. The Japanese, of course, will choose their own representatives upon their merits. In the election I think the treaty should be purely an incidental affair. I hope it will be.

Mr. COOPER. I appreciate the Senator's statement.

I do not wish to oversimplify the matter nor suggest that we should intervene in Japan's internal affairs. I raised the point because I believe it bears upon the effectiveness of the treaty. If we expect the Japanese to fully support the treaty, to resist the propaganda and subversion of the Communists with true and enduring support, there must be reciprocal advantages for the Japanese and we must recognize fully their sovereignty and equality. On their part, they must know the great obligations we undertake. The treaty is a deterrent to war, a protection for their security and their free system of government, as well as the protection for all the rest of us. The Japanese undertake a great obligation in accepting our bases and our troops, but it could mean their continued existence as a free nation.

Mr. FULBRIGHT. I agree with the Senator that it is necessary for the Japanese to understand the treaty to appreciate it. I have no doubt that the Communists and some of the pacifists have misrepresented what the treaty will do. The job of providing an understanding of the treaty is a job for the Japanese Government and the Japanese press to fulfill.

Mr. COOPER. I close by saying I earnestly hope and believe—I do not know, but I am very hopeful—that the treaty will be supported henceforth by the Japanese Government and by the Japanese people as it will be fully supported by our people. It is probably true that the overwhelmingly majority of the Japanese people will support the treaty.

I think it is incumbent upon the Congress and the administration to consider the alternatives which we may face in the future, if this treaty does not last, and we ought to be prepared for them. It could make it necessary to build new defenses in the Pacific, and further strengthen our forces at home.

I ask unanimous consent to have printed in the body of the RECORD, following my statement, a very incisive and I believe correct analysis of the situation in Japan, an editorial appearing in the Louisville Courier-Journal, June 19, 1960.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

PERHAPS A JAPANESE ELECTION SHOULD PRECEDE THE TREATY NOW

In the further collapse of personal diplomacy, Far Eastern division, it is easy to reach simplified answers and to react emotionally toward the "ungrateful" Japanese. Such reactions are foolish and dangerous.

It is true that Japanese Premier Kishi and, after him, our Ambassador, Douglas MacArthur II, seriously miscalculated the extent to which an apparent minority could sway students and leftwing groups toward violent anti-American demonstrations. But there are many more facets to these demonstrations than mere anti-Americanism or even anti-Kishi feeling. There was the emo-

tionalism of Japanese youth, brought up with a fear of war that has its roots in defeat and in a pacifism that was considered good for the Japanese until our need for bases and a strong Far Eastern ally supervened.

But this need for bases, embodied in the new Japanese treaty and also in the old one that it supersedes, has never been sold to the student groups, even though most of their elders reluctantly acknowledge its existence. And the student groups have proved fertile ground for agitators, not all of them party line Communists.

The reaction of Americans toward the troubles of Premier Kishi must be primarily one of sympathy. But we can do little to help in light of the double loss of face he has suffered. The fall of his government seems almost inevitable. There is some comfort, however, in the knowledge that left-wing groups have never been able to summon enough votes to dominate a government by themselves. The shock and embarrassment suffered by millions of reasonable Japanese who stayed aloof from demonstrations and expressions of opinion may well react to the Kishi government's advantage.

One must wonder, however, whether the Premier is wise in struggling still to force the disputed treaty on the country without taking his case to the country. In this case, our own prompt and good-humored ratification might help him to persuade the moderate Japanese that the new treaty is actually fairer to Japan than the old one was.

A vote of confidence in the treaty would give it a far firmer basis than its enforced passage in the face of hostile demonstrations. But if the contrary happens and the reservations of the objectors are shared by large numbers of Japanese voters, we and Japan's Government might as well know the truth and plan a reappraisal of the mistaken diplomacy which led us so far on so unpredictable a road.

Mr. FULBRIGHT. I thank the Senator.

Mr. MORSE. Mr. President, as a member of the Committee on Foreign Relations, I propose to discuss the treaty and some of its implications for the next few minutes.

At the outset, I say I shall vote to agree to the resolution of ratification of the treaty, because I think, after the treaty is considered from its four corners and after its weaknesses, so far as some of its implications are concerned, are carefully weighed, we find ourselves in a position where the preponderance of the evidence is in support of the resolution of ratification of the treaty.

The chairman of the Committee on Foreign Relations, I think, deserves the thanks of the entire Senate for the very judicial, impartial, and scholarly work he did as chairman of the committee during our hearings and our executive deliberations with respect to the treaty. Once again in the field of foreign policy the Senator from Arkansas [Mr. FULBRIGHT] has demonstrated his statesmanship.

It is a great pleasure for me to serve under his leadership in the Committee on Foreign Relations of the Senate. He happens to be the type of chairman who respects sincere and honest differences of opinion with him on some matters of detail, as we are confronted with those details in connection with such a problem as this treaty.

The Senator from Arkansas is a great team worker with his associates on the Committee on Foreign Relations. He is always tolerant of the points of view of other Senators. He is always willing to listen to arguments and to evidence, and to modify his opinion according to the evidence when a modification seems to be justified. That was particularly well demonstrated by the Senator from Arkansas [Mr. FULBRIGHT] during our deliberations with respect to the treaty.

I caution the Senate to keep in mind today, as we consider the resolution of ratification of the treaty, that we should consider the matter with a good many mental reservations. It is unfortunate that we are not considering some actual reservations written into the treaty itself.

Mr. FULBRIGHT. Mr. President, will the Senator yield to me before he begins a discussion of the treaty itself?

Mr. MORSE. I am happy to yield.

Mr. FULBRIGHT. I could not let this opportunity go by, Mr. President, without expressing my appreciation for the kind words the Senator has spoken with regard to the chairman of the committee. I appreciate them very much. I certainly reciprocate the statements the Senator has made with respect to cooperation. The Senator from Oregon has certainly been of great help to me and to the other members of the committee in the committee deliberations on this treaty and on other matters of recent date. I appreciate it very much.

Mr. MORSE. Mr. President, the Senator from Arkansas has only further proved, by the utterance he has made, my words with respect to the complete fairness and the ever-present courtesy of the Senator from Arkansas in our work together on the Committee on Foreign Relations.

Mr. President, as I was saying, as we consider the resolution of ratification of the treaty we should certainly do so with a good many mental reservations. I felt perhaps it would have been better if we had proposed some reservations in the treaty itself. For a time I considered, Mr. President, the possibility of offering some reservations to the treaty. However, after conferring with my colleagues on the committee, after discussing the matter with some officials of the State Department, and after studying the text of the material we had before us, much of which is on the desks of Senators this afternoon, in the form of the exchange of notes which led to the final submission of the treaty, I felt it would not be the best procedure to offer reservations to the treaty.

I think it is perfectly clear that the prospects for getting further consideration of reservations on the part of the Japanese Government are practically nil. I felt also that the offering of reservations in the Senate might be subject to interpretations elsewhere in the world which would not be in the best interests of my country.

Mr. President, when we consider the mater of foreign policy, no matter what differences we may have on the legislative front in the Senate in respect to American foreign policy, in the carrying out of our duties as Senators in the legislative field the problem takes on a different complexion when we are confronted with international affairs and questions which are raised in regard to treaties. Mr. President, I think it is important that we should close ranks. We should ask ourselves the question, "Can we, in all honesty and sincerity, say to ourselves that under the advise-and-consent clause of the Constitution it should be our individual advice as Senators that the treaty, in view of all the circumstances, should be ratified?"

In keeping with that obligation, Mr. President, I have reached my decision. I voted in support of the treaty in the committee, and I shall vote for the resolution of ratification of the treaty in the Senate this afternoon. However, I wish to discuss the treaty a bit, for the purpose of the historic record and for future reference.

I do wish to talk about what I consider to be some of the implications of this treaty which cause us to have some mental reservations in regard to it. The Senator from Arkansas [Mr. FULBRIGHT] I think is quite right when he points out that there are two types of opposition to this treaty in Japan. There is the Communist opposition, which was manifested by the stirring up of the type of riots and mob demonstrations that characterized the protesting groups that participated in demonstrations in recent days in Japan. These groups did great damage to the history of Japan. They also did great injury, it seems to me, to the reputation of Japan as a nation that seeks to be fair and courteous and one that endeavors to conduct a foreign policy based upon good international manners.

I think we would make a great mistake if we completely ignored another group in Japan that also has a great many reservations about this treaty, and to some extent expresses hostility toward the treaty.

In this morning's issue of the Washington Post another one of those great writings by the great Walter Lippmann was published, and because during the course of my remarks I shall have some comments to make on some of the premises contained in the Lippmann article, I ask unanimous consent that the entire article, entitled "Trouble in Japan," be printed at this point as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TROUBLE IN JAPAN

(By Walter Lippmann)

The cancellation of the President's visit to Japan, and his embarrassing experience in Okinawa, stems from the refusal in Washington to look squarely at the U–2 affair and its significance.

The capture of the U–2 and the way the incident was handled in Washington compromised gravely the whole circle of American bases from Norway through Turkey and Pakistan to Okinawa and Japan. When we confessed, and indeed boasted, that for 4 years we had been using these bases for a secret and illegal operation against the Soviet Union, our allies were morally and legally defenseless against the threats of the Soviet Union. A small and exposed nation is bound to take such threats seriously, and although the threats may have been blunted they were not removed by the President's renunciation of aerial espionage. Thus the effect of the U–2 was to undermine our whole system of encircling bases. For it focused

attention upon the fact that the bases had been secretly used for an operation which exposed the country containing the base to grave risk.

In the very days when the U–2 had become the occasion for Mr. Khrushchev's actions in Paris, the Kishi government was trying to have the new Japanese-American Treaty ratified by Parliament. This treaty grants to us the base right in Japan for at least 11 years. A less auspicious movement for railroading the treaty through the Parliament can be hardly imagined than was the moment in which the summit conference collapsed. But Mr. Kishi, who was fighting not only for the treaty but for his own political life, did railroad the treaty through the Parliament in the face of a very large volume of public disapproval, by no means confined to the Communists.

The President was then called upon to decide whether instead of traveling to Tokyo from Moscow, as originally planned, he would go to Tokyo anyway and would arrive there on the day when Mr. Kishi's coup for the treaty was consummated. The President decided to go to Tokyo, to go despite the fact that the U–2 and the collapse at the summit had aroused great popular fears about the American base. The President chose to go despite the fact that after his quarrel with Mr. Khrushchev, his visit to Japan had ceased to be conciliatory and had become defiant. He chose to go despite the fact that the timing of the visit enabled Mr. Kishi to exploit for his own political purposes the President of the United States.

This was a wrong decision. After the collapse of the summit the right decision would have been to cancel all visits, and to remain in Washington on the grounds that the world situation required the full attention of the President for the purpose of strengthening the national position. This would have been an answer to Mr. Khrushchev's vituperations. It would have done much to restore the shaken confidence of our allies. And it would have spared the President the humiliation in the Far East which has been inflicted upon him and his office.

It can be said that the wrong decision was taken without any strong protest and criticism in Congress or in the press. That is true. The opposition had been virtually silent when the Republicans and Senator JOHNSON cried out that it was unpatriotic to inquire seriously into the causes of the U–2 disaster.

So the President and his advisers had a free hand to take the decision about the Far East. Unfortunately for them and for the country, they showed the same kind of bad judgment which had caused them to fumble the U–2 affair. In both cases they ignored the well-known conventions and the old wisdom of the art of diplomacy. In both cases they judged the immediate situation not objectively but wishfully.

Thus, in the affair of the U–2 they abandoned the ancient convention which is that a government never avows responsibility for espionage, much less attempts to justify it. In the affair of the Tokyo visit they ignored the conventions which protect a state visit. One of these conventions is that a visit by the head of a state is a visit to the whole nation and not to a political head of the Government which happens to be in office. A state visit, therefore, should never be made to a country which is divided within itself on an issue in which the visiting head of state has a special interest. The very reasons which have been advanced on behalf of the visit are compelling arguments against it—that the treaty would fail if the President decided not to come to Tokyo and that Kishi would fall. This was a misuse of the institution of the state visit, and if the President and his advisors had known or had remembered the old rules of the diplomatic game, we would all be much better off today.

Furthermore, in their judgment of the immediate situation in the Far East and especially in Japan, they grossly under-estimated the impact on Asian popular opinion of the U–2 and the renewed quarrel with Moscow. There is no use deluding ourselves as Mr. Hagerty does, that the opposition to the treaty and to the President's visit was confined to a small minority of Communists incited and paid for by Peiping and Moscow. The preponderant opinion of any Asian country within the military reach of Russia and China is bound to be neutralist. When we urge them to be antineutralist, they respond by being anti-American, and it is a great error to act as if an antineutralist policy can rally popular support. In Tokyo mighty little has been heard recently from the alleged majority who are supposed to be for the treaty.

The treaty has nevertheless been ratified. But we must realize that we are not at the end of the story. It is a question whether the treaty can now be made to work against a mounting agitation. In fact, we have to ask ourselves whether a much greater disaster to our position in the Far East can be averted unless there is, as powerful Japanese newspapers are already demanding, a renegotiation of the treaty, and with it a reformulation of our Far Eastern policy.

Mr. MORSE. Mr. President, at a point of the article by Walter Lippmann we read the following:

> The treaty has nevertheless been ratified. But we must realize that we are not at the end of the story. It is a question whether the treaty can now be made to work against a mounting agitation. In fact, we have to ask ourselves whether a much greater disaster to our position in the Far East can be averted unless there is, as powerful Japanese newspapers are already demanding, a renegotiation of the treaty, and with it a reformulation of our Far Eastern policy.

Mr. President, I am greatly concerned about the fact that there is growing opposition in Japan in the non-Communist groups and among very substantial economic groups. I say most respectfully that we shall only have our heads in the sand if we blithely go forward in the ratification of this treaty on the basis of the assumption that all is well in United States-Japanese relations in Japan except our relations with Japanese Communists. I do not think anything could be further from the realities in Japan.

There are substantial leaders in the economy of Japan who are greatly concerned about this treaty and think that this treaty is a very unwise step to take on the part of Japan.

The Senator from Arkansas [Mr. FULBRIGHT] very rightly pointed out that within the Liberal Democratic Party in Japan, the Kishi party, there is a great power political play. Let us always keep in mind that power political play in the Democratic Party in Japan and that Kishi is the head of the ultra-conservative wing of the Liberal Democratic Party in Japan.

I always find it a matter of interest that so frequently we find the United States lined up on the side of the ultra-conservatives in the countries around the world in which we have so many international policy problems. Here again we have the so-called moderates and liberals in the Liberal Democratic Party in Japan against Kishi, and in my judgment they are going to throw him out.

In my judgment, when the election takes place in Japan in the not too distant future, the Liberal Democratic Party will beat the radicals. Let us pray that that becomes a reality. I believe they will beat the Communists, win the election, and, of course, if the Liberal Democratic Party wins, there will be a new Liberal Democrat as Prime Minister. Obviously he will not be Kishi because there is the power drive to which I referred within the Kishi party in Japan to make that party a more liberal party.

I say in passing that such development should be no new experience for us to understand in the United States. That is even true of my own party in the United States. It has reached a great point of crisis in Japanese politics.

I have been in Japan, too. I am not one of those who feels that because he has visited a country he is in an expert position to speak with authority upon the problems of a country he has visited. At least it does put one in a position to take note of his observations and to keep in mind the many conversations that he has had with leaders of a foreign country in regard to the internal problems of the country when he is in that country.

Nothing has happened in Japan that has surprised me since my visit to Japan, because businessmen, professional men, and politicians in Japan told me in conferences I had with them that Japanese politics would follow just about the course of action that they have followed. This treaty will not create a rosy, pro-American political climate in Japan, and if any Senator votes for the treaty this afternoon on the basis of that assumption, I wish to say most respectfully that in my opinion he is voting on the basis of a false assumption.

We hope Japan is on the march to greater and greater progress. In my judgment, the moderate, private-enterprise, economic, and political forces of Japan will prevail. I believe we should do everything we can to help strengthen that approach, because that is the approach of the political society for Japan based upon a system of government by law, as contrasted to a system of government by men, which always prevails when radical groups such as the Communist bloc or State Socialist bloc or other radical groups take over the government of a country, including, may I say, also fascist groups.

One of the first mental reservations we should make this afternoon is one in regard to the effect of this treaty upon pro-American feelings in Japan. It is my judgment that this treaty will not strengthen pro-American feelings in Japan. I think that for the time being, under our present foreign policy in the Pacific, it will help to strengthen the security of our country and the security of Japan because of the mutuality of agreement in regard to defense policies under the treaty.

But there is another reservation I would have the Senate consider this

afternoon as we ponder this treaty and come to vote upon it. When all is said and done, this treaty is but another structure in the containment policy of U.S. foreign policy. This is nothing but an extension of the containment policy.

I had hoped that even before now more people in our country and that more Members of Congress would have given recognition to the fact that our containment policy in the long run will not work. When I say it will not work, I mean it will not win the peace. This is one of the great issues in American foreign policy, about which too few people are doing very much thinking.

I believe that if we continue to build a foreign policy based upon the program of containment of the Russian-Red Chinese Communist threat, the end will be war, and inevitably so. Such a policy as this, based upon a bilateral relation between the United States and Japan will produce—what? It will produce a further strengthening of the arms race. I say to Senators, "You wait and see." I say that Senators should expect in future sessions of Congress proposals that will be made to strengthen the military containment implications of the pending Japanese Treaty.

There may be those who think that we can continue that containment policy, with an ever-growing increase in the nuclear armaments program, to produce permanent peace in the world. Those who think so have read some history that I have never read; obviously they have never read the history I have read. If the history of mankind teaches anything, it teaches that armament races which last very long are armament races that end in war.

Therefore, one of the mental reservations I have about the treaty is the reservation expressing my fear that I believe it will add to the armaments race and not increase the possibilities of diminishing the armaments race.

I will give my reason for that observation in a moment. I wish to stress the premise first, because it is one of the major premises of my analysis of the treaty and its implications in terms of future American history.

Mr. President, what we have here again is another pact, in this instance a bilateral pact, between two great powers in the world, pledged to come to each other's assistance in the case of attack. From what direction will the attack come if it comes? It can only come from Red China and Red Russia.

Once again we proceed with a military course of action, in which we make very clear to the Communist section of the world that "we are getting ourselves ready to take you on if you in turn make a mistake in judgment which results in increasing nuclear armament program, cause an accident or an incident or make a mistake, or if you in turn, in your ever-the dropping of the first nuclear bomb."

I would have Senators keep in mind that such information as we have seems to indicate very clearly that the probabilities are great that within the next 10 years Red China will be a nuclear power.

That is why I believe it is important, if we are to ratify treaties such as the one before us, that we should accelerate a program which seeks at least to lead our foreign policy down another road, a road which seeks to set up a world authority whereby the issues which threaten the peace of mankind will be settled, and not by a proposed program of military containment, but by a program which will result in the application of the rules of reason, rather than the jungle law of military force, to the problems that threaten the peace of the world. If we are to travel that road, we must travel it with many others.

So I move to the next mental reservation I have about the treaty. Why is this a bilateral treaty? Why are we being asked to ratify a treaty this afternoon which places upon the United States the tremendous military obligation and defense obligation the treaty assumes for us? Where are our allies in this treaty? Where are our friends in the world with respect to the treaty?

Why is it a treaty only between the United States and Japan? Could it possibly be that England, with Hong Kong, has no vital concern or interest in a treaty which is entered into between Japan and the United States? What about Canada, Australia, New Zealand, France, Italy, and all the other free nations of the world?

One of my mental reservations is that once again we see our allies in the background perfectly willing to let Uncle Sam do it—to paraphrase the old saying, "Let George do it." In this instance it is Uncle Sam who is asked to do it.

Therefore, I have been concerned about the bilateral nature of the treaty. If no one else will help, then I would not have my country shirk its responsibility to the meeting of the evergrowing Communist threat.

In seeking to find an answer to the question, "Where are our allies?" I went back into our documents. In fairness I believe the record should show this afternoon how it came about that we find ourselves in this bilateral relationship with Japan, although we sacrificed the lives of many American boys in World War II, which was participated in by other allies as well as by the United States. Of course, the war against Japan was not a war between the United States and Japan alone. When I say that, I do not detract one iota from the great contributions which other allies made to that war. Of course, it is true that the United States assumed the greatest burden of that part of World War II which involved war with Japan.

It is very interesting to note what happened at the close of that war. We spoke for our allies. We did not speak for our allies without their approval. However, when we came to enter into a treaty, when we came to determine the terms of a surrender policy, the interesting thing is that, in effect—and I know this is subject to modification as far as technicalities of international law are concerned, but I am putting it in language which I believe the public can understand—in effect, the Allies delegated to us the role of spokesman and negotiator for all the Allies.

We find it in many documents that followed World War II, and in negotiations and relations which developed between the Allies and Japan, through the spokesmanship of the United States of America. I could offer many exhibits to document the observation I have just made, but I shall not do so in view of the hour, except to call attention to a few documents which demonstrate what I mean. I simply say that anyone who wishes to be a student of this problem can find many official documents which show that in effect, if not formally, the Allies delegated to us that spokesmanship role and the negotiator role in behalf of the Allies—excluding Russia.

I digress to say that a very important piece of research needs to be done. As a former professor, I should like to recommend to the deans of the graduate schools in America that a doctorate thesis needs to be written on the differences in attitudes and actions between the Allies and Red Russia following World War II, in the treaty that brought an end to the war, and in the terms-of-surrender policy which was to prevail in Japan.

One of the most remarkable things to be found is that at that very time Russia, over and over again, served clear notice that she could not be relied upon as an ally. She was a nonparticipant in a good many of the negotiations with Japan and has remained so up to the very hour when I speak.

That is the main reason, as I find as I study the record and read the accounts of those who know all the background of the treaty with Japan, why the word "Formosa" is not even mentioned in the treaty with Japan. It is pretty well understood that from the standpoint of relations with Russia, it had better not be mentioned. So up to the very moment at which I speak, we still have suspended in international law, undetermined and in complete abeyance, the whole question of the sovereignty of Formosa. It is not touched in the first Japanese Treaty, and is not touched in this one either, please take note.

Does any Senator think he can tell us who has sovereign power over Formosa within the terms or the meaning of international sovereignty or international law? Not a nation in the world at this moment. Surely not the United States. No matter how much military control we exercise over Formosa, we do not have a scintilla of international law or sovereign right over Formosa.

Certainly not Chiang Kai-shek, no matter how much military backing we give him to keep him in power.

Certainly not Red China, and certainly not Japan. Yet it was Japan that last had any sovereign power over Formosa.

The sovereignty of Japan over Formosa was well recognized in international law prior to World War II. Japan got Formosa by conquest, but she met all the criteria over the years for the establishment of sovereign rights.

So we ought to keep in mind the fact that the question of Formosa and the Pescadores is still in the background, unsettled by any Eisenhower doctrine in the Formosa Strait, unsettled by any

use of American military might in the Formosa Strait. Here, we see, we have a problem which can be settled only by the rules of reason, not by nuclear bombers or jet fighters or hydrogen bombs, so far as international law is concerned.

Of course, the question can be settled by the exercise of jungle law, if it is willed to do so. In consequence, that part of the world, and subsequently all the rest of the world, would be thrust into a great nuclear holocaust.

I would have the Senate keep in mind, as we come to ratify the treaty, that here is an implication which does not arise from the problem simply because we vote to ratify the treaty. Therefore, I respectfully suggest that our allies cannot escape this problem, even though they remain silent at the present time, and even though they do not participate with us in this new treaty, but apparently are content to let what I respectfully recall an international fiction be extended once more into a treaty between the United States and Japan, as that international fiction was extended into the first treaty between the United States and Japan.

I am of the opinion that many years after all of us here are gone, history will record that the Allied Powers which fought World War II and conquered Japan evaded a very delicate and hot issue at the time the Japanese treaty was signed after World War II. I think history will probably record that it would have been in the best interest of peace and in the best interest of setting up an international order under which the rules of reason through international law could have been applied for the creation of a permanent system of peace in the world if all the Allies, including Russia, had gone to work for as many months, or possibly more than months—2 or 3 years—to try to iron out the difficulties. We should not forget that at that time we were working together in a common cause. At that time we might have created an Allied treaty with Japan, equally binding on Russia as well as on the United States and on our allies. I respectfully submit that our allies were bound by the spokesmanship of the United States in the negotiation of the Japanese treaty in 1951. They can be charged with a tacit understanding of giving their power of attorney to the United States in the negotiating of that treaty.

But where were they in connection with the negotiating of the treaty now before the Senate? The course of action which was followed in this instance was a completely bilateral one between the United States and Japan.

I am not one to pause longer than to take note of what has happened in history and to try to learn a lesson from it, as a guide to our future course of action. In other words, I am not one to cry over spilt milk. I ask myself, once the facts of a situation are presented to me: Where do we go from here? What I am saying is that following the defeat of Japan our allies passed to the United States the major responsibilities of negotiating a peace settlement with Japan.

As a documentation of our spokesmanship in behalf of our allies—that is, our true allies, in my judgment—I cite the postsurrender policy of Japan announced in a document as of that time dated September 6, 1945.

When I use the phrase "true allies," I repeat what I have said on other occasions; namely, that during World War II it was my public position that Red Russia was never an ally of ours; all she was was a country with a common enemy, fighting a common enemy. I had too many opportunities to make observations of incident after incident and evidence after evidence that clearly demonstrated that if Russia was an ally of ours, she was a very strange, peculiar, and novel ally, because I knew something about the shiploadings on the west coast and about the Russian ships which took away our lend-lease offerings to Russia and our military supplies to Russia; and I knew of the policies and restrictions and censorship and prohibitions against any official observation by representatives of our Government on the very ships on which those supplies were being loaded. In fact, in most instances it was impossible even to find out what the course of the ship was to be; and time and time again there was manifested anything but the attitude of an ally. All of us know that even in Russia itself, by means of the prohibitions the Russian Government imposed upon our forces that were inside Russia during the war, we had ample warning that we were dealing with a country and a government which had a common enemy, but was not a true ally.

When it came to the problem of determining the post-surrender policy for Japan, a very interesting document, dated September 6, 1945, was entered into. At the beginning it states:

This document is a statement of general initial policy relating to Japan after surrender. It has been approved by the President and distributed to the Supreme Commander for the Allied Powers and to appropriate United States departments and agencies for their guidance. It does not deal with all matters relating to the occupation of Japan requiring policy determinations. Such matters as are not included or are not fully covered herein have been or will be dealt with separately.

PART I—ULTIMATE OBJECTIVES

The ultimate objectives of the United States in regard to Japan, to which policies in the initial period must conform, are:

(a) To insure that Japan will not again become a menace to the United States or to the peace and security of the world.

(b) To bring about the eventual establishment of a peaceful and responsible government which will respect the rights of other states and will support the objectives of the United States as reflected in the ideals and principles of the Charter of the United Nations. The United States desires that this government should conform as closely as may be to principles of democratic self-government but it is not the responsibility of the Allied Powers to impose upon Japan any form of government not supported by the freely expressed will of the people.

These objectives will be achieved by the following principal means:

(a) Japan's sovereignty will be limited to the islands of Honshu, Hokkaido, Kyushu, Shikoku and such minor outlying islands as may be determined, in accordance with the Cairo Declaration and other agreements to which the United States is or may be a party.

(b) Japan will be completely disarmed and demilitarized. The authority of the militarists and the influence of militarism will be totally eliminated from her political, economic, and social life. Institutions expressive of the spirit of militarism and aggression will be vigorously suppressed.

(c) The Japanese people shall be encouraged to develop a desire for individual liberties and respect for fundamental human rights, particularly the freedoms of religion, assembly, speech, and the press. They shall also be encouraged to form democratic and representative organizations.

(d) The Japanese people shall be afforded opportunity to develop for themselves an economy which will permit the peacetime requirements of the population to be met.

Mr. President, this afternoon I would not have the Senate seek to ignore that military policy of surrender, which we imposed upon Japan.

We did a great job in imposing it, because we came to deal with the problem of demilitarization of Japan by way of obtaining educational acceptance by millions of the Japanese people. I believe history will also record that one of the greatest contributions made by the MacArthur administration in Japan was in getting an overwhelming majority of the Japanese people during that period of time to accept the philosophy of demilitarization and the historic fact that one of the great causes of Japan's problem, which led to World War II, insofar as Japan was concerned, was the military dictatorship which in effect had come to characterize the Japanese Government. Japan had come to be ruled and dominated by the military powers in Japan.

We did a remarkably good job in convincing millions of the Japanese people that that course of action must be reversed. In these articles of surrender policy we made very clear that we would impose that policy upon Japan, if necessary.

But the interesting thing is that we did not have to impose it by any expression of force. We stated it. We got the leaders who came into political power in Japan, following World War II, to accede to it; and it became Japanese policy. Today, it is deeply entrenched in the thinking of millions of the Japanese people who seek to help establish a world order of peace.

I wish to draw a line of distinction between two classes of Japanese citizenry. There is no doubt that the Japanese Communists, aided and abetted by Communist agents from Red China and Red Russia, play upon this policy for propaganda purposes. Mr. President, they will always do that, everywhere in the world. The sad thing which confronts us in regard to our attempts to win the peace and set up economic and political procedures which will strengthen the peace and strengthen freedom and help us expand a private enterprise economy in all the areas of the world where the fight for freedom has to be won, is that the Communist will come in and, with their wicked and lying and clever propaganda,

seek to use these very legitimate and desirable economic and political objectives to mislead the people of that country.

So, in Japan today, I am well satisfied, part of the Communist drive is to point out that the United States and the other allies took the position that Japan should be demilitarized, that military power was not to be restored; and the Communists make attacks—very unfair ones, at least from the standpoint of the thesis from which I argue this afternoon—upon this treaty, in that they allege that it constitutes a reversal of American policy, and that now the United States is seeking to build up another military class in Japan.

Mr. President, all of us know better than that; but we cannot escape the fact that the treaty will, to some extent, supply a false platform for Communists who so argue.

However, Mr. President, I am not basing my point on the attitude of the Communists in Japan. I am basing this argument on the attitude taken by a very large number of non-Communists, Communist-hating, freedom-loving Japanese in the professions, in business, in labor, and in politics.

A part of the struggle within the Liberal Democratic Party in Japan today against Kishi, on the part of some of the moderates in that party who seek an election and seek to overthrow Kishi and supplant him with another Prime Minister from the same party, but more liberal in point of view, is their fear that Japan is moving again in the direction of seeking to build up her military power and become in the Pacific again a military country.

Mr. President, I would that that could have been avoided. I think we ought to try to avoid it. I think if the approach had been an approach other than a bilateral approach, but an allied approach, with the Allies coming out from under cover, with the Allies ceasing to set up the United States as their spokesman in regard to the Pacific problem, the cause of peace for the future would have been much more enhanced than, I fear, it may be if this treaty is accepted as the sole answer to the approach toward communism in the Pacific.

Let us see what these articles, of September 6, 1945, have to say so far as they concern a surrender policy for Japan, have to say about military occupation, because we come to the next major point I want to mention, which was alluded to by Walter Lippmann in his column and by many other writers here in the United States in recent weeks as they have discussed in their editorials and in their columns the implications of the Japanese treaty.

This article of September 6, 1945, on the problem, reads as follows:

> There will be a military occupation of the Japanese home islands to carry into effect the surrender terms and further the achievement of the ultimate objectives stated above. The occupation shall have the character of an operation in behalf of the principal Allied Powers acting in the interests of the United Nations at war with Japan.

I repeat that sentence, Mr. President:

> The occupation shall have the character of an operation in behalf—

I emphasize the words "in behalf"—

> of the principal Allied Powers acting in the interests of the United Nations at war with Japan. For that reason, participation of the forces of other nations that have taken a leading part in the war against Japan will be welcomed and expected. The occupation forces will be under the command of a Supreme Commander designated by the United States.
>
> Although every effort will be made, by consultation and by constitution of appropriate official bodies, to establish policies for the conduct of the occupation and the control of Japan which will satisfy principal Allied Powers, in the event of any differences of opinion among them, the policies of the United States will govern.

That is the catch. That provision created the problem. That is the major point of my thesis in respect to this premise. That is the spilled milk, Mr. President. That was a great mistake which we made.

I am not in a position this afternoon to give an indication as to why that mistake was made. It is going to require a good deal of research and probably the passage of a lot of time for that research; but of one thing I am satisfied: Our country made a great mistake when we took that position so early that, in the event of any differences of opinion among the Allies, the policies of the United States will govern.

I hold to the point of view, and have expressed it on other occasions here on the floor of the Senate when other great documents were before us for ratification, that the greatest mistake of American foreign policy in the Pacific is that foreign policy in the Pacific is dominated by the Unted States.

So long as foreign policy in the Pacific is dominated by the United States, I think the cause of peace in the Pacific will be greatly jeopardized. Many persons do not like to hear that statement, but I am quite impersonal about it. I mean to be very objective and coldly realistic about it. I just do not think that the United States and Russia can build up and build up and build up, year after year, now with Red China becoming more and more of a major power, what has every evidence of two sides choosing up their forces, without their finally doing battle with each other.

That is why I regret that the treaty I shall vote for today—because I think it is more in the interest of my country to vote for it than to reject it—is a United States-Japanese treaty. It ought to be a Japanese-Allied treaty. It ought to be a treaty that is the result of a much greater stride toward the building up of a system of international justice through law than this treaty is.

When all is said and done, Mr. President, the essence of this treaty makes it a military treaty. I think the world should be done with military treaties. Oh, I know it cannot be done overnight; but my plea is a plea for the march of mankind in the opposite direction from military treaties, because of my very deep conviction that, if we continue for many more years adding military treaty on top of military treaty on top of military treaty, we shall be in a holocaust from which there will be no return. It will certainly be the end for the participant nations, and too many innocent, nonparticipating nations will get caught in the holocaust at last.

We are again confronted with the same old paradox. We must do those things which are necessary to make it clear to the Communist sector of the world that it has nothing to gain by an aggressive course of action against the free world. That is the chief justification given for the treaty. Senators may read the report and analyze the arguments. I do not see how anyone could escape the conclusion I present. This is a military treaty offered to give further notice to Russia that she has everything to lose and nothing to gain by an aggressive course of action.

But this does not further the cause of peaceful procedures for the settlement of disputes. The treaty does not even include our allies. No matter what happens under the treaty, Mr. President, they at least can say, "We were only parties to it by proxy. We were only parties to it by an extension of what was understood in 1945, that the United States spoke in behalf of the Allies."

But did we? Really, did we? What evidence do we have from England, France, Canada, Australia, New Zealand, Italy or any other ally that we really did speak for our allies? What tangible, concrete support have we had from our allies in regard to the solution of any of these problems of the Pacific? They are perfectly content to let us carry the burden. I wonder how content they will be if things go awry?

It is said, "Well, Mr. Senator, it is one thing to point that out, but what do you propose to do about it?" I have made proposals from time to time. For the RECORD, I shall summarize them again this afternoon as I bring this speech to a close.

I have one additional word to say about the attitude in Japan on the part of that type of substantial citizen we want on our side, who is very much puzzled about the treaty today, referred to again by the great Lippmann and other writers. We should not forget, Mr. President, that the treaty continues to a degree, American military occupation in Japan. If Senators do not like the word "occupation"—if they find that causes a little tension—then let us use another word. The treaty would authorize the maintaining of an American base or bases in Japan.

From the standpoint of the Japanese citizen in this much larger group, I fear, than some who have discussed the matter would have us believe, this amounts to foreign soldiers on Japanese soil. I do not care how serious is the threat of a vicious ideology such as communism in any part of the world, the maintaining of a foreign soldier on a country's soil automatically is a source of resentment. It has always been so, and I think it will forever be so.

There is great criticism even in the newspapers to which Lippmann refers in his article this morning. These newspapers are already proposing renegotiation of the treaty, although the U.S. Senate has not yet acted upon the resolution of ratification. There have been editorials on the part of non-Communist newspapers in Japan expressing this emotional attitude to which I have referred about American military personnel being kept on Japanese soil. I think the situation will get worse rather than better.

This leads me to comment on the point made by the Senator from Arkansas [Mr. MCCLELLAN] in his colloquy with the chairman of the committee [Mr. FULBRIGHT] concerning the duration of the treaty. I cannot reach the conclusion which was expressed on the floor of the Senate that there is any open end to the treaty, other than the 10-year end, with a year's notice.

Mr. LAUSCHE. Mr. President, will the Senator yield for a question?

Mr. MORSE. I yield.

Mr. LAUSCHE. If it is wrong for us to have our troops in Japan under a joint understanding between our country and Japan, what about the troops of the Soviet Union in the satellite nations of Poland, Hungary, Czechoslovakia, Rumania, Lithuania, Latvia, Estonia, and all the other captive nations?

Mr. MORSE. I think, from the standpoint of the promotion of world peace, both are indefensible.

Mr. LAUSCHE. Both of them?

Mr. MORSE. One is as indefensible as the other.

Mr. LAUSCHE. Is it not a fact that so long as the Soviet Union pursues the course it has pursued, for our own security we have no alternative to seeking alliances and bases which enable us to compete with them?

Mr. MORSE. This is not an adequate answer, and I shall attempt to give a more adequate answer in a moment, but I say, good naturedly, as a parent I never accepted the idea that my child should continue improper behavior simply because a neighbor's child was guilty of improper behavior. I always thought we had a neighborhood problem, and that the parents ought to get together and negotiate a peace settlement.

Mr. LAUSCHE. I agree with the Senator in that regard, but when there are thieves and bandits upon the highway the peaceloving citizen must discard his judgment that he can do without police and do without arms to protect himself.

Mr. MORSE. I have never proposed that. The Senator understands, I am not making an argument this afternoon for a non-defense policy on the part of the United States. I am making an argument this afternoon for joint action with our allies.

Mr. LAUSCHE. I think it would be wonderful.

Mr. MORSE. I am raising a question as to why we did not try to arrive at such an agreement. From the investigation I have made I have been left with the conclusion that no attempt was made to change the position to which we acceded in 1945, when we assumed the role of spokesman for the Allies. I think it was a mistake then. I think it is a greater mistake to continue it now, after we have had all the lessons to learn since 1945.

Mr. LAUSCHE. I think it would be remarkable if the major nations with whom we are allied, especially those who have interests in the Far East, would join with us in the treaty. I do not know why it was not done. Frankly, in meditating during the Senator's argument, I assumed there must be some good reasons. I do not know what the reasons are. Perhaps there are none at all. The argument of the Senator from Oregon was so potent in regard to the comfort one would find in knowledge that there were more than merely Japan and the United States as parties to this agreement, that I did meditate upon it and come to that conclusion.

Mr. MORSE. Honest men can differ as to the interpretation of the course of action which has been taken by our Government. But, in my judgment, ever since World War II, we have not made a really vigorous attempt to try to get Pacific problems first within the jurisdiction of the United Nations and, failing in that, at least get them within the common cooperative enterprise of the other allies acting with us.

I think the sad fact is that we have followed to a greater extent than we should, a U.S. unilateral course of action in the Pacific. I think it should be changed. We will not change it overnight or drastically, but I shall make certain suggestions before I take my seat that I think would be at least first steps toward that change and which would increase the chance, I think, of our avoiding what might very well be, if we continue to build up the armament race in the Pacific, a war in the Pacific.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. LAUSCHE. Returning to the thought which I originally expressed, I feel that in the face of the persistence of the Soviet penetration everywhere, and now within 100 miles of our shores, our country must try to develop allies among people who show a disposition to subscribe to the philosophy of liberty and democracy.

During the hearings I said to Secretary Herter that in my opinion, of all people in the Far East, the Japanese have shown a greater tendency to adopt our ways than had other people in that area.

This morning I saw a picture somewhere of little Korean boys in baseball uniforms. It may be that some of our basic thinking has penetrated into Korea.

Mr. MORSE. They love Indian suits, too.

Mr. LAUSCHE. That is correct. But I think by disposition Japan leans to the West. The treaty which we are considering today is more beneficial to our country than the treaty that we are abandoning if domination over a country is considered.

Mr. MORSE. I completely agree. I think it would be a matter of only a few years, anyway, when we would have had to abandon the other treaty, because I think if we had continued that practice of domination, we would have increased the danger of more and more Communist control in Japan, and there would be less likelihood of a Liberal Democratic Party, such as the Kishi party, winning the next election. Maybe they would not win the next election, but they might win two or three elections from now.

I think that is one of the strengths of the treaty. At least there is less military domination than previously existed.

I am worried, as I said, about the extent to which the treaty involves also the building up of some military power on the part of Japan itself, after we have done such a fine educational job in getting the Japanese people to reverse centuries of military philosophy and accept the notion of a demilitarized country.

Mr. LAUSCHE. I do not know whether it is generally understood, but the fact is that the treaty which we exacted as military conquerors imposed conditions upon the Japanese people that should not be imposed upon any dignified human beings.

Mr. MORSE. That is true, and yet it was a remarkably moderate and fair treaty in view of the public demand at the time. The Senator will remember—though it is so easy to forget—the attitude that prevailed in the United States following the Japanese war, because our boys had been subjected to some unbelievable atrocities, and the bitter feeling toward Japan and the people of Japan. It went beyond the Government of Japan; it went to the people of Japan.

Mr. LAUSCHE. That is correct.

Mr. MORSE. The feeling was very intense, and I felt that our Government was remarkably moderate in that treaty in view of what the emotional extremists at the time wanted us to exact from Japan.

Mr. LAUSCHE. I am glad the Senator agrees with me that if we wanted to be tyrannical and to remain conquerors, we would insist upon the terms of the treaty of 1951, which was finally approved in 1952. Those terms would have probably precipitated great difficulty, and instead of being beneficial, they would have been harmful to us.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CASE of South Dakota. Mr. President, the Senator from South Dakota has listened with great interest to most of the debate, and he thinks that all this debate will be found useful in the days, weeks, and years ahead. I found myself intrigued by several of the observations that were made.

First, I refer to two or three of the observations which were just made in the exchange between the Senator from Ohio and the Senator from Oregon with respect to the retention of some of the features of the original 1951 treaty. I think history will demonstrate that any treaty must be lived with if we are to have self-respect between the engaging powers. If there were provisions in the

1951 treaty which, even if it was a moderate treaty under the temper of the times, were provisions which were somewhat onerous, let us say, to the Japanese, there would have to come a time when they would have to be changed.

The ratification of a treaty is a formal act. Living with a treaty is something else. It is much like the marriage vow. Marriage can be entered into as a formal contract, but the marriage is something that must be lived with day after day and in the years ahead. If it does not provide for mutual self-respect, or if in the carrying out of the contract there is no mutual self-respect, the contract will eventually fall.

It seems to me that it is in the interest of both Japan and the United States to have a treaty which each country can honor and retain its self-respect.

The treaty with Japan in 1951 was moderate in relation to the temper of the times, and to remind ourselves of how moderate it was all we need do is to compare it with the unconditional surrender which was imposed upon Germany earlier during World War II. The treaty with Japan, it always seemed to me, was better considered in that respect than the extreme conditions which were written into the unconditional surrender idea.

With respect to the importance of our maintaining troops or bases in Japan, and as to the justification that we should maintain such troops because Russia has troops in some of our satellite countries, we ought to remember, it seems to me, the principle of human psychology to which the Senator from Oregon has alluded when he said that over a period of time any country resents having foreign troops within its borders.

Mr. MORSE. Particularly a free people.

Mr. CASE of South Dakota. Particularly a free people. Even in countries which have surrendered or lost some of their freedom. I have no doubt that there are germs of resentment in the so-called satellite countries of Communist Russia, and that the real seeds of freedom will grow in those countries as that resentment increases.

Mr. MORSE. If the Senator will yield for one interruption—and I want him to continue with his discourse—the interesting thing about this to me is that our own American intelligence, working in those countries, is counting on what the Senator envisages. That happens to be one of the things we are counting on to eventually help overthrow these totalitarian governments. In a sort of negative way we hope it will prove the point we are making, that the resentment will be the seed of the revolt against the foreign government.

Mr. CASE of South Dakota. To the extent that the occupying power pushes these countries down or tightens the screws in them, the greater the resentment and the greater the possibility of an eventual explosion. The placing of foreign troops in any country where there is self-respect and a desire for freedom must in the long run be regarded as a liability to the country that tries to keep the troops there.

The only intelligent approach, it seems to me, is an attempt to respect, as conditions permit, the desire for liberty, the desire for self-respect, and the encouragement of democratic processes in the occupied country.

I am glad that the treaty does contain a 10-year provision, rather than an open end. I am glad that the Japanese, after 10 years, if they wish, can serve a 1-year notice and say the treaty will end after 1 year.

As the Japanese people consider this treaty, they will regard it as something in their favor. I regret as much as anyone can the situation which has developed in Japan in the last few weeks. I was in Japan over New Years Day. When I was there I had a talk with Ambassador MacArthur about the scope of the treaty. That was only 3 weeks before he came to Washington for the signing of the treaty. I came to Japan through southeast Asia, through Taiwan and Hong Kong. I thought I had obtained some impressions on the developing attitudes in the Far East.

The Senator from Oregon makes a point with regard to the way in which we count upon ferment in the satellite countries or occupied countries or depressed countries to be the yeast which will eventually lead to the overthrow of oppression.

In Hong Kong and in Taipei, the people who discuss these matters with visiting Members of Congress point to the fact that people in Red China are commencing to react against the pressure the present government of Red China places upon them. They point to reports of the long hours that people are compelled to work, on the way in which the policy of the present Chinese Government runs counter to the traditional respect for families, and the traditional respect for ancestors, and the way in which the present government of China is destroying traditional Chinese life. All these things are seized upon by our friends in Hong Kong and Taipei as evidence of the fact that eventually the policy of Mao must come to disaster in China.

We seize upon it. Therefore, in the long run oppression will bring about an explosion. I have no doubt that it is the aim of the Communist world to try to cause as much trouble as they can, to fish in as many troubled waters as they can. I believe the Communist world would like to neutralize Japan. I believe they would like to defeat in some manner the effective operation of the proposed treaty.

One cannot travel through Okinawa without realizing there are pressures at work to try to reduce the influence of the United States in the Ryukyu Islands. All of those things are at work. It is unfortunate not merely for the United States but also for Japan that these elements were given an opportunity to fan feelings into flame at this particular time.

On second thought I believe that the great majority of the Japanese people will see that the treaty is in the interest of their country, because it gives them a shield, because it gives them the protection of the United States against possible aggression. They are not in a position to defend themselves today. With the limitations that were placed upon the development of their military forces, what air force they have, what navy they have, and what ground forces they have must all be considered in terms of self-defense. It is a self-defense air arm. It is a self-defense navy. It is a self-defense ground unit. They must all be considered in terms of self-defense under the treaty. I do not believe that the number of troops—they cannot even be called troops—would be utterly inadequate to defend Japan against Communist aggression.

I am also convinced in my own mind that, given a little time, the Japanese people will thank God for the fact that there is in effect a treaty which gives them the shield of the United States.

Some questions were raised about the advantage of the treaty to the United States. It is asked what advantage is there to the United States to have this mutual security treaty in effect, when the United States assumes the big burden and cost of providing defense for Japan. What does it provide for us? That question can be answered simply by saying that if we were not there and aggression took place tomorrow, we would want to get there in the shortest time possible. Jet planes would not be fast enough. We are already there, with a deployment up and down the 1,500 miles of the islands that constitute the whole Japanese area there. We are already there. That is of some benefit to the United States under the pressures that exist.

In addition to that, I believe the treaty has other benefits. It makes possible a better exchange of cultural relations, better trade relationships, and things of that sort. We are in much better position today, if we act wisely with our personnel, than if we did not have them there.

I am glad that there is a termination date for the treaty, so that as these things grow, changes can be made. Perhaps the treaty will be succeeded by a treaty which will be more in the economic field. However, for the time being, I believe the treaty is a treaty of mutual interest. The Japanese people, on second thought, will be just as glad that it is in effect. I suspect that a majority of them are in favor of it.

There is one other point I wished to comment on, and this is where I take a little issue with my friend from Oregon. The Senator from Oregon suggests that it would be desirable if we had some allies with us in the treaty. First, I wish to point out—and I am sure that the Senator from Oregon is even more familiar with this than I am—that the treaty does repeatedly refer to the United Nations.

Mr. MORSE. I am going to quote that. I have that point marked for discussion.

Mr. CASE of South Dakota. It provides:

> Any armed attack * * * shall be immediately reported to the Security Council of the United Nations.

In the first article of the treaty there is provided:

> The parties undertake, as is set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means.

In the next sentence, the United Nations is mentioned again. It reads:

> The parties will endeavor in concert with other peace-loving countries to strengthen the United Nations so that its mission of maintaining international peace and security may be discharged more effectively.

Therefore, there is recognition in the treaty of the United Nations and of our allies.

The point at which I differ particularly with the Senator from Oregon is in wishing that there were other parties to the treaties. I do not suggest that Russia herself should have been made a party to the treaty. I think it is an oversimplification to make that statement. Yet it meets my point. I am glad Russia is not a party to the treaty, because I would not want Tokyo today to present a problem akin to that which Berlin presents. I do not see how we could have Russia come into partnership in the treaty without taking a chance that we would have a divided Tokyo, a Tokyo divided into sectors, as Berlin was divided into sectors, and perhaps be confronted with the problem of access and other problems which we find in our relationships with Berlin.

I thought Russia got considerably more out of the Japanese war than she put into it, for only a couple of days' participation, which was precipitated by the action which we took in August with the bomb. Russia hurried and rushed in, then asked for the fulfillment of the Yalta Treaty, and expected to take the Manchurian Railway, the Kuriles, and Sakhalin. I thought she got more out of the war than she put into it.

Thus, so far as making Russia a party to this particular treaty is concerned, I would not favor that. I do not regret that Russia is not a party to it.

At the same time, having said that—and I have already spoken longer than I said I would, to deliver myself of a few thoughts which have occurred to me as I listened to the debate this afternoon—I feel very deeply that it is impossible for the United States, on the one hand, and Russia, on the other, to continue the arms race without expecting that some day something will happen by miscalculation, by accident, or by some impetus or movement to cause a holocaust or catastrophe to come to the world.

I have believed that we should, at every possible opportunity, attempt to find ways to lessen the tension which exists in the world. That is why I have wholeheartedly supported the President in his efforts to find some way to lessen the tensions of the cold war.

I have some feelings, some convictions, concerning the way in which certain actions have been handled. I shall not take the time to dwell on them now. I recognize that the U–2 incident and the events which have followed have shaken our entire oversea posture. In some remarks on the floor before the "blowup" at Paris, I observed that I thought the U–2 incident meant we had to reexamine our military posture overseas. I said then that I thought it raised questions about the ratification of the Japanese treaty. I suggested that some clarification, at least, would be needed; and that if the situation became a little shaken in Japan, repercussions would be felt throughout the Far East. I think we shall have to take cognizance of that.

We shall have to recognize that the small countries of the world, the countries in which we have bases, do not want to become the first battleground in a nuclear war. We cannot expect small powers, up against the borders of the Communist world, to approve of our using bases in their countries as launching points for reconnaissance machines, or whatever they may be called. Such countries are simply too close to Russia. The inevitable result for them would be to be ground between the hammer and the anvil.

In recognizing that fact, I think we should reexamine our entire posture overseas, and place our emphasis on the development of a defense capability which will fall more upon our own self-reliance. That was the basis on which I supported, the other day, some of the changes in the defense appropriation bill. The B–70, the carrier, and the modernization of the Army, I thought, were movements in the direction of improving our own military posture. They are means by which we can depend upon ourselves. I thought the action which was taken was justified in the light of the present situation.

I have strayed a bit from the discussion of the treaty; but I believe what I have said is related to it, because the incidents which have led to the situation which we find expressed in the very regrettable incidents in Japan have their repercussions in our total security position.

So far as the treaty is concerned, I certainly intend to support it. I think it is in our interest to do so. I think it is likewise in the interest of the Japanese to do so. If it were not a mutually beneficial treaty, it could not live or survive, in any event. However, it is a mutually beneficial treaty; therefore, I shall vote for it. At the same time, I shall hope we will not consider that this treaty is the end of the matter. We shall have to live with this contract afterward; and day by day, week by week, month by month, and year by year we must seek to make the relationships between the United States and Japan a rich, fruitful experience, beneficial to us all.

Mr. MORSE. Mr. President, I deeply appreciate the contribution which the distinguished Senator from South Dakota has made to my discussion of the treaty this afternoon. Many of the reasons he expressed, up to the point where he expressed certain differences with points of view which I have expressed, are the same reasons which caused me to reach the decision I reached in the Committee on Foreign Relations to support the treaty. That is why I said at the beginning of my speech, in effect, that I thought the benefits of the treaty, read from its four corners, outweigh its disadvantages. I think the treaty has some advantages which I am seeking to develop this afternoon.

I shall comment, when I reach that point in my speech, concerning the factor of the United Nations, which I think is involved. I shall also comment concerning my view about what we ought to try to do to carry a peace offensive against Russia with respect to the treaty. It is not my view that, in doing so, we would set up Tokyo as another Berlin. I hope we will not make the same mistake twice. We must promptly take advantage of the opportunity which we have, and which I think we must use, to carry a peace offensive against Russia in respect to this treaty We must not give up the opportunity, which I think is ours to get our allies to play a greater part in solving the problems in the Pacific.

Furthermore we must not give up the opportunity to bring the United Nations into the picture. This we certainly have not done.

Mr. MANSFIELD. Mr. President, will the Senator from Oregon, who has already been so generous with his time, yield?

Mr. MORSE. I am happy to yield to the Senator from Montana.

Mr. MANSFIELD. First, I commend the Senator from Oregon for going into such great detail to express so frankly the views he has expressed. I think it is very worthwhile to put all the facts we can into the RECORD.

I may state again that I favor the treaty and shall vote for it, but that does not, by any means, mean that it is a perfect instrument. Far from it.

From the Japanese point of view, it is far better than the 1951 agreement.

According to the testimony of Assistant Secretary of State for Far Eastern Affairs J. Graham Parsons, as it appears on page 12 of the hearings before the Committee on Foreign Relations on Executive E, 86th Congress, 2d session, on January 7, 1960, the old treaty did not reflect the Japanese interest in the following respects:

> The United States was permitted to use bases in Japan without consulting the Japanese Government for actions in other parts of the Far East that might involve Japan in a war irrespective of her own desires.
>
> Second, the old treaty permitted the United States to bring into Japan whatever weapons she chose regardless of the wishes of the Japanese.
>
> Third, the old treaty provided for the intervention of U.S. forces in large-scale international disturbances in Japan.
>
> Then it provided for a U.S. veto over any arrangements for the entry of the forces of a third power into Japan. And finally, as has been stated, there were no provisions for the termination of the treaty.

I should say that from the point of view of the United States, the new treaty, the one under consideration now, creates problems and raises questions, as the Senator from Oregon is so ably bringing out. According to testimony at the hearings, which the Senator from Oregon attended, a question arose as to what would happen if an opposition party or a party opposed to Mr. Kishi came to power. The question was whether it would be possible for the new party to

disavow the treaty now under consideration, if it is ratified. I believe the answer was, "Yes, it could."

I think we ought to point out that even though this is a 10-year treaty, with a 1-year period added, to make it an 11-year treaty, during which time either side can give notice of withdrawing from the treaty, in my opinion it would be possible at any time, after the treaty shall be ratified, for renegotiations to take place in view of changed conditions.

One way would be voluntary action on the part of the two Governments.

Another way would be if perhaps some party different from the one which Kishi represents came into power, and had different ideas—not that I am advocating that; I am simply raising the possibility.

Both the Senator from Oregon and the Senator from Ohio [Mr. LAUSCHE] will recall that the State Department and the Department of Defense consider the treaty satisfactory from a security point of view. They informed us that the treaty has been 16 months in the making, and that it represents a reassessment of our position vis-a-vis Japan, and, by the same token, the position of Japan vis-a-vis the United States. It represents the achievement of equality to a degree on the part of Japan, and the acquiescence of Japan to our use of the bases there, on conditions agreeable to the Japanese.

I hope that as time passes, Japan—as the Senator from Oregon has said—will more and more take care of her own defense. It would be on that basis that we could begin to consider the possibility of withdrawal from Japan.

I am sure the same reasoning would apply to the Bonins and to Okinawa, in which the "residual sovereignty" of Japan is recognized. The use of the term "residual sovereignty" recognizes the fact that when real peace and stability are achieved, these areas will, as a matter of course and as a matter of right, be returned to Japan.

In view of developments to date, in my opinion it is now too late to consider a reservation, because we have reached the "take it or leave it" stage. The treaty is better for Japan than it is for the United States; but the treay does keep Japan and the United States together; it does keep Japan allied with the West; it does recognize a mutual dependence—which is very important in any consideration—of peace and of stability in the Pacific.

I wished to make these remarks while I had a chance to do so, especially in view of the fine, outstanding speech being made by the Senator from Oregon.

I desire to point out that some of these questions were raised in the committee. For instance, the question of the legality of the ratification of the treaty by the lower house of the Japanese Parliament was raised. We were assured by Secretary Herter that that was entirely legal, insofar as we know. The question of questionability was raised; and Secretary Herter replied, "I do not think it is questionable. It has been questioned; but a quorum was present, and all the normal legislative procedures were complied with."

Question was also raised at that time about the Ryukyu Islands and the Bonin Islands, as well as other matters very pertinent to the debate now under way.

I desire to thank the Senator from Oregon for his courtesy, and I wish to assure him that I appreciate his kindness in giving me this time.

If I may, I now ask unanimous consent that the colloquy between Secretary Herter and me, at the time of the holding of the 1-day hearing on the treaty, be printed at this point in the RECORD.

Mr. MORSE. Certainly.

The PRESIDING OFFICER. Is there objection?

There being no objection, the excerpt from the hearing was ordered to be printed in the RECORD, as follows:

SIGNERS OF THE TREATY

Senator MANSFIELD. This treaty now before the Senate Committee on Foreign Relations was initiated by the Kishi government?

Secretary HERTER. Yes.

Senator MANSFIELD. This treaty was initiated or signed by Prime Minister Kishi and President Eisenhower on January 19, last?

Secretary HERTER. It was not signed by President Eisenhower. I signed and—Mr. Parsons and I signed and Ambassador MacArthur signed on behalf of the United States.

STATUS OF THE BONIN AND RYUKYU ISLANDS

Senator MANSFIELD. Now, the Bonins and the Ryukyus will be returned to Japan once a stable peace has been achieved in the Far Eastern area?

Secretary HERTER. Excuse me?

Senator MANSFIELD. The Bonins and the Ryukyus will be returned to Japan once peace and stability has been achieved in the Far Eastern area. Is that the intention of the U.S. Government?

Secretary HERTER. That has always been the interpretation of the phrase, "residual sovereignty."

DURATION OF THE TREATY

Senator MANSFIELD. Why is there a 10-year, really an 11-year, treaty under consideration rather than a standard 1-year treaty?

Secretary HERTER. Well, when as extensive rights as base rights that were given to us were envisaged a longer term treaty seemed to be to our mutual advantage so that there wouldn't be a sudden shift that might take place perhaps because of a political gesture of some kind. This would insure that for at least a 10-year period this mutual relationship could continue.

CIRCUMSTANCES OF APPROVAL OF TREATY BY LOWER HOUSE OF JAPANESE DIET

Senator MANSFIELD. Under what conditions did the Japanese Lower House approve the treaty last month?

Secretary HERTER. That—I tried to describe that rather briefly. The conditions were very disturbed in that the Japanese Socialist Party tried to keep the speaker of the House from getting to his desk for 6 hours or so; they kept him a prisoner.

Finally, the police were called in and the Socialists were removed forcibly in order to allow the speaker to get into the Diet chamber. At that time, the ratification took place by very considerable over the majority required.

Senator MANSFIELD. Was that ratification legal?

Secretary HERTER. Entirely legal so far as we know.

Senator MANSFIELD. Was it questionable?

Secretary HERTER. I dont think it was questionable. It has been questioned, but there was a quorum present and all the normal legislative procedures had been complied with.

Senator MANSFIELD. The reason I raise the question is that it is my understanding that the Socialists stayed away en masse and did not participate in this vote.

Secretary HERTER. That was a voluntary abstention on their part.

Senator MANSFIELD. Did the one Communist member in the Lower House appear at that time, or did he likewise stay away?

Secretary HERTER. I am not sure, but it is my impression he stayed away, too. He stayed away.

EFFECT ON TREATY OF A CHANGE IN THE JAPANESE GOVERNMENT

Senator MANSFIELD. If the Kishi government were replaced by a neutralist government, let us say, and this treaty was in force, do you think the subsequent government following Kishi would adhere to the agreement entered into between the two countries?

Secretary HERTER. Well, that is entirely a matter of speculation as to whether a successor government would abide by its international obligations or not.

IMPORTANCE OF THE TREATY

Senator MANSFIELD. Mr. Chairman, I have no more questions, but I want to make one brief statement. I think this is a good treaty. I think it is beneficial to both Japan and the United States, and it is my belief that the peace of the Pacific may well be determined by the continued partnership, understanding, and unity of these two countries which occupy such an important position in the Pacific area.

That is all, Mr. Chairman.

Mr. MORSE. Mr. President, I wish to thank the Senator from Montana very much for his contribution to this discussion.

As he knows, in the committee, I joined him in the views he expressed there; and I took the position that I would vote for the treaty because I think its benefits far outweigh its disadvantages.

On the other hand, I believe that some of the disadvantages and some of the implications of the treaty need to be pointed out during the course of the debate on ratification. That is why I am doing so today.

Mr. LAUSCHE. Mr. President——

Mr. MORSE. Mr. President, before I yield to my good friend, the Senator from Ohio, I ask unanimous consent to have printed in the RECORD, at the end of my remarks, the full text of the Japanese Treaty of 1951, because I believe the Senator from Ohio is about to discuss certain portions of it, and I believe the entire treaty should be in the RECORD, so those who read the RECORD will be able to refer to it.

The PRESIDING OFFICER (Mr. MCGEE in the chair). Is there objection? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. LAUSCHE. Mr. President——

Mr. MORSE. I yield.

Mr. LAUSCHE. The Senator from Montana has enumerated five respects in which we have made concessions to Japan in the proposed new treaty, as compared with the treaty of 1952.

The mysterious aspect of the whole confused situation of mob rule in Tokyo becomes rather pointed when we realize that from the time when the new treaty was proposed, the Communists began to oppose it. For 15 months they have been propagandizing, provoking disorders, and stimulating opposition to a treaty which

admittedly is better for Japan than the 1952 treaty.

Therefore, it is proper to ask why the Soviets have provoked disorder and have urged rejection of this treaty, which any reasonable person must concede is better than the 1952 treaty.

At the risk of repeating too much, I shall again enumerate the five provisions of the treaty which the Senator from Montana identified a moment ago.

The 1952 treaty, exacted by a conqueror from a conquered people, provided, among other things, the following:

First, the United States was permitted to use bases in Japan, without consulting the Japanese Government, for actions in other parts of the Far East that might involve Japan in war, irrespective of her own desires.

Mr. President, certainly the good, peace-loving American people would not wish to impose such a condition, even upon a conquered people.

Second, the old treaty, which is still in existence, permitted the United States to bring into Japan whatever weapons the United States might choose, regardless of the wishes of the Japanese.

In that connection, I make the same observation—namely, that we are not blood-lusty people; we do not wish to exact from the Japanese people the concession that we can bring into their land thermonuclear or nuclear weapons, without allowing the Japanese people to say anything about that.

Third, the 1952 treaty provided for intervention by U.S. forces in any large-scale international disturbances in Japan. We declared that the Japanese people shall be a free and sovereign people, but the 1952 treaty provided that our forces would be allowed to enter Japan and to quell or otherwise handle any disturbances which might occur there.

Fourth, the 1952 treaty provided for a U.S. veto over any arrangements for the entry into Japan of the forces of a third power.

The Senator from Oregon has observed that we said, "You shall deal with no one but us. You shall allow only our forces to be with you." That amounts to an exaction by a conqueror, not an effort by a fellow nation to seek peace and dignity in the world.

Fifth, the 1952 treaty had no terminal date; it was to continue indefinitely, with these rights vested in the United States.

The point I am trying to make is the mystery of the Communists stimulating Japanese youth and socialists into demonstrations against our Government when we made concessions which would never have been made by the Soviet, and would have been made only by a people of our character, who were seeking peace.

I thank the Senator from Oregon very much for yielding.

Mr. MORSE. I thank the Senator from Ohio very much. I think it is important to have in the RECORD the material which the Senator from Ohio has put in it.

Mr. President, I shall not yield further until I finish my remarks. I think I can conclude in 15 minutes if I am not interrupted. Then, if any Senator wishes to ask me a question when I am through, I shall be very glad to yield. There are two or three loose ends I wish to tie up which need to be tied up in view of the discussion during the interruption. Then I shall return to my speech in the order in which I had intended to give it.

Relating to the period of the treaty for 10 years, with a year's notification for its termination at the end of 11 years, the Senator from Montana [Mr. MANSFIELD], has said there is no doubt about the fact that, voluntarily, the two countries could negotiate for a modification of the treaty or the ending of the treaty during the 10-year period. However, the fact is they did agree to a period of 10 years, and that puts the initiator at a great disadvantage if it seeks to bring to an end a treaty to which it has put its signature.

Therefore, as I expressed in some of our discussions in committee, I think it would have been better if there had been a specific clause in the treaty that would have provided further opportunity on the part of either party to request negotiations at the end of the second year, or at the end of any year thereafter. I think such a provision would have eliminated some of the propaganda advantage that I understand both the Communist forces and the moderate forces in Japan are making use of in their attack on the treaty—that this is an attempt on the part of Kishi to tie up Japan in a straitjacket for 10 years under this treaty. A little change in the language, I think, could have avoided that propaganda advantage on the part of those who are making it. But, as the Senator from Montana has said, it became too late to seek to improve the treaty by reservation, and it was very much a take-it-or-leave-it proposition. I recognize that fact, and I, therefore, make these points only by way of a record of the debate on the treaty here in the Senate.

Then, too, some mention has been made as to the effect of the U–2 incident. I do not propose to discuss it other than to point out that I think Walter Lippmann again is unanswerably right when he comments on the effect of the U–2 incident on the uprisings and demonstrations in Japan. I think the incident was unfortunate from the very beginning. I have not only said publicly, but I am perfectly willing to repeat today, I do not think we should have used any U–2 plane over any country at any time, because, in my judgment, under international law, it constitutes aggression. I think we are guilty of it. I think we shall be guilty of it in all history as a nation that resorted to aggression by use of a U–2 plane.

I do not think we have heard the last of its psychological effects on our friends in the world. Our allies are remarkably silent about it. Their silence is attributable, I believe, to the fact that they cannot say anything good about it. They know any attempt upon their part to come right out and support the United States use of the U–2 plane flights for espionage purposes cannot be justified under international comity. I think it was a stupid, shortsighted mistake on the part of our Government. But, it has happened, and again I say, there is no sense in crying over spilt milk. At this point we must ask ourselves, "Where do we go from here?"

As Walter Lippmann has pointed out, one of the effects of the U–2 incident among our friends, where we have bases, is that they are much concerned because they cannot be too sure—and who can be sure?—as to whether or not the Russians will completely lose their heads and, by a madman's mistake, carry out the threat of their air marshal, which seems to have been underwritten by Khrushchev, that, if they have any evidence that a plane leaves any base in order to fly over Russia, they will fire on that base. I think that threat has provided a propaganda advantage which is a part of the great cost of the U–2 incident. So much for that. It is a mistake we must live with. I think it lends support to the argument I shall make, before I close, as to the importance of our trying to get our allies to join with us in some United Nations action in the great cause of trying to win the peace before it is too late.

Before I turn to the 1951 treaty and make the comments I was going to make on it, I wish to make another point as to the matter of tying in the ratification of this treaty.

The Senator from Montana [Mr. MANSFIELD] spoke about what would be the effect of a Japanese election in which the Liberal Democratic Party was thrown out, or the Liberal Democratic Party won and there were some change of attitude on the part of the winning group in regard to the treaty.

It has bothered me, Mr. President, as to whether or not we ought to ratify the treaty until after the Japanese election. I have decided to go along with ratification now, although I think a very good argument could be made for recognizing that the treaty is at least one of the major issues involved in the political struggle going on inside Japan at the present time. Undoubtedly this struggle will lead to an election, and the treaty will be a subject matter for discussion in that election.

I do not know, and I do not see how anyone can be sure, what the political effect in Japan in respect to that election will be by reason of our ratifying it in advance of the election. I am willing, however, on this occasion to take the advice of our Ambassador in Tokyo, Mr. MacArthur. I am glad there was reference made by the Senator from South Dakota [Mr. CASE] to Ambassador MacArthur. There have been writings recently that have seemed to be somewhat critical of our Ambassador, and I think this word of commendation needs to be spoken in the midst of this debate. I think Ambassador MacArthur has been doing a remarkable job in Tokyo.

I think he has been a very good "good will" Ambassador for the United States

in Tokyo. I base that upon my own observations when I was in Japan, as to the stature he has attained and the confidence the leaders of Japan have in him. I do not share some of the criticism to the effect that he should not have advised the President to come to Japan. After all, that was obviously the wish of the Japanese Government. When Ambassador MacArthur was giving that advice to our President, he was doing it upon the basis of what he believed to be good assurances that no untoward incidents which could not be controlled by the Japanese Government would occur, and his feeling that the overall good will the President would create in Tokyo would be a pretty good check on the progress which Communist propaganda seemed to be making.

It all did not work out that way, but I do not think there is any basis in fact for the criticism of the Ambassador for the course of action or the policies followed in respect to it.

Mr. President, I return to the thesis which I was discussing before I yielded to the Senator from South Dakota, the Senator from Montana and the Senator from Ohio.

I have already received permission to have printed in the RECORD the Peace Treaty of September 8, 1951, but I wish to read the first paragraph or two. Then I shall make a brief comment.

Whereas the Allied Powers and Japan are resolved that henceforth their relations shall be those of nations which, as sovereign equals, cooperate in friendly association to promote their common welfare and to maintain international peace and security, and are therefore desirous of concluding a Treaty of Peace which will settle questions still outstanding as a result of the existence of a state of war between them;

Whereas Japan for its part declares its intention to apply for membership in the United Nations and in all circumstances to conform to the principles of the Charter of the United Nations; to strive to realize the objectives of the Universal Declaration of Human Rights; to seek to create within Japan conditions of stability and well-being as defined in Articles 55 and 56 of the Charter of the United Nations and already initiated by post-surrender Japanese legislation; and in public and private trade and commerce to conform to internationally accepted fair practices;

Whereas the Allied Powers welcome the intentions of Japan set out in the foregoing paragraph;

The Allied Powers and Japan have therefore determined to conclude the present Treaty of Peace, and have accordingly appointed the—

and so on. I cite these paragraphs because they bear on the point I made earlier in my speech that after World War II, we really functioned as the chief spokesman and negotiator for the Allied Powers. We find that also true with respect to the Security Treaty between the United States and Japan of September 8, 1951.

Mr. President, I ask unanimous consent to have the Security Treaty printed in the CONGRESSIONAL RECORD following the Treaty of Peace with Japan, at the conclusion of my remarks.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

(See exhibit 2.)

Mr. MORSE. All through our negotiations since World War II, Mr. President, we have been the chief spokesman for the allies and, in effect, we have been granted power of attorney by the Allied Nations in dealing with Japan.

With that as the background, I think it is all the more important that greater attention should have been paid to my point that the Allied Powers should have been specifically drawn into the matter of negotiating a new treaty with Japan and should have played a very active part.

What about the possible role of Russia? It would have been a pretty good test to see what Russia's demands would have been, or what Russia's attitude would have been, as to whether she would have been willing to cooperate at all. I happen to hold to the point of view that we ought always to keep the Soviet Union on the spot in the United Nations and before the people of the world in the matter of the course of action she is willing to follow in promoting peace. I happen to think that for propaganda purposes, for so-called psychological purposes in relation to the people in the underdeveloped areas of the world, we lost another opportunity to demonstrate again who is seeking to prevent the development of a permanent system of peace in the world.

I think it is probably true that Russia would not have gone along. If she did not, or if she took a position which was completely unacceptable, as she took at Berlin—which ought to have been considered unacceptable at the time—we would not have had to consummate any treaty with her as a party thereto. But instead of doing that, we have repeated which I think is a mistake in foreign policy. We have entered into another bilateral arrangement, and we have entered into it really, in spite of what I shall quote from the treaty in a moment, without the participation of the United Nations. I think we have to stop that course of action. I think we have to stop our bilateral pacts, because I fear that our bilateral pacts are increasing the danger of war.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. MORSE. I wish to finish my remarks. I have been yielding for a long time. I do not wish to wear out those Senators who are not present, who may say, "Is that fellow still talking?"

This would have been a relatively short speech if I had not yielded so much to my colleagues. I wish to finish my main speech, and then I shall be glad to yield to the Senator from Louisiana.

I think this bilateral course of action upon our part is having a tendency to speed up the nuclear armaments race. I think this is going to help speed it up. I think we need a slowdown in it. We need, as I said before, to keep ourselves so strong that Russia will not dare to attack. But we have to bring our allies into the program with us.

It is true, as the Senator from South Dakota pointed out in his colloquy—and as Senators will find stated in the committee report on page 5—that under article VII the two parties disavow any possible conflict between the terms of the treaty and the Charter of the United Nations, which they acknowledge as a higher authority. But that is only a bilateral agreement between Japan and the United States. There is no participation of the United Nations in that determination.

There is also cited the primary responsibility of the United Nations for the maintenance of international peace and security, but that does not bring the United Nations into the treaty.

All this amounts to, after all, is that Japan and the United States are bowing respectfully to the United Nations in language form. In fact, in no way is the United Nations brought into the treaty as a party.

Articles VIII and IX define the means by which the pending treaty supersedes the existing agreement.

Article X declares that the treaty shall remain in force until such time as the two parties are persuaded that the maintenance of peace and security within the Japan area is within the capability of the United Nations, and decide to terminate it.

The interesting thing is that even in language form Japan and the United States recognize the desirability to make a bow of courtesy to the United Nations.

I would have them do more than that. I would have them use the United Nations. I would at least try to make the United Nations a party to any international agreement which involves military defense, military security, or military agreement which is entered into henceforth. I happen to believe it is important that as rapidly as we can—and it will take years—we get the United Nations to supersede the nations in maintaining the security of the world.

One of the things I do not like about this treaty is that, in my judgment, it does not strengthen that approach to world peace. It is a long way away. Instead of American military power pledging itself under this treaty to maintain peace in the Pacific, we ought to move as rapidly as we can to the point that we can place in United Nations the responsibility for maintaining peace in the Pacific through United Nations forces, and not U.S. forces.

Again I say that if we do not come to that point, there will be no permanent peace. The countries which make these bilateral military pacts, of which this is one, and similar ones entered into by the Communist segment of the world, will finally engage in contests and the holocaust will be on.

This is not a new position for the Senator from Oregon. For years in the Senate I have either opposed such pacts or I have raised my voice in trying to point out the implications and the mental reservations we ought to have in regard to such pacts, as I am doing this afternoon in regard to this one.

In 1955 I fought the Formosa doctrine and the Formosa resolution, and I am glad I did so. I proposed then a United Nations trusteeship over the Formosa Straits and, because the United Nations had no police force, I included a pledge

then that the United States guarantee to the United Nations that we would defend Formosa and the Pescadores from a Communist blood bath or from any attack by the Communists. I think it is unfortunate that Formosa today is not under a United Nations trusteeship, because in my judgment Formosa today is one of the great potential threats to the peace of the world. I pray to my God that we will not have to experience that threat once Red China becomes a nuclear power.

That is why I have said so many times I think we have only about 10 years to win this peace. I think we have only about 10 years to avoid a nuclear war. I believe if this mad, immoral, nuclear armament race continues for another 10 years, the holocaust will be inevitable. That is why I prefer a United Nations treaty to a bilateral treaty this afternoon or, rather, a United Nations compact whereby the United Nations would assume the responsibility for maintaining the peace in the Pacific area.

Of course, that means we must have a program that will set up a workable arrangement whereby the United Nations will have the international police force that will make it possible to maintain the peace. It means something else, too. It means that in the 10-year period we must find, with the reasoning power that God gave man, a basis for setting up an international judicial system, the decisions of which would be enforced by the United Nations, so that we shall not be confronted with all the implications of a military pact which, no matter what one says about it, means that it carries with it the potentiality that Japan and the United States may possibly find themselves in armed combat against Red China and Red Russia in that area of Asia and the Pacific.

These are some of the reservations I thought we ought to take note of as we come to vote for the treaty this afternoon. I am going to vote for it, but I hope that within the 10-year period we shall be able to carry out the procedure that the Senator from Montana [Mr. MANSFIELD] suggested is inherent in this language, namely, that the parties themselves voluntarily agree to negotiate a new understanding. I hope that within that 10-year period we can negotiate with Japan a scrapping of this treaty along with the scrapping of other military pacts, because we will have been able to attain, through the United Nations, an agreement and the procedures to enforce such agreement that will make forever unnecessary this type of a military pact.

I go to the United Nations this fall as a delegate of the Senate in association with my dear friend from Vermont [Mr. AIKEN], and under the leadership of our Ambassador in the United Nations, Henry Cabot Lodge. If the treaty is confirmed, I shall do what I can within the framework of American policy to try to strengthen the judicial articles of the United Nations Charter to the end that in our time we can make a constructive contribution to the establishment of a system of international justice through law, for which the great Arthur Vandenberg so eloquently pleaded in the Senate in a series of historic speeches he made before his untimely death. I would call attention to his plea again this afternoon.

There is no hope for permanent peace, and in my judgment there is no hope for the survival of America, Western civilization, and Russian civilization unless the great powers of the world in the next 10 years put into force a practice and system of international justice through law, enforced not by Russia, not by the United States, not by any combination of nations working by way of military pacts outside of the United Nations, but by the United Nations through the enforcement procedures that were placed in it.

I yield the floor.

EXHIBIT 1

TREATY OF PEACE, SEPTEMBER 8, 1951 [1]

Whereas the Allied Powers and Japan are resolved that henceforth their relations shall be those of nations which, as sovereign equals, cooperate in friendly association to promote their common welfare and to maintain international peace and security, and are therefore desirous of concluding a Treaty of Peace which will settle questions still outstanding as a result of the existence of a state of war between them;

Whereas Japan for its part declares its intention to apply for membership in the United Nations and in all circumstances to conform to the principles of the Charter of the United Nations; to strive to realize the objectives of the Universal Declaration of Human Rights; to seek to create within Japan conditions of stability and well-being as defined in Articles 55 and 56 of the Charter of the United Nations and already initiated by post-surrender Japanese legislation; and in public and private trade and commerce to conform to internationally accepted fair practices;

Whereas the Allied Powers welcome the intentions of Japan set out in the foregoing paragraph;

The Allied Powers and Japan have therefore determined to conclude the present Treaty of Peace, and have accordingly appointed the undersigned Plenipotentiaries, who, after presentation of their full powers, found in good and due form, have agreed on the following provisions:

CHAPTER I

Peace

Article 1

(a) The state of war between Japan and each of the Allied Powers is terminated as from the date on which the present Treaty comes into force between Japan and the Allied Power concerned as provided for in Article 23.

(b) The Allied Powers recognize the full sovereignty of the Japanese people over Japan and its territorial waters.

CHAPTER II

Territory

Article 2

(a) Japan, recognizing the independence of Korea, renounces all right, title and claim to Korea, including the islands of Quelpart, Port Hamilton and Dagelet.

(b) Japan renounces all right, title and claim to Formosa and the Pescadores.

(c) Japan renounces all right, title and claim to the Kurile Islands, and to that portion of Sakhalin and the islands adjacent to it over which Japan acquired sovereignty as a consequence of the Treaty of Portsmouth of September 5, 1905.[2]

(d) Japan renounces all right, title and claim in connection with the League of Nations Mandate System, and accepts the action of the United Nations Security Council of April 2, 1947, extending the trusteeship system to the Pacific Islands formerly under mandate to Japan.[3]

(e) Japan renounces all claim to any right or title to or interest in connection with any part of the Antarctic area, whether deriving from the activities of Japanese nationals or otherwise.

(f) Japan renounces all right, title and claim to the Spratly Islands and to the Paracel Islands.

Article 3

Japan will concur in any proposal of the United States to the United Nations to place under its trusteeship system, with the United States as the sole administering authority, Nansei Shoto south of 29° north latitude (including the Ryukyu Islands and the Daito Islands), Nanpo Shoto south of Sofu Gan (including the Bonin Islands, Rosario Island and the Volcano Islands) and Parece Vela and Marcus Island.[4] Pending the making of such a proposal and affirmative action thereon, the United States will have the right to exercise all and any powers of administration, legislation and jurisdiction over the territory and inhabitants of these islands, including their territorial waters.

Article 4

(a) Subject to the provisions of paragraph (b) of this Article, the disposition of property of Japan and of its nationals in the areas referred to in Article 2, and their claims, including debts, against the authorities presently administering such areas and the residents (including juridical persons) thereof, and the disposition in Japan of property of such authorities and residents, and of claims, including debts, of such authorities and residents against Japan and its nationals, shall be the subject of special arrangements between Japan and such authorities. The property of any of the Allied Powers or its nationals in the areas referred to in Article 2 shall, insofar as this has not already been done, be returned by the administering authority in the condition in which it now exists. (The term nationals whenever used in the present Treaty includes juridical persons.)

(b) Japan recognizes the validity of dispositions of property of Japan and Japanese nationals made by or pursuant to directives of the United States Military Government in any of the areas referred to in Articles 2 and 3.

(c) Japanese owned submarine cables connecting Japan with territory removed from Japanese control pursuant to the present Treaty shall be equally divided, Japan re-

[1] TIAS 2490; 3 UST, pt. 3, p. 3169. Ratification advised by the Senate, Mar. 20, 1952, subject to a declaration (see infra); ratified by the President, Apr. 15, 1952; entered into force, Apr. 28, 1952.

[2] Foreign Relations of the United States, 1905, pp. 824–828.

[3] TIAS 1665; 61 Stat., pt. 3, p. 3301.

[4] The United States was designated as the administering authority of all trust territories formerly administered by Japan under mandate of the League of Nations by a resolution adopted by the U.N. Security Council, Apr. 2, 1947 ("A Decade of American Foreign Policy," pp. 1031–1035). All of the territories referred to here in article 3 have remained under United States jurisdiction and outside of the U.N. trusteeship system with a view to their eventual return to Japanese sovereignty. The Amami Oshima group of the Ryukyu Islands reverted to Japanese sovereignty by the terms of a United States-Japanese agreement signed Dec. 24, 1953 (TIAS 2895; 4 UST, pt. 2, p. 2912). See infra, p. 2430.

taining the Japanese terminal and adjoining half of the cable, and the detached territory the remainder of the cable and connecting terminal facilities.

CHAPTER III

Security

Article 5

(a) Japan accepts the obligations set forth in Article 2 of the Charter of the United Nations, and in particular the obligations.

(i) to settle its international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered;

(ii) to refrain in its international relations from the threat or use of force against the territorial integrity or political independence of any State or in any other manner inconsistent with the Purposes of the United Nations;

(iii) to give the United Nations every assistance in any action it takes in accordance with the Charter and to refrain from giving assistance to any State against which the United Nations may take preventive or enforcement action.

(b) The Allied Powers confirm that they will be guided by the principles of Article 2 of the Charter of the United Nations in their relations with Japan.

(c) The Allied Powers for their part recognize that Japan as a sovereign nation possesses the inherent right of individual or collective self-defense referred to in Article 51 of the Charter of the United Nations and that Japan may voluntarily enter into collective security arrangements.

Article 6

(a) All occupation forces of the Allied Powers shall be withdrawn from Japan as soon as possible after the coming into force of the present Treaty, and in any case not later than 90 days thereafter. Nothing in this provision shall, however, prevent the stationing or retention of foreign armed forces in Japanese territory under or in consequence of any bilateral or multilateral agreements which have been or may be made between one or more of the Allied Powers, on the one hand, and Japan on the other.[5]

(b) The provisions of Article 9 of the Potsdam Proclamation of July 26, 1945,[6] dealing with the return of Japanese military forces to their homes, to the extent not already completed, will be carried out.

(c) All Japanese property for which compensation has not already been paid, which was supplied for the use of the occupation forces and which remains in the possession of those forces at the time of the coming into force of the present Treaty, shall be returned to the Japanese Government within the same 90 days unless other arrangements are made by mutual agreement.

CHAPTER IV

Political and economic clauses

Article 7

(a) Each of the Allied Powers, within one year after the present Treaty has come into force between it and Japan, will notify Japan which of its prewar bilateral treaties or conventions with Japan it wishes to continue in force or revive, and any treaties or conventions so notified shall continue in force or be revived subject only to such amendments as may be necessary to ensure conformity with the present Treaty.[7] The treaties and conventions so notified shall be considered as having been continued in force or revived three months after the date of notification and shall be registered with the Secretariat of the United Nations. All such treaties and conventions as to which Japan is not so notified shall be regarded as abrogated.

(b) Any notification made under paragraph (a) of this Article may except from the operation or revival of a treaty or convention any territory for the international relations of which the notifying Power is responsible, until three months after the date on which notice is given to Japan that such exception shall cease to apply.

Article 8

(a) Japan will recognize the full force of all treaties now or hereafter concluded by the Allied Powers for terminating the state of war initiated on September 1, 1939, as well as any other arrangements by the Allied Powers for or in connection with the restoration of peace. Japan also accepts the arrangments made for terminating the former League of Nations and Permanent Court of International Justice.

(b) Japan renounces all such rights and interests as it may derive from being a signatory power of the Conventions of St. Germain-en-Laye of September 10, 1919[8] and the Straits Agreements of Montreux of July 20, 1936,[9] and from Article 16 of the Treaty of Peace with Turkey signed at Lausanne on July 24, 1923.[10]

(c) Japan renounces all rights, title and interests acquired under and is discharged from all obligations resulting from, the Agreement between Germany and the Creditor Powers of January 20, 1930, and its Annexes, including the Trust Agreement, dated May 17, 1930;[11] the Convention of January 20, 1930, respecting the Bank for International Settlements;[12] and the Statutes of the Bank for International Settlements.[13] Japan will notify to the Ministry of Foreign Affairs in Paris within six months of the first coming into force of the present Treaty its renunciation of the rights, title and interests referred to in this paragraph.

Article 9

Japan will enter promptly into negotiations with the Allied Powers so desiring for the conclusion of bilateral and multilateral agreements providing for the regulation or limitation of fishing and the conservation and development of fisheries on the high seas.[14]

Article 10

Japan renounces all special rights and interests in China, including all benefits and privileges resulting from the provisions of the final Protocol signed at Peking on September 7, 1901,[15] and all annexes, notes and documents supplementary thereto, and agrees to the abrogation in respect to Japan of the said protocol, annexes, notes and documents.

Article 11

Japan accepts the judgments of the International Military Tribunal for the Far East[16] and of other Allied War Crimes Courts both within and outside Japan, and will carry out the sentences imposed thereby upon Japanese nationals imprisoned in Japan. The power to grant clemency, to reduce sentences and to parole with respect to such prisoners may not be exercised except on the decision of the Government or Governments which imposed the sentence in each instance, and on the recommendation of Japan. In the case of persons sentenced by the International Military Tribunal for the Far East, such power may not be exercised except on the decision of a majority of the Governments represented on the Tribunal, and on the recommendation of Japan.

Article 12

(a) Japan declares its readiness promptly to enter into negotiations for the conclusion with each of the Allied Powers of treaties or agreements to place their trading, maritime and other commercial relations on a stable and friendly basis.[17]

(b) Pending the conclusion of the relevant treaty or agreement, Japan will, during a period of four years from the first coming into force of the present Treaty

(1) accord to each of the Allied Powers, its nationals, products and vessels

(i) most-favored-nation treatment with respect to customs duties, charges, restrictions and other regulations on or in connection with the importation and exportation of goods;

(ii) national treatment with respect to shipping, navigation and imported goods, and with respect to natural and juridical persons and their interests—such treatment to include all matters pertaining to the levying and collection of taxes, access to the courts, the making and performance of contracts, rights to property (tangible and intangible), participation in juridical entities constituted under Japanese law, and generally the conduct of all kinds of business and professional activities;

(2) ensure that external purchases and sales of Japanese state trading enterprises shall be based solely on commercial considerations.

(c) In respect to any matter, however, Japan shall be obliged to accord to an Allied Power national treatment, or most-favored-nation treatment, only to the extent that the Allied Power concerned accords Japan national treatment or most-favored-nation treatment, as the case may be, in respect to the same matter. The reciprocity envisaged in the foregoing sentence shall be determined, in the case of products, vessels and juridical entities of, and persons domiciled in, any non-metropolitan territory of an Allied Power, and in the case of juridical entities of, and persons domiciled in, any state or province of an Allied Power having a federal government, by reference to the treatment accorded to Japan in such territory, state or province.

(d) In the application of this Article, a discriminatory measure shall not be considered to derogate from the grant of national or most-favored-nation treatment, as the case may be, if such measure is based on an

[17] See Treaty of Friendship, Commerce, and Navigation, Protocol and Exchange of Notes of Aug. 29, 1953, United States and Japan, signed Apr. 2, 1953; TIAS 2863 (4 UST 2863).

exception customarily provided for in the commercial treaties of the party applying it, or on the need to safeguard that party's external financial position or balance of payments (except in respect to shipping and navigation), or on the need to maintain its essential security interests, and provided such measure is proportionate to the circumstances and not applied in an arbitrary or unreasonable manner.

(e) Japan's obligations under this Article shall not be affected by the exercise of any Allied rights under Article 14 of the present Treaty; nor shall the provisions of this Article be understood as limiting the undertakings assumed by Japan by virtue of Article 15 of the Treaty.

Article 13

(a) Japan will enter into negotiations with any of the Allied Powers, promptly upon the request of such Power or Powers, for the conclusion of bilateral or multilateral agreements relating to international civil air transport.

(b) Pending the conclusion of such agreement or agreements, Japan will, during a period of four years from the first coming into force of the present Treaty, extend to such Power treatment not less favorable with respect to air-traffic rights and privileges than those exercised by any such Powers at the date of such coming into force, and will accord complete equality of opportunity in respect to the operation and development of air services.

(c) Pending its becoming a party to the Convention on International Civil Aviation [18] in accordance with Article 93 thereof, Japan will give effect to the provisions of that Convention applicable to the international navigation of aircraft, and will give effect to the standards, practices and procedures adopted as annexes to the Convention in accordance with the terms of the Convention.

CHAPTER V

Claims and property

Article 14

(a) It is recognized that Japan should pay reparations to the Allied Powers for the damage and suffering caused by it during the war. Nevertheless it is also recognized that the resources of Japan are not presently sufficient, if it is to maintain a viable economy, to make complete reparation for all such damage and suffering and at the same time meet its other obligations.

Therefore,

1. Japan will promptly enter into negotiations with Allied Powers so desiring, whose present territories were occupied by Japanese forces and damaged by Japan, with a view to assisting to compensate those countries for the cost of repairing the damage done, by making available the services of the Japanese people in production, salvaging and other work for the Allied Powers in question. Such arrangements shall avoid the imposition of additional liabilities on other Allied Powers, and, where the manufacturing of raw materials is called for, they shall be supplied by the Allied Powers in question, so as not to throw any foreign exchange burden upon Japan.

2. (I) Subject to the provisions of subparagraph (II) below, each of the Allied Powers shall have the right to seize, retain, liquidate or otherwise dispose of all property, rights and interests of

(a) Japan and Japanese nationals,

(b) persons acting for or on behalf of Japan or Japanese nationals, and

(c) entities owned or controlled by Japan or Japanese nationals,

which on the first coming into force of the present Treaty were subject to its jurisdiction. The property, rights and interests specified in this subparagraph shall include those now blocked, vested or in the possession or under the control of enemy property authorities of Allied Powers, which belonged to, or were held or managed on behalf of, any of the persons or entities mentioned in (a), (b) or (c) above at the time such assets came under the controls of such authorities.

(II) The following shall be excepted from the right specified in sub-paragraph (I) above:

(i) property of Japanese natural persons who during the war resided with the permission of the Government concerned in the territory of one of the Allied Powers, other than territory occupied by Japan, except property subjected to restrictions during the war and not released from such restrictions as of the date of the first coming into force of the present Treaty:

(ii) all real property, furniture and fixtures owned by the Government of Japan and used for diplomatic or consular purposes, and all personal furniture and furnishings and other private property not of an investment nature which was normally necessary for the carrying out of diplomatic and consular functions, owned by Japanese diplomatic and consular personnel;

(iii) property belonging to religious bodies or private charitable institutions and used exclusively for religious or charitable purposes;

(iv) property, rights and interests which have come within its jurisdiction in consequence of the resumption of trade and financial relations subsequent to September 2, 1945, between the country concerned and Japan, except such as have resulted from transactions contrary to the laws of the Allied Power concerned;

(v) obligations of Japan or Japanese nationals, any right, title or interest in tangible property located in Japan, interests in enterprises organized under the laws of Japan, or any paper evidence thereof; provided that this exception shall only apply to obligations of Japan and its nationals expressed in Japanese currency.

(III) Property referred to in exceptions (i) through (v) above shall be returned subject to reasonable expenses for its preservation and administration. If any such property has been liquidated the proceeds shall be returned instead.

(IV) The right to seize, retain, liquidate or otherwise dispose of property as provided in subparagraph (I) above shall be exercised in accordance with the laws of the Allied Power concerned, and the owner shall have only such rights as may be given him by those laws.

(V) The Allied Powers agree to deal with Japanese trademarks and literary and artistic property rights on a basis as favorable to Japan as circumstances ruling in each country will permit.

(b) Except as otherwise provided in the present treaty, the Allied Powers waive all reparations claims of the Allied Powers, other claims of the Allied Powers and their nationals arising out of any actions taken by Japan and its nationals in the course of the prosecution of the war, and claims of the Allied Powers for direct military costs of occupation.

Article 15

(a) Upon application made within nine months of the coming into force of the present Treaty between Japan and the Allied Power concerned, Japan will, within six months of the date of such application, return the property, tangible and intangible, and all rights or interests of any kind in Japan of each Allied Power and its nationals which was within Japan at any time between December 7, 1941, and September 2, 1945, unless the owner has freely disposed thereof without duress or fraud. Such property shall be returned free of all encumbrances and charges to which it may have become subject because of the war, and without any charges for its return. Property whose return is not applied for by or on behalf of the owner or by his Government within the prescribed period may be disposed of by the Japanese Government as it may determine. In cases where such property was within Japan on December 7, 1941, and cannot be returned or has suffered injury or damage as a result of the war, compensation will be made on terms not less favorable than the terms provided in the draft Allied Powers Property Compensation Law approved by the Japanese Cabinet on July 13, 1951.[19]

(b) With respect to industrial property rights impaired during the war, Japan will continue to accord to the Allied Powers and their nationals benefits no less than those heretofore accorded by Cabinet Orders No. 309 effective September 1, 1949, No. 12 effective January 28, 1950, and No. 9 effective February 1, 1950,[20] all as now amended, provided such nationals have applied for such benefits within the time limits prescribed therein.

(c) (i) Japan acknowledges that the literary and artistic property rights which existed in Japan on December 6, 1941, in respect to the published and unpublished works of the Allied Powers and their nationals have continued in force since that date, and recognizes those rights which have arisen, or but for the war would have arisen, in Japan since that date, by the operation of any conventions and agreements to which Japan was a party on that date, irrespective of whether or not such conventions or agreements were abrogated or suspended upon or since the outbreak of war by the domestic law of Japan or of the Allied Power concerned.

(ii) Without the need for application by the proprietor of the right and without the payment of any fee or compliance with any other formality, the period from December 7, 1941, until the coming into force of the present Treaty between Japan and the Allied Power concerned shall be excluded from the running of the normal term of such rights; and such period, with an additional period of six months, shall be excluded from the time within which a literary work must be translated into Japanese in order to obtain translating rights in Japan.

Article 16

As an expression of its desire to indemnify those members of the armed forces of the Allied Powers who suffered undue hardships while prisoners of war of Japan, Japan will transfer its assets and those of its nationals in countries which were neutral during the war, or which were at war with any of the Allied Powers, or, at its option, the equivalent of such assets, to the International Committee of the Red Cross which shall liquidate such assets and distribute the resultant fund to appropriate national agencies, for the benefit of former prisoners of war and their families on such basis as it may determine to be equitable. The categories of assets described in Article 14(a)2(II) (ii) through (v) of the present Treaty shall be excepted from transfer, as well as assets of Japanese natural persons not residents of Japan on the first coming into force of the Treaty. It is equally understood that the transfer provision of this Article has no application to

[18] Convention of Dec. 7, 1944 (TIAS 1591; 61 Stat., pt. 2, p. 1180). (Excerpts in "A Decade of American Foreign Policy," pp. 311–318.)

[19] Text in the Department of State Bulletin, Sept. 10, 1951, pp. 429–432.

[20] See the "Third Report on the Activities of the Far Eastern Commission, December 24, 1948–June 30, 1950"; ibid., Aug. 21, 1950, pp. 288–293.

the 19,770 shares in the Bank for International Settlements presently owned by Japanese financial institutions.

Article 17

(a) Upon the request of any of the Allied Powers, the Japanese Government shall review and revise in conformity with international law any decision or order of the Japanese Prize Courts in cases involving ownership rights of nationals of that Allied Power and shall supply copies of all documents comprising the records of these cases, including the decisions taken and orders issued. In any case in which such review or revision shows that restoration is due, the provisions of Article 15 shall apply to the property concerned.

(b) The Japanese Government shall take the necessary measures to enable nationals of any of the Allied Powers at any time within one year from the coming into force of the present Treaty between Japan and the Allied Power concerned to submit to the appropriate Japanese authorities for review any judgment given by a Japanese court between December 7, 1941, and such coming into force, in any proceedings in which any such national was unable to make adequate presentation of his case either as plaintiff or defendant. The Japanese Government shall provide that, where the national has suffered injury by reason of any such judgment, he shall be restored in the position in which he was before the judgment was given or shall be afforded such relief as may be just and equitable in the circumstances.

Article 18

(a) It is recognized that the intervention of the state of war has not affected the obligation to pay pecuniary debts arising out of obligations and contracts (including those in respect of bonds) which existed and rights which were acquired before the existence of a state of war, and which are due by the Government or nationals of Japan to the Government or nationals of one of the Allied Powers, or are due by the Government or nationals of one of the Allied Powers to the Government or nationals of Japan. The intervention of a state of war shall equally not be regarded as affecting the obligation to consider on their merits claims for loss or damage to property or for personal injury or death which arose before the existence of a state of war, and which may be presented or re-presented by the Government of one of the Allied Powers to the Government of Japan, or by the Government of Japan to any of the Governments of the Allied Powers. The provisions of this paragraph are without prejudice to the rights conferred by Article 14.

(b) Japan affirms its liability for the prewar external debt of the Japanese State and for debts of corporate bodies subsequently declared to be liabilities of the Japanese State, and expresses its intention to enter into negotiations at an early date with its creditors with respect to the resumption of payments on those debts; to encourage negotiations in respect to other prewar claims and obligations; and to facilitate the transfer of sums accordingly.

Article 19

(a) Japan waives all claims of Japan and its nationals against the Allied Powers and their nationals arising out of the war or out of actions taken because of the existence of a state of war, and waives all claims arising from the presence, operations or actions of forces or authorities of any of the Allied Powers in Japanese territory prior to the coming into force of the present Treaty.

(b) The foregoing waiver includes any claims arising out of actions taken by any of the Allied Powers with respect to Japanese ships between September 1, 1939, and the coming into force of the present Treaty, as well as any claims and debts arising in respect to Japanese prisoners of war and civilian internees in the hands of the Allied Powers, but does not include Japanese claims specifically recognized in the laws of any Allied Power enacted since September 2, 1945.

(c) Subject to reciprocal renunciation, the Japanese Government also renounces all claims (including debts) against Germany and German nationals on behalf of the Japanese Government and Japanese nationals, including intergovernmental claims and claims for loss or damage sustained during the war, but excepting (a) claims in respect of contracts entered into and rights acquired before September 1, 1939, and (b) claims arising out of trade and financial relations between Japan and Germany after September 2, 1945. Such renunciation shall not prejudice actions taken in accordance with Articles 16 and 20 of the present Treaty.

(d) Japan recognizes the validity of all acts and omissions done during the period of occupation under or in consequence of directives of the occupation authorities or authorized by Japanese law at that time, and will take no action subjecting Allied nationals to civil or criminal liability arising out of such acts or omissions.

Article 20

Japan will take all necessary measures to ensure such disposition of German assets in Japan as has been or may be determined by those powers entitled under the Protocol of the proceedings of the Berlin Conference of 1945 [21] to dispose of those assets, and pending the final disposition of such assets will be responsible for the conservation and administration thereof.

Article 21

Notwithstanding the provisions of Article 25 of the present Treaty, China shall be entitled to the benefits of Articles 10 and 14 (a) 2; and Korea to the benefits of Articles 2, 4, 9 and 12 of the present Treaty.

CHAPTER VI

Settlement of disputes

Article 22

If in the opinion of any Party to the present Treaty there has arisen a dispute concerning the interpretation or execution of the Treaty, which is not settled by reference to a special claims tribunal or by other agreed means, the dispute shall, at the request of any party thereto, be referred for decision to the International Court of Justice. Japan and those Allied Powers which are not already parties to the Statute of the International Court of Justice [22] will deposit with the Registrar of the Court, at the time of their respective ratifications of the present Treaty, and in conformity with the resolution of the United Nations Security Council, dated October 15, 1946,[23] a general declaration accepting the jurisdiction, without special agreement, of the Court generally in respect to all disputes of the character referred to in this Article.[24]

CHAPTER VII

Final clauses

Article 23

(a) The present Treaty shall be ratified by the States which sign it, including Japan, and will come into force for all the States which have then ratified it, when instruments of ratification have been deposited by Japan and by a majority, including the United States of America as the principal occupying Power, of the following States, namely Australia, Canada, Ceylon, France, Indonesia, the Kingdom of the Netherlands, New Zealand, Pakistan, the Republic of the Philippines, the United Kingdom of Great Britain and Northern Ireland, and the United States of America.[25] The present Treaty shall come into force for each State which subsequently ratifies it, on the date of the deposit of its instrument of ratification.[26]

(b) If the Treaty has not come into force within nine months after the date of the deposit of Japan's ratification, any State which has ratified it may bring the Treaty into force between itself and Japan by a notification to that effect given to the Governments of Japan and the United States of America not later than three years after the date of deposit of Japan's ratification.

Article 24

All instruments of ratification shall be deposited with the Government of the United States of America which will notify all the signatory States of each such deposit, of the date of the coming into force of the Treaty under paragraph (a) of Article 23, and of any notifications made under paragraph (b) of Article 23.

Article 25

For the purposes of the present Treaty the Allied Powers shall be the States at war with Japan, or any State which previously formed a part of the territory of a State named in Article 23, provided that in each case the State concerned has signed and ratified the Treaty.[27] Subject to the provisions of Article 21, the present Treaty shall not confer any rights, titles or benefits on any State which is not an Allied Power as herein defined; nor shall any right, title or interest of Japan be deemed to be diminished or prejudiced by any provision of the Treaty in favor of a State which is not an Allied Power as so defined.

Article 26

Japan will be prepared to conclude with any State which signed or adhered to the United Nations Declaration of January 1, 1942,[28] and which is at war with Japan, or with any State which previously formed a part of the territory of a State named in Article 23, which is not a signatory of the present Treaty, a bilateral Treaty of Peace on

[25] The treaty entered into force Apr. 28, 1952, following the deposits of instruments of ratification by Japan (Nov. 28, 1951), the United Kingdom (Jan. 3, 1952), Mexico (Mar. 3, 1952), Argentina (Apr. 9, 1952), Australia and New Zealand (Apr. 10, 1952), Canada and Pakistan (Apr. 17, 1952), France (Apr. 18, 1952), and the United States (Apr. 28, 1952).

[26] The treaty was subsequently ratified and automatically entered into force with respect to Ceylon (Apr. 28, 1952), El Salvador (May 6, 1952), Brazil (May 20, 1952), Cambodia (June 2, 1952), the Dominican Republic (June 6, 1952), Ethiopia (June 12, 1952), the Netherlands and Peru (June 17, 1952), Viet-Nam (June 18, 1952), Norway (June 19, 1952), Laos and Venezuela (June 20, 1952), Turkey (July 24, 1952), Cuba (Aug. 12, 1952), Belgium (Aug. 22, 1952), Union of South Africa (Sept. 10, 1952), Costa Rica (Sept. 17, 1952), Nicaragua (Nov. 4, 1952), Uruguay (Dec. 2, 1952), Liberia and Syria (Dec. 29, 1952), Egypt (Dec. 30, 1952), Paraguay (Jan. 15, 1953), Panama (Apr. 10, 1953), Haiti (May 1, 1953), Greece (May 19, 1953), Honduras (Sept. 4, 1953), Lebanon (Jan. 7, 1954), Saudi Arabia (Mar. 13, 1954), Chile (Apr. 28, 1954), Guatemala (Sept. 23, 1954), Iraq (Aug. 18, 1955), Ecuador (Dec. 27, 1955), the Philippine Republic (July 23, 1956), and Iran (Aug. 29, 1956).

[27] The lists of these states in either category correspond to the lists set forth in the two preceding footnotes.

[28] "A Decade of American Foreign Policy," pp. 2–3.

the same or substantially the same terms as are provided for in the present Treaty,[29] but this obligation on the part of Japan will expire three years after the first coming into force of the present Treaty.[30] Should Japan make a peace settlement or war claims settlement with any State granting that State greater advantages than those provided by the present Treaty, those same advantages shall be extended to the parties to the present Treaty.

Article 27

The present Treaty shall be deposited in the archives of the Government of the United States of America which shall furnish each signatory State with a certified copy thereof.

In faith whereof the undersigned Plenipotentiaries have signed the present Treaty.

Done at the city of San Francisco this eighth day of September 1951, in the English, French, and Spanish languages, all being equally authentic, and in the Japanese language.

[The treaty was signed by the plenipotentiaries of the following states in the following order: Argentina, Australia, Belgium, Bolivia, Brazil, Cambodia, Canada, Ceylon, Chile, Colombia, Costa Rica, Cuba, the Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Indonesia, Iran, Iraq, Laos, Lebanon, Liberia, Luxembourg, Mexico, the Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Paraguay, Peru, the Philippine Republic, Saudi Arabia, Syria, Turkey, the Union of South Africa, the United Kingdom, the United States, Uruguay, Venezuela, Vietnam, and Japan.]

Exhibit 2

Security Treaty Between the United States and Japan

Text of Treaty, September 8, 1951[1]

Japan has this day signed a Treaty of Peace with the Allied Powers.[2] On the coming into force of that Treaty, Japan will not have the effective means to exercise its inherent right of self-defense because it has been disarmed.

There is danger to Japan in this situation because irresponsible militarism has not yet been driven from the world. Therefore Japan desires a Security Treaty with the United States of America to come into force simultaneously with the Treaty of Peace between the United States of America and Japan.

The Treaty of Peace recognizes that Japan as a sovereign nation has the right to enter into collective security arrangements, and further, the Charter of the United Nations recognizes that all nations possess an inherent right of individual and collective self-defense.

In exercise of these rights, Japan desires, as a provisional arrangement for its defense, that the United States of America should maintain armed forces of its own in and about Japan so as to deter armed attack upon Japan.

The United States of America, in the interest of peace and security, is presently willing to maintain certain of its armed forces in and about Japan, in the expectation, however, that Japan will itself increasingly assume responsibility for its own defense against direct and indirect aggression, always avoiding any armament which could be an offensive threat or serve other than to promote peace and security in accordance with the purposes and principles of the United Nations Charter.

Accordingly, the two countries have agreed as follows:

ARTICLE I

Japan grants, and the United States of America accepts, the right, upon the coming into force of the Treaty of Peace and of this Treaty, to dispose United States land, air and sea forces in and about Japan. Such forces may be utilized to contribute to the maintenance of international peace and security in the Far East and to the security of Japan against armed attack from without, including assistance given at the express request of the Japanese Government to put down large-scale internal riots and disturbances in Japan, caused through instigation or intervention by an outside power or powers.

ARTICLE II

During the exercise of the right referred to in Article I, Japan will not grant, without the prior consent of the United States of America, any bases or any rights, powers or authority whatsoever, in or relating to bases or the right of garrison or of maneuver, or transit of ground, air or naval forces to any third power.

ARTICLE III

The conditions which shall govern the disposition of armed forces of the United States of America in and about Japan shall be determined by administrative agreements between the two Governments.[3]

ARTICLE IV

This Treaty shall expire whenever in the opinion of the Governments of the United States of America and Japan there shall have come into force such United Nations arrangements or such alternative individual or collective security dispositions as will satisfactorily provide for the maintenance by the United Nations or otherwise of international peace and security in the Japan Area.

ARTICLE V

This Treaty shall be ratified by the United States of America and Japan and will come into force when instruments of ratification thereof have been exchanged by them at Washington.[4]

In witness whereof the undersigned Plenipotentiaries have signed this Treaty.

Done in duplicate at the city of San Francisco, in the English and Japanese languages, this eighth day of September, 1951.

Mr. CASE of South Dakota. Mr. President, I rise to express my appreciation to the Senator from Oregon for yielding to me earlier this afternoon. He was generous to do so. May I add that I was delighted when I read a few days ago that President Eisenhower had designated the able Senator from Oregon, along with the great Senator from Vermont [Mr. AIKEN] to serve as advisors to our Ambassador, at the forthcoming Assembly of the United Nations. This will be one of the most important sessions in the history of the Assembly. The Senator from Oregon is well qualified to make there an outstanding contribution to the development of a system of order for the nations of the world. His knowledge of law and procedure may easily combine to make his contribution the greatest public service of his career.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT AND LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its deliberation today, it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, that will be the order.

Mr. JOHNSON of Texas. It is expected that the Senate will remain in session until late this evening. I would like to finish consideration of the treaty and get along in the consideration of the General Government and Independent Offices appropriation bills.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 762. An act for the relief of Manuel Alves de Carvalho;

S. 2089. An act for the relief of Henry K. Lee (Hyun Kui);

S. 2106. An act for the relief of Emiko Nagamine;

S. 2528. An act for the relief of John Lipset;

S 2639. An act for the relief of Mo Tong Lui;

S. 2646. An act for the relief of Lloyd C. Kimm;

S. 2681. An act for the relief of Yi Young An;

S. 2768. An act for the relief of Frederick T. C. Yu and his wife, Alice Siao-Fen Chen Yu;

S. 2822. An act for the relief of Low Wing Quey (Kwai);

S. 2886. An act for the relief of Nikolija Lazic;

S. 2918. An act for the relief of Boris Priestley;

S. 2942. An act for the relief of Eugene Storme;

S. 2964. An act for the relief of Kang Sun Ok;

S. 2991. An act for the relief of Ah See Lee Chin;

S. 3016. An act for the relief of Walter F. Beecroft;

S. 3038. An act for the relief of Jung Hi Pak;

---

[29] Bilateral treaties of peace were subsequently negotiated and signed by Japan with the National Government of China at Taipei, Apr. 28, 1952 (United Nations Treaty Series, vol. 138, pp. 3 ff.), with India at Tokyo, June 9, 1952 (not yet registered with the U.N. Secretariat), and with Burma at Rangoon, Nov. 5, 1954 (not yet registered with the U.N. Secretariat). Outside the time limits set forth in this article Japan and the U.S.S.R. signed a joint "peace declaration" at Moscow, Oct. 19, 1956.

[30] I.e., Apr. 28, 1955.

[1] TIAS 2491; 3 UST 3329–3340. Ratification advised by the Senate, Mar. 20, 1952; ratified by the President, Apr. 15, 1952; entered into force, Apr. 28, 1952.

[2] Supra, pp. 425–440.

[3] See infra, pp. 2406–2423.

[4] Instruments of ratification were exchanged Apr. 28, 1952.

S. 3049. An act for the relief of Oh Chun Soon;

S. 3091. An act for the relief of Pasquale Mira;

S. 3130. An act for the relief of Anne-Marie Stehlin; and

S. 3235. An act for the relief of Cecilia Rubio.

The message also announced that the House had agreed to the amendment of the Senate to each of the following bills of the House:

H.R. 6081. An act for the relief of M. Sgt. Emery C. Jones; and

H.R. 9443. An act for the relief of Mrs. Ethel B. Morgan.

The message further announced that the House had agreed to the amendments of the Senate to the joint resolution (H.J. Res. 688) for the relief of certain aliens.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 7634) authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. DAVIS of Tennessee, Mr. BLATNIK, Mr. JONES of Alabama, Mr. BALDWIN, and Mr. CRAMER were appointed managers on the part of the House at the conference.

The message further announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 11390) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1961, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. FOGARTY, Mr. DENTON, Mr. CANNON, Mr. LAIRD, and Mr. TABER were appointed managers on the part of the House at the conference.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 12381) to increase for 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal-tax rate and certain excise-tax rates; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. MILLS, Mr. FORAND, Mr. KING of California, Mr. O'BRIEN of Illinois, Mr. MASON, Mr. BYRNES of Wisconsin, and Mr. BAKER were appointed managers on the part of the House at the conference.

REVIEW OF VETERANS' AFFAIRS

Mr. JAVITS. Mr. President. The senior Senator from New Hampshire [Mr. BRIDGES] has compiled an excellent review of veterans' affairs since 1953 under the Republican administration. It points up the major accomplishments in the affairs of those who have served our country in uniform.

In these days, when we are particularly concerned with the defense of our Nation, it is well to reflect on what is being done in behalf of the men and women who have so nobly responded to defend our freedom in the past. As in the other, in this body we have always been aware of our responsibilities in the affairs of our veterans, and the report of the Senator from New Hampshire is most gratifying.

Mr. President, I ask unanimous consent that this report be printed in the body of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE STEWARDSHIP OF VETERANS AFFAIRS UNDER THE REPUBLICAN ADMINISTRATION, 1953–60

(By U.S. Senator STYLES BRIDGES, of New Hampshire, chairman, Senate Republican policy committee)

Under the leadership of the Nation's best loved and most respected wartime military commander the Republican administration has, since 1953, substantially advanced the affairs of those who have defended the Republic and its flag against aggressors who have sought to deprive men of freedom and the world of peace.

The Republican Party, since its founding a little more than a hundred years ago, has traditionally respected the Nation's responsibility, as George Washington said, "to care for him who shall have borne the battle and his widow, and his orphan." The Republican administration has enhanced its already splendid record in the field of veterans' affairs by a number of major accomplishments as follows:

COMPENSATION AND PENSIONS

1. Compensation for the wartime disabled was increased twice, once in 1954 and again in 1957.

2. Legislation was enacted in 1959 which provides more equitable treatment of needy veterans and modernized the veterans' pension program. This legislation also provides pension benefits to widows of World War II and the Korean conflict on the same basis as those for widows of World War I veterans.

MEDICAL BENEFITS

1. Thirteen new veterans' hospitals have been opened and there has been a substantial increase in the number of hospital beds in operation and the average number of patients treated in VA hospitals throughout the year.

2. A $900 million program has been developed and approved to modernize the veterans hospital system. The first $75 million increment of this 12-year program was included in the 1961 budget.

3. A new Presidential policy was established which authorizes the continued operation of 125,000 beds in the VA hospital system and gives the Administrator of Veterans' Affairs the authority to shift and adjust the number and type of beds from one area to another to coincide with population movements and the changing diagnostic demands for hospitalization.

4. The medical research program of the VA has been broadened and strengthened, thus enhancing the quality of medical care for veterans and contributing generally to the health and welfare of the Nation.

EDUCATION AND TRAINING

1. Legislation was enacted in 1956 to provide educational assistance to orphans of war veterans. Since then a total of 19,000 war orphans have received benefits under this act.

2. Two million eight hundred and eighty thousand veterans have received training under VA education and training programs since 1953.

3. One hundred and five thousand disabled veterans have received vocational rehabilitation training benefits since 1953.

HOME LOANS

1. Between 1953 and 1960, a total of 2,639,140 loans to veterans were guaranteed or insured by the VA.

INSURANCE

1. New benefits have been provided for the GI insurance policyholder, including additional disability insurance, additional conversion rights and liberalized standards for reinstatements.

2. A new investment formula for insurance trust funds allows the investment of these funds at higher rates of interest. Increased earnings will mean increased dividends to policyholders.

MANAGEMENT

1. The VA went through a major reorganization which resulted in economies and improved service to veterans.

2. Modern electronic machines have been installed for the insurance operations and to process the compensation and pension payments. This will result in improved efficiency and economy.

3. The personnel program has been strengthened, resulting in improved morale and efficiency of employees.

4. The stature of the Administrator of Veterans' Affairs has been heightened by having him serve more directly as the adviser to the President in veterans' matters. This includes attendance at Cabinet meetings when matters under discussion involve the VA.

5. The public image of the VA has been improved vastly through sound personnel and management practices.

FIGURES SHOW SCOPE OF ACTIVITIES UNDER REPUBLICANS

Summary statistics give a picture of the scope and growth of veterans' benefits from 1954 to 1961 as follows:

	Fiscal year 1954	Fiseal year 1961	Increase
Total VA budget	$4,282,591,740	$5,397,291,000	$1,114,719,260
Compensation payments	$1,730,915,000	$2,066,288,000	$335,873,000
Pension payments	$715,635,000	$1,715,807,000	$1,000,172,000
Regular insurance dividends	$182,300,000	$250,000,000	$67,700,000
VA hospital beds in operation	114,244	121,456	7,212
Average daily patients in VA hospitals	103,491	111,600	8,109
Outpatients visiting	2,152,000	2,279,600	127,600
	June 30, 1954	Estimated, June 30, 1961	Increase
Principal value of loans guaranteed:			
Cumulative	$23,948,000,000	$51,640,000,000	$27,692,000,000
Outstanding	17,580,000,000	32,350,000,000	14,970,000,000
Direct loans:			
Cumulative	346,000,000	1,525,000,000	1,179,000,000
Outstanding	298,000,000	1,200,000,000	902,000,000

TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN

The Senate resumed the consideration of Executive E (86th Cong., 2d sess.), the Treaty of Mutual Cooperation and Security Between the United States of America and Japan, signed at Washington on January 19, 1960.

Mr. HICKENLOOPER. Mr. President, at the outset of the few remarks which I have to make I wish to assure my friends who are rather anxious about the time, that my remarks will take about 10 minutes.

I congratulate the Senator from Arkansas, the distinguished chairman of the Committee on Foreign Relations [Mr. FULBRIGHT], for his very forceful and lucid discussion of the treaty and for the clarity with which he engaged in the colloquies with Senators who had some questions about the meaning and the impact of the various terms of the treaty. He has worked very diligently as chairman of the committee to bring about a full appreciation of the significance of the treaty. Those of us who have worked with him are very grateful indeed for his services and his efforts.

Mr. President, behind all the tension in Japan that the treaty before the Senate has caused, and the thousands of words which have been written about it, there stands a single fact of overriding importance. It is that the treaty is beneficial to both Japan and the United States. For that reason I fully commend it to my colleagues in the Senate.

For the Japanese this treaty signals the end of an arrangement in which the Japanese may have appeared—to themselves at least—as the junior partner of the United States in a relationship which has been regarded by both governments as essential to the security of each nation.

In addition, the present treaty between the United States and Japan, while undoubtedly a most liberal and generous treaty, so far as a defeated nation which unconditionally surrendered is concerned, was one between victor and vanquished.

This no doubt has caused some understandable irritation in Japan, and has stimulated a strong desire there for a treaty made in a new climate of equal sovereignty. Japan, through its remarkable economic and social rehabilitation, has certainly earned this consideration.

The pending treaty has been approached and signed on that basis.

Mr. President, after 10 years the new treaty may be terminated by either party on 1 year's notice to the other. The old treaty, lacking any time limit, could continue indefinitely, with the maturing friendly relationships between the two countries still in need of an adjustment.

Perhaps most important, under the new treaty, the United States gives up the unilateral right to use Japanese bases as staging areas for military operations without the consent of the Japanese. An exchange of notes to the new treaty provides that prior consultation between the two governments is a necessary precondition to military activities of the kind that might cause concern in Japan. I urge my colleagues to study this exchange of notes carefully. My regret is that they have been so inadequately reported in Japan, where the opponents of this treaty—many of them well meaning, as the Senator from Arkansas [Mr. FULBRIGHT] has suggested—either do not understand or do not choose to acknowledge the distinction between absolute American military rights and the old treaty and rights to be maintained by mutual consent under the new treaty.

For the United States the new treaty assures continued use of military bases and other facilities in the Japanese islands based on consultation. The agreement covering the use of these facilities is elaborated and detailed in an administrative agreement which in my judgment is comprehensive and equitable.

I believe, as well, that the United States can take rare satisfaction in the knowledge that a nation from which it received unconditional surrender only 15 years ago has in this short space of time restored itself to full sovereignty, maturity, and sympathetic orientation within the other great democracies of the world.

Mr. President, I use the word "maturity" advisedly, because the emotional immaturity which is characterized by a small but militant minority in many of the events attendant on the ratification of the treaty in Japan is not a fair reflection of the Japanese people as a whole.

Based on the informed observations and judgment of people with experience in Japan, I believe that the opposition to the pending treaty represents an uneasy minority coalition of elements which, taken altogether, does not represent the calm attitude of the great majority of the Japanese people.

The decibel level of these elements is high, but the level of their political responsibility is regrettably low. And, most regrettable, this minority has allowed itself to be transformed by a small, disciplined Communist nucleus into a force that could conceivably destroy Japan's free, parliamentary political institutions.

Mr. President, I do not believe that will happen. I believe that if and when the Kishi government is replaced, at some time in the future, it no doubt will be replaced by a regime whose orientation is essentially that of his or other recent Japanese Governments. Yet I think we should be alert to the danger posed by this destructive minority in Japan. In the Senate I urge the speedy ratification of the new treaty. It will strengthen the hand of the mature, responsible leaders of Japan. It will reassure the masses of pro-Western Japanese whose views have not been so vocal but which are nonetheless of the greatest importance to the future of the great Japanese Empire.

Mr. President, I should like to bring out one or two other matters in reference to the rather short, formal statement which I have made concerning the treaty.

One is the question which has been raised by Senators on the floor today about the advantages or disadvantages of the ratification of the treaty. There seems to be substantial agreement that the treaty will be advantageous to Japan; and, indeed, it will. I have tried to point out briefly, as did the Chairman of the Committee on Foreign Relations, the Senator from Arkansas [Mr. FULBRIGHT], that the treaty constitutes the complete maturity of Japan following World War II, a maturity among the free nations of the world, in which they have negotiated on a voluntary basis, a basis of freedom, and on a basis which they sought and received.

Japan has the advantage of the elimination of a treaty, regardless of how generous it might have been, which was, as I said a moment ago, a treaty of the victor over the vanquished. That treaty has been eliminated. The right of Japan to act within its own sphere and its own sovereignty has been completely restored. The treaty is advantageous to Japan.

However, a question has been raised concerning the advantages of the treaty to the United States. I think the treaty is very advantageous to the United States. Senators have raised here today, and in the hearings, the point that while we agree to come to the defense of Japan in the event she is attacked, Japan does not agree to come to our defense in case we are attacked on some of our territories outside the Japanese area.

I again point out, as has been pointed out repeatedly, that there is an absolute prohibition in the Japanese Constitution against the development of military forces for either offensive or defensive purposes. It is a provision which is probably as restrictive as any provision which has ever been written into a constitution on that subject, and probably is the most restrictive. Nevertheless, the Japanese, in my opinion, have exhibited every possible resource, within the legal limitations which were imposed upon them by the Constitution which they adopted immediately following World War II, to align themselves with us and to exert their fullest cooperation from the standpoint of mutual security and freedom in the world.

Mr. LONG of Louisiana. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

Mr. LONG of Louisiana. Recognizing that Japan is bound by the folly of American policy in imposing the conditions to which the Senator refers, why should we undertake to give a commitment that we will go to war to defend Japan, in view of the fact that Japan can make no reciprocal commitment?

Mr. HICKENLOOPER. There is one completely ample reason for that position, and it is that if Japan is attacked by superior force in the Pacific, the island periphery of Asia will be endangered; our whole position in the Pacific will be endangered, as the Senator from Ohio [Mr. LAUSCHE] pointed out earlier in a colloquy with the chairman of the committee; the bastion of American defense would rapidly recede to the State of Hawaii, if not to the west coast of the

United States; and the Philippines would be gone and the rest of that area would be gone.

Mr. LONG of Louisiana. The point which concerns me is that we give so much free to those to whom we are making the commitment. Turkey wanted an arrangement with the United States. She wanted a United States-Turkish pact whereby Turkey would assist us, and we would assist Turkey, in the event either country was compelled to go to war with the Soviet Union. Turkey made every effort to get the United States to agree to such an arrangement, and the effort resulted in Turkey being admitted to the North Atlantic Treaty Organization.

But how can we expect to get other nations to agree to a reciprocal arrangement if they can get an arrangement which will require us to help them without their helping us?

Mr. HICKENLOOPER. Japan is doing much in this respect. Japan is permitting us to maintain and operate bases in Japan. We are permitted to locate our troops, supplies, and logistics center in Japan. Japan is permitting us to maintain that great center in the island complex.

Mr. LONG of Louisiana. Do we not have that right already?

Mr. HICKENLOOPER. We have that right under this treaty.

Mr. LONG of Louisiana. How about the old one?

Mr. HICKENLOOPER. Under the treaty that now exists?

Mr. LONG of Louisiana. Yes.

Mr. HICKENLOOPER. The old treaty, as I tried to point out a while ago, was a treaty inflicted, we might say—I do not think that is the proper word, because it is too harsh; the treaty was liberal—it is a treaty which the Japanese were required, as a vanquished people, to accept from the victor. It was a treaty that was obtained under the duress of an unconditional surrender on the part of Japan.

The Japanese people, after 15 years of substantial and remarkable economic and political recovery, and after considerable proof during the last 15 years that they are oriented toward the West and oriented toward freedom and democracy and self-determination, are now entitled to the dignity of having the old treaty set aside and the new treaty adopted, a treaty based upon mutual consent, and their own sovereignty as a sovereign nation. This, I think, is very important.

Mr. LONG of Louisiana. If the Senator will permit me to suggest it, in dealing with a nation which is spending only a pittance for its own national defense, I question whether the army of that nation can control the Communist mobs which are rioting there today. In dealing with such a nation as that, which is doing so little to provide for its own defense, it seems to me it would be better if it did not feel that it could rely entirely upon the United States to provide adequately for the defense of Japan.

Mr. HICKENLOOPER. I point out again the provision of the Japanese Constitution which denies to Japan the right not only to have military forces for offensive purposes, but the right to have military forces for defensive forces, but only for police action. The Japanese have stretched that constitution far out.

Mr. LONG of Louisiana. If the Constitution of the United States had such a provision, I should think anybody would be foolhardy to agree to go to war to defend the United States, when we had written it into our Constitution that we could not, under any circumstances, assist a nation which would fight for us, in the event it was compelled to fight in its own defense. Does the Senator think that was a wise provision to put in the Constitution of Japan, looking at the situation with hindsight?

Mr. HICKENLOOPER. Does the Senator mean the provision which was put into the Constitution?

Mr. LONG of Louisiana. Yes.

Mr. HICKENLOOPER. No, I do not think it was wise to include that in it. But several things which were done in Japan at that time were not wise, in my opinion—and several things which were done in other parts of the world at that time were not wise, in my opinion.

But now we are facing a fact, not a theory.

I should like to ask the Senator a question in regard to our signing the treaty or getting into this so-called defensive alliance: Is the Senator from Louisiana of the opinion that if a superior, major power in the Orient—let us say Russia—today were to attack Japan, even in the absence of a treaty, we would not be in that conflict? Even in the absence of a treaty, would not our own security and best interests demand that we look to the integrity of Japan and the Philippines and Formosa and Korea?

Mr. LONG of Louisiana. It would be my reaction that in view of the small effort that our so-called allies are making—and we have many who are genuine allies—as compared to the tremendous effort the United States is making, they would be doing more for their own defense and for the defense of the free world if they did not have the assurance that the United States would go to war, in an effort to save any and all of them.

Each of them has a piecemeal commitment from us, although few of them is required to go to war in the event we have to go to war in order to fulfill our commitments elsewhere—with the result that we can be sure that if war were to break out, the Soviet Union would not begin the war by attacking Japan. Treaties of this sort are giving us a rock-ribbed guarantee that if war comes, it will come first to us, and by surprise, and that will bring us surprise attack casualties numbering to the tens of millions, because we never would receive any advance notice or warning of the war.

The United States would be attacked first, and without warning, because, by means of these commitments the United States is making it impossible for any nation to go to war with another nation, without making war on us, also.

Mr. HICKENLOOPER. But the treaty provides great benefits both to Japan and to the United States, and we shall derive great benefits from the treaty. Even if we assume that at long last, perhaps after 15 years, we would wish to set aside the war-enforced treaty with Japan, the great benefits will come to us, in the main, as a result of the bases we shall maintain in Japan and as a result of the cooperative efforts the Japanese will be making to assist us in the maintenance of those bases and in the maintenance of that strength in the Far East. That is a very great contribution. If we did not have those bases, where would we go? Would we perhaps go to Okinawa?

Mr. LONG of Louisiana. Let me ask this question: If in a few years the Russians had developed their atomic power and other power sufficiently to be in a position to be able to knock us out, by means of a surprise attack, does the Senator from Iowa believe we should be in a position to strike back at the Soviet Union from those bases in Japan, if those bases and a few planes in England would then be about all we had to strike back with?

Mr. HICKENLOOPER. In my judgment, if the situation reached that point, there would be no question but that the Japanese would be in the conflict, in one way or another.

Mr. LONG of Louisiana. Even under a neutralist government?

Mr. HICKENLOOPER. Of course I cannot look into a crystal ball and say what will be the complexion of the Government of Japan in 10 years.

I can only believe that in 10 years an enlightened self-interest would compel Japan to enter such a war, because Japan would have no other course, except slavery.

Mr. LONG of Louisiana. But would not it be better for us to have the right to make that decision alone, rather than to have to make it in part with Japan—because in view of the present commitments we have with so many other countries in the world, any nation which wished to make such an attack on Japan would strike first at the United States.

Mr. HICKENLOOPER. Does the Senator advocate that we abandon all our bases in Japan?

Mr. LONG of Louisiana. No; because we have rights there—rights obtained by conquest.

Mr. HICKENLOOPER. It is true that they are rights by conquest. But there comes a time when rights by conquest should disappear, in the interest of better international relationships. That is what we are trying to do now—in other words, set aside the old peace treaty which was obtained by the victor from the vanquished and was imposed by right of conquest. Regardless of whether that treaty was liberal or was not liberal at that time the Japanese had to accept it; they had no other choice.

Today we hope to set aside that treaty, and to deal with the Japanese on the basis of sovereign equality, and I think, thus greatly strengthen the feeling of the Japanese in regard to their equality in the family of nations; and I believe it will greatly promote the common strength and the common purpose of our two nations in the Pacific.

Mr. LONG of Louisiana. Can the Senator from Iowa tell me what nation ever made a treaty to go to war to defend the United States, without having a reciprocal commitment that the United States would respond likewise in the event that nation was attacked?

Mr. HICKENLOOPER. I cannot say there has been none, but at the moment I know of none.

Mr. LAUSCHE. Mr. President, will the Senator from Iowa yield to me?

Mr. HICKENLOOPER. I yield.

Mr. LAUSCHE. Let me say that I think the attitude of the people of the United States in regard to the treatment the Communists are giving the captive nations should likewise be the attitude of the United States in regard to the treatment we should give to the Japanese. The Congress passed the captive nations resolution, which condemned the captivity into which the conquering Communists have placed the satellite nations of Europe. The United States and the other conscientious peoples of the world have said to the conquering Communists of Russia, "You are not treating the satellite nations correctly and justly. You are degrading their dignity. You should allow them to live as worthy human beings." That is what we are saying to the Communist leaders of Soviet Russia.

But it seems to me that if we insist upon our rights under the 1952 treaty with Japan, we are degrading the Japanese people.

It is on that basis that I believe that to yield the powerful rights which were given to us under the 1952 treaty with Japan will be only in conformity with a just attitude and a proper recognition of the rights of those people.

Mr. HICKENLOOPER. I agree completely with the Senator from Ohio. I agree that it is foreign to our policy and our belief to keep these nations in a state of servility. We do not believe in that. We have practiced our beliefs by making equitable treaties with nations which were on the other side during the recent war; and we have criticized and condemned communism for enslaving the peoples of other nations when the force and power of Soviet Russia has permitted the Soviets to do so.

Mr. FULBRIGHT. Mr. President, will the Senator from Iowa yield to me?

Mr. HICKENLOOPER. I yield.

Mr. FULBRIGHT. First, I wish to thank the Senator from Iowa for the kind words he had to say about me.

Second, I desire to thank him for the great contributions he has made, both to this debate and to the consideration of this matter by the committee.

Under the circumstances which have arisen, this became a serious undertaking. Speaking for myself, and also for the committee and for the entire Senate, I wish to state that I certainly appreciate very much the contributions the Senator from Iowa has made to this debate.

Mr. HICKENLOOPER. I thank the Senator from Arkansas.

Again, I wish to refer to my earlier expressions of appreciation—which I made at the outset of my remarks—in regard to the contributions the Senator from Arkansas has made and in regard to what I believe to be the great and constructive step he is advocating in connection with the association of Japan and the United States.

Mr. President, I do not wish to prolong the debate; but I desire to point out one other matter which was referred to earlier in these proceedings. I believe it impossible to overemphasize the fact that the Japanese must consent to our use of bases in Japan. I believe that is a fundamental part of sovereignty if we are dealing with Japan on a basis of mutual and equal sovereignty. So I think it proper and just that that provision be included. But I also call attention to the fact that the maintenance, operation, and servicing of those bases in Japan was agreed to, and is a basic part of this treaty by reference.

I call attention to article VI of the treaty, which states:

> For the purpose of contributing to the security of Japan and the maintenance of international peace and security in the Far East, the United States of America is granted—

It does not say "may be" or "will be." It says:

> the United States of America is granted the use by its land, air, and naval forces of facilities and areas in Japan.

That is the first paragraph of article VI.

The second paragraph reads:

> The use of these facilities and areas as well as the status of the U.S. Armed Forces in Japan shall be governed by a separate agreement, replacing the administrative agreement under article III of the Security Treaty Between the United States of America and Japan, signed at Tokyo on February 28, 1952, as amended, and by such other arrangements as may be agreed upon.

The administrative agreement under article III refers to the old treaty, which is now the one in force, and which will be superseded by this one. But the important thing is that under article VI there has been agreed to between Japan and the United States a document which is contained, beginning on page 13, in the Senate document known as Executive E., 86th Congress, 2d session, which is the message of the President of the United States containing the treaty and related documents, a document entitled "Agreement Under Article VI of the Treaty of Mutual Cooperation and Security Between the United States of America and Japan, Regarding Facilities and Areas and the Status of U.S. Armed Forces in Japan."

Then it goes on through 28 articles, plus 6 or 7 pages of agreed minutes. The 28 articles in the original agreement encompass about 18 pages in this document; and there is the agreement, already arrived at, which is just as binding, in my view, as is this treaty, because it is a part of this treaty by reference for the maintenance of American bases in Japan and all the details that go with it.

The Japanese have agreed to it. There is not any question of their waiting or any question of their agreeing. The agreement is there. They will from time to time, by their consent and ours, mutually agree to alterations and changes; but, throughout the treaty and the agreement, any changes that occur must be mutually agreeable. That is, we have to agree to the changes just as the Japanese do. I see nothing in the treaty that necessarily would permit the Japanese to throw us out of their bases in Japan merely on a whim or caprice. I see nothing in it that would give the Japanese justification, under international law or treaty law, to do anything like that whatsoever. The alterations and changes must be by mutual consent and agreement, and the agreements are already made and entered into. We know what they are, and they are in black and white.

Mr. President, I have occupied the floor about twice as long as I had intended to. I think the subject has been quite thoroughly covered by the chairman of the Foreign Relations Committee and by the discussions engaged in by other Members of the Senate. I was not on the floor at all times. May I inquire of the chairman of the committee, the Senator from Arkansas [Mr. FULBRIGHT], whether this agreement, under article VI, has been put in the RECORD?

Mr. FULBRIGHT. I do not believe so, although the treaty in its entirety was referred to. Why does not the Senator put it in the RECORD?

Mr. HICKENLOOPER. I believe it would be informative for the people of the country to have available the agreement made pursuant to article VI of the treaty. Therefore, Mr. President, I ask unanimous consent that this particular agreement, beginning on page 13 of the Senate document entitled "Executive E," ending on page 31 of the document, be placed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HICKENLOOPER. Mr. President, we are indeed in a vital struggle. I do not think there is a loyal, patriotic American who does not fervently hope and pray that the time will come—soon, we hope—when a reliable peace can be in effect throughout the world. But even greater than peace is freedom and the right of men to have freedom.

Civilization has been built upon freedom, and it has flourished and come to its highest pinnacle because people have been willing to sacrifice security for freedom. They have preferred freedom and sometimes all of the sacrifices that go with it because freedom is the dearest thing we have. And today I believe we are taking a step, in the relations between nations, and especially in the Pacific area, that will strengthen our progress toward the extension of freedom in this world and our progress toward a system of unity in the world which we hope will bring closer that day when a reliable peace may be our lot.

This treaty in and of itself will not, of course, revolutionize international affairs in the world, but it will contribute greatly to stability. It will restore, finally and at long last, the sovereignty of a great and strong and vigorous nation, Japan. It will relieve the people of

that country from the onus of a treaty under which they may feel servile at the present time. It will bring full brotherhood in the community of nations to Japan, which no doubt is the strongest nation in the Pacific area today.

It will continue a friendship between the United States and Japan which began well over 100 years ago and which, sadly, was interrupted only for a short period of misguided military philosophy which for a temporary season got hold of the people of Japan and led them into mistakes and errors from which they have suffered greatly.

I think it is a constructive treaty. I think it is a forward step toward international peace, security, and unity. I earnestly hope the Senate will advise and consent to the resolution of ratification by a very substantial majority.

EXHIBIT 1

AGREEMENT UNDER ARTICLE VI OF THE TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN, REGARDING FACILITIES AND AREAS AND THE STATUS OF U.S. ARMED FORCES IN JAPAN

The United States of America and Japan, pursuant to article VI of the Treaty of Mutual Cooperation and Security between the United States of America and Japan signed at Washington on January 19, 1960, have entered into this agreement in terms as set forth below:

ARTICLE I

In this agreement the expression—

(a) "members of the United States armed forces" means the personnel on active duty belonging to the land, sea or air armed services of the United States of America when in the territory of Japan.

(b) "civilian component" means the civilian persons of United States nationality who are in the employ of, serving with, or accompanying the United States armed forces in Japan, but excludes persons who are ordinarily resident in Japan or who are mentioned in paragraph 1 of article XIV. For the purposes of this agreement only, dual nationals, United States and Japanese, who are brought to Japan by the United States shall be considered as United States nationals.

(c) "dependents" means

(1) Spouse, and children under 21;

(2) Parents, and children over 21, if dependent for over half their support upon a member of the United States armed forces or civilian component.

ARTICLE II

1. (a) The United States is granted, under article VI of the Treaty of Mutual Cooperation and Security, the use of facilities and areas in Japan. Agreements as to specific facilities and areas shall be concluded by the two Governments through the Joint Committee provided for in article XXV of this agreement. "Facilities and areas" include existing furnishings, equipment and fixtures necessary to the operation of such facilities and areas.

(b) The facilities and areas of which the United States has the use at the time of expiration of the Administrative Agreement under article III of the Security Treaty between the United States of America and Japan, shall be considered as facilities and areas agreed upon between the two Governments in accordance with subparagraph (a) above.

2. At the request of either Government, the Governments of the United States and Japan shall review such arrangements and may agree that such facilities and areas shall be returned to Japan or that additional facilities and areas may be provided.

3. The facilities and areas used by the United States armed forces shall be returned to Japan whenever they are no longer needed for purposes of this agreement, and the United States agrees to keep the needs for facilities and areas under continual observation with a view toward such return.

4. (a) When facilities and areas are temporarily not being used by the United States armed forces, the Government of Japan may make, or permit Japanese nationals to make, interim use of such facilities and areas provided that it is agreed between the two Governments through the Joint Committee that such use would not be harmful to the purposes for which the facilities and areas are normally used by the United States armed forces.

(b) With respect to facilities and areas which are to be used by United States armed forces for limited periods of time, the Joint Committee shall specify in the agreements covering such facilities and areas the extent to which the provisions of this agreement shall apply.

ARTICLE III

1. Within the facilities and areas, the United States may take all the measures necessary for their establishment, operation, safeguarding and control. In order to provide access for the United States armed forces to the facilities and areas for their support, safeguarding and control, the Government of Japan shall, at the request of the United States armed forces and upon consultation between the two Governments through the Joint Committee, take necessary measures within the scope of applicable laws and regulations over land, territorial waters and airspace adjacent to, or in the vicinities of the facilities and areas. The United States may also take necessary measures for such purposes upon consultation between the two Governments through the Joint Committee.

2. The United States agrees not to take the measures referred to in paragraph 1 in such a manner as to interfere unnecessarily with navigation, aviation, communication, or land travel to or from or within the territories of Japan. All questions relating to frequencies, power and like matters used by apparatus employed by the United States designed to emit electric radiation shall be settled by arrangement between the appropriate authorities of the two Governments. The Government of Japan shall, within the scope of applicable laws and regulations, take all reasonable measures to avoid or eliminate interference with telecommunications electronics required by the United States armed forces.

3. Operations in the facilities and areas in use by the United States armed forces shall be carried on with due regard for the public safety.

ARTICLE IV

1. The United States is not obliged, when it returns facilities and areas to Japan on the expiration of this agreement or at an earlier date, to restore the facilities and areas to the condition in which they were at the time they became available to the United States armed forces, or to compensate Japan in lieu of such restoration.

2. Japan is not obliged to make any compensation to the United States for any improvements made in the facilities and areas or for the buildings or structures left thereon on the expiration of this agreement or the earlier return of the facilities and areas.

3. The foregoing provisions shall not apply to any construction which the Government of the United States may undertake under special arrangements with the Government of Japan.

ARTICLE V

1. United States and foreign vessels and aircraft operated by, for, or under the control of the United States for official purposes shall be accorded access to any port or airport of Japan free from toll or landing charges. When cargo or passengers not accorded the exemptions of this agreement are carried on such vessels and aircraft, notification shall be given to the appropriate Japanese authorities, and their entry into and departure from Japan shall be according to the laws and regulations of Japan.

2. The vessels and aircraft mentioned in paragraph 1, United States Government-owned vehicles including armor, and members of the United States armed forces, the civilian component, and their dependents shall be accorded access to and movement between facilities and areas in use by the United States armed forces and between such facilities and areas and the ports or airports of Japan. Such access to and movement between facilities and areas by United States military vehicles shall be free from toll and other charges.

3. When the vessels mentioned in paragraph 1 enter Japanese ports, appropriate notification shall, under normal conditions, be made to the proper Japanese authorities. Such vessels shall have freedom from compulsory pilotage, but if a pilot is taken pilotage shall be paid for at appropriate rates.

ARTICLE VI

1. All civil and military air traffic control and communications systems shall be developed in close coordination and shall be integrated to the extent necessary for fulfillment of collective security interests. Procedures, and any subsequent changes thereto, necessary to effect this coordination and integration will be established by arrangement between the appropriate authorities of the two Governments.

2. Lights and other aids to navigation of vessels and aircraft placed or established in the facilities and areas in use by United States armed forces and in territorial waters adjacent thereto or in the vicinity thereof shall conform to the system in use in Japan. The United States and Japanese authorities which have established such navigation aids shall notify each other of their positions and characteristics and shall give advance notification before making any changes in them or establishing additional navigation aids.

ARTICLE VII

The United States armed forces shall have the use of all public utilities and services belonging to, or controlled or regulated by the Government of Japan, and shall enjoy priorities in such uses, under conditions no less favorable than those that may be applicable from time to time to the ministries and agencies of the Government of Japan.

ARTICLE VIII

The Government of Japan undertakes to furnish the United States armed forces with the following meteorological services in accordance with arrangements between the appropriate authorities of the two Governments.

(a) Meteorological observations from land and ocean areas including observations from weather ships.

(b) Climatological information including periodic summaries and the historical data of the Meteorological Agency.

(c) Telecommunications service to disseminate meteorological information required for the safe and regular operation of aircraft.

(d) Seismographic data including forecasts of the estimated size of tidal waves resulting from earthquakes and areas that might be affected thereby.

ARTICLE IX

1. The United States may bring into Japan persons who are members of the United States armed forces, the civilian component, and their dependents, subject to the provisions of this article.

2. Members of the United States armed forces shall be exempt from Japanese passport and visa laws and regulations. Members of the United States armed forces, the civilian component, and their dependents shall be exempt from Japanese laws and regulations on the registration and control of aliens, but shall not be considered as acquiring any right to permanent residence or domicile in the territories of Japan.

3. Upon entry into or departure from Japan members of the United States armed forces shall be in possession of the following documents:

(a) personal identity card showing name, date of birth, rank and number, service, and photograph; and

(b) individual or collective travel order certifying to the status of the individual or group as a member or members of the United States armed forces and to the travel ordered.

For purposes of their identification while in Japan, members of the United States armed forces shall be in possession of the foregoing personal identity card which must be presented on request to the appropriate Japanese authorities.

4. Members of the civilian component, their dependents, and the dependents of members of the United States armed forces shall be in possession of appropriate documentation issued by the United States authorities so that their status may be verified by Japanese authorities upon their entry into or departure from Japan, or while in Japan.

5. If the status of any person brought into Japan under paragraph 1 of this article is altered so that he would no longer be entitled to such admission, the United States authorities shall notify the Japanese authorities and shall, if such person be required by the Japanese authorities to leave Japan, assure that transportation from Japan will be provided within a reasonable time at no cost to the Government of Japan.

6. If the Government of Japan has requested the removal from its territory of a member of the United States armed forces or civilian component or has made an expulsion order against an ex-member of the United States armed forces or the civilian component or against a dependent of a member or ex-member, the authorities of the United States shall be responsible for receiving the person concerned within its own territory or otherwise disposing of him outside Japan. This paragraph shall apply only to persons who are not nationals of Japan, and have entered Japan as members of the United States armed forces or civilian component or for the purpose of becoming such members, and to the dependents of such persons.

ARTICLE X

1. Japan shall accept as valid, without a driving test or fee, the driving permit or license or military driving permit issued by the United States to a member of the United States armed forces, the civilian component, and their dependents.

2. Official vehicles of the United States armed forces and the civilian component shall carry distinctive numbered plates or individual markings which will readily identify them.

3. Privately owned vehicles of members of the United States armed forces, the civilian component, and their dependents shall carry Japanese number plates to be acquired under the same conditions as those applicable to Japanese nationals.

ARTICLE XI

1. Save as provided in this agreement, members of the United States armed forces, the civilian component, and their dependents shall be subject to the laws and regulations administered by the customs authorities of Japan.

2. All materials, supplies and equipment imported by the United States armed forces, the authorized procurement agencies of the United States armed forces, or by the organizations provided for in article XV, for the official use of the United States armed forces or for the use of the members of the United States armed forces, the civilian component, and their dependents, and materials, supplies and equipment which are to be used exclusively by the United States armed forces or are ultimately to be incorporated into articles or facilities used by such forces, shall be permitted entry into Japan; such entry shall be free from customs duties and other such charges. Appropriate certification shall be made that such materials, supplies and equipment are being imported by the United States armed forces, the authorized procurement agencies of the United States armed forces, or by the organizations provided for in article XV, or, in the case of materials, supplies and equipment to be used exclusively by the United States armed forces or ultimately to be incorporated into articles or facilities used by such forces, that delivery thereof is to be taken by the United States armed forces for the purposes specified above.

3. Property consigned to and for the personal use of members of the United States armed forces, the civilian component, and their dependents, shall be subject to customs duties and other such charges, except that no duties or charges shall be paid with respect to:

(a) Furniture and household goods for their private use imported by the members of the United States armed forces or civilian component when they first arrive to serve in Japan or by their dependents when they first arrive for reunion with members of such forces or civilian component, and personal effects for private use brought by the said persons upon entrance.

(b) Vehicles and parts imported by members of the United States armed forces or civilian component for the private use of themselves or their dependents.

(c) Reasonable quantities of clothing and household goods of a type which would ordinarily be purchased in the United States for everyday use for the private use of members of the United States armed forces, civilian component, and their dependents, which are mailed into Japan through United States military post offices.

4. The exemptions granted in paragraphs 2 and 3 shall apply only to cases of importation of goods and shall not be interpreted as refunding customs duties and domestic excises collected by the customs authorities at the time of entry in cases of purchases of goods on which such duties and excises have already been collected.

5. Customs examination shall not be made in the following cases:

(a) Units of the United States armed forces under orders entering or leaving Japan;

(b) Official documents under official seal and official mail in United States military postal channels:

(c) Military cargo shipped on a United States Government bill of lading.

6. Except as such disposal may be authorized by the United States and Japanese authorities in accordance with mutually agreed conditions, goods imported into Japan free of duty shall not be disposed of in Japan to persons not entitled to import such goods free of duty.

7. Goods imported into Japan free from customs duties and other such charges pursuant to paragraphs 2 and 3, may be reexported free from customs duties and other such charges.

8. The United States armed forces, in cooperation with Japanese authorities, shall take such steps as are necessary to prevent abuse of privileges granted to the United States armed forces, members of such forces, the civilian component, and their dependents in accordance with this article.

9. (a) In order to prevent offenses against laws and regulations administered by the customs authorities of the Government of Japan, the Japanese authorities and the United States armed forces shall assist each other in the conduct of inquiries and the collection of evidence.

(b) The United States armed forces shall render all assistance within their power to ensure that articles liable to seizure by, or on behalf of, the customs authorities of the Government of Japan are handed to those authorities.

(c) The United States armed forces shall render all assistance within their power to ensure the payment of duties, taxes, and penalties payable by members of such forces or of the civilian component, or their dependents.

(d) Vehicles and articles belonging to the United States armed forces seized by the customs authorities of the Government of Japan in connection with an offense against its customs or fiscal laws or regulations shall be handed over to the appropriate authorities of the force concerned.

ARTICLE XII

1. The United States may contract for any supplies or construction work to be furnished or undertaken in Japan for purposes of, or authorized by, this agreement, without restriction as to choice of supplier or person who does the construction work. Such supplies or construction work may, upon agreement between the appropriate authorities of the two Governments, also be procured through the Government of Japan.

2. Materials, supplies, equipment and services which are required from local sources for the maintenance of the United States armed forces and the procurement of which may have an adverse effect on the economy of Japan shall be procured in coordination with, and, when desirable, through or with the assistance of, the competent authorities of Japan.

3. Materials, supplies, equipment and services procured for official purposes in Japan by the United States armed forces, or by authorized procurement agencies of the United States armed forces upon appropriate certification shall be exempt from the following Japanese taxes:

(a) Commodity tax
(b) Travelling tax
(c) Gasoline tax
(d) Electricity and gas tax.

Materials, supplies, equipment and services procured for ultimate use by the United States armed forces shall be exempt from commodity and gasoline taxes upon appropriate certification by the United States armed forces. With respect to any present or future Japanese taxes not specifically referred to in this article which might be found to constitute a significant and readily identifiable part of the gross purchase price of materials, supplies, equipment and services procured by the United States armed forces, or for ultimate use by such forces, the two Governments will agree upon a procedure for granting such exemption or relief therefrom as is consistent with the purposes of this article.

4. Local labor requirements of United States armed forces and of the organizations provided for in article XV shall be satisfied with the assistance of the Japanese authorities.

5. The obligations for the withholding and payment of income tax, local inhabitant tax and social security contributions, and, except as may otherwise be mutually agreed, the conditions of employment and work, such as those relating to wages and supplementary payments, the conditions for the protection of workers, and the rights of workers concerning labor relations shall be those laid down by the legislation of Japan.

6. Should the United States armed forces or as appropriate an organization provided

for in article XV dismiss a worker and a decision of a court or a Labor Relations Commission of Japan to the effect that the contract of employment has not terminated become final, the following procedures shall apply:

(a) The United States armed forces or the said organization shall be informed by the Government of Japan of the decision of the court or Commission;

(b) Should the United States armed forces or the said organization not desire to return the worker to duty, they shall so notify the Government of Japan within seven days after being informed by the latter of the decision of the court or Commission, and may temporarily withhold the worker from duty;

(c) Upon such notification, the Government of Japan and the United States armed forces or the said organization shall consult together without delay with a view to finding a practical solution of the case;

(d) Should such a solution not be reached within a period of thirty days from the date of commencement of the consultations under (c) above, the worker will not be entitled to return to duty. In such case, the Government of the United States shall pay to the Government of Japan an amount equal to the cost of employment of the worker for a period of time to be agreed between the two Governments.

7. Members of the civilian component shall not be subject to Japanese laws or regulations with respect to terms and conditions of employment.

8. Neither members of the United States armed forces, civilian component, nor their dependents, shall by reason of this article enjoy any exemption from taxes or similar charges relating to personal purchases of goods and services in Japan chargeable under Japanese legislation.

9. Except as such disposal may be authorized by the United States and Japanese authorities in accordance with mutually agreed conditions, goods purchased in Japan exempt from the taxes referred to in paragraph 3, shall not be disposed of in Japan to persons not entitled to purchase such goods exempt from such tax.

ARTICLE XIII

1. The United States armed forces shall not be subject to taxes or similar charges on property held, used or transferred by such forces in Japan.

2. Members of the United States armed forces, the civilian component, and their dependents shall not be liable to pay any Japanese taxes to the Government of Japan or to any other taxing agency in Japan on income received as a result of their service with or employment by the United States armed forces, or by the organizations provided for in article XV. The provisions of this article do not exempt such persons from payment of Japanese taxes on income derived from Japanese sources, nor do they exempt United States citizens who for United States income tax purposes claim Japanese residence from payment of Japanese taxes on income. Periods during which such persons are in Japan solely by reason of being members of the United States armed forces, the civilian component, or their dependents shall not be considered as periods of residence or domicile in Japan for the purpose of Japanese taxation.

3. Members of the United States armed forces, the civilian component, and their dependents shall be exempt from taxation in Japan on the holding, use, transfer inter se, or transfer by death of movable property, tangible or intangible, the presence of which in Japan is due solely to the temporary presence of these persons in Japan, provided that such exemption shall not apply to property held for the purpose of investment or the conduct of business in Japan or to any intangible property registered in Japan. There is no obligation under this article to grant exemption from taxes payable in respect of the use of roads by private vehicles.

ARTICLE XIV

1. Persons, including corporations organized under the laws of the United States, and their employees who are ordinarily resident in the United States and whose presence in Japan is solely for the purpose of executing contracts with the United States for the benefit of the United States armed forces, and who are designated by the Government of the United States in accordance with the provisions of paragraph 2 below, shall, except as provided in this article, be subject to the laws and regulations of Japan.

2. The designation referred to in paragraph 1 above shall be made upon consultation with the Government of Japan and shall be restricted to cases where open competitive bidding is not practicable due to security considerations, to the technical qualifications of the contractors involved, or to the unavailability of materials or services required by United States standards, or to limitations of United States law.

The designation shall be withdrawn by the Government of the United States:

(a) upon completion of contracts with the United States for the United States armed forces;

(b) upon proof that such persons are engaged in business activities in Japan other than those pertaining to the United States armed forces; or

(c) when such persons are engaged in practices illegal in Japan.

3. Upon certification by appropriate United States authorities as to their identity, such persons and their employees shall be accorded the following benefits of this agreement:

(a) Rights of accession and movement, as provided for in article V, paragraph 2;

(b) Entry into Japan in accordance with the provisions of article IX;

(c) The exemption from customs duties, and other such charges provided for in article XI, paragraph 3, for members of the United States armed forces, the civilian component, and their dependents;

(d) If authorized by the Government of the United States, the right to use the services of the organizations provided for in article XV;

(e) Those provided for in article XIX, paragraph 2, for members of the armed forces of the United States, the civilian component, and their dependents;

(f) If authorized by the Government of the United States, the right to use military payment certificates, as provided for in article XX;

(g) The use of postal facilities provided for in article XXI;

(h) Exemption from the laws and regulations of Japan with respect to terms and conditions of employment.

4. Such persons and their employees shall be so described in their passports and their arrival, departure and their residence while in Japan shall from time to time be notified by the United States armed forces to the Japanese authorities.

5. Upon certification by an authorized officer of the United States armed forces, depreciable assets except houses, held, used, or transferred, by such persons and their employees exclusively for the execution of contracts referred to in paragraph 1 shall not be subject to taxes or similar charges of Japan.

6. Upon certification by an authorized officer of the United States armed forces, such persons and their employees shall be exempt from taxation in Japan on the holding, use, transfer by death, or transfer to persons or agencies entitled to tax exemption under this agreement, of movable property, tangible or intangible, the presence of which in Japan is due solely to the temporary presence of these persons in Japan, provided that such exemption shall not apply to property held for the purpose of investment or the conduct of other business in Japan or to any intangible property registered in Japan. There is no obligation under this article to grant exemption from taxes payable in respect of the use of roads by private vehicles.

7. The persons and their employees referred to in paragraph 1 shall not be liable to pay income or corporation taxes to the Government of Japan or to any other taxing agency in Japan on any income derived under a contract made in the United States with the Government of the United States in connection with the construction, maintenance, or operation of any of the facilities or areas covered by this agreement. The provisions of this paragraph do not exempt such persons from payment of income or corporation taxes on income derived from Japanese sources, nor do they exempt such persons and their employees who, for United States income tax purposes, claim Japanese residence, from payment of Japanese taxes on income. Periods during which such persons are in Japan solely in connection with the execution of a contract with the Government of the United States shall not be considered periods of residence or domicile in Japan for the purposes of such taxation.

8. Japanese authorities shall have the primary right to exercise jurisdiction over the persons and their employees referred to in paragraph 1 of this article in relation to offenses committed in Japan and punishable by the law of Japan. In those cases in which the Japanese authorities decide not to exercise such jurisdiction they shall notify the military authorities of the United States as soon as possible. Upon such notification the military authorities of the United States shall have the right to exercise such jurisdiction over the persons referred to as is conferred on them by the law of the United States.

ARTICLE XV

1. (a) Navy exchanges, post exchanges, messes, social clubs, theaters, newspapers and other nonappropriated fund organizations authorized and regulated by the United States military authorities may be established in the facilities and areas in use by the United States armed forces for the use of members of such forces, the civilian component, and their dependents. Except as otherwise provided in this agreement, such organizations shall not be subject to Japanese regulations, license, fees, taxes or similar controls.

(b) When a newspaper authorized and regulated by the United States military authorities is sold to the general public, it shall be subject to Japanese regulations, license, fees, taxes or similar controls so far as such circulation is concerned.

2. No Japanese tax shall be imposed on sales of merchandise and services by such organizations, except as provided in paragraph 1(b), but purchases within Japan of merchandise and supplies by such organizations shall be subject to Japanese taxes.

3. Except as such disposal may be authorized by the United States and Japanese authorities in accordance with mutually agreed conditions, goods which are sold by such organizations shall not be disposed of in Japan to persons not authorized to make purchases from such organizations.

4. The organizations referred to in this article shall provide such information to the Japanese authorities as is required by Japanese tax legislation.

ARTICLE XVI

It is the duty of members of the United States armed forces, the civilian component, and their dependents to respect the law of Japan and to abstain from any activity inconsistent with the spirit of this agreement, and, in particular, from any political activity in Japan.

ARTICLE XVII

1. Subject to the provisions of this article,

(a) the military authorities of the United States shall have the right to exercise within Japan all criminal and disciplinary jurisdiction conferred on them by the law of the United States over all persons subject to the military law of the United States;

(b) the authorities of Japan shall have jurisdiction over the members of the United States armed forces, the civilian component, and their dependents with respect to offenses committed within the territory of Japan and punishable by the law of Japan.

2. (a) The military authorities of the United States shall have the right to exercise exclusive jurisdiction over persons subject to the military law of the United States with respect to offenses, including offenses relating to its security, punishable by the law of the United States, but not by the law of Japan.

(b) The authorities of Japan shall have the right to exercise exclusive jurisdiction over members of the United States armed forces, the civilian component, and their dependents with respect to offenses, including offenses relating to the security of Japan, punishable by its law but not by the law of the United States.

(c) For the purposes of this paragraph and of paragraph 3 of this article a security offense against a State shall include

(i) treason against the State;

(ii) sabotage, espionage or violation of any law relating to official secrets of that State, or secrets relating to the national defense of that State.

3. In cases where the right to exercise jurisdiction is concurrent the following rules shall apply:

(a) The military authorities of the United States shall have the primary right to exercise jurisdiction over members of the United States armed forces or the civilian component in relation to

(i) offenses solely against the property or security of the United States, or offenses solely against the person or property of another member of the United States armed forces or the civilian component or of a dependent;

(ii) offenses arising out of any act or omission done in the performance of official duty.

(b) In the case of any other offense the authorities of Japan shall have the primary right to exercise jurisdiction.

(c) If the State having the primary right decides not to exercise jurisdiction, it shall notify the authorities of the other State as soon as practicable. The authorities of the State having the primary right shall give sympathetic consideration to a request from the authorities of the other State for a waiver of its right in cases where that other State considers such waiver to be of particular importance.

4. The foregoing provisions of this article shall not imply any right for the military authorities of the United States to exercise jurisdiction over persons who are nationals of or ordinarily resident in Japan, unless they are members of the United States armed forces.

5. (a) The military authorities of the United States and the authorities of Japan shall assist each other in the arrest of members of the United States armed forces, the civilian component, or their dependents in the territory of Japan and in handing them over to the authority which is to exercise jurisdiction in accordance with the above provisions.

(b) The authorities of Japan shall notify promptly the military authorities of the United States of the arrest of any member of the United States armed forces, the civilian component, or a dependent.

(c) The custody of an accused member of the United States armed forces or the civilian component over whom Japan is to exercise jurisdiction shall, if he is in the hands of the United States, remain with the United States until he is charged by Japan.

6. (a) The military authorities of the United States and the authorities of Japan shall assist each other in the carrying out of all necessary investigations into offenses, and in the collection and production of evidence, including the seizure and, in proper cases, the handing over of objects connected with an offense. The handing over of such objects may, however, be made subject to their return within the time specified by the authority delivering them.

(b) The military authorities of the United States and the authorities of Japan shall notify each other of the disposition of all cases in which there are concurrent rights to exercise jurisdiction.

7. (a) A death sentence shall not be carried out in Japan by the military authorities of the United States if the legislation of Japan does not provide for such punishment in a similar case.

(b) The authorities of Japan shall give sympathetic consideration to a request from the military authorities of the United States for assistance in carrying out a sentence of imprisonment pronounced by the military authorities of the United States under the provisions of this article within the territory of Japan.

8. Where an accused has been tried in accordance with the provisions of this article either by the military authorities of the United States or the authorities of Japan and has been acquitted, or has been convicted and is serving, or has served, his sentence or has been pardoned, he may not be tried again for the same offense within the territory of Japan by the authorities of the other State. However, nothing in this paragraph shall prevent the military authorities of the United States from trying a member of its armed forces for any violation of rules of discipline arising from an act or omission which constituted an offense for which he was tried by the authorities of Japan.

9. Whenever a member of the United States armed forces, the civilian component or a dependent is prosecuted under the jurisdiction of Japan he shall be entitled:

(a) to a prompt and speedy trial;

(b) to be informed, in advance of trial, of the specific charge or charges made against him;

(c) to be confronted with the witnesses against him;

(d) to have compulsory process for obtaining witnesses in his favor, if they are within the jurisdiction of Japan;

(e) to have legal representation of his own choice for his defense or to have free or assisted legal representation under the conditions prevailing for the time being in Japan;

(f) if he considers it necessary, to have the services of a competent interpreter; and

(g) to communicate with a representative of the Government of the United States and to have such a representative present at his trial.

10. (a) Regularly constituted military units or formations of the United States armed forces shall have the right to police any facilities or areas which they use under article II of this agreement. The military police of such forces may take all appropriate measures to ensure the maintenance of order and security within such facilities and areas.

(b) Outside these facilities and areas, such military police shall be employed only subject to arrangements with the authorities of Japan and in liaison with those authorities, and in so far as such employment is necessary to maintain discipline and order among the members of the United States armed forces.

11. In the event of hostilities to which the provisions of article V of the Treaty of Mutual Cooperation and Security apply, either the Government of the United States or the Government of Japan shall have the right, by giving sixty days' notice to the other, to suspend the application of any of the provisions of this article. If this right is exercised, the Governments of the United States and Japan shall immediately consult with a view to agreeing on suitable provisions to replace the provisions suspended.

12. The provisions of this article shall not apply to any offenses committed before the entry into force of this agreement. Such cases shall be governed by the provisions of article XVII of the administrative agreement under article III of the Security Treaty between the United States of America and Japan, as it existed at the relevant time.

ARTICLE XVIII

1. Each party waives all its claims against the other party for damage to any property owned by it and used by its land, sea or air defense services, if such damage—

(a) was caused by a member or an employee of the defense services of the other party in the performance of his official duties; or

(b) arose from the use of any vehicle, vessel or aircraft owned by the other party and used by its defense services, provided either that the vehicle, vessel or aircraft causing the damage was being used for official purposes, or that the damage was caused to property being so used.

Claims for maritime salvage by one party against the other party shall be waived, provided that the vessel or cargo salved was owned by a party and being used by its defense services for official purposes.

2. (a) In the case of damage caused or arising as stated in paragraph 1 to other property owned by either party and located in Japan, the issue of the liability of the other party shall be determined and the amount of damage shall be assessed, unless the two Governments agree otherwise, by a sole arbitrator selected in accordance with subparagraph (b) of this paragraph. The arbitrator shall also decide any counterclaims arising out of the same incident.

(b) The arbitrator referred to in subparagraph (a) above shall be selected by agreement between the two Governments from amongst the nationals of Japan who hold or have held high judicial office.

(c) Any decision taken by the arbitrator shall be binding and conclusive upon the parties.

(d) The amount of any compensation awarded by the arbitrator shall be distributed in accordance with the provisions of paragraph 5(e)(i), (ii), and (iii) of this article.

(e) The compensation of the arbitrator shall be fixed by agreement between the two Governments and shall, together with the necessary expenses incidental to the performance of his duties, be defrayed in equal proportions by them.

(f) Nevertheless, each party waives its claim in any such case up to the amount of 1,400 U.S. dollars or 504,000 yen. In the case of considerable variation in the rate of exchange between these currencies the two Governments shall agree on the appropriate adjustments of these amounts.

3. For the purposes of paragraphs 1 and 2 of this article the expression "owned by a party" in the case of a vessel includes a vessel on bare boat charter to that party or requisitioned by it on bare boat terms or seized by it in prize (except to the extent that the risk of loss or liability is borne by some person other than such party).

4. Each party waives all its claims against the other party for injury or death suffered by any member of its defense services while such member was engaged in the performance of his official duties.

5. Claims (other than contractual claims and those to which paragraphs 6 or 7 of this

article apply) arising out of acts or omissions of members or employees of the United States armed forces done in the performance of official duty, or out of any other act, omission, or occurence for which the United States armed forces are legally responsible, and causing damage in Japan to third parties, other than the Government of Japan, shall be dealt with by Japan in accordance with the following provisions:

(a) Claims shall be filed, considered, and settled or adjudicated in accordance with the laws and regulations of Japan with respect to claims arising from the activities of its self-defense forces.

(b) Japan may settle any such claims, and payment of the amount agreed upon or determined by adjudication shall be made by Japan in yen.

(c) Such payment, whether made pursuant to a settlement or to adjudication of the case by a competent tribunal of Japan, or the final adjudication by such a tribunal denying payment, shall be binding and conclusive upon the parties.

(d) Every claim paid by Japan shall be communicated to the appropriate United States authorities together with full particulars and a proposed distribution in conformity with subparagraphs (e)(i) and (ii) below. In default of a reply within two months, the proposed distribution shall be regarded as accepted.

(e) The cost incurred in satisfying claims pursuant to the preceding subparagraphs and paragraph 2 of this article shall be distributed between the parties as follows:

(i) Where the United States alone is responsible, the amount awarded or adjudged shall be distributed in the proportion of 25 percent chargeable to Japan and 75 percent chargeable to the United States.

(ii) Where the United States and Japan are responsible for the damage, the amount awarded or adjudged shall be distributed equally between them. Where the damage was caused by the defense services of the United States or Japan and it is not possible to attribute it specifically to one or both of those defense services, the amount awarded or adjudged shall be distributed equally between the United States and Japan.

(iii) Every half year, a statement of the sums paid by Japan in the course of the half-yearly period in respect of every case regarding which the proposed distribution on a percentage basis has been accepted, shall be sent to the appropriate United States authorities, together with a request for reimbursement. Such reimbursement shall be made, in yen, within the shortest possible time.

(f) Members or employees of the United States armed forces, excluding those employees who have only Japanese nationality, shall not be subject to any proceedings for the enforcement of any judgment given against them in Japan in a matter arising from the performance of their official duties.

(g) Except in so far as subparagraph (e) of this paragraph applies to claims covered by paragraph 2 of this article, the provisions of this paragraph shall not apply to any claim arising out of or in connection with the navigation or operation of a ship or the loading, carriage, or discharge of a cargo; other than claims for death or personal injury to which paragraph 4 of this article does not apply.

6. Claims against members or employees of the United States armed forces (except employees who are nationals of or ordinarily resident in Japan) arising out of tortious acts or omissions in Japan not done in the performance of official duty shall be dealt with in the following manner:

(a) The authorities of Japan shall consider the claim and assess compensation to the claimant in a fair and just manner, taking into account all the circumstances of the case, including the conduct of the injured person, and shall prepare a report on the matter.

(b) The report shall be delivered to the appropriate United States authorities, who shall then decide without delay whether they will offer an ex gratia payment, and if so, of what amount.

(c) If an offer of ex gratia payment is made, and accepted by the claimant in full satisfaction of his claim, the United States authorities shall make the payment themselves and inform the authorities of Japan of their decision and of the sum paid.

(d) Nothing in this paragraph shall affect the jurisdiction of the courts of Japan to entertain an action against a member or an employee of the United States armed forces unless and until there has been payment in full satisfaction of the claim.

7. Claims arising out of the unauthorized use of any vehicle of the United States armed forces shall be dealt with in accordance with paragraph 6 of this Article, except in so far as the United States armed forces are legally responsible.

8. If a dispute arises as to whether a tortious act or omission of a member or an employee of the United States armed forces was done in the performance of official duty or as to whether the use of any vehicle of the United States armed forces was unauthorized, the question shall be submitted to an arbitrator appointed in accordance with paragraph 2(b) of this Article, whose decision on this point shall be final and conclusive.

9. (a) The United States shall not claim immunity from the jurisdiction of the courts of Japan for members or employees of the United States armed forces in respect of the civil jurisdiction of the courts of Japan except to the extent provided in paragraph 5(f) of this article.

(b) In case any private movable property, excluding that in use by the United States armed forces, which is subject to compulsory execution under Japanese law, is within the facilities and areas in use by the United States armed forces, the United States authorities shall, upon the request of Japanese courts, possess and turn over such property to the Japanese authorities.

(c) The authorities of the United States and Japan shall cooperate in the procurement of evidence for a fair hearing and disposal of claims under this article.

10. Disputes arising out of contracts concerning the procurement of materials, supplies, equipment, services, and labor by or for the United States armed forces, which are not resolved by the parties to the contract concerned, may be submitted to the Joint Committee for conciliation, provided that the provisions of this paragraph shall not prejudice any right which the parties to the contract may have to file a civil suit.

11. The term "defense services" used in this article is understood to mean for Japan its self-defense forces and for the United States its armed forces.

12. Paragraphs 2 and 5 of this article shall apply only to claims arising incident to noncombat activities.

13. The provisions of this article shall not apply to any claims which arose before the entry into force of this Agreement. Such claims shall be dealt with by the provisions of article XVIII of the Administrative Agreement under article III of the Security Treaty between the United States of America and Japan.

ARTICLE XIX

1. Members of the United States armed forces, the civilian component, and their dependents, shall be subject to the foreign exchange controls of the Government of Japan.

2. The preceding paragraph shall not be construed to preclude the transmission into or outside of Japan of United States dollars or dollar instruments representing the official funds of the United States or realized as a result of service or employment in connection with this agreement by members of the United States armed forces and the civilian component, or realized by such persons and their dependents from sources outside of Japan.

3. The United States authorities shall take suitable measures to preclude the abuse of the privileges stipulated in the preceding paragraph or circumvention of the Japanese foreign exchange controls.

ARTICLE XX

1. (a) United States military payment certificates denominated in dollars may be used by persons authorized by the United States for internal transactions within the facilities and areas in use by the United States armed forces. The Government of the United States will take appropriate action to insure that authorized personnel are prohibited from engaging in transactions involving military payment certificates except as authorized by United States regulations. The Government of Japan will take necessary action to prohibit unauthorized persons from engaging in transactions involving military payment certificates and with the aid of United States authorities will undertake to apprehend and punish any person or persons under its jurisdiction involved in the counterfeiting or uttering of counterfeit military payment certificates.

(b) It is agreed that the United States authorities will apprehend and punish members of the United States armed forces, the civilian component, or their dependents, who tender military payment certificates to unauthorized persons and that no obligation will be due to such unauthorized persons or to the Government of Japan or its agencies from the United States or any of its agencies as a result of any unauthorized use of military payment certificates within Japan.

2. In order to exercise control of military payment certificates the United States may designate certain American financial institutions to maintain and operate, under United States supervision, facilities for the use of persons authorized by the United States to use military payment certificates. Institutions authorized to maintain military banking facilities will establish and maintain such facilities physically separated from their Japanese commercial banking business, with personnel whose sole duty is to maintain and operate such facilities. Such facilies shall be permited to maintain United States currency bank accounts and to perform all financial transactions in connection therewith including receipt and remission of funds to the extent provided by article XIX, paragraph 2, of this Agreement.

ARTICLE XXI

The United States may establish and operate, within the facilities and areas in use by the United States armed forces, United States military post offices for the use of members of the United States armed forces, the civilian component, and their dependents, for the transmission of mail between United States military post offices in Japan and between such military post offices and other United States post offices.

ARTICLE XXII

The United States may enroll and train eligible United States citizens residing in Japan, who apply for such enrollment, in the reserve organizations of the armed forces of the United States.

ARTICLE XXIII

The United States and Japan will cooperate in taking such steps as may from time to time be necessary to ensure the security of the United States armed forces, the members thereof, the civilian component, their

dependents, and their property. The Government of Japan agrees to seek such legislation and to take such other action as may be necessary to ensure the adequate security and protection within its territory of installations, equipment, property, records and official information of the United States, and for the punishment of offenders under the applicable laws of Japan.

ARTICLE XXIV

1. It is agreed that the United States will bear for the duration of this agreement without cost to Japan all expenditures incident to the maintenance of the United States armed forces in Japan except those to be borne by Japan as provided in paragraph 2.

2. It is agreed that Japan will furnish for the duration of this agreement without cost to the United States and make compensation where appropriate to the owners and suppliers thereof all facilities and areas and rights of way, including facilities and areas jointly used such as those at airfields and ports, as provided in articles II and III.

3. It is agreed that arrangements will be effected between the Governments of the United States and Japan for accounting applicable to financial transactions arising out of this agreement.

ARTICLE XXV

1. A Joint Committee shall be established as the means for consultation between the Government of the United States and the Government of Japan on all matters requiring mutual consultation regarding the implementation of this agreement. In particular, the Joint Committee shall serve as the means for consultation in determining the facilities and areas in Japan which are required for the use of the United States in carrying out the purposes of the Treaty of Mutual Cooperation and Security.

2. The Joint Committee shall be composed of a representative of the Government of the United States and a representative of the Government of Japan, each of whom shall have one or more deputies and a staff. The Joint Committee shall determine its own procedures, and arrange for such auxiliary organs and administrative services as may be required. The Joint Committee shall be so organized that it may meet immediately at any time at the request of the representative of either the Government of the United States or the Government of Japan.

3. If the Joint Committee is unable to resolve any matter, it shall refer that matter to the respective Governments for further consideration through appropriate channels.

ARTICLE XXVI

1. This agreement shall be approved by the United States and Japan in accordance with their legal procedures, and notes indicating such approval shall be exchanged.

2. After the procedure set forth in the preceding paragraph has been followed, this Agreement will enter into force on the date of coming into force of the Treaty of Mutual Cooperation and Security, at which time the Administrative Agreement under Article III of the Security Treaty between the United States of America and Japan, signed at Tokyo on February 28, 1952, as amended, shall expire.

3. The Government of each party to this Agreement undertakes to seek from its legislature necessary budgetary and legislative action with respect to provisions of this Agreement which require such action for their execution.

ARTICLE XXVII

Either Government may at any time request the revision of any Article of this Agreement, in which case the two Governments shall enter into negotiation through appropriate channels.

ARTICLE XXVIII

This Agreement, and agreed revisions thereof, shall remain in force while the Treaty of Mutual Cooperation and Security remains in force unless earlier terminated by agreement between the two Governments.

In witness whereof the undersigned Plenipotentiaries have signed this Agreement.

Done at Washington, in duplicate, in the English and Japanese languages, both texts equally authentic, this 19th day of January, 1960.

For the United States of America:

CHRISTIAN A. HERTER.
DOUGLAS MACARTHUR 2D.
J. GRAHAM PARSONS.

For Japan:

TADASHI ADACHI.
KOICHIRO ASAKAI.

Mr. ALLOTT. Mr. President, first I commend the senior Senator from Iowa for the very well considered and brilliant discourse which he has made upon the Japanese Treaty. I concur in what the Senator has said. I also concur in the remarks of the Senator from Arkansas, who this afternoon made such a fine presentation of all the ramifications of the Japanese Treaty to the Members of the Senate.

I intend to support the treaty. There is one thing I wish to state, as a result of some of the colloquy which occurred in the last few minutes. It seems to me that to deny the treaty is to draw a line down the Pacific. I do not think the United States can afford to do so. I do not think we can afford to bring our outer perimeter of defense closer to the United States than it is. We do not have to go far back in history to remember the Oxford movement of the 1930's and the very sad effect it had upon the thinking, the alertness and the wakefulness of this country. After World War II, I think we should ever be mindful of the effects which drawing a line closer to the United States might have upon our national policy and international policy.

I think we are all indebted to the Senator from Iowa [Mr. HICKENLOOPER], to the Senator from Arkansas [Mr. FULBRIGHT], to the Senator from Ohio [Mr. LAUSCHE], and to other Senators who have taken such a clear-cut stand upon this question.

Mr. President, for the benefit of my colleagues in the Senate I intend to devote myself for some 15 or 20 minutes to an entirely different subject, so Senators who have other things to do can take care of them in these few minutes.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield.

Mr. HICKENLOOPER. I merely wish to express my thanks to the Senator for the kind words he has said about the treaty. I am happy the Senator agrees with me with regard to the treaty and is going to support it.

Mr. ALLOTT. Oftentimes the Senator from Iowa and I have minor disagreements, but this is not one of those occasions. I think the Senator has contributed a very great argument in behalf of the treaty.

Mr. HICKENLOOPER. I thank the Senator.

THE NATIONAL SPACE EXPLORATION PROGRAM

Mr. ALLOTT. Mr. President, I shall take several minutes of the Senate's valuable time to make what I believe to be some pertinent comments on our national space exploration program. As ranking minority member of the Appropriations Subcommittee, which is responsible for approving the operating funds of the National Aeronautics and Space Administration, I have been somewhat disturbed by an apparent public confusion and outlook on this Nation's space efforts. I hope the statements and suggestions submitted in the course of my remarks will, on analysis, be considered as a constructive attempt to promote clarity and public understanding toward a program which unquestionably involves one of the most noble national endeavors upon which this country has ever embarked.

The study and deliberations I have made of our national space activities have led me to the conclusion that the Congress itself has been guilty of not providing the degree of enlightened cooperation which our space scientists and technologists require if they are to advance in their efforts on this challenging frontier of space. In fact, congressional enthusiasm and apathy on our space efforts have been so intermixed that our citizens have not been able to feel the real pulse of the truly great developments occurring in space in their own lifetimes.

Before providing the particulars in support of this conclusion, it may be helpful to review briefly what lies ahead on the space horizon for all humanity if our national space program is fully supported as well as vigorously pursued. Most of our scientists who have come to grips with the realities of our technical capabilities in space believe that within the lifetimes of most of us our progress in the world outside the earth will give us instantaneous communications around the earth. Television programs, for example, originating in New York, will be viewed in Bombay or Cairo. International telephone conversations will, without delay, be as easily made from Denver to Paris as they presently are today from Denver to Chicago.

Second. Our space capabilities reflect the great advances which lie before us in weather forecasting and possibly even weather control in the near future. Meteorologists of every nation have already acclaimed the breathtaking cloud cover pictures taken over millions of miles of the earth's surface by Tiros I. Pictures from Tiros I have now accumulated to a number of over 24,000. Our own weather experts indicate that with the earlier weather predictions now promised through our space efforts, billions of dollars in terms of lives and property can be saved to this Nation and the world.

It becomes immediately apparent that if our satellites can photograph with accuracy and detail cloud structure and formation, typhoons, and hurricanes, as they have, they will be able to observe, also in detail, launching sites, nuclear explosions, and military production sites. In the near future, then, hopefully the

world can be protected against sneak attacks and surprise aggression. If in December of 1941, the photographic capabilities of satellites had been available to the Nation, the destruction of our naval strength at Pearl Harbor might never have occurred.

In the field of navigation, there appears now to be no unsolved technological problems ahead to the development of a satellite system producing instantaneous information for accurate guidance of our ships and commerce on the high seas.

Sometime late next year, if present schedules can be maintained, the Nation's first man traveling in space will circle the earth in his mercury capsule. Twenty-seven thousand miles in 90 minutes, Mr. President, will be the greatest jump in manned traveling speed the world has experienced to date. In fact, it will be over a 1,200 percent increase in the speed attained today in even our advanced jet military aircraft. If our commerce keeps pace with our technological progress, it is not too unrealistic to visualize transportation between our east coast and Europe in a time period of less than 15 minutes. Yes; it sounds incredible, Mr. President, but we must remember that the Wright brothers were considered as "loony tinkerers" not too many years ago.

Even beyond the exciting vista which lies before us in the fields I have mentioned, great advancements can be expected in a number of areas upon which our lives are already heavily dependent today. The electronics industry, for example, pressed by the demands of space technology, has taken great strides forward in the development of new techniques and the miniaturization of existing equipment.

Medical research will be given new information through the experience of animate life traveling through space, some of which may open new avenues for remedies of present day diseases and illnesses. New and more powerful propulsion fuels are in development; the desire for new materials that are harder, lighter, and more durable under intense heating conditions in space may revolutionize the present day manufacture of industrial products in the days ahead; new power sources through a better understanding of the sun-earth relationship may develop; and perhaps beyond anything else, the great increase in our basic knowledge about the origin of the earth and indeed the existence of life on other planets holds a promise and excitement that few experiments in all recorded history could reflect.

I have not referred directly as yet to the international character of our space activities or the international prestige that is implicit in the competition between the United States and the U.S.S.R. in this field. The successful orbiting of Sputnik I on October 4, 1957, marked a new era in the Communist cold war, and the free nations of the world are, 4 years later, still rebounding from the claims of technological superiority of the Marxist societies.

Scientific community and world leaders, at home and abroad, know that the United States has launched successfully far more satellite and deep space probes than the Russians and have provided far more valuable data to benefit the world at large than their counterparts in the Soviet Union. However, the vast propagandist mill of the Communist network has exploited to the fullest measure, the sputniks, and luniks, which have been launched to the moon and beyond in order to achieve the greatest psychological advantage for Russia.

Our scientists inform us that the Soviet Union has revealed to the world at large relatively little scientific data that they may have obtained through these efforts. And this in spite of the condition that our data, as well as the information on our successes and failures in space, have been placed in open view, even to the Soviet Union.

I believe there is no question that we are in a technological race in space with the Soviet Union and that our competition views this race as a critical factor in their drive to communize the world. Our scientists and technicians are not hanging their heads in shame, nor are they fearful of the outcome if they can be assured of continuous support for their research efforts. They have proven to date that they are not only willing but capable of keeping this Nation in the forefront in the fields I have already mentioned but are confident of leading the way in many others that will bring credit to the Nation and the free world as well.

Most of the Members of the Senate recall the lengthy hearings held several years ago in both Houses of Congress by select committees on the subject of this Nation's space effort. These hearings culminated in the establishment of a national policy that our exploration of space should be dedicated to peaceful purposes and the establishment of the National Aeronautics and Space Administration to conduct our space exploration program. Provision was made at that time to safeguard the responsibilities of the Defense Department to carry on defense programs in space. And finally, for the first time in some 80 years, both Houses of the Congress, established new permanent committees to legislate and have jurisdiction over a new function of the Federal Government.

Since these developments have occurred, programs, personnel, and facilities have been concentrated in the NASA and a long-range plan for space exploration has been formulated by the scientists in the new agency.

In addition to these rapid developments, appropriations have been requested of the Congress to provide the financial foundation that this challenging and promising program required. And it is in this area, Mr. President, that I would like to direct my final comments to the attention of my colleagues.

I, and I am sure the citizens of my State, have been disturbed by the comments of leading members of the opposition party that we are not going fast enough in space and that budget restrictions are retarding our space efforts.

However, I find that in the last 3 fiscal years, the Congress of the United States has cut the funds for our National Space Administration by $74,900,000. And the other body of Congress has already approved a reduction of $38,900,000 for next year's operating funds for NASA. I am pleased to state quite openly that the reduction in funds for this vital program has not originated in this body. To the contrary, the Senate has supported on every occasion the appropriations requested by our space scientists and technicians. But, as the Members well know, controversies between the two Houses are settled by compromises and these compromises in our space budget have resulted in vital programs being delayed or canceled by the space agency.

I believe that the Members of Congress should be as consistent in the support which they give to the space program as they are consistent in their repeated statements regarding the urgency for our national space efforts.

In conclusion, I want to state that there may be a valid question as to whether our present organizational structure in Congress for consideration of space legislative matters is designed to promote the information needed by its members in order for them to intelligently support their efforts.

I do not wish my remarks however to be misunderstood for I have the highest regard for the work which the present Space Committees of both houses have performed to date.

Over the years the Joint Committee on Atomic Energy has become a valuable mechanism to the Members of Congress in bringing pertinent and timely information on a scientific program of great national significance. I believe that a Joint Committee on Space Exploration which would have legislative jurisdiction over our national space activities would possibly produce a greater degree of congressional support for our technical space oriented programs.

I ask unanimous consent that an information fact sheet about the National Aeronautics and Space Administration, together with a table 1 entitled, "Significant Firsts in Sounding Rockets, Satellite, and Space Probe Research," be printed in the RECORD at this point in my remarks.

There being no objection, the fact sheet and table were ordered to be printed in the RECORD, as follows:

INFORMATION FACT SHEET ABOUT THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

BACKGROUND

The National Aeronautics and Space Administration (NASA) was established by Public Law 85-568 signed by President Eisenhower on July 29, 1958. Earliest public statements about official governmental interest in scientific experiments in space occurred in 1955 when announcement was made of our intention to launch artificial satellites as part of our contribution to the program of the International Geophysical Year (IGY). Military interest in the use of the space environment has existed, but not publicly, for many years.

Prior to 1958, the limited space activities of the United States were conducted by the military departments. Although financed by the National Science Foundation, the Vanguard IGY program was under the management and technical direction of the Navy.

Projects initiated following Sputnik I (Oct. 4, 1957) were funded by the Department of Defense, Advanced Research Projects Agency (ARPA) and carried out by the military services whether for civilian scientific or for military purposes.

On October 1, 1958, NASA officially came into existence and several projects were transferred from the Department of Defense (DOD) to NASA. The Administrator of NASA and the Deputy Administrator, T. Keith Glennan and Hugh L. Dryden, respectively, were confirmed by the Senate on August 14, 1958, and sworn in on August 19, 1958. Throughout the balance of 1958 and 1959, transfers of various projects between DOD and NASA occurred as the program and operating responsibilities of each agency were clarified.

PROVISIONS OF THE SPACE ACT

The act set forth the policy of the United States that activities in space should be devoted to peaceful purposes for the benefit of all mankind and that a civilian organization, NASA, was being organized to conduct such activities. The act reserved to the Defense Department jurisdiction over those space activities which were necessary in carrying out the military responsibilities of the respective departments.

The President was made directly responsible for (1) surveying all significant aeronautical and space activities, (2) developing a comprehensive program of such activities to be conducted by agencies of the United States, (3) designating the agency to carry out major activities, (4) providing for effective cooperation between the DOD and NASA and (5) resolving differences between these two agencies on matters of jurisdiction. He was given a Space Council composed of governmental and nongovernmental members to advise him on the performance of these duties and there was established a Civilian-Military Liaison Committee through which the Secretary of Defense and the Administrator of NASA would advise and consult on matters of concern to each.

PROPOSED CHANGES IN SPACE ACT (85–568)

On January 14, 1960, the President transmitted a message to the Congress proposing changes in Public Law 85–568 which are intended to make it clear that the Nation's program in space exploration for peaceful purposes is and should be the responsibility of a single civilian agency—NASA. Provision is made for the President to allocate responsibility for the design and development of new launch vehicles and to resolve possible disputes between NASA and the DOD. While there are proposed changes in the wording regarding military activities in space, there is no change in the intent to leave the Department of Defense free to meet its military responsibilities through the use of space and the development of weapons using space vehicles.

Further, the President states his belief that it is no longer desirable to retain in the act those provisions which impose planning and supervisory duties on the President. Since the purpose of the Space Council is solely that of advising the President on the performance of his duties, the enumeration of which is to be repealed, he proposes the elimination of the Space Council. Because of the many channels for communication between NASA and the DOD, the President further proposes the elimination of the Civilian-Military Liaison Committee.

A proposed change that has attracted some attention has to do with property rights in inventions. In brief, it is proposed that the patent policies of NASA be changed to approximate those of the Department of Defense so that the Government, through both of these agencies, treats its contractors in this field similarly, while adequately protecting the interests of the Government.

TECHNICAL COMPETENCY OF NASA

NASA has transferred to it the 43-year-old National Advisory Committee for Aeronautics (NACA), including 8,000 scientific, technical, and administrative personnel. The NACA's reputation for research in the development of advanced aircraft was unexcelled anywhere in the world. Its research program, for some years, had been oriented substantially toward space related problems. In addition, the President has transferred scientists from the Naval Research Laboratory, 2,700 technical and scientific personnel of the Jet Propulsion Laboratory, and recently approximately 5,000 Government personnel from the Army's Huntsville Ordnance Command (Von Braun group) to NASA. The last transfer will become effective March 15, 1960, unless Congress disapproves, but the technical management of the group's main program, Saturn (the 1½-million-pound thrust engine) is already being carried forward by NASA.

NASA'S PROGRAM OF SPACE EXPLORATION

The major components of the Nation's space exploration program being conducted by NASA are:

(a) Manned satellite program: The first step in this program is Project Mercury. The objectives are to place a man in orbit; to recover him safely; and to study his capability to perform useful functions while in orbit. Ballistic training flights for the Astronauts are scheduled for the last half of calendar year 1960. Present plans call for orbital flight in calendar year 1961.

(b) Scientific investigations in space: A broadly based program of research in a variety of fields (chemistry, physics, astronomy, biology, etc.) will employ satellites and sounding rockets. This program will continue over many years at a significant but relatively constant funding level.

(c) Lunar and planetary programs: First steps involve the launching of lunar probes and satellites followed by hard and soft lunar landings and finally by manned lunar expeditions. Similar exploration of the environment and surface of Mars and Venus will follow in a later time period. Other projects in this category will involve the use of probes to study interplanetary space. A manned lunar landing is not anticipated before 1970.

(d) Satellite applications: This program utilizing orbiting satellite spacecraft is designed to produce practical applications of space technology. It is expected to provide greatly improved weather forecasting, worldwide television and telephone services, improved and more reliable navigational aids and more accurate mapping of the earth's surface. In this area, there exists the greatest possibility of duplication of activities between NASA and the DOD. This being recognized, effective means of avoiding needless duplication have been developed. It is important to note, too, that in these areas, the greatest opportunity for mutual support between NASA and the DOD also exists.

(e) Launch vehicle systems: A very substantial portion of NASA's budget is being devoted to the development and testing of launch vehicle systems necessary to carry instruments and men into space. This program shares with Project Mercury the highest urgency in the entire NASA effort.

The launch vehicles that are presently in use are those that for the most part have been assembled from available missile hardware and have been marginal for the missions to which they have been assigned.

However, a family of new launch vehicles is under development that will provide the capability to place payloads ranging from 200 to 30,000 pounds into a low earth orbit. It is expected to develop this capability to orbit payloads of 5,500 pounds in 12 to 15 months, 9,000 pounds in 18 months to 2 years, and 30,000 pounds in 3 to 5 years.

UNITED STATES-U.S.S.R. SPACE COMPARISON

Immediately after World War II, the Soviet Union began intensive work in the field of high-thrust ballistic missiles. This was 5 or 6 years before any serious organized activity within the United States. Due to this headstart, the U.S.S.R. has demonstrated a considerable lead over the United States in the field of propulsion, and, consequently, the ability to project heavier payloads into space. Within 2 years the present U.S. vehicle development program will enable the United States to catch up with the present effort of the U.S.S.R., but it will take 4 or 5 years before we can expect to significantly surpass their present capabilities. This will come with the development of the Saturn (1½-million-pound thrust) vehicle. All available evidence indicates U.S. superiority in tracking and data acquisition operations and equal or superior ability with the U.S.S.R. in the scientific instrumentation field.

In the past 2 years the United States successfully launched 12 scientific earth satellites and 3 deep space probes. Seven U.S. satellites are still in orbit, and one space probe orbits the sun. In the same period, the U.S.S.R. has launched three satellites and three space probes; one satellite orbits the earth, one probe orbits the sun; another probe impacted the moon, and a third is in an earth-lunar orbit. Because the U.S.S.R. has had more powerful launch vehicles, they have been able to launch heavier payloads and perform more spectacular experiments than the United States. Table I lists some of the significant accomplishments of both countries. Table II lists U.S. launchings for calendar year 1959.

INTERNATIONAL COOPERATION

The United States has continued the cooperative nature of its space activities that was the keynote of the International Geophysical Year (IGY) program. This has been effected through U.S. participation in the extension of IGY in the International Council of Scientific Unions Committee on Space Research (Cospar). Through Cospar the United States has offered to launch scientific satellites containing experiments of foreign scientists. In addition arrangements are being made for limited joint programs of space exploration between the United States, Canada, and the United Kingdom.

The operation of the extensive U.S. tracking network required for all space launchings, and in particular for project Mercury, is another avenue through which our program has attained an international character. We have even offered the services of this network in support of the Soviet-manned space flight program since they have no comparable facilities.

Last but not least the United States has taken the initiative in the United Nations to bring about the appropriate study, cooperation and action that is due a subject of such wide appeal to nations around the world.

TABLE I. SIGNIFICANT FIRSTS IN SOUNDING ROCKETS, SATELLITE, AND SPACE PROBE RESEARCH

UNITED STATES

1. A number of firsts in high altitude rocket research, including among others:

First detailed photo of solar ultraviolet spectrum.

First photo of complete tropical storm.

First penetration of equatorial ionospheric current sheets.

First detection of X-rays in high atmosphere.

First detection of auroral particles in high atmosphere.

2. Discovery of the Van Allen Radiation Belt.

3. Discovery that the Van Allen Radiation Belt consists of at least two zones.

4. Creation of a manmade radiation shell around the earth (the Argus experiments).

5. The first precise geodetic use of artificial earth satellites (Vanguard I) to obtain refined information on the size and shape of the earth, providing a more accurate measurement of the flattening and showing that the earth is actually slightly pear shaped.

6. First achievement of an elementary communication satellite, in Project Score.

U.S.S.R.

1. First artificial earth satellite.

2. First lunar near miss.

3. First lunar impact.

4. First pictures of the hitherto unseen side of the moon.

5. First detection of what may be a current ring about the earth (the Chapman-Störmer ring).

6. First routine recovery of large animals (dogs and rabbits) from high altitude rocket flights.

7. Development routine use of a meteorological sounding rocket, recoverable and reflyable.

8. First launching of a large animal (laika) in a satellite of the earth.

9. First high capacity, maneuverable, heavily instrumented, spacecraft with fully successful long range communications (Lunik III).

TABLE II.—*Calendar year 1959 launchings*

Date	Experiment	Results
Feb. 7, 1959	Vanguard II	Success.
Mar. 3, 1959	Pioneer IV	Do.
Apr. 13, 1959	Vanguard	Failure.
June 22, 1959	Vanguard	Do.
July 16, 1959	Explorer	Do.
Aug. 7, 1959	Explorer VI	Success.
Aug. 14, 1959	Beacon (12-foot sphere)	Failure.
Sept. 18, 1959	Vanguard III	Success.
Oct. 13, 1959	Explorer VII	Do.
Nov. 26, 1959	Lunar Orbiter	Failure.
Sept. 9, 1959	Mercury-Atlas	Success.
Aug. 21, 1959	Mercury-Little Joe I	Failure.
Oct. 4, 1959	Mercury-Little Joe II	Success.
Nov. 4, 1959	Mercury-Little Joe III	Do.
Dec. 4, 1959	Mercury-Little Joe IV	Do.

PROPOSED NATIONAL INSTITUTE FOR ATMOSPHERIC RESEARCH

Mr. ALLOTT. Mr. President, it is with a great deal of confidence that I can announce to the Senate that plans now are under way for a new National Institute for Atmospheric Research.

This will be announced by the National Science Foundation and the University Corporation for Atmospheric Research. Both will support this coordinated endeavor to further our basic research into the atmosphere.

A Director will be announced soon. It will be his task to select a research and planning staff. New, major facilities for atmospheric research, so important in our space and other programs, are envisioned ultimately. However, it will be the task—one of several months or even of several years—of this planning group to determine exactly what is needed and where it should be located.

The National Science Foundation plans to participate by making grants to the University Corporation on Atmospheric Research to pay the salaries and costs of this planning work.

This is just one of the reasons that it is so important to restore the cuts made by the House in the proposed Foundation budget, much of which would have come from funds urgently needed for broad basic research if we are to continue to match or exceed the Soviet Union in scientific endeavor.

To background this just a bit more, let me say that in 1959 a report was published by a committee composed of scientists from 14 major universities which pointed up many deficiencies in the atmospheric sciences in the United States. A major deficiency was the lack of suitable facilities for the conduct of broad-scale research in the complex and diverse phenomena affecting the atmospheric envelope of the earth. As a result of recommendations contained in the report, the Foundation proposes a gradual buildup in the research facilities necessary to support this field of science. Examples of such facilities include aircraft, equipped and instrumented, to serve as platforms for atmospheric research; ground-based and airborne equipment for probing the atmosphere with radar and other electromagnetic radiation techniques; and, instrumented balloons and rockets for probing the upper atmosphere. Assistance in building atmospheric science laboratories will also be provided to individual university groups to improve the effectiveness and coverage of the cooperative research programs.

TREATY OF MUTUAL COOPERATION AND SECURITY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN

The Senate resumed the consideration of Executive E (86th Cong., 2d sess.), the Treaty of Mutual Cooperation and Security Between the United States of America and Japan, signed at Washington on January 19, 1960.

Mr. GRUENING. Mr. President, I rise to support the ratification of the treaty with Japan. I shall vote for it with no slight misgivings, but shall do so because I believe that on balance, and, perhaps better said, because I hope, the treaty will be beneficial both to Japan and to the United States, and that it may contribute to the keeping of the peace, which certainly is the desire and hope of the peoples of the world. Actually, we have no desirable alternative.

I wish to take this occasion to congratulate the chairman of the Committee on Foreign Relations on his well-balanced, objective, and dispassionate presentation of the pros and cons of ratification, and of the complexities underlying the situation.

He has illuminated the problems involved and has truly informed us. He has in no sense minimized the uncertainties that lie ahead after ratification. His has been a statesmanlike performance.

Likewise, I wish to pay tribute to the senior Senator from Oregon [Mr. MORSE] for his penetrating discussion of the weaknesses and omissions of the treaty. The Senator from Oregon has likewise announced his support of ratification, but his criticism of the administration's foreign policy deserves wide reading. It is notable that again and again in the past Senator MORSE, a member of the Committee on Foreign Relations, has been a dissenter, at times a lone dissenter, at times supported by only two or three, from the policies recommended by the administration and adopted, often reluctantly, by the Senate. Time and again his analysis of the shortcomings of these policies has proved sound, and his prophetic judgments have been vindicated with the passage of time. So his views on the treaty and the circumstances and events surrounding it are entitled to the utmost respect.

I likewise wish to commend the value of the remarks expressing doubt and probable opposition to the treaty which have been raised by the Senator from Louisiana [Mr. LONG].

Nor in deciding to support ratification, am I unmindful of the moving plea against ratification found on pages 48, 49, and 50 of the hearings, signed by nearly 400 representatives of the clergy, from all parts of the Union, who illustrate in their objection to the treaty the great dilemma which arises from the conflicting desire for disarmament, a goal we must all seek, and the need for military sufficiency, which the realities of this contemporary world with its totalitarian aggressors requires.

There are strong bonds of amity between us and the great people who occupy the narrow chain of islands that constitute the homeland of Japan. It is clearly desirable to erase as far as we may the harsh memories of the bitter struggle in which our two nations engaged, with the sacrifices of so many young lives, which have left a legacy of mourning in countless homes, both in Japan and in the United States.

It is clearly desirable to erase as far as we can the bitter fruits of what President Roosevelt labeled "a day of infamy," when, under the misleadership of a fanatic military clique, Japan precipitated the unprovoked attack without warning on Pearl Harbor.

It is desirable for us to remember always that the people of a nation are not necessarily responsible for the acts of their governmental leaders. They are,

as often as not, the victims. While we like to believe, and do believe, that even, in a democracy like ours where the people rule, and are hence presumed responsible for our Government's acts, in a system that whatever its faults we still consider the best yet devised by man, yet the acts of our Government may be unwise and productive of disaster. Much that has happened to us recently falls into this category.

So, we should try to dissociate ourselves from holding the people of Japan responsible for the actions of their warlords in 1941, just as we should clearly distinguish between the people of Russia and the actions of their rulers in the Kremlin, and no doubt also between the people of Red China and the leaders Mao Tse-tung and Chou En-lai.

Mr. President, the Japanese are a noble people, with a high culture, a great history, and with unique qualities of an outstanding order. They fought with great bravery in a war into which they were pushed. They have returned to the difficult struggles of peace, after a crushing defeat, with courage and determination. They are a hard-working, industrious people with exceptional standards of morality. They are an artistic people, a courteous people, a friendly people. Whatever we may do to get to know them better, to achieve a better understanding by us of them and by them of us, will be in the best possible cause.

Incidentally, I am glad to report in this connection that an entirely new and unprecedented industrial and trade relationship is in the making between the State of Alaska and Japan. Japanese and American capital have combined to establish a new and important industry in Sitka, a pulpmill which utilizes the hitherto unused virgin timber resources of southeastern Alaska.

The mill will be dedicated with appropriate ceremonies in a few days, on June 29. I wish I could be there. However, I consider it of sufficient importance to warrant my sending a member of my staff to represent me and convey my good wishes.

From Wrangell and other southeastern Alaskan communities, spruce, hemlock, and cedar timber is being directly exported to Japan, which is so short of its own forestry resources.

Alaskan iron ore, chromite, and oil, all needed in Japan, are in prospect as exports, from Alaska to Japan. Conversely, we hope to see the direct importation from Japan, on its steamers, of the superlative arts and crafts of Japan, and of its many manufactured products in the perfecting of which the Japanese have made such great progress in recent years, and whose export is necessary to sustain a stable economy in those crowded islands of Nippon.

Some grave problems, particularly in the field of fisheries, remain as yet unresolved between Alaska and Japan but we hope that by an attitude of mutual understanding, forbearance, reasonable compromise, and give and take, we may resolve some of these thorny differences.

The able Ambassador of Japan, Mr. Koichiro Asakai, will visit Alaska this summer. We have gotten to know him well here in Washington and both like and admire him. I bespeak for him a warm and hospitable welcome.

Whether the treaty will serve the purposes which its Government sponsors in Japan and the United States hope for is by no means certain. As the New York Times in its leading editorial today said, "the ultimate fate of the security treaty and our bases in Japan must depend on the will of the Japanese people as expressed in new elections which now seem inevitable. Bases in a hostile country are of little value. The great majority of the Japanese people has thus far been realistic enough to support their alliance with the United States. This choice will now be put to the test again. The United States could well contribute to a positive result by ratifying the pact as quickly as possible."

Mr. President, I agree with that conclusion. I ask unanimous consent that the full text of the Times editorial be printed in the RECORD at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Tuesday, June 21, 1960]

WHITHER JAPAN?

The course of events in Japan in recent weeks has demonstrated clearly that two vital issues are at stake. One is Japan's position as a key bastion in the defense structure of the free world, now represented by the mutual security pact and the American bases in Japan. The other is the fate of Japan's new democracy.

The Communist objective is obviously to knock Japan out of the defense structure, as Premier Khrushchev seeks to knock out Germany, to neutralize both and thus pave the way to further Communist gains. To this end they have mobilized in Japan what they could not mobilize in Germany—namely, a Communist "Fifth Column." They have also sought to exploit a postwar jumble of emotions which Japan has been unable to resolve and in which neutralism and pacifism blend with pro-communism to produce an anti-American reaction.

In this situation the ultimate fate of the security treaty and our bases in Japan must depend on the will of the Japanese people as expressed in new elections which now seem inevitable. Bases in a hostile country are of little value. The great majority of the Japanese people has thus far been realistic enough to support their alliance with the United States. This choice will now be put to the test again. The United States could well contribute to a positive result by ratifying the pact as quickly as possible.

That the leftwing riots, of which more seem likely to follow, are jeopardizing Japan's democracy is self-evident. Japanese Communists have been able to get control of large student and labor organizations and to form them into political fighting groups for their own ends. The Japanese Government has thus far lacked power to deal with the rioters effectively before the rioting begins. This may change after the elections. But if it does not, one result seems inevitable. The leftwing "storm troopers" will stimulate the formation of rightwing "storm troopers" by rightist organizations already on the scene, and Japanese democracy could well be crushed between the forces of communism and fascism, as democracy was crushed in the Weimar Germany. Only the Japanese Government and the Japanese people can ward off this danger.

The debate on the treaty and the events which have preceded and accompanied its ratification in Japan, and which continue, have been the subject of pertinent and illuminating comment, not only on the floor of the Senate today, but by some of the country's leading columnists.

It should be a part of our duty to inform the American people, as fully as possible, of what is implied in the action the Senate will shortly take. It is regrettable that these comments by the most respected and responsible of our commentators inevitably find so much to criticize in the policies of this administration.

I call attention particularly to the article written by Walter Lippmann, already referred to by other Senators in the course of the debate. Mr. Lippmann makes clear that the "Trouble in Japan," which is the title of his widely syndicated column published in this morning's Washington Post, is that the administration's policies have played no small part in that trouble.

Mr. Lippmann begins his article by saying:

The cancellation of the President's visit to Japan, and his embarrassing experience in Okinawa, stem from the refusal in Washington to look squarely at the U–2 affair and its significance.

The capture of the U–2 and the way the incident was handled in Washington compromised gravely the whole circle of American bases from Norway through Turkey and Pakistan to Okinawa and Japan. When we confessed, and indeed boasted, that for 4 years we had been using these bases for a secret and illegal operation against the Soviet Union, our allies were morally and legally defenseless against the threats of the Soviet Union. A small and exposed nation is bound to take such threats seriously and although the threats may have been blunted they were not removed by the President's renunciation of aerial espionage. Thus the effect of the U–2 was to undermine our whole system of encircling bases. For it focused attention upon the fact that the bases had been secretly used for an operation which exposed the country containing the base to grave risk.

It was in this atmosphere that the Kishi government felt compelled to secure the ratification of the treaty. This naturally led to the rioting. Nevertheless, it seems to me inevitable that we should ratify the treaty.

I ask unanimous consent that the article by Mr. Lippmann be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TROUBLE IN JAPAN

(By Walter Lippmann)

The cancellation of the President's visit to Japan, and his embarrassing experience in Okinawa, stem from the refusal in Washington to look squarely at the U–2 affair and its significance.

The capture of the U–2 and the way the incident was handled in Washington compromised gravely the whole circle of American bases from Norway through Turkey and Pakistan to Okinawa and Japan. When we confessed, and indeed boasted, that for 4 years we had been using these bases for a secret and illegal operation against the Soviet Union, our allies were morally and le-

gally defenseless against the threats of the Soviet Union. A small and exposed nation is bound to take such threats seriously, and although the threats may have been blunted they were not removed by the President's renunciation of aerial espionage. Thus the effect of the U–2 was to undermine our whole system of encircling bases. For it focused attention upon the fact that the bases had been secretly used for an operation which exposed the country containing the base to grave risk.

In the very days when the U–2 had become the occasion for Mr. Khushchev's actions in Paris, the Kishi government was trying to have the new Japanese-American treaty ratified by parliament. This treaty grants to us the base right in Japan for at least 11 years. A less auspicious moment for railroading the treaty through the parliament can be hardly imagined than was the moment in which the summit conference collapsed. But Mr. Kishi, who was fighting not only for the treaties but for his own political life, did railroad the treaty through the parliament in the face of a very large volume of public disapproval, by no means confined to the Communists.

The President was then called upon to decide whether instead of traveling to Tokyo from Moscow, as originally planned, he would go to Tokyo anyway and would arrive there on the day when Mr. Kishi's coup for the treaty was consummated. The President decided to go to Tokyo, to go despite the fact that the U–2 and the collapse at the summit had aroused great popular fears about the American base. The President chose to go despite the fact that after his quarrel with Mr. Khrushchev, his visit to Japan had ceased to be conciliatory and had become defiant. He chose to go despite the fact that the timing of the visit enabled Mr. Kishi to exploit for his own political purposes the President of the United States.

This was a wrong decision. After the collapse of the summit the right decision would have been to cancel all visits, and to remain in Washington on the grounds that the world situation required the full attention of the President for the purpose of strengthening the national position. This would have been an answer to Mr. Khrushchev's vituperations. It would have done much to restore the shaken confidence of our allies. And it would have spared the President the humiliation in the Far East which has been inflicted upon him and his Office.

It can be said that the wrong decision was taken without any strong protest and criticism in Congress or in the press. That is true. The opposition had been virtually silenced when the Republicans and Senator JOHNSON cried out that it was unpatriotic to inquire seriously into the causes of the U–2 disaster.

So the President and his advisers had a free hand to take the decision about the Far East. Unfortunately for them and for the country, they showed the same kind of bad judgment which had caused them to fumble the U–2 affair. In both cases they ignored the well-known conventions and the old wisdom of the art of diplomacy. In both cases they judged the immediate situation not objectively but wishfully.

Thus, in the affair of the U–2 they abandoned the ancient convention which is that a government never avows responsibility for espionage, much less attempts to justify it. In the affair of the Tokyo visit they ignored the conventions which protect a state visit. One of these conventions is that a visit by the head of a state is a visit to the whole nation and not to a political head of the government which happens to be in office. A state visit, therefore, should never be made to a country which is divided within itself on an issue in which the visiting head of state has a special interest. The very reasons which have been advanced on behalf of the visit are compelling arguments against it—that the treaty would fail if the President decided not to come to Tokyo and that Kishi would fall. This was a misuse of the institution of the state visit, and if the President and his advisers had known or had remembered the old rules of the diplomatic game, we would all be much better off today.

Furthermore, in their judgment of the immediate situation in the Far East and especially in Japan, they grossly underestimated the impact on Asian popular opinion of the U–2 and the renewed quarrel with Moscow. There is no use deluding ourselves, as Mr. Hagerty does, that the opposition to the treaty and to the President's visit was confined to a small minority of Communists incited and paid for by Peiping and Moscow. The preponderant opinion of any Asian country within the military reach of Russia and China is bound to be neutralist. When we urge them to be anti-neutralist, they respond by being anti-American, and it is a great error to act as if an anti-neutralist policy can rally popular support. In Tokyo mighty little has been heard recently from the alleged majority who are supposed to be for the treaty.

The treaty has nevertheless been ratified. But we must realize that we are not at the end of the story. It is a question whether the treaty can now be made to work against a mounting agitation. In fact, we have to ask ourselves whether a much greater disaster to our position in the Far East can be averted unless there is, as powerful Japanese newspapers are already demanding, a renegotiation of the treaty, and with it a reformulation of our Far Eastern policy.

Mr. GRUENING. Mr. President, a similar column, written by another distinguished columnist, Marquis Childs, entitled "The Asian Volcano Ready To Erupt," also published in today's Washington Post, expresses his forebodings. He begins by saying:

The sounds out of Asia are like the rumblings of a volcano about to erupt. The subterranean roar, breaking out into the open in Korea and Japan, is a deepseated symptom that American policymakers have in recent years either ignored or have failed to face up to.

They have believed that by backing "strong" men and providing military assistance for military pacts the line could be held. What is happening today, belies this comfortable assumption.

The easy explanation is communism—the Communists have been at it again. Certainly communism is the trigger. But an explosion could not be set off if in the mass there were not the potentialities for an outburst.

Mr. Childs concludes with the wise advice:

There are two ways to react to what is happening. One is to learn from it and to try to formulate new and more realistic policies to be carried out by those who understand what recent events mean. The other way is to belabor the Communist scapegoat, to go on ignoring the present trend away from the West—and to be shocked and surprised when the volcano erupts again.

I ask unanimous consent that the article by Mr. Childs be printed at this point in my remarks.

There being no objection, the article by Mr. Childs was ordered to be printed in the RECORD, as follows:

THE ASIAN VOLCANO READY TO ERUPT

(By Marquis Childs)

The sounds out of Asia are like the rumblings of a volcano about to erupt. The subterranean roar, breaking out into the open in Korea and Japan, is a deepseated symptom that American policymakers have in recent years either ignored or have failed to face up to.

They have believed that by backing "strong" men and providing military assistance for military pacts the line could be held. What is happening today belies this comfortable assumption.

The easy explanation is communism—the Communists have been at it again. Certainly communism is the trigger. But an explosion could not be set off if in the mass there were not the potentialities for an outburst.

In the view of this observer, America's China policy, ignoring the existence of 600 million people and hoping that something would turn up, preferably that long-promised internal revolution, is at the root of the trouble. The effect of the Chinese revolution throughout Asia has been incalculable. The material achievements of the Red regime, trumpeted by a powerful and uncreasing propaganda, have had a far-reaching influence.

Those achievements seem to the West to have come at an appalling cost in human values, reducing human beings to ants or bees entirely at the mercy of an all-powerful dictatorship. But in Asia, where all but a tiny fraction of the people live close to the hunger line and where "freedom" is only the vaguest word, this has nothing like the same impact. The mass of Asians see the highways, schools, research centers, modern weapons achieved by an Asian people who breathe defiance at the West.

The surprises for policymakers in Washington, such as the uprising that drove Syngman Rhee from Korea, are far from ended. Knowledgable analysts in the top echelon of Government believe that something like this may happen in the not too distant future in Vietnam. Or, at any rate, the potential is there to be fired by a Communist fuse.

It is a familiar situation. The head of the Government, President Ngo Dinh Diem, is a man of integrity and courage dedicated to a free Vietnam oriented toward the West. But recent reports indicate that grafting by officials of his National Revolutionary Party is reaching an intolerable stage. In some areas the Government exercises authority during the day and the Communists take over at night, as in the last phase of the French Indo-China war.

What is disturbing is to hear from State Department officials something like the following: Yes, there is graft. Perhaps it is not as bad as some sources represent it to be. Anyway, in the Orient you have to accept a degree of graft as a matter of course.

This was exactly what was being said by apologists for Chiang Kai-shek before the Communists triumphed in 1949 and drove Chiang and a remnant of his force to Formosa. Certainly in China the graft had reached an intolerable level, with members of Chiang's family amassing enormous fortunes as a ruinous inflation ran riot and contributed to the ultimate tragedy.

Graft in the Philippines is reported to be at such an oppressive level that some sources advised the President against visiting Manila lest he seem to sanction what is going on. Richard Dudman of the St. Louis Post-Dispatch staff, traveling with the President, reports that leaders of the opposition Liberal Party were kept away from Eisenhower, although the likelihood is that they will come to power in elections next year on a wave of discontent.

That illustrates one handicap of the personal diplomacy of these Presidential tours. The visiting American President sees only those sitting currently in the seats of power and he hears only their formal protestations of friendship at big, showy ceremonial functions.

There are two ways to react to what is happening. One is to learn from it and to

try to formulate new and more realistic policies to be carried out by those who understand what recent events mean. The other way is to belabor the Communist scapegoat, to go on ignoring the present trend away from the West—and to be shocked and surprised when the volcano erupts again.

Mr. GRUENING. Mr. President, likewise, in another category, is a moving letter which was published in today's Washington Post and Times-Herald. The letter was written by a Japanese student who is in Washington studying medicine. He said:

I like your country very much. One of the many reasons why I came all the way from Japan to study medicine in your country is because I wanted to have many good friends in this lovely country.

Then he discussed the history of the war, the peace treaty, and the renunciation of war by Japan. He ends with a conclusion adverse to the treaty, but which is revealing, because it supports the favorable sentiment in Japan, which is pacifistic, not communistic, but which is the natural reaction to recent history. He says:

America as a great country once taught Japan how to adopt a democratic constitution in her country. I do not believe that the same America teaches the same Japan now how to destroy it.

I ask unanimous consent that the letter be printed at this point in my remarks.

There being no objection, the letter was ordered printed in the RECORD, as follows:

BEHIND THE PROTESTS

I am a Japanese student visiting your lovely country in order to study at Howard University Medical School in Washington. I like your country very much. One of the many reasons why I came all the way from Japan to study medicine in your country is because I wanted to have many good friends in this lovely country.

I like America as well as my own country. Therefore, the major concern between the two countries is also my personal concern. For this reason, I am forced to mention my opinion about the United States-Japan military treaty, which is now going to create misunderstanding between the people of the two nations.

According to the news, it is said that the demonstration in Tokyo against the United States-Japan military treaty was the biggest and the toughest one that Mr. Hagerty had ever encountered in this life.

"More than 150,000 Japanese marched through Tokyo's broad downtown avenues for 10 hours Saturday * * *. Marching sometimes 30 abreast, columns—including workers, actors, artists, teachers, farmers, Communists, Socialists, and fanatical university students—paraded riotously. Buddhist priests, hymn-singing Christians and hundreds of women joined in." (Quotation from Washington Post, June 12.)

Reading this, it was hard for me to believe the demonstration was done only by a small group of pro-Communists. My strong feeling is that the demonstration was done by a majority of Japanese including all kinds of people. It was nationwide in scale. It may be difficult for most Americans to know the reason why such a demonstration of great scale was held.

I will try to explain that reason. The demonstration is in its essence nothing but the protest against the United States-Japan military treaty which was signed recently between the two Governments. The main reason why the Japanese people protest so seriously against this treaty is because it is against the Japanese Constitution for her to have such a treaty.

Some of the readers may not know this fact, but Japan adopted the new Constitution after the end of World War II. The most conspicuous feature of this new Constitution is the absolute and unconditional renunciation of war as a sovereign right of a nation, thereby outlawing the use of threat as well as of force itself as a means of settling international dispute.

Therefore, it is a matter of common sense for the Japanese people to demand their Government as well as American Government to cancel such a treaty. But their demand was refused with the reason that it does not represent the opinions of the majority Japanese.

However, since this demand does represent the opinions of the majority Japanese, such a large number of Japanese of all kinds are still seriously protesting against the United States-Japan military treaty. It is true that there is a small group of Communists who are participating in the protest. However, all the protestants are not the Communists. On the contrary, the majority of the participants in this movement are the pacifists. They are the ones who love peace. Because of this love for peace they are united with each other.

With this understanding, the only way for both American and Japanese Governments to solve this problem is to cancel their military treaty. Japan is determined to exist as a peace-loving country. Let her grow in that line. For Japan to have any kind of military treaty with any nation is against her Constitution. To respect Constitution is the vital importance for any democratic government to be survived.

America as a great country once taught Japan how to adopt a democratic constitution in her country. I do not believe that the same America teaches the same Japan now how to destroy it.

MITSUNOBU TOYAMA.

WASHINGTON.

Mr. GRUENING. Mr. President, we hope this treaty will not destroy Japan or destroy our friendly relations with Japan. We hope, on the contrary, that it will strengthen both nations and their relations. As the treaty is now written, I think we have no alternative. Let us hope for the best. Let us support the treaty with as large a vote as the conscience of the Senate will permit.

Mr. KEATING. Mr. President, the treaty of mutual cooperation and security with Japan now before the Senate for ratification is a truly historic document. Its importance is, of course, underscored by developments in recent days.

This agreement should mark a great step forward in the development of a strong alliance between the people of Japan and America. It is a milestone of cooperation between two sovereign, democratic nations. It represents a partnership between two countries which share a common interest in securing a free and peaceful world.

In replacing the 1951 treaty between Japan and the United States, the new treaty grants recognition to the changes which have taken place in the last 9 years regarding the relative position of the two nations involved. This is a treaty to which Japan has agreed as a free and equal partner, not one which was imposed upon her.

The agreement now before us eliminates many of the onerous burdens of the 1951 treaty. It removes the present authority of the United States to intervene in the internal affairs of Japan. Further, it deprives us of a right which the old treaty granted us; namely, the right to use our bases in Japan for purposes other than the defense of Japan against attack, without engaging in prior consultation. Now we can only use these bases for the defense of Japan, unless the Japanese Government agrees with us as to some further or other use.

This marks another concession to the Japanese, stemming from the change in the relationship between the two countries since 1951.

Surely the new treaty must be recognized as a symbol of the progress Japan has made in recent years. Why, then, has there been so much opposition to the treaty on the part of Japanese demonstrators in recent weeks? While it is clear that there is some sincere opposition from Japanese liberals of a neutralist bent who fear that the treaty may drag Japan into a military conflict of which she wants no part, it is highly likely that the impetus for the demonstrations has come from the Communists and Communist sympathizers who have used the treaty as a pretext with which to seriously threaten the democratic processes of Japan.

It is, of course, a bitter paradox that the Japanese should represent their pacifist sentiments by means of violent rioting and the establishment of conditions making impossible a good-will visit, a mission of peace, by the respected leader of another nation. That these demonstrators, a violent, extra-legal minority, were able to frustrate the will of the majority of the Japanese people and create a situation in which the safety of the President of the United States could not be guaranteed is truly unfortunate, more so for Japan than for us.

The participants in the riots were mainly hard-core radicals. The attack was led by the tough mainstream extreme wing of the student federation, many of whose leaders were expelled even from the Communist Party of Japan because of their violent activities and views. This group, combined with the party-line Communists representatives, and supported by Communist funds, have provided the spearhead of the demonstrations.

The constant agitation of the radio propaganda of Communist China and the maneuvering of the Soviet Union—such as the note sent to Japan attempting to intimidate the Japanese Government into abandoning its pro-Western orientation by warning them of the serious consequences of the Japanese-American treaty—have both worked relentlessly to arouse the radical elements in Japan to violent action. The obvious aim of such propaganda is the creation of a situation of chaos and anarchy, the sort of conditions under which Communists function most effectively.

All three of these factors—the highly organized way the riots were carried out, the extremist and Communist nature of the participants, and the constant agitation by the Soviets and

Chinese Communists—indicate that the riots were anything but spontaneous or representative of the will of any great number of Japanese.

It is hard to understand, however, why the demonstrations of a Communist-led minority were allowed to reach such proportions that they could not be controlled. In a genuine attempt not to repress dissent and to keep state police powers under restraint, the Government did not move against a clear threat to its authority until it was too late.

The situation is forebodingly reminiscent of the one in the 1930's, when the first attempt at democracy in Japan failed. A small and determined minority undertook a deliberate policy of assassination, in order to make democratic government impossible, and to hand over power to right-wing militarists. Today, a left-wing group is using violence and threats to destroy the government of the people. It would be tragic for Japan and for the world if the Communists were to succeed with this kind of tactic.

The future course of the Kishi government will not be easy. Members of Zengakuran, the radical student federation, greeted the postponement of the visit with cries of "We have won! We have won!" Even now, they are holding a huge victory parade. The next step in their campaign against democracy, so they have announced, will be to overthrow the Kishi government, obstruct the implementation of the Japanese-American security pact, and break off Japan's links with the free world.

The Kishi government will have to stand more firmly against that kind of mob rule. Many reports indicate that the majority of the Japanese people are ashamed of the radicals' action. Even more important, Japanese moderates are beginning to fear, for the first time, the force of a Communist conspiracy that could put their country into so shameful a position. There is still hope that the rioting may have the result of awakening the rest of the country to a more positive stand for democracy.

Mr. President, what can the United States do to repair the damage that has been caused to United States-Japanese relations? Mainly, of course, the task is up to Japan; and it is up to the Japanese moderates to support the Government they have freely elected. But we can help the forces of democracy in Japan survive. An immediate and unanimous ratification of the Japanese-American security pact will show that we, at least, are not to be intimidated by Communist machinations. We must continue to support, as fully as we can, the Kishi government or whatever government represents the free choice of the Japanese electorate. The present situation reveals only too clearly that freedom is in danger in Japan. It is a time for more, not less, United States support of the forces of democracy everywhere in the world.

With respect to the present treaty, we must be concerned with the effect it will have both on the Far Eastern defenses of the free world against the Communists and on relations between the United States and Japan. In these two vital areas, the treaty offers a noteworthy contribution. By granting us bases in Japan for at least 10 more years, and by strengthening the ties between the United States and Japan, as a result of our working together for mutual defense and our recognition of the equal status of the Japanese, the new treaty performs a vital function.

For these reasons, the treaty deserves support and ratification by the Senate.

We can hope, and not wholly without substance, that in the Japanese elections which appear likely to come in the not too distant future, the people of Japan will assert their respect for democracy, by vetoing the demands of the extremists. It would not be surprising to find that, in the long run, the violence and even the success of extremist action so far will undermine the extremist position, by making all the more clear the need for real democracy, and the threat posed to it, and by serving as a rallying point for the mobilization of other groups to political action. The victory of the extremists may well be their undoing. They may have won the battle, but they may well lose the war.

Mr. President, I hope the treaty will receive speedy and, as I have said hopefully, unanimous approval by the Senate.

At this time I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

WIRETAP EVIDENCE

As in legislative session,

Mr. McCLELLAN. Mr. President, on May 23 of this year I again brought to the Senate's attention the grave and crippling effect that recent court decisions and present Federal law are having on the administration of criminal justice in several States. I speak of those cases in the United States Court of Appeals for the Second Circuit holding that the introduction of wiretap evidence by State officials in State courts constitutes a violation of section 605 of the Federal Communications Act of 1934. These decisions, of course, are following the precedent laid down by the U.S. Supreme Court in *United States* v. *Benanti* (355 U.S. 96). In that case the Supreme Court held that wiretap evidence obtained by State officials under authority of State law was inadmissible in Federal courts. That decision was based, not on constitutional questions, but solely on the Court's interpretation of congressional intent in the enactment of section 605 of the Federal Communications Act.

I have always maintained that in the enactment of section 605 Congress never intended to obstruct or restrict State and local law enforcement agencies in their efforts to enforce criminal statutes, or prosecute and convict those guilty of crime. Therefore, on January 16, 1958, shortly after the Benanti case was decided, I introduced S. 3013, 85th Congress, 2d session. This bill would have amended section 605 of the Federal Communications Act of 1934 to authorize wiretaps by State officials and the use of evidence so obtained in State criminal proceedings when done in compliance with State law and under authority and direction of a State court order. I regret, however, that the 85th Congress adjourned before this bill could be fully considered and enacted.

On April 6 of this year the distinguished junior Senator from New York [Mr. KEATING], whose State law enforcement agencies have been most seriously handicapped by the Benanti case and the court of appeals' decisions following it, introduced S. 3340. With certain minor changes, the bill of the Senator from New York follows the language of S. 3013 except that it would amend title 18 of the United States Code, rather than the Federal Communications Act of 1934.

When I introduced S. 3013 in the 85th Congress, and also in my remarks on the Senate floor on May 23 of this year in support of S. 3340, I stated that the detection, investigation, and prosecution of crime, particularly organized crime, had been seriously handicapped and weakened by the Supreme Court's decision. I further stated that Congress should enact remedial legislation without delay. Failure to do so will only aggravate and compound the intolerable situation that has followed in the wake of the Benanti decision.

Subsequent to my statement on the Senate floor of May 23, I have received several communications from State officials which very vividly serve to confirm the validity and importance of my remarks.

One very pressing appeal comes in the form of a letter of May 31 and telegram of yesterday from Hon. Edward S. Silver, the district attorney for Kings County, N.Y. Mr. Silver is also president of the National District Attorneys' Association and chairman of the executive committee of the New York District Attorneys' Association. He declares that unless Congress enacts S. 3340 or some comparable measure, he personally will be forced to dismiss at least 200 criminal cases now pending in his district.

Mr. President, if he is forced to do this, due to the failure of Congress to act, it will serve as a windfall of immeasurable benefit to organized crime.

Mr. President, I ask unanimous consent to have printed as a part of my remarks at this point in the RECORD the letter from District Attorney Silver, to which I have just referred, together with the telegram I received from him on yesterday.

There being no objection, the letter and telegram were ordered to be printed in the RECORD, as follows:

BROOKLYN, N.Y., *May 31, 1960.*

HON. JOHN L. McCLELLAN,
Chairman, Subcommittee on Investigations, Senate Office Building, Washington, D.C.

DEAR SENATOR: Both in my capacity as district attorney of Kings County (Brooklyn) and as president of the National District Attorneys' Association, I want to express my deep thanks to you for your remarks in the Senate on wiretapping.

Unless, as you put it, Congress does something about it at this session, organized crime will have a field day and the law-enforcing agencies will be shackled from doing its job.

In my county, I have at least 200 cases that I'll have to dismiss unless Congress does something with these bills. I know that similar situations exist in other counties in our State. Just as important, we will have to discontinue many important investigations that are now in progress and disregard others that we would inaugurate if we were not hamstrung by Benanti.

Only recently from the Halls of the Senate came the statement that racketeering and organized crime is on the increase. There can be no question about that. At the same time, Congress has done nothing to give the law-enforcing agencies the tools with which to fight this very racketeering and organized crime with which they are so concerned.

I am mindful that you and some of your colleagues introduced in the 85th Congress a bill (S. 3013) which would have extricated law-enforcement agencies from the decision of the Supreme Court in the Benanti case handed down in December 1957.

In this Congress, Senator KEATING and Congressman CELLER have introduced companion bills (S. 3340 and H.R. 11589) which would accomplish the same result, but nothing has been done to move these bills along.

The National District Attorneys' Association in convention assembled on March 19 of this year, in Miami Beach, unanimously passed a resolution urging Congress to do something about this desperate situation.

Last year, I personally saw Senator O'MAHONEY and talked to him about the matter and I was encouraged by his point of view. Unfortunately, as you know, illness has prevented him from an active part in this work.

Our own Senator KEATING has been most helpful but he needs the help of his brothers if he is to accomplish anything.

I have been advised that Senator EASTLAND, chairman of the Senate Judiciary Committee, is favorably disposed toward S. 3340.

I can think of no one who knows more about organized crime and racketeering in our country than you do. I beseech you, on the part of law and order, to do all humanly possible to get these bills out of committee and passed by Congress.

It is unfortunate that this situation has been muddled by persons honestly concerned with civil liberties. Frankly, this situation is in no way involved with civil liberties. Under the laws as we have them in New York State, a district attorney must state under oath giving facts showing that the person whose wire he desires to intercept is engaged in criminal activities and he has reasonable grounds to believe that the interception of his telephone will produce evidence of his nefarious activities. It is only then that we can get a court order to intercept a telephone wire of one engaged in crime.

For 20 years, the 62 district attorneys in New York State have operated under our law and have never abused this privilege which is given to us by our State constitution and by our enabling statutes.

It might be of interest to you to know that the district attorneys in New York State have introduced more legislation to protect defendants' rights than the Civil Liberties Union or any bar associations. I can send you the details if you wish. We are jealous of our liberties as American citizens and all the imaginary ills that are raised are fully answered by 20 long years of experience in this State.

Again, let me say thanks to you for what you have done. I hope that with your interest and effort we can get something accomplished in this Congress on this most important problem to law enforcement.

With esteem and warm regards,

Respectfully,

EDWARD S. SILVER,
District Attorney, Kings County.

BROOKLYN, N.Y.

Hon. JOHN L. MCCLELLAN,
Chairman, Subcommittee on Investigations, Senate Office Building, Washington, D.C.:

Failure of Congress to act on wiretapping bill, S. 3340, creating grave crisis to law enforcement. Please refer my letter to you May 31, 1960. Unless action taken promptly I personally will have to dismiss at least 200 cases, as will district attorneys throughout this State. Vital investigation against racketeering and organized crime will also have to be discontinued. Recent Senate statement bewails fact racketeering and organized crime on increase. Failure to give this vital tool to those States that need it will be responsibility of Congress. No question that failure to act is green light to crime.

Respectfully submit this requires emergency action.

EDWARD S. SILVER,
District Attorney, Kings County; President, National District Attorneys Association; Chairman, Executive Committee, New York State District Attorneys Association.

Mr. McCLELLAN. Mr. President, another such appeal comes in a letter from the district attorney for the county of New York, the Honorable Frank Hogan. Mr. Hogan states that he will be unable to proceed with the prosecution of seven defendants involved in a multi-million-dollar narcotics business unless their telephone conversations, legally intercepted under New York law, can be used in the trial of the cases. He also states that a number of other investigations now in progress, and cases of utmost importance to his district, will also have to be abandoned unless S. 3340 is enacted during this session.

I ask unanimous consent that the letter from District Attorney Hogan be printed at this point in the RECORD as a part of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FRANK S. HOGAN,
DISTRICT ATTORNEY,
New York, N.Y., May 27, 1960.

Hon. JOHN MCCLELLAN,
U.S. Senator from Arkansas,
Senate Office Building, Washington, D.C.

DEAR SENATOR MCCLELLAN: I have read and reread your urgent remarks, made this past Monday on the floor of the U.S. Senate, concerning the need for Federal legislation in the field of telephonic interception. I am certain that those of us throughout this Nation who are directly charged with responsibility for law enforcement are encouraged by the logic and reason and by the strength of your statement. We are deeply indebted to you. I wish there were some way that we might help you to impress upon your colleagues in the Congress the desperate plight in which law enforcement finds itself.

At present, some of the most significant work of my office is dangerously hampered by the cloud under which heretofore legal interception of telephone conversations has existed since the December 1957 opinion of the U.S. Supreme Court in *United States* v. *Benanti* (355 U.S. 96). The situation, as you noted in the Senate, has not since improved, and it is clear that we cannot look to our courts for improvement. Last month it deteriorated further with the decision of our Federal circuit court in the Pugach and O'Rourke cases.

We have now a number of vital investigations and cases pending with respect to which we cannot proceed further in light of these recent cases. These specifically include some important matters in the labor-management field in which you and your committee have so effectively functioned. There is another matter that may be of particular interest to your colleagues and their home communities in which our inability to proceed—and the reasons therefor—are already a matter of public record. In January of this year, after a lengthy investigation, we arrested seven defendants for their participation in a multi-million-dollar heroin business that they had been conducting in New York for some years. They all pleaded not guilty, and are presently out on bail, awaiting a trial date. That, however, may never be reached because the case against them is untriable if our legal interceptions of telephone conversations cannot be used in our State courts.

I am ready to review with you in detail other matters that have been halted because they also involve court ordered legal interception of telephone conversations, and which cannot be reactivated until the Congress acts to remove from the law an interpretation that the Congress never intended it to have.

In 1955, more than 2 years before Benanti, the chairman of the House Judiciary Committee stated, at a time when his committee was considering amendments to the Federal Communications Act:

"I think the general idea of this committee is that we would not interfere with the practices, the legal practices that obtained in the various States. So you can set your mind at rest as far as New York is concerned: that is New York's problem, and I don't think we would attempt to make the Federal statute, and I don't know that we could, paramount, if there are any restrictions inconsistent with the New York statute, and I am sure the New York State statute would prevail, insofar as New York is concerned."

I know that you have always believed and have repeatedly stated that section 605 was never intended to bar the States from authorizing wiretapping as a proper exercise of the State police power. In early 1958, when, joined with many of your colleagues of the Senate's Committee on Improper Activities in the Labor or Management Field, you introduced Senate 3013, you stated:

"When the select committee launched its investigation into the labor situation in the New York area, it did so, unaware of the extent racketeers had penetrated the Teamsters Union and certain other branches of organized labor in the nation's largest city. The committee and, I believe, the public was shocked at its revelations.

"What was portrayed was a picture of ruthless gangsters led by Johnny Dio and Anthony Ducks Corallo joining in an alliance with Jimmy Hoffa to seize control of the transportation industry in the Nation's largest and richest city. The control of this strategic economic area by unscrupulous gangsters presented, and continues to present, a threat to the economic security of this country. For the past 23 years, since the enactment of section 605, there was no question of the right of State authorities to authorize wiretapping to obtain evidence of serious crimes. This conspiracy would not have been presented in such clarity without the use of intercepted telephonic messages which were made available to this committee through permission of the New York State

Supreme Court and the offices of the New York County district attorney."

Recently, in hearings conducted in this city by our New York State Commission of Investigation, I took the liberty of quoting at length from your statement. Our commission, after listening to extensive testimony concerning the need for the legal interception of telephone conversations, went on record urging congressional action to permit the States to continue that reasonable exercise of their police power that Congress did not intend to ban.

If there is any way that I can bring to the attention of your colleagues in the Congress the host of instances in which important criminal conduct could not have been brought to the bar of justice were it not for court authorized interception of telephone conversations, I should be pleased to have such opportunity. With ever increasing public concern about organized crime, and with mounting crime rates, I find it difficult to believe our Congress can any longer fail to recognize this emergency, and can permit law enforcement to remain stripped of this important weapon.

Again my thanks to you for your great energies and understanding on behalf of fair and proper law enforcement, and my hopes that you will let me know how I may be of assistance.

Sincerely,

FRANK S. HOGAN,
District Attorney, County of New York.

Mr. McCLELLAN. Similar and equally urgent letters come from the Honorable Manuel W. Levine, district attorney of Nassau County, N.Y.; Mr. Stephen P. Kennedy, police commissioner of the city of New York; and Mr. Miles J. Lane, chairman of the New York State Commission of Investigation.

Mr. President, I ask unanimous consent that these communications be printed in the RECORD at this point, and I most respectfully urge immediate action by the Congress in response to and in accordance with the appeals of these dedicated State officials.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CITY OF NEW YORK,
June 2, 1960.

Hon. JOHN L. MCCLELLAN,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MCCLELLAN: Jerry Adlerman, general counsel of the United States Senate Permanent Subcommittee on Investigations, over which you preside, was kind enough to send to me a copy of your statement placed in the CONGRESSIONAL RECORD on May 23, urging action in this session of the Senate on Senator KEATING's bill S. 3340, which would authorize law-enforcement agencies of the States to intercept telephonic communications pursuant to court order.

As stated by you, court-authorized interception by law-enforcement officers is an indispensable weapon in combating the machinations of the overlords of the underworld. All law enforcement applauds your efforts to make this weapon available to them in order to better safeguard the interests of the people.

I expect to be in Washington on or about June 8 and would greatly appreciate the opportunity to stop in at your office, if you are free, to further discuss the importance of this problem.

Faithfully yours,

STEPHEN P. KENNEDY,
Police Commissioner.

NASSAU COUNTY,
Mineola, N.Y., May 25, 1960.

Senator JOHN L. MCCLELLAN,
U.S. Senate, Committee on Government Operations, Senate Permanent Subcommittee on Investigations, Washington, D.C.

DEAR SENATOR MCCLELLAN: I am in receipt, from Jerome S. Adlerman, of the copies of the press release of your statement on the floor of the Senate on May 23, 1960, for which I thank you.

If you don't mind my saying so, I found the contents to be a concise, accurate, and intelligent summary of the facts and also the problems confronting all law-enforcement agencies. It is most heartwarming to have your support on this very important problem of wiretaps.

Yours very truly,

MANUEL W. LEVINE,
District Attorney.

STATE OF NEW YORK,
COMMISSION OF INVESTIGATION,
June 7, 1960.

Hon. JOHN L. MCCLELLAN,
U.S. Senator from Arkansas,
Senate Office Building, Washington, D.C.

DEAR SENATOR MCCLELLAN: On April 5 and 6 of this year, this commission held a public hearing concerning wiretapping in New York State. The purpose of the hearing was to inform the public of the serious law-enforcement problem that has arisen by virtue of recent court rulings relating to the effect of the provisions of section 605 of the Federal Communications Act on the admissibility in New York State criminal trials of evidence obtained through New York State court-authorized wiretaps.

The following prominent law-enforcement officials and other distinguished persons interested in this problem attended and presented their views at the hearing:

Frank S. Hogan, district attorney of New York County.

Edward S. Silver, district attorney of Kings County; president, National District Attorneys' Association.

Raymond C. Baratta, district attorney of Dutchess County; president, New York State District Attorneys' Association.

Joseph F. Gagliardi, district attorney of Westchester County.

Manuel W. Levine, district attorney of Nassau County.

Harry L. Rosenthal, district attorney of Monroe County.

Daniel Gutman, dean of New York Law School.

Anthony P. Savarese, Jr., chairman of the New York State Joint Legislature Committee on Privacy of Communications and Licensure of Private Investigators.

Stephen P. Kennedy, police commissioner of the city of New York.

Francis S. McGarvey, superintendent of the State Police of New York State.

Manuel Lee Robbins, counsel, Grand Jury Association of New York County.

Ferdinand Pecora, attorney and former justice of the New York Supreme Court.

Testimony received at the hearing was overwhelmingly to the effect that the administration of criminal justice in New York State is gravely affected by the recent court decisions and present Federal law. District attorneys from different parts of this State testified that investigations of great public importance, especially those dealing with organized crime in the fields of narcotics and official corruption, have been halted or seriously restricted. Whatever the problems of law enforcement in other States, it is undeniable that the authorities in New York State are confronted by a deeply serious crisis in their fight against organized crime in New York.

During our hearing, we were pleased to receive telegrams from Senator KENNETH B. KEATING and Congressman EMANUEL CELLER advising us that, jointly, they had introduced a bill in the Congress of the United States which would amend section 605 of the Federal Communications Act by exempting from its sanctions those States that provide for wiretapping by court order. Senator JACOB K. JAVITS also sent us a telegram assuring us that he will give every consideration to Federal legislation on this subject in the light of the requirements of New York. We are informed that the Senate bill, S. 3340, is presently pending in the Judiciary Committee.

The need for this remedial legislation is urgent. We respectfully request that immediate consideration be given to Senator KEATING's bill, as aforementioned, and that it be voted out of committee for action by the Senate during this session.

Your cooperation will be deeply appreciated.

Very truly yours,

MYLES J. LANE,
Chairman.
